OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5 California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9) (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violations of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00.):

☐ I, as owner of the property or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If however, the building or improvement is sold within one year of completion the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. ..... B. & P. C. for this reason:

Date ..... Signature of Owner .....

WORKER'S COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self-insure or a certificate of Worker's Compensation Insurance or a certified copy thereof (Sec. 3800, Lab. C.).

Policy No. WP-81-057111 Company FREMONT

☐ Certified copy is hereby furnished.

☒ Certified copy is filed with the Department of Building & Safety.

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9) (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violations of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, B. & P. C. - The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that it was not built or improved for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.- The Contractor's License Law does not apply to an owner of contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. ..... B. & P. C. for this reason:

Date ..... Signature of Owner .....

WORKER'S COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self-insure or a certificate of Worker's Compensation Insurance or a certified copy thereof (Sec. 3800, Lab. C.).

Policy No. WP-81-067141 Company Fremont

☐ Certified copy is hereby furnished.

☑ Certified copy is filed with the Department of Building & Safety.

Date 10-8-82 Applicant Mark Bryant

CERTIFICATE OF EXEMPTION FROM WORKER'S COMPENSATION INSURANCE

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Worker's Compensation laws of California.

Date ..... Applicant .....

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Work's Comp. provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name NONE

Lender's Address .....

I certify that I have read this application and state that the above information is correct. I agree to comply with all City and State laws relating to the building construction, and hereby authorize representatives of this City to enter upon the above-mentioned property for inspection purposes.

Mark Bryant 10-8-82

OWNER BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9 (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violations of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. ..... B. & P. C. for this reason:

Date ..... Signature of Owner .....

WORKER'S COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self-insure or a certificate of Worker's Compensation Insurance or a certified copy thereof (Sec. 3800, Lab. C.).

ADDRESS City Zip

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9) (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violations of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. ..... B. & P. C. for this reason:

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9) (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☑ I am exempt under Sec. B. & P. C. for this reason:

Date ..... Signature of Owner .....

WORKER'S COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self-insure or a certificate of Workers Compensation Insurance or a certified copy thereof (Sec. 3800, Lab. C.).

Policy No. ..... Company .....

☐ Certified copy is hereby furnished.

☐ Certified copy is filed with the Department of Building & Safety.

Date ..... Applicant .....

CERTIFICATE OF EXEMPTION FROM WORKER'S COMPENSATION INSURANCE

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Worker's Compensation Laws of California.

Date July 12/88 Applicant Jan R. Woodard

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Work's Comp. provisions of the Labor Code, You must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name .....

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9) (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violations of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. ..... B. & P. C. for this reason:

Date ..... Signature of Owner .....

WORKER'S COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self insure or a certificate of Worker's Compensation Insurance or a certified copy thereof (Sec. 3800, Lab. C.).

Policy No. WCW9140304?2 Company W. Amer. Ins.

☐ Certified copy is hereby furnished.

☒ Certified copy is filed with the Department of Building & Safety.

Date 5-16-91 Applicant .....

CERTIFICATE OF EXEMPTION FROM WORKER'S COMPENSATION INSURANCE

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Worker's Compensation Laws of California.

Date ..... Applicant .....

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Work's Comp. provisions of the Labor Code, You must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name .....

Lender's Address .....

I certify that I have read this application and state that the above information is correct. I agree to comply with all City, and State laws relating to the building construction, and hereby authorize representatives of this City to enter upon the above-mentioned property for inspection purposes.

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code: Any City which requires a permit to construct, alter improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9) (Commencing with Sec. 7000) of Div. 3 of the B & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violations of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044 B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon and who does such work himself or through his own employees provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. ..... B. & P. C. for this reason:

DSR CONSTRUCTION INC.
Contractor's Business Name

9430 TRUE AVE DOWNEY 90240
Business Address City Zip

License Class B-1 License No. 656618

Exp Date 10-31-96 Signature of Contractor [signature]

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5 California Business and Professions Code: See Back).

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, B. & P. C.: See Back).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: See Back).

☐ I am exempt under Sec. _____ B. & P. C. for this reason:

Date _____ Signature of Owner _____

Owner Verified By:	City Lic. Verified By:

IMPORTANT

IF WORK AUTHORIZED BY THIS PERMIT IS NOT COMMENCED WITHIN ONE YEAR OF ISSUANCE DATE, OR IF WORK IS SUSPENDED OR ABANDONED FOR A PERIOD OF 180 DAYS, THIS PERMIT SHALL BECOME NULL AND VOID BY TIME LIMITATION. THE WORK IS DEEMED SUSPENDED OR NOT COMMENCED IF THERE IS NO SIGNED INSPECTION RECORD ON JOB CARD

WORKER'S COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self-insure or a certificate of Worker's Compensation Insurance (Sec. 3800 Labor Code).

Policy No 1288684 Company STATE FUND

Exp. Date 4-1-96 Signature of Applicant [signature]

DECLARATION OF EXEMPTION

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Worker's Compensation Laws of California.

Date _____ Signature of Applicant _____

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Worker's Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name _____

Lender's Address _____

HAZARDOUS MATERIALS

I have read AQMD's Rule 1403 regarding asbestos emissions control and:

☐ I have submitted required notification to AQMD. A copy of the notification is hereby furnished.

☑ According to the Rule, notification is not required for this renovation project.

Will the applicant or future building occupant handle a hazardous material or a mixture containing a hazardous material exceeding the exempt amount: ☐ Yes ☐ No

I CERTIFY THAT I HAVE READ THIS APPLICATION AND STATE THAT THE ABOVE INFORMATION IS CORRECT. I AGREE TO COMPLY WITH ALL CITY AND STATE LAWS RELATING TO THE BUILDING CONSTRUCTION, AND HEREBY AUTHORIZE REPRESENTATIVES OF THIS CITY TO ENTER UPON THE ABOVE-MENTIONED PROPERTY FOR INSPECTION PURPOSES.

SUBJECT: SOIL SAMPLING RESULTS RELATED TO UST SYSTEM REMOVALS
1977 SATURN STREET
MONTEREY PARK, CALIFORNIA 91755

Dear Sirs:

This report summarizes the results of tank system removals, and associated soil sampling activities, completed at the subject site in Monterey Park, California (see attached Site Location Map - **Figure 1**).

The soil sampling activities were completed in general accordance with guidelines of Los Angeles County Department of Public Works (LADPW) and the Los Angeles Regional Water Quality Control Board (LARWQCB).

A copy of the UST removal permit is provided in attached **Appendix A**.

The tank removal activities were conducted by George Bryant Construction of Alta Loma, California (contractor). Soil sampling was completed by ALTA EM, Inc. (environmental consultant). A representative of the LACDPW (Mr. William Edwards) was scheduled to be on-site, but called the site contractor on-site within a few minutes of the scheduled inspection time, indicating he would not be able to be on site. Mr. Edwards authorized the UST removals and soil sampling to commence without his presence. A representative of ALTA EM, Inc. also spoke with Mr. Edwards verifying these approvals, and provided him our contact info, and the license number of the responsible Professional Geologist prior to proceeding.

Site Setting / Hydrogeology

The site is located at the northern edge of the Coastal Plain of Los Angeles County, in the Merced / Montebello Hills. These hills consist of sedimentary rocks of the Pico Formation, and the site area is dominated by the structural feature known as the Montebello Anticline. The site area is not known to contain large-scale regional aquifers, as is the nearby/adjoining LA County Coastal Plain just to the south. The site is located just north and outside of the Montebello Forebay Area of the LA Coastal Plain Groundwater basin (DWR, 1961).

A review of the LACDPW water well database revealed no listed wells within one mile of the subject site (LACDPW, 2018). ALTA EM, Inc. also contacted a nearby cemetery east of the subject site (see **Figure 1**) asking about any potential well information at this location. The cemetery staff reported they have no wells (Resurrection Cemetery, 2018). A review of the Geotracker database for nearby LUST cases, with well data, revealed one facility approximately 0.5 miles south-southwest of the site with groundwater at approximately 70 feet deep in 2005. All other LUST sites with groundwater well data were greater than 0.75 miles away (Geotracker, 2018).

The site is located at the foot of a small hill, on a large graded earthen pad built for the construction of the commercial-office complex which occupies the property. Atop the hill overlooking the site are large municipal water storage tanks, a landscaping nursery (Chuys Nuersery), and a community park (La Loma Park) (see attached **Figure 2**).

While a regional aquifer is not anticipated beneath the site area, an accumulation of relatively shallow groundwater *does* exists beneath the site. The source of this groundwater is unknown (i.e. from nearby or on-site irrigation water? an accumulation of natural precipitation? an on-site water leak? combination of these sources?). Groundwater was initially encountered in the larger UST pit at approximately 5 feet, but stabilized at approximately 11.5 feet bgs overnight after it was pumped out to facility the UST removals. It is noted that groundwater appeared to be shallowest in the western-most portion of the area of investigation, even being encountered in a couple of the piping trench soil samples at 4 feet bgs.

Three monitoring wells were noted around the perimeter of the larger UST pit. All three wells appeared to have been partially destroyed (i.e. cement backfilled in their wells boxes). During excavation, the upper three to five feet of several of the wells was exposed and observed to be 4" PVC casing (presumed to also be backfilled). It is unknown if these wells were installed as groundwater monitoring wells, or possibly vadose wells when groundwater was absent or deeper.

In summary, while a regional aquifer is not anticipated beneath the site area, an accumulation of relatively shallow groundwater exists beneath the site at 4 to 11.5 feet bgs. The direction of groundwater flow is unknown, though topography of the site would strongly indicate it is likely toward the west to southwest. This is contradicted by on-site observations indicating the shallowest groundwater is in the western-most portion of the area investigated.

Tank Contents, Capacity, Construction

Details of the removed tanks were reported by the contractor as follows:

	Content	Capacity	Size	Construction
Tank #1	Diesel Fuel	10,000 gals	34' by 8'	Single-wall fiberglass w/rounded ends
Tank #2	Diesel Fuel	10,000 gals	34' by 8'	Single-wall fiberglass w/rounded ends
Tank #3	Diesel Fuel	2,500 gals	12' by 6'	Double-wall fiberglass coated steel

Larger Tanks 1 & 2 were located in a cluster, while Tank 3 was located approximately 140 feet east of the others. All three tanks contained diesel fuel, and were used to supply emergency generators. All three thanks were buried 3 to 4 feet bgs.

Attached **Figure 3** and **Photo nos. 1 and 2** show the two tank pit areas.

Soil Sampling Methods & Locations

All samples were collected on November 8, 2018.

Samples along the fuel product lines were collected at depths ranging from 3.5 to 5 feet bgs (at least 2 feet beneath removed lines), and were designated as samples no. PS1 to PS13. Attached **Photo nos. 3 through 7** show the various product line trenches which were sampled.

The Tanks 1 & 2 pit contained groundwater at approximately 11.5 feet bgs, and a large concrete pad underlying the tanks at approximately 13.5 feet bgs, precluding reasonable soil sampling. Attached **Photo no. 8** shows groundwater in the tank pit and the concrete pad depth. Given soil samples could not reasonably be collected, alternative groundwater samples were collected from this UST pit with a disposable polyethylene sampling bailer. Attached **Figure no. 3** shows the approximate locations of these two groundwater samples, designated TPGW1 and TPGW2.

The Tank 3 pit also contained an underlying concrete pad throughout the pit bottom at approximately 11.5 feet bgs, but no groundwater. This pad also precluded the reasonable collection of soil samples beneath

the concrete. Alternatively, soil samples were collected from the pit sidewalls, just above the concrete pad level, at diagonally opposing corners of the former tank. The locations of these soil samples, designated T3-1-10 and T3-2-10, are shown on attached **Figure 3**.

Soil samples were obtained with the aid of a hand auger or backhoe. Samples were retained in general accordance with EPA method no. 5035 protocol. An additional amount of each sample (for non-VOC analyses) was also collected in laboratory approved 4-oz. glass jars. **Appendix B** includes further details of the sampling procedures.

Attached **Photos 9 & 10** show both UST pits after the tanks had been removed.

Field Observations

During the soil sampling, olfactory and visual observations, as well as soil types, were recorded and are summarized in the table below:

SAMPLE NO.	SAMPLE LOCATION	SAMPLE DEPTH (feet bgs)	ODOR	COLOR	SOIL TYPE
PS1-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, damp, clayey F. SAND
PS2-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, silty F. SAND
PS3-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, F. SAND; with trace silt
PS4-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, F. SAND; with trace silt
PS5-5	Pipingt rench	5	No Odor	No Discoloration	Yellowish brown, damp to moist, clayey gravelly F. SAND
PS6-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist, F. SAND
PS7-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist, gravelly F. SAND
PS8-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, most , F. SAND
PS9-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist to wet, silty F. SAND
PS10-3.5	Piping trench	3.5	No Odor	No Discoloration	Yellowish brown, moist to wet, silty F. SAND
PS11-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, saturated, clayey silty F. SAND
PS12-3.5	Piping trench	3.5	No Odor	No Discoloration	Yellowish brown, damp to moist, clayey silty F. SAND
PS13-4	Piping trench	4	Very slight HC odor	No Discoloration	Yellowish brown w/olive mottling, moist, sandy SILT; with trace clay
T3-1-10	Tank #3 pit	10	No Odor	No Discoloration	Yellowish orange brown, damp, clayey F. SAND
T3-2-10	Tank #3 pit	10	No Odor	No Discoloration	Yellowish brown, damp, F. SAND; with trace silt and Med Sand.

During the groundwater sampling, olfactory and visual observations were recorded and are also summarized in the table below:

SAMPLE NO.	SAMPLE LOCATION	SAMPLE DEPTH (feet bgs)	ODOR & VISUAL OBSERVATIONS	COMMENT
TPGW1	Tank #1 pit - North	11.5	No odor or sheen	Groundwater sample
TPGW2	Tank #1 pit - South	11.5	No odor or sheen	Groundwater sample

Analytical Methods / Results

All soil and groundwater samples were analyzed for TPH diesel (C_{10}-C_{28}), BTEX and Fuel Oxygenates. The UST removal permit initially indicated that organic lead analyses were also required; however follow-up communications with Kattya Batres of the LACDPW confirmed the lead analyses were not required if the USTs historically only contained diesel fuel (which is the case) (see Appendix A).

The analyses were completed in general accordance with modified EPA method no. 8015 (for TPH diesel) and EPA method no. 5035/8260B (for BTEX & FUEL OXYENATES). Results are summarized as follows:

SOIL SAMPLES (all results in mg/kg)				
SAMPLE NO.	**SAMPLE DEPTH (feet bgs)**	**TPH DIESEL (C_{10}-C_{28})**	**BTEX**	**FUEL OXYGENATES (MTBE, ETBE, DIPE, TAME, TBA)**
PS1-4	4	ND	ND	ND
PS2-4	4	ND	ND	ND
PS3-4	4	ND	ND	ND
PS4-4	4	ND	ND	ND
PS5-5	5	ND	ND	ND
PS6-4	4	ND	ND	ND
PS7-4	4	ND	ND	ND
PS8-4	4	ND	ND	ND
PS9-4	4	ND	ND	ND
PS10-3.5	3.5	ND	ND	ND
PS11-4	4	ND	ND	ND
PS12-3.5	3.5	ND	ND	ND
PS13-4	4	**15.2**	ND	ND
T3-1-10	10	**10.5**	ND	ND
T3-2-10	10	ND	ND	ND
PQLs	**N/A**	**10**	**0.005-0.01**	**0.005 - 0.05**

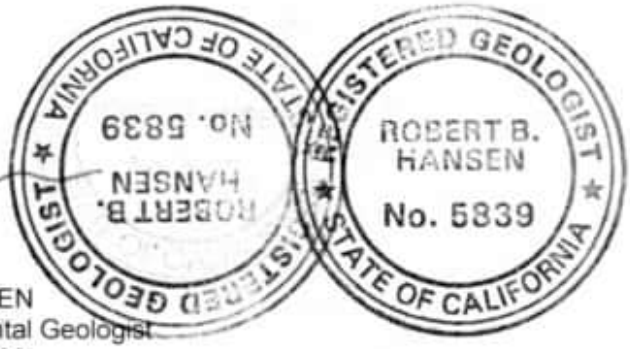
GROUNDWATER SAMPLES (all results in ug/L)				
SAMPLE NO.	**SAMPLE DEPTH (feet bgs)**	**TPH DIESEL (C_{10}-C_{28})**	**BTEX**	**FUEL OXYGENATES (MTBE, ETBE, DIPE, TAME, TBA)**
TPGW1	11.5	ND	ND	ND
TPGW2	11.5	ND	ND	ND
PQLs	**N/A**	500	1-3	3-50

In summary, no significant TPH (C_{10}-C_{28}), BTEX or Fuel Oxygenates were detected in any of the soil or groundwater samples. Two soil samples were reported to contain minor detected TPH (C_{10}-C_{28}) at concentration of 15.2 and 10.5 mg/kg. No field evidence indicating major fuel impacts was observed at or nearby these two samples with detections. A laboratory report further detailing the results of the soil/water sample analyses is provided in attached **Appendix C**.

Other Documentation

Provide in attached **Appendix D** are copies of the tank cleaning rinsate manifest, and the tank destruction/recycling certificates.

Conclusions



Three USTs were removed from the subject site. Two UST were located in one pit, and the third was approximately 140 feet away. Soil samples PS13-4 (piping trench) and T3-1-10 (Tank 3 pit) were reported to contain 15.2 and 10.5 mgkg of TPH (C_{10}-C_{28}), but no detected BTEX or Fuel Oxygenates. Every other soil sample was reported to contain no detected TPH (C_{10}-C_{28}), BTEX or Fuel Oxygenates.

Shallow groundwater was encountered in the Tank 1 & 2 pit, as well as a concrete pad underlying the tanks. Two groundwater samples collected from this tank pit were also reported to contain no detected TPH (C_{10}-C_{28}), BTEX or Fuel Oxygenates.

Based on the field observations and laboratory data, there is no evidence to indicate a significant release of diesel fuel from the removed UST systems. No further action is recommended, and a no further action letter is requested from the responsible party. At the time of this report, the site had no Geotracker case or global ID assigned, so this report and associated data could not be uploaded.

The opportunity to be of service is greatly appreciated. If you have any questions or comments, please do nothesitate to contact the office at (909) 476-2120.

Very Truly Yours,
ALTA EM, INC.

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION

CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the County of Los Angeles Department of Public Works, Environmental Programs Division, P.O. Box 1460, Alhambra, California 91802-1460, containing:

1. File number of facility and closure permit number.
2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets, and north arrow.
3. Description of methods for obtaining, handling, and transporting samples.
4. Time and date samples were obtained.
5. Soil sampling certification (including but not limited to soils classification, boring logs, sample procedures, sample locations, initiating chain-of-custody, and groundwater location) for Underground Storage Tank closure shall be certified by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils. The certification must clearly state that all work was performed under the supervision of the person signing.
6. Chain-of-custody documentation initiated by person obtaining sample through person at a California Department of Health Services certified laboratory.
7. Disposal destination of tanks and evidence of legal disposal.
8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction, and methods of analysis.
9. Documentation as to depth of groundwater at facility.
10. Manifests to document hazardous waste disposal of any removed soil and tank rinsate.
11. Evidence of legal disposal of soils designated as nonhazardous.
12. Any observations of site contamination.
13. Report to be signed by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils.
14. Submit to the California Environmental Reporting System (CERS) the date the UST was permanently closed for all tanks removed or closed in-place.

UST Facility Operating Permit Application:

Home » Prepare Submittal » UST: UST Facility Operating Permit Application (Draft)

Instructions/Help

You must complete this form withing 30 days of all new permits, permit changes, or facility information changes. You will also need to update/confirm your tank, monitoring plan, and other pertinent UST-related forms.

All facilities **must** provide a BOE Number--valid numbers are 8 digits long starting with the numbers 44... State and federal facilities should use 44032062. If **ALL** underground tanks at your facility **ONLY** contain NON-petroleum productions, you can provide this generic BOE Number: 44000000. Contact your local regulator if you are unsure what number to provide.

The former paper version of this form was called "UST Operating Permit Application-Facility Information" (Form A).

More information about UST Financial Responsibility Mechanisms is available at the Water Board's Underground Storage Tank Cleanup Fund Financial Responsibility web page.

CLOSURE – UNDERGROUND STORAGE TANKS

CONDITIONS A – GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer – Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

   a. Removal of tank shall require a three (3)-business day advance notification.
   b. Permanent closure of a tank in place or a temporary closure shall require a 30-written notification.

3. Consult current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74 – 81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

   a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.
   b. The personnel shall be sufficiently skilled to safely carry out such operation.
   c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.
   d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B – TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, "Abandonment or Removal of Underground Tanks, "Part A and any other applicable Parts.

2. A temporary closure shall not exceed 180 days.

CONDITION C – PERMANENT TANK (S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Part D and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer Inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tank shall be transported to a legal disposal point.

6. If the tank has stored materials other than motor fuel, fuel oil or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be filled and re-compacted to a relative compaction of 90%.

CONDITIONS D – PERMANENT

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Parts B or C, and any other applicable Parts.

2. Owners/operators shall demonstrate part site integrity as follows:

   a. Test borings shall be slant drilled to intercept a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test boring may be drilled vertically and the reason stated in the report in 2.h. below.
   b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.
   c. For multiple tanks, as a minimum, boring shall be placed at 20-foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test location and placement.
   d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 40 feet below grade level.
   e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.
   f. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.
   g. A report containing the results of the above analysis shall be submitted to the County Engineer.

3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials – Guidelines."

4. A report shall be submitted to the County Engineer containing the results of the site investigation.

CLOSURE APPLICATION SUPPLEMENT **PART 1 OF 3**
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

DPW USE ONLY:
SITE-FILE NO. 6994-62151
APPLICATION NO. 905099

To satisfy the permanent closure requirements for underground storage tanks storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

***** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. *****

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2-4 feet beneath	TPHD	→ 8015M
2A, 2B	tank invert	BTEX, MTBE	→ 8260B
3A, 3B		Fuel Oxygenates	→ 8260B
		# Organic Lead	→ DOHS Method
1 sample	2-4 feet below	same as	same as
	each UDC	above	above
1 sample	2-4 feet below	Same as	Same as
	piping, every 20 feet	above	above
	starting from UDC's		

- Apply EPA Method 5035 for soil sample collection, preparation and preservation.

~~# Test for organic lead if past UST contents were tested, or if it is unknown whether past UST contents were leaded.~~

Continued on Page 2

3. All soil samples obtained shall be discrete, undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date/time of sampling shall be included in the final report.

4. Conform to the analytical requirements table below for petroleum hydrocarbon sites. Apply EPA Method 5035 specified in the USEPA SW-846, version III (12/1996) for soil sample preparation and preservation in order to minimize volatile organic losses. Use the sample collection devices, or equivalent, specified in the method (e.g., the Encore™ sampler). If the Encore™ sampler is used, analyze sample within 48 hours from the collection. Analyze sample within 10 days for soil samples stored under frozen conditions.

UST CONTENTS	Analyte	Analytical Method	Required MDL

Continued on Page 3

5. All soil/groundwater samples shall be analyzed by a laboratory approved by the California Environmental Accreditation Laboratory Program (ELAP).

6. Analytical results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) Detection limits for each analytical procedure and determination; d) The method of analysis; e) Signature of chemist certifying results.

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

10. A final report that contains all of the above required information shall be submitted to the office above within one (1) month form the sampling date or 180 days from the date of this permit, whichever is earlier.

11. All electronic data shall be submitted to the State Water Resources Control Board Geotracker database.

Here is the reply for the lead samples. The tanks were always permitted as diesel fuel

Subject: 1977 Saturn St

Ron,

Attached you can find the pdf copy of the approved tank removal permit. In the soil sample laboratory analysis specification sheet, you can see that we require the samples to be analyzed for Organic Lead, with a note clarifying to test for it if the tanks' contents used to be leaded or if it is unknown whether they were leaded or not.
If the owner is sure these tanks never contained leaded fuel, the Organic Lead analysis can be disregarded. If there is some doubt, then it has to be included.

Best regards,
Kattya Batres

CLOSURE APPLICATION SUPPLEMENT **PART 1 OF 3**
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

DPW USE ONLY
SITE-FILE NO 6994-62151
APPLICATION NO 905099

To satisfy the permanent closure requirements for underground storage tanks storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

***** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. *****

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2-4 feet beneath	TPHD	→ 8015M
2A, 2B	tank invert	BTEX, MTBE	
3A, 3B		Fuel Oxygenates	→ 8260B
		* Organic Lead	→ DOHS Method
1 sample	2-4 feet below	same as	same as
	each UDC	above	above
1 sample	2-4 feet below	Same as	Same as
	piping, every 20 feet	above	above
	starting from UDCs		

° Apply EPA Method 5035 for soil sample collection, preparation and preservation

* Test for organic lead if past UST contents were leaded, or if it is unknown whether past UST contents were leaded.

Continued on Page 2

APPENDIX B

SOIL & GROUNDWATER SAMPLING PROCEDURES

APPENDIX B

SOIL & GROUNDWATER SAMPLING PROCEDURES

Soil Samples

- Soil samples collected from the piping trenches were obtained using a hand auger. Soil samples collected from the tank pit were obtained with a backhoe.
- A relatively undisturbed portion of each sample was also retained in general accordance with EPA method no. 5035 protocol, using an EASYDRAW® syringe. An approximate five gram sample was collected with the syringe and ejected each into four pre-tared, 40 ml glass VOA vials (two vials containing pre-measured quantities of $NaHSO_4$, one vial containing MeOH, and one vial with no preservative).
- Additional sample (for non VOC anlayses) was also collected in a laboratory approved, 4-Oz. glass jar at each location.
- All collected samples was labeled with the sample number, date and project number.
- All samples were stored in an ice chest kept at approximately 40 to 50 degrees Fahrenheit prior to transportation to a State of California, Department of Health Services certified laboratory under strict chain-of-custody procedures.
- All re-usable soil sampling equipment was washed prior to each sampling events with a solution of LIQUINOX (a phosphate free detergent), rinsed with potable tap water, and then rinsed again with de-ionized water.

Groundwater Samples

- Groundwater samples were obtained with a disposable polyethylene sampling bailer lowered into the groundwater in the bottom of the UST pit.
- The groundwater samples were each retained in a 1-liter amber glass bottle containing H_2SO_4, and three 40-ml glass VOA vials with no preservative.
- All collected samples was labeled with the sample number, date and project number.
- All samples were stored in an ice chest kept at approximately 40 to 50 degrees Fahrenheit prior to transportation to a State of California, Department of Health Services certified laboratory under strict chain-of-custody procedures.

Dear Mr. Hansen:

The **analytical results** for the soil and water samples, received by our laboratory on November 9, 2018, are attached. The samples were received chilled, intact, and accompanying chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manager

UNDERGROUND STORAGE TANK PROGRAM – NON-CASE DETERMINATION

BRE CA SATURN LLC
1977 SATURN STREET, MONTEREY PARK
CASE NO. R-65226, GLOBAL ID NO. T10000018576

Dear Mr. Christian:

On April 27, 2020, the County of Los Angeles Department of Public Works transmitted this case to our agency due to concerns regarding soil impacts at the subject site (Site). The California Regional Water Quality Control Board, Los Angeles Region (Los Angeles Water Board) is the public agency with primary responsibility for the protection of ground and surface water quality for all beneficial uses within Los Angeles and Ventura counties. As such, the Los Angeles Water Board is the lead regulatory agency for overseeing corrective actions (assessment and/or monitoring activities) and cleanup of releases from leaking underground storage tank (UST) systems at the subject site (Site).

We have received the following document for the Site:

- "UST Soil Sampling/Closure Report" dated December 17, 2018, prepared by ALTA EM, Inc.

Based on our review of the submitted document, we have the following comments:

- Three diesel USTs (two 10,000-gallon USTs and one 2,500-gallon UST) were removed from the Site. The tank removal document is not available to Los Angeles Water Board staff at this time. The two 10,000-gallon diesel USTs were removed from the same excavation (Tank #1 pit). The 2,500-gallon diesel UST excavation (Tank #3 pit) was located at approximately 140 feet east from the other excavation.
- Groundwater was encountered in Tank #1 pit. The groundwater was initially encountered at approximately 5 feet below ground surface; it stabilized at approximately 11.5 feet bgs. Two grab groundwater samples (TPGW1 and TPGW2) were collected within the UST excavation instead of soil samples.

- Two soil samples (T3-1-10 and T3-2-10) were collected beneath the 2,500-gallon diesel UST (Tank #3 pit) at approximately 10 feet bgs. Groundwater was not encountered at the 2,500-gallon UST excavation.
- Thirteen soil samples (PS1-4, PS2-4, PS3-4, PS4-4, PS5-5, PS6-4, PS7-4, PS8-4, PS9-4, PS10-3.5, PS11-4, PS12-3.5 and PS13-4) were collected along the piping trench between 3.5 and 5 feet bgs.
- All samples were collected on November 8, 2018.
- The soil and groundwater samples were analyzed using EPA Method 8015B for total petroleum hydrocarbons as diesel and EPA Method 5035/8260B for benzene, toluene, ethylbenzene, xylenes (BTEX) and fuel oxygenates including methyl tertiary butyl ether (MTBE).
- The laboratory analysis results indicated non-detect concentration for BTEX and fuel oxygenates. All soil and groundwater samples were non-detect for TPHd, except for soil samples PS13-4 and T3-1-10 which contained TPHd at 15.2 milligrams per kilogram (mg/kg) and 10.5 mg/kg, respectively.

Based on the information available to us, Los Angeles Water Board staff has determined that residual concentrations of fuel constituents pose low threat to human health and the environment. Therefore, no further action is required at this time. The Los Angeles Water Board Underground Storage Tank is not opening a case for the Site. Please note this determination is only pertinent to the UST areas.

Site data indicate that there may be residual concentrations of pollutants in soil at this site that could pose an unacceptable risk as a result of future construction/redevelopment activities, and/or change to a more sensitive land use from commercial use. Responsible parties, landowners, and contractors performing subsurface activities at the site should be prepared to manage properly to avoid threats to human health or the environment.

If you have any questions, please contact Ms. Ann Lin at (213) 576-6702 or at ann.lin@waterboards.ca.gov.

Sincerely,

Yue Rong, Ph. D.
Program Manager

NOTICE OF VIOLATION ORDER TO COMPLY

Date _____ Permit _____

Owner/Operator _____ Site/Fac _____

Site Name _____ Violation # _____

Site Address _____ City, Zip _____

Mailing Address _____ City, Zip _____

A recent inspection of your facility revealed the following conditions and/or practices relating to hazardous materials underground storage tanks (USTs) which are violations of California Health and Safety Code (CH&SC) Chapter 6.7; Los Angeles County Code (LACC), Title 11, Division 4 and/or the conditions and limitations of the above permit.

YOU ARE HEREBY DIRECTED to submit to the office indicated below, the following items checked:

☐ **OPERATING WITHOUT A CERTIFIED / OPERATING MONITORING SYSTEM – CH&SC 25293**

YOU ARE HEREBY DIRECTED to have the monitoring system and the USTs certified immediately and the results received by this office no later than 7 Days from the date of this Notice or the contents of all underground storage tank systems are to be removed within this time period.

☐ **MISSING TEST RESULTS** – Test must be conducted and results received by this office.

- ☐ Secondary Containment Testing
- ☐ Tank Integrity Testing
- ☐ Corrosion Protection Certification
- ☐ API 2161 Testing
- ☐ Line Testing
- ☐ Line Leak Detection Testing
- ☐ Financial Responsibility Certification
- ☐ Owner Statement of Designated Operator
- ☐ Facility Employee Training
- ☐ Missing Designated Operator Monthly Form
- ☐ Monitoring/Response Plan
- ☐ _____
- ☐ _____
- ☐ _____

☐ **UNREGISTERED TANKS – CH&SC 25286**

☐ **OPERATING WITHOUT A PERMIT DUE TO A CHANGE OF OWNERSHIP – CH&SC 25284 (c)**

- ☐ Complete and sign the Transfer of Ownership Application (yellow form).
- ☐ An application fee of $_____ payable to the County of Los Angeles Department of Public Works.
- ☐ Verify that all Unified Program (UP) form data is accurate and uploaded to the California Environmental Reporting System (CERS) https://cersbusiness.calepa.ca.gov/Account/SignIn?ReturnUrl=%2f, including all UP UST Facility Information data, UP UST Tank Information data, for each UST and UST Monitoring Plan data (You must include the Board of Equalization Number.)
- ☐ Complete and sign the Certificate of Financial Responsibility Form.
- ☐ completed and signed Response Plan
- ☐ completed and signed Owner Statement of Designated Operator
- ☐ Provide Monitoring System Certification which is current (performed within the last 12 months).

☐ **OUT OF SERVICE UNDERGROUND STORAGE TANKS – CH&SC 25298**

Immediately remove all residual liquids, solids, or sludge stored within the USTs to a legal disposal facility. Provide copy of proof of legal disposal.

- ☐ Complete, and sign the Application for Closure.
- ☐ An Application for Closure fee of $_____ payable to the County of Los Angeles Department of Public Works.
- ☐ Complete and sign Permit Application Supplemental Notice to File.
- ☐ Verify that all Unified Program (UP) form data is accurate and uploaded to the California Environmental Reporting System (CERS) https://cersbusiness.calepa.ca.gov/Account/SignIn?ReturnUrl=%2f, including all UP UST Facility Information data, UP UST Tank Information data, for each UST, and UST Monitoring Plan data (You must include the Board of Equalization Number)
- ☐ Complete and sign the Certificate of Financial Responsibility Form.
- ☐ An Operating Permit Application fee of $_____ payable to the County of Los Angeles, Department of Public Works.
- ☐ Submit an Annual Permit Maintenance fee of $_____ payable to the County of Los Angeles Department of Public Works.

YOU ARE FURTHER DIRECTED to submit to the office below evidence of compliance with the above directives by no later than fifteen (15) days from the date on this Notice, unless otherwise directed above. Failure to comply with the Underground Storage Tank laws and regulations may subject you to a civil penalty of not less than $500 or more than $5,000, or by one year in county jail or both. Additionally pursuant to LACC Title 1, § 1.25.040, each violation of any provision of this Code and each separate offense is subject to an administrative fine up to $1,000 for each separate day during which any violation occurs or continues. Furthermore, a noncompliance fee may be imposed to recover the cost incurred by this Department in the enforcement of LACC.

If you have any questions regarding this matter, please contact _____, [ ] Monday through Friday, 9 a.m. to 5:30 p.m. or [ ] Monday through Thursday, 7 a.m. to 5:30 p.m. at ( ) _____.

		ADMINISTRATION/DOCUMENTATION															
1	2010001	Current BOE number submitted to the CUPA and/or CERS? UU6184		V			C			C				N			
2	2030021	Facility has a valid permit to operate from the CUPA?		V			C			C				N			
3	2010007	Financial Responsilbity current and on file? (exp. 12/05/14)		V			C			C				N			
4	2010010A	Submitted an accurate CUPA UST Operating Permit Application for Facility Information?		V			C			C				N			
5	2010010B	Submitted an accurate CUPA UST Operating Permit Application for Tank Information?		V			C			C				N			
6	2030011A	Has statement of UST compliance certification been submitted?		V			C			C				N			
7	2030011B	Has designated operator current certification been submitted?		V			C			C				N			
8	2010003	Has the owner/operator designated a UST operator?		V			C			C				N			
9	2030014A	Owner/operator received approval for a training program at an unstaffed facility?		V			C			C				N			
10	2030014B	Owner/operator implemented the approved training program?		V			C			C				N			
11	2030037	Did they submit an owner/operator agreement?		V			C			C				N			
12	2030041	A complete and accurate plot plan has been submitted, approved and maintained?		V			C			C				N			
13	2030046	A complete and accurate response plan has beeen submitted, approved and maintained?		V			C			C				N			
14	2030007	Did they submit and maintain documentation regarding positive statement of compatibility for UST system components?		V			C			C				N			
15	2010008D	Have they maintained written performance claims pertaining to release detection systems and calibration and maintenance records for such systems for 5 years?		V			C			C				N			
16	2030068	Was enhanced leak detection testing conducted for the double-walled UST systems located within 1,000 feet of a public drinking water well?		V			C			C				N			
17	2030066	Was appropriate action taken to repair and retest any component of a double-walled UST system that is leaking liquid or vapor which is discovered from an enhanced leak detection test for UST system located within 1,000 feet of a public drinking water well?		V			C			C				N			
18	2030067	ELD testing conducted every 36 months on USTs located within 1,000 feet of a public drinking well? (singlewalled components)		V			C			C				N			
19	2010008A	Have they maintained records of repairs, lining, and upgrades for life of UST?															
20	2010008B	Have they maintained written monitoring and maintenance records for 3 years?															
21	2010008C	Have they maintained cathodic protection records for 6 1/2 years?															
22	2030033	Is an approved monitoring plan maintained on-site?															
23	2030002A	Has monitoring system been certified annually? 10/10/14															
24	2030002B	Monitoring System Certification submitted within thirty days?															
25	2030055	Have spill buckets been tested annually? 10/10/14															
26	2060016	Was secondary containment testing conducted at installation?															
27	2030047	Secondary containment maintained tight and has been confirmed by testing? 10/12/12															
28	2030048A	Was secondary containment testing conducted within 6 months of install/repair?															
29	2030048B	Has Secondary Containment Testing been conducted every 36 months?															
30	2010009	Has Secondary Containment Test been submitted within thirty days?															
31	2030064	Was Notification given 48 hours prior to testing?															
32	2010011	Has data been electronically submitted into CERS?															
		ENFORCEMENT															
33	2030044	Did the owner/operator deposit or allow the deposit of petroleum into a UST that has a red tag affixed to the fill pipe?															
34	2030045	Has the Red Tag been removed, defaced, altered, or otherwise tampered with so that the information on the tag is not legible?															
35	2030063	Were temporary closure requirements complied with?															
36	2030038	Were permanent closure requirements complied with?															
37	2030061	Was a suspected or actual unauthorized release recorded and/or reported in an appropriate time frame?															
38	2010006	Owner/Operator has not made false statements or representation on any required document?															
39	2030039	Did they comply with all of the operating permit conditions?

		MAINTENANCE															
40	2030059	UST system maintained in accordance with exclusion/exemption status?			/			/			/						
		TECHNICANS															
41	2030023A	Has the service technician obtained and maintained a current ICC certification?		/			/			/							
42	2030024A	Has the service technician obtained and maintained a proper license?		/			/			/							
43	2030031A	Has the service technician obtained and maintained a manufacturer certification?		/			/			/							
44	2030023C	Has the installer obtained and maintained a current ICC certification?		/			/			/							
45	2030024B	Has the installer obtained and maintained a proper license?		/			/			/							
46	2030031B	Has the Installer obtained and maintained a manufacturer certification?		/			/			/							
		DESIGNATED OPERATOR															
47	2030023B	Has the designated operator obtained and maintained a current ICC certification?		/			/			/							
48	2010004A	Have they maintained a copy of monthly designated operator reports for 12 months?		/			/			/							
49	2010004B	Have they maintained a list of trained employees?		/			/			/							
50	2030012A	Has training been provided to facility employee(s) responsible for proper operation and maintenance every 12 months?		/			/			/							
51	2030012B	Did they train new employee(s) who are responsible for proper operation and maintenance within 30-days of hire?		/			/			/							
52	2030012C	Is there at least one employee present during operating hours that has been trained in the proper operation and maintenance of the UST system?		/			/			/							
53	2030010	Has the designated operator notified the owner or operator of any condition discovered during the monthly visual inspection that may require follow-up actions?		/			/			/							
54	2030013A	Was the monthly alarm history report inspected by the designated operator?		/			/			/							
55	2030013B	Was a copy of the alarm history report attached to the monthly designated operator report?		/			/			/							
56	2030013C	Was the spill container/spill bucket inspected for the presence of liquid/debris by the designated operator?		/			/			/							
57	2030013D	Was the UDC inspected by the designated operator for the presence of liquid/debris?		/			/			/							
58	2030013E	Was the UDC Inspected by the designated operator to ensure that monitoring equipment is placed in the proper position?		/			/			/							
59	2030013F	Did the designated operator inspect for liquid/debris in the containment sump where an alarm occurred?		/			/			/							
60	2030013G	Did the designated operator inspect the containment sump for liquid/debris for which there is no record of a service visit?		/			/			/							
61	2030013H	Has all testing and maintenance been completed and documented?		/			/			/							
62	2030001	Were leak detection alarm logs, maintenance and records of appropriate follow-up actions maintained?		/			/			/							
		UST															
63	2030043	Has the leak detection equipment been properly programmed and properly operated?		/			/			/							
64	2030016A	Is the interstitial space of the tank continuously monitored such that the leak detection activates an audible/visual alarm when a leak is detected?		/			/			/							
		Monitoring System Manufacturer's Name and Model #	VR3L335														
65	2030034	Was a tag/sticker properly affixed to the monitoring equipment being certified, repaired, or replaced?		/			/			/							
66	2030003	Leak detection system maintains continuous an audible and visual alarm		/			/			/							
		SPILL BUCKET															
67	2060020A	Are spill buckets installed?			/			/			/						
68	2060020B	Does the spill bucket/container have a functional drain valve or other liquid removal method?			/			/			/						
69	2060020C	Is the spill bucket resistant to galvanic corrosion?			/			/			/						
70	2030054A	Are the spill buckets in good condition?			/			/			/						
71	2030054B	Are the spill buckets free of debris/liquid?			/			/			/						
72	2030054C	Were spill bucket contents removed when a release was observed?			/			/			/						
73	2060019	Do spill buckets have a minimum capacity of five gallons?			/			/			/						
		OVERFILL PREVENTION															
74	2030035	Was the UST system operated to prevent spills and/or overfills?			/			/			/						
75	2030036A	Overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm (Ball float or external alarm at 90%); or			/			/			/						
76	2030036B	2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills (Ball float and external alarm); or			/			/			/						
77	2030036C	3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity (Flapper at 95%); or			/			/			/						
78	2030036D	4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling (Flapper below tank top fitting)			/			/			/

		SUMP															
79	2030008C	Are the sumps in good condition?		✓			✓			✓							
80	2030008D	Are the sumps free of debris/liquid?		✓			✓			✓							
81	2030008E	Is the secondary containment in good condition?		✓			✓			✓							
82	2030008F	Is the secondary containment free of debris/liquid?		✓			✓			✓							
83	2030060	Is entry fitting maintained such that it properly seals to the containment?		✓			✓			✓							
84	2030040	Is the secondarily contained piping maintained to allow drainback to the sump in the event of a leak?		✓			✓			✓							
85	2030026B	Does the electronic leak detection equipment successfully trigger an audible/visual alarm?		✓			✓			✓							
86	2030016C	Are the sumps continuously monitored such that the leak detection activates an audible/visual alarm when a leak is detected?		✓			✓			✓							
87	2030062	Is leak detection equipment set up such that the monitoring system would detect a leak at the earliest opportunity and/or alert the owner/operator of a leak?		✓			✓			✓							
88	2060015	Are the sensors located in the proper position/location?		✓			✓			✓							
		Line Leak Detectors															
89	2060012	Does the pressurized piping system have a line leak detector installed?			✓			✓			✓						
		Line Leak Detector Model #															
90	2030026A	Is the line leak detector certified to detect a 3gph leak and restrict or shutoff the flow of product through the piping when a leak is detected?			✓			✓			✓						
91	2060017	Is an automatic line leak detector installed which is capable of shutting off the pump when a release occurs, fails, or is disconnected? (Single Walled)			✓			✓			✓						
92	2060014	Is the leak detection equipment correct for the type of system?			✓			✓			✓						
		PIPING															
		Product Piping Manufacturing	Asmith														
		Singlewalled Pressurized Piping															
93	2030027	Does the pump shut down when a leak is detected or when line leak detector is disconnected? (Positive shutdown/failsafe)			✓			✓			✓						
94	2060018	Was it demonstrated that existing single wall pressurized pipe containing motor vehicle fuel is constructed of glass fiber reinforced plastic, cathodically protected steel, or steel clad with glass reinforced plastic?			✓			✓			✓						
95	2030052	Was pressurized pipe containing motor vehicle fuel monitored at least hourly at any pressure and was a 0.2 gph monthly line integrity test or 0.1 gph annual line integrity test performed?			✓			✓			✓						
		Singlewalled Conventional Suction Piping															
96	2030049	Was daily monitoring conducted for air in the pipe and were the results logged?			✓			✓			✓						
97	2030050	Was a 0.1 gph piping integrity test conducted every three years?			✓			✓			✓						
		Singlewalled Gravity Piping															
98	2030051	Was a 0.1 gph piping integrity test or overfill integrity test conducted every two years?			✓			✓			✓						
		Singlewalled Safe Suction Piping															
99	2030053A	Does piping drain back into UST if the suction is released?			✓			✓			✓						
100	2030053B	Does piping have a check valve on the piping located directly below the suction pump?			✓			✓			✓						
		Double Walled Safe, Conventional, Gravity Piping															
101	2060006	Does secondary containment piping slope back to the collection sump?		✓			✓			✓							
		Double Walled Pressurized Piping															
102	2030042A	Was an annual line integrity test performed for pressurized pipe that does not utilize fail safe or shut down?			✓			✓			✓						
103	2030042B	Was a passing result achieved on the annual line integrity test for pressurized pipe that does not utilize fail safe or shut down?			✓			✓			✓						
104	2030016B	Is the piping continuously monitored such that the leak detection activates an audible/visual alarm when a leak is detected?			✓			✓			✓						
105	2030017	Product piping outside the UDC is fail-safe and shuts down the pump or restricts flow?			✓			✓			✓						
106	2030018	Is the double wall pressurized piping in the turbine sump continuously monitored with a system that activates an audible and visual alarm or restricts or stops flow at dispenser when a leak is detected?			✓			✓			✓						
107	2030025A	Is the pressurized piping able to monitor at least hourly with the ability to detect of release of 3.0 gph or trigger an audible/visual alarm?			✓			✓			✓						
108	2030025B	Does the pressurized piping restrict product flow through the piping when a release occurs?			✓			✓			✓						
109	2030025C	Does the pressurized piping trigger an alarm when a release occurs?			✓			✓			✓						
		Other Piping															
110	2030020	Unburied fuel piping (connected to an emergency tank system) visually inspected at least monthly and log kept?			✓			✓			✓						
111	2030020X	Buried fuel piping connected to an emergency genrator tank systems, the monitoring system checked at least daily by either remote electronic access or visually inspected and log kept onsite?			✓			✓			✓

		UDC															
112	2030008A	Are the UDCs in good condition?															
113	2030008B	Are the UDCs free of debris/liquid?															
114	2030019	Monitoring system in the UDCs activates an audible and visual alarm or stops the flow at the UDC?	N/A														
		Sensor Model # or Type															
		INSPECTION															
115	2060001	Were as-built plans submitted for the location and orientation of the tanks and appurtenant piping systems for new installations and/or with the permit application?		✓	✓			✓		✓	✓						
116	2060010	Does the UST storing a hazardous substance have secondary containment?		✓				✓			✓						
117	2060007	Was non-integral secondary containment designed and constructed to an engineering specification approved by a registered professional engineer or in accordance with a nationally recognized industry core or engineering standard?			✓			✓			✓						
118	2060009	Was a permit obtained to install, replace, repair, or modify part of the UST system containment or leak detection equipment? PENDING		✓			✓			✓							
119	2060021	Is a striker plate installed & positioned correctly under any opening that could be used for manual dipsticking or do they have a drop-tube mounted bottom protector?			✓			✓			✓						
120	2010005	Were enhanced leak detection testing results submitted to the board and the local agency within 60 days of test completion?			✓			✓			✓						
121	2030069	Is the secondary containment free of liquid and debris for a tank installed after January 1, 1984?		✓			✓	✓		✓	✓						
122	2030070	The primary containment maintained product-tight for a tank installed after January 1, 1984?		✓			✓			✓							
123	2030071	Maintain primary containment as product-tight and compatible with the stored product for a tank installed after July 1, 2004?			✓			✓			✓						
124	2030072	Maintain the primary containment as product-tight and compatible with stored product for a tank installed after July 1, 2003 and before July 1, 2004?			✓			✓			✓						
125	2030073	Corrective items noted by on an inspection report have been returned to compliance?		✓		✓			✓								
126	2060025	Secondary Contaimment free of liquid and debris for tank installed after January 1, 1984?		✓			✓			✓							
127	2060026	Primary containment is product ight for tank installed after January 1, 1984?		✓			✓			✓							
128	2060027	Maintain primary containment as product-tight and compatible with the stored for tank installed after July 1, 2004?			✓			✓			✓						
129	2060028	Primary containment as product-tight and compatible with stored product for tank installed after July 1, 2003 and before July 1, 2004?			✓			✓			✓						
		DOUBLE WALLED PRE 2003 TANKS															
130	2060005	Was system constructed with a monitoring system capable of detecting entry into secondary containment?		✓			✓			✓							
		TANKS 2003 - PRESENT															
131	2030065	Is the interstitial space maintained under constant vacuum, pressure, or hydrostatic conditions, such that a breach in the primary or secondary containment is detected before the liquid or vapor phase of the hazardous substance stored in the UST tank is released into the environment? (VPH - 7/2004)															
132	2060008	Was enhanced leak detection testing performed before the tank was placed in use?			N/A			N/A									
133	2060022A	Is the UST system installed on or after July 1, 2003 and before July 1, 2004, designed and constructed with a monitoring system capable of detecting the entry of the hazardous substance stored in the primary containment into the secondary containment? (Including Vent/Vapor Piping)															
134	2060022B	Is the UST system installed on or after July 1, 2003 and before July 1, 2004, capable of detecting water intrusion into the secondary containment? (Including Vent/Vapor Piping)															
135	2060023	Is the UST system installed on or after July 1, 2004, designed and constructed so as to detect the entry of the liquid or vapor-phase of the hazardous substance stored in the primary containment into the secondary containment and capable of detecting water intrusion into the secondary containment? (VPH)															
		ONSITE TANK TOP INSPECTION															
		Annular Space Sensors (if applicable)	VR394			N/A			N/A								
		Fill Sump Sensors	VR208			VR208			VR208								
		Piping Sump Sensors	VR208			VR311			VR311

		LINED TANKS															
136	2060024	UST system is made of or lined with material that are compatible with the substance stored?															
137	2030028A	Was a proper written tank lining certification submitted within 30 days of completion of the inspection?															
138	2030028B	Was a tank integrity test performed?															
139	2030028C	Was a vacuum test performed following lining? N/A															
140	2030028D	Did they employ a proper coatings expert and/or special inspector?															
141	2030029	Lined or repaired steel tank was inspected within 10 years of lining and every 5 years after?															
142	2060003	Were components inspected at the install site using an electrical resistance holiday detector and repaired if necessary?															
		SINGLE WALLED TANK MONITORING															
143	2010002A	Have they maintained records of cathodic protection systems testing conducted within six months of installation and at least every three years thereafter?			/			/			/						
144	2010002B	Have they maintained records for the 60 calendar day inspection of the impressed-current system?			/			/			/						
145	2010002C	Have they maintained records for sacrificial anodes testing every three years?			/			/			/						
146	2010002D	Do they have written monitoring and maintenance records on-site or off-site at a readily available location if approved?			/		/			/							
147	2030004	Automatic tank gauge programmed to test the tank at least once per month at 0.1 gallons per hour?			/			/			/						
148	2030005	The 0.2 gallons per hour continuous in tank lek decteciton performed?			/			/			/						
149	2030006A	Monthly 0.2 gallons per hour automatic tank gauging performed?			/		/			/							
150	2030006B	Did the automatic tank gauge generate and print a hard copy of the monthly 0.2 gph test?			/		/			/							
151	2030009A	Was the impressed-current system inspected every 60 calendar days?			/			/			/						
152	2030009C	Was the impressed-current system inspected within six months of installation and at least every three years thereafter?			/			/			/						
153	2030009D	Were the sacrificial anodes tested once every three years in accordance with the manufacturer's instructions?			/			/			/						
154	2030015	Facility exhibited that the method used to monitor the tank meets the monitoring methods in 2643(f)?			/		/			/							
155	2030056	Was an annual SIR report submitted?			/			/			/						
156	2030030	Weekly manual tank gauging performed in accordance to the required specifications?			/			/			/						
157	2030057A	Did they notify of a possible release within 24 hours?			/			/			/						
158	2030057B	Was a copy of the release report submitted within 10 days?			/			/			/						
159	2030057C	Were records inspected for errors and the UST system physically inspected within 24 hours?			/			/			/						
160	2030057D	Were meters recalibrated within 48 hours of receipt of report?			/			/			/						
161	2030058A	Were measurements taken daily (SIR)?			/			/			/						
162	2030058B	Was monthly inventory calculated(SIR)?			/			/			/						
163	2030058C	Is the system capable of detecting a 0.2 gph release(SIR)?			/			/			/						
164	2030058D	Was a tank integrity test conducted every two years(SIR)?			/			/			/						
165	2030058E	Was piping test conducted within 15 days of receipt of two successive SIR reports which were inconclusive or which indicated a possible release(SIR)?			/			/			/						
166	2030058F	Were dispenser meters calibrated annually(SIR)?			/			/			/						
167	2060002	Automatic tank gauging/continuous in tank leak detection system installed/properly functioning?			/			/			/						
168	2060004A	Is UST corrosion protection installed?			/			/			/						
169	2060004B	Does field-installed cathodic protection meet the consensus standards?			/			/			/

NOTICE OF VIOLATION ORDER TO COMPLY

Date 10-10-14 Permit 55945

Owner/Operator JOE REBELO Site/File 006994-687311

Site Name BANK OF THE WEST Violation # 285364

Site Address 1977 SATURN ST City, Zip MONTEREY PARK CA. 91755

Mailing Address _____ City, Zip _____

A recent inspection of your facility revealed the following conditions and/or practices relating to hazardous materials underground storage tanks (USTs) which are violations of California Health and Safety Code (CH&SC) Chapter 6.7; Los Angeles County Code (LACC), Title 11, Division 4 and/or the conditions and limitations of the above permit.

YOU ARE HEREBY DIRECTED to submit to the office indicated below, the following items checked:

☐ **OPERATING WITHOUT A CERTIFIED / OPERATING MONITORING SYSTEM – CH&SC 25293**
YOU ARE HEREBY DIRECTED to have the monitoring system and the USTs certified immediately and the results received by this office no later than 7 Days from the date of this Notice or the contents of all underground storage tank systems are to be removed within this time period.

☑ **MISSING TEST RESULTS** – Test must be conducted and results received by this office.

- ☑ Secondary Containment Testing FAILED 10/7/14
- ☐ Tank Integrity Testing
- ☐ Corrosion Protection Certification
- ☐ AB 2481 Testing
- ☐ Line Testing
- ☐ Line Leak Detection Testing
- ☐ Financial Responsibility Certification
- ☐ Owner Statement of Designated Operator
- ☐ Facility Employee Training
- ☐ Missing Designated Operator Monthly Form
- ☐ Monitoring/Response Plan
- ☐ _____
- ☐ _____
- ☐ _____

☐ **UNREGISTERED TANKS – CH&SC 25286**

☐ **OPERATING WITHOUT A PERMIT DUE TO A CHANGE OF OWNERSHIP – CH&SC 25284 (c)**

- ☐ Complete and sign the Transfer of Ownership Application (yellow form).
- ☐ An application fee of $_____ payable to the County of Los Angeles Department of Public Works.
- ☐ verify that all Unified Program (UP) form data is accurate and uploaded to the California Environmental Reporting System (CERS) http://cersbusiness.calepa.ca.gov/Account/SignIn?ReturnUrl=%2f, including all UP UST Facility Information data, UP UST Tank Information data, for each UST, and UST Monitoring Plan data (You must include the Board of Equalization Number)
- ☐ Complete and sign the Certificate of Financial Responsibility Form
- ☐ completed and signed Response Plan
- ☐ completed and signed Owner Statement of Designated Operator
- ☐ Provide Monitoring System Certification, which is current (performed within the last 12 months).

☐ **OUT OF SERVICE UNDERGROUND STORAGE TANKS – CH&SC 25298**
Immediately remove all residual liquids, solids, or sludge stored within the USTs to a legal disposal facility. Provide copy of proof of legal disposal.

- ☐ Complete, and sign the Application for Closure.
- ☐ An Application for Closure fee of $_____ payable to the County of Los Angeles Department of Public Works.
- ☐ Complete and sign Permit Application Supplemental/Notice to File.
- ☐ verify that all Unified Program (UP) form data is accurate and uploaded to the California Environmental Reporting System (CERS) http://cersbusiness.calepa.ca.gov/Account/SignIn?ReturnUrl=%2f, including all UP UST Facility Information data, UP UST Tank Information data, for each UST, and UST Monitoring Plan data (You must include the Board of Equalization Number)
- ☐ Complete and sign the Certificate of Financial Responsibility Form
- ☐ An Operating Permit Application fee of $_____ payable to the County of Los Angeles, Department of Public Works.
- ☐ Submit an Annual Permit Maintenance fee of $_____ payable to the County of Los Angeles Department of Public Works.

YOU ARE FURTHER DIRECTED to submit to the office below evidence of compliance with the above directives by no later than fifteen (15) days from the date on this Notice, unless otherwise directed above. Failure to comply with the Underground Storage Tank laws and regulations may subject you to a civil penalty of not less than $500 or more than $5,000, or by one year in county jail or both. Additionally pursuant to LACC Title 1, § 1.25.040, each violation of any provision of this Code and each separate offense is subject to an administrative fine up to $1,000 for each separate day during which any violation occurs or continues. Furthermore, a noncompliance fee may be imposed to recover the cost incurred by this Department in the enforcement of LACC.

If you have any questions regarding this matter, please contact WALTER/ LIEUTENANT BE, ☑ Monday through Friday, 8 a.m. to 9:30 a.m. or [ ] Monday through Thursday, 7 a.m. to 5:30 p.m. at (323) 881-7031

17	2030066	Was appropriate action taken to repair and retest any component of a double-walled UST system that is leaking liquid or vapor which is discovered from an enhanced leak detection test for UST system located within 1,000 feet of a public drinking water well?		V			C			C				N			
18	2030067	ELD testing conducted every 36 months on USTs located within 1,000 feet of a public drinking well? (singlewalled components)		V			C			C				N			
19	2010008A	Have they maintained records of repairs, lining, and upgrades for life of UST?															
20	2010008B	Have they maintained written monitoring and maintenance records for 3 years?															
21	2010008C	Have they maintained cathodic protection records for 6 1/2 years?															
22	2030033	Is an approved monitoring plan maintained on-site?															
23	2030002A	Has monitoring system been certified annually? 10/10/14															
24	2030002B	Monitoring System Certification submitted within thirty days?															
25	2030055	Have spill buckets been tested annually? 10/10/14															
26	2060016	Was secondary containment testing conducted at installation?															
27	2030047	Secondary containment maintained tight and has been confirmed by testing? 10/12/12															
28	2030048A	Was secondary containment testing conducted within 6 months of install/repair?															
29	2030048B	Has Secondary Containment Testing been conducted every 36 months?															
30	2010009	Has Secondary Containment Test been submitted within thirty days?															
31	2030064	Was Notification given 48 hours prior to testing?															
32	2010011	Has data been electronically submitted into CERS?															
		ENFORCEMENT															
33	2030044	Did the owner/operator deposit or allow the deposit of petroleum into a UST that has a red tag affixed to the fill pipe?															
34	2030045	Has the Red Tag been removed, defaced, altered, or otherwise tampered with so that the information on the tag is not legible?															
35	2030063	Were temporary closure requirements complied with?															
36	2030038	Were permanent closure requirements complied with?															
37	2030061	Was a suspected or actual unauthorized release recorded and/or reported in an appropriate time frame?															
38	2010006	Owner/Operator has not made false statements or representation on any required document?															
39	2030039	Did they comply with all of the operating permit conditions?

		MAINTENANCE															
40	2030059	UST system maintained in accordance with exclusion/exemption status?			/			/			/						
		TECHNICANS															
41	2030023A	Has the service technician obtained and maintained a current ICC certification?		/			/			/							
42	2030024A	Has the service technician obtained and maintained a proper license?		/			/			/							
43	2030031A	Has the service technician obtained and maintained a manufacturer certification?		/			/			/							
44	2030023C	Has the installer obtained and maintained a current ICC certification?		/			/			/							
45	2030024B	Has the installer obtained and maintained a proper license?		/			/			/							
46	2030031B	Has the Installer obtained and maintained a manufacturer certification?		/			/			/							
		DESIGNATED OPERATOR															
47	2030023B	Has the designated operator obtained and maintained a current ICC certification?		/			/			/							
48	2010004A	Have they maintained a copy of monthly designated operator reports for 12 months?		/			/			/							
49	2010004B	Have they maintained a list of trained employees?		/			/			/							
50	2030012A	Has training been provided to facility employee(s) responsible for proper operation and maintenance every 12 months?		/			/			/							
51	2030012B	Did they train new employee(s) who are responsible for proper operation and maintenance within 30-days of hire?		/			/			/							
52	2030012C	Is there at least one employee present during operating hours that has been trained in the proper operation and maintenance of the UST system?		/			/			/							
53	2030010	Has the designated operator notified the owner or operator of any condition discovered during the monthly visual inspection that may require follow-up actions?		/			/			/							
54	2030013A	Was the monthly alarm history report inspected by the designated operator?		/			/			/							
55	2030013B	Was a copy of the alarm history report attached to the monthly designated operator report?		/			/			/							
56	2030013C	Was the spill container/spill bucket inspected for the presence of liquid/debris by the designated operator?		/			/			/							
57	2030013D	Was the UDC inspected by the designated operator for the presence of liquid/debris?		/			/			/							
58	2030013E	Was the UDC Inspected by the designated operator to ensure that monitoring equipment is placed in the proper position?		/			/			/							
59	2030013F	Did the designated operator inspect for liquid/debris in the containment sump where an alarm occurred?		/			/			/							
60	2030013G	Did the designated operator inspect the containment sump for liquid/debris for which there is no record of a service visit?		/			/			/							
61	2030013H	Has all testing and maintenance been completed and documented?		/			/			/							
62	2030001	Were leak detection alarm logs, maintenance and records of appropriate follow-up actions maintained?		/			/			/							
		UST															
63	2030043	Has the leak detection equipment been properly programmed and properly operated?		/			/			/							
64	2030016A	Is the interstitial space of the tank continuously monitored such that the leak detection activates an audible/visual alarm when a leak is detected?		/			/			/							
		Monitoring System Manufacturer's Name and Model #	VR3L335														
65	2030034	Was a tag/sticker properly affixed to the monitoring equipment being certified, repaired, or replaced?		/			/			/							
66	2030003	Leak detection system maintains continuous an audible and visual alarm		/			/			/							
		SPILL BUCKET															
67	2060020A	Are spill buckets installed?			/			/			/						
68	2060020B	Does the spill bucket/container have a functional drain valve or other liquid removal method?			/			/			/						
69	2060020C	Is the spill bucket resistant to galvanic corrosion?			/			/			/						
70	2030054A	Are the spill buckets in good condition?			/			/			/						
71	2030054B	Are the spill buckets free of debris/liquid?			/			/			/						
72	2030054C	Were spill bucket contents removed when a release was observed?			/			/			/						
73	2060019	Do spill buckets have a minimum capacity of five gallons?			/			/			/						
		OVERFILL PREVENTION															
74	2030035	Was the UST system operated to prevent spills and/or overfills?			/			/			/						
75	2030036A	Overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm (Ball float or external alarm at 90%); or			/			/			/						
76	2030036B	2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills (Ball float and external alarm); or			/			/			/						
77	2030036C	3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity (Flapper at 95%); or			/			/			/						
78	2030036D	4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling (Flapper below tank top fitting)			/			/			/

		SUMP															
79	2030008C	Are the sumps in good condition?		✓			✓			✓							
80	2030008D	Are the sumps free of debris/liquid?		✓			✓			✓							
81	2030008E	Is the secondary containment in good condition?		✓			✓			✓							
82	2030008F	Is the secondary containment free of debris/liquid?		✓			✓			✓							
83	2030060	Is entry fitting maintained such that it properly seals to the containment?		✓			✓			✓							
84	2030040	Is the secondarily contained piping maintained to allow drainback to the sump in the event of a leak?		✓			✓			✓							
85	2030026B	Does the electronic leak detection equipment successfully trigger an audible/visual alarm?		✓			✓			✓							
86	2030016C	Are the sumps continuously monitored such that the leak detection activates an audible/visual alarm when a leak is detected?		✓			✓			✓							
87	2030062	Is leak detection equipment set up such that the monitoring system would detect a leak at the earliest opportunity and/or alert the owner/operator of a leak?		✓			✓			✓							
88	2060015	Are the sensors located in the proper position/location?		✓			✓			✓							
		Line Leak Detectors															
89	2060012	Does the pressurized piping system have a line leak detector installed?			✓			✓			✓						
		Line Leak Detector Model #															
90	2030026A	Is the line leak detector certified to detect a 3gph leak and restrict or shutoff the flow of product through the piping when a leak is detected?			✓			✓			✓						
91	2060017	Is an automatic line leak detector installed which is capable of shutting off the pump when a release occurs, fails, or is disconnected? (Single Walled)			✓			✓			✓						
92	2060014	Is the leak detection equipment correct for the type of system?			✓			✓			✓						
		PIPING															
		Product Piping Manufacturing	Asmith														
		Singlewalled Pressurized Piping															
93	2030027	Does the pump shut down when a leak is detected or when line leak detector is disconnected? (Positive shutdown/failsafe)			✓			✓			✓						
94	2060018	Was it demonstrated that existing single wall pressurized pipe containing motor vehicle fuel is constructed of glass fiber reinforced plastic, cathodically protected steel, or steel clad with glass reinforced plastic?			✓			✓			✓						
95	2030052	Was pressurized pipe containing motor vehicle fuel monitored at least hourly at any pressure and was a 0.2 gph monthly line integrity test or 0.1 gph annual line integrity test performed?			✓			✓			✓						
		Singlewalled Conventional Suction Piping															
96	2030049	Was daily monitoring conducted for air in the pipe and were the results logged?			✓			✓			✓						
97	2030050	Was a 0.1 gph piping integrity test conducted every three years?			✓			✓			✓						
		Singlewalled Gravity Piping															
98	2030051	Was a 0.1 gph piping integrity test or overfill integrity test conducted every two years?			✓			✓			✓						
		Singlewalled Safe Suction Piping															
99	2030053A	Does piping drain back into UST if the suction is released?			✓			✓			✓						
100	2030053B	Does piping have a check valve on the piping located directly below the suction pump?			✓			✓			✓						
		Double Walled Safe, Conventional, Gravity Piping															
101	2060006	Does secondary containment piping slope back to the collection sump?		✓			✓			✓							
		Double Walled Pressurized Piping															
102	2030042A	Was an annual line integrity test performed for pressurized pipe that does not utilize fail safe or shut down?			✓			✓			✓						
103	2030042B	Was a passing result achieved on the annual line integrity test for pressurized pipe that does not utilize fail safe or shut down?			✓			✓			✓						
104	2030016B	Is the piping continuously monitored such that the leak detection activates an audible/visual alarm when a leak is detected?			✓			✓			✓						
105	2030017	Product piping outside the UDC is fail-safe and shuts down the pump or restricts flow?			✓			✓			✓						
106	2030018	Is the double wall pressurized piping in the turbine sump continuously monitored with a system that activates an audible and visual alarm or restricts or stops flow at dispenser when a leak is detected?			✓			✓			✓						
107	2030025A	Is the pressurized piping able to monitor at least hourly with the ability to detect of release of 3.0 gph or trigger an audible/visual alarm?			✓			✓			✓						
108	2030025B	Does the pressurized piping restrict product flow through the piping when a release occurs?			✓			✓			✓						
109	2030025C	Does the pressurized piping trigger an alarm when a release occurs?			✓			✓			✓						
		Other Piping															
110	2030020	Unburied fuel piping (connected to an emergency tank system) visually inspected at least monthly and log kept?			✓			✓			✓						
111	2030020X	Buried fuel piping connected to an emergency genrator tank systems, the monitoring system checked at least daily by either remote electronic access or visually inspected and log kept onsite?			✓			✓			✓

		UDC															
112	2030008A	Are the UDCs in good condition?															
113	2030008B	Are the UDCs free of debris/liquid?															
114	2030019	Monitoring system in the UDCs activates an audible and visual alarm or stops the flow at the UDC?	N/A														
		Sensor Model # or Type															
		INSPECTION															
115	2060001	Were as-built plans submitted for the location and orientation of the tanks and appurtenant piping systems for new installations and/or with the permit application?		✓	✓			✓		✓	✓						
116	2060010	Does the UST storing a hazardous substance have secondary containment?		✓				✓			✓						
117	2060007	Was non-integral secondary containment designed and constructed to an engineering specification approved by a registered professional engineer or in accordance with a nationally recognized industry core or engineering standard?			✓			✓			✓						
118	2060009	Was a permit obtained to install, replace, repair, or modify part of the UST system containment or leak detection equipment? PENDING		✓			✓			✓							
119	2060021	Is a striker plate installed & positioned correctly under any opening that could be used for manual dipsticking or do they have a drop-tube mounted bottom protector?			✓			✓			✓						
120	2010005	Were enhanced leak detection testing results submitted to the board and the local agency within 60 days of test completion?			✓			✓			✓						
121	2030069	Is the secondary containment free of liquid and debris for a tank installed after January 1, 1984?		✓			✓	✓		✓	✓						
122	2030070	The primary containment maintained product-tight for a tank installed after January 1, 1984?		✓			✓			✓							
123	2030071	Maintain primary containment as product-tight and compatible with the stored product for a tank installed after July 1, 2004?			✓			✓			✓						
124	2030072	Maintain the primary containment as product-tight and compatible with stored product for a tank installed after July 1, 2003 and before July 1, 2004?			✓			✓			✓						
125	2030073	Corrective items noted by on an inspection report have been returned to compliance?		✓		✓			✓								
126	2060025	Secondary Contaimment free of liquid and debris for tank installed after January 1, 1984?		✓			✓			✓							
127	2060026	Primary containment is product ight for tank installed after January 1, 1984?		✓			✓			✓							
128	2060027	Maintain primary containment as product-tight and compatible with the stored for tank installed after July 1, 2004?			✓			✓			✓						
129	2060028	Primary containment as product-tight and compatible with stored product for tank installed after July 1, 2003 and before July 1, 2004?			✓			✓			✓						
		DOUBLE WALLED PRE 2003 TANKS															
130	2060005	Was system constructed with a monitoring system capable of detecting entry into secondary containment?		✓			✓			✓							
		TANKS 2003 - PRESENT															
131	2030065	Is the interstitial space maintained under constant vacuum, pressure, or hydrostatic conditions, such that a breach in the primary or secondary containment is detected before the liquid or vapor phase of the hazardous substance stored in the UST tank is released into the environment? (VPH - 7/2004)															
132	2060008	Was enhanced leak detection testing performed before the tank was placed in use?			N/A			N/A									
133	2060022A	Is the UST system installed on or after July 1, 2003 and before July 1, 2004, designed and constructed with a monitoring system capable of detecting the entry of the hazardous substance stored in the primary containment into the secondary containment? (Including Vent/Vapor Piping)															
134	2060022B	Is the UST system installed on or after July 1, 2003 and before July 1, 2004, capable of detecting water intrusion into the secondary containment? (Including Vent/Vapor Piping)															
135	2060023	Is the UST system installed on or after July 1, 2004, designed and constructed so as to detect the entry of the liquid or vapor-phase of the hazardous substance stored in the primary containment into the secondary containment and capable of detecting water intrusion into the secondary containment? (VPH)															
		ONSITE TANK TOP INSPECTION															
		Annular Space Sensors (if applicable)	VR394			N/A			N/A

		LINED TANKS															
136	2060024	UST system is made of or lined with material that are compatible with the substance stored?															
137	2030028A	Was a proper written tank lining certification submitted within 30 days of completion of the inspection?															
138	2030028B	Was a tank integrity test performed?															
139	2030028C	Was a vacuum test performed following lining? N/A															
140	2030028D	Did they employ a proper coatings expert and/or special inspector?															
141	2030029	Lined or repaired steel tank was inspected within 10 years of lining and every 5 years after?															
142	2060003	Were components inspected at the install site using an electrical resistance holiday detector and repaired if necessary?															
		SINGLE WALLED TANK MONITORING															
143	2010002A	Have they maintained records of cathodic protection systems testing conducted within six months of installation and at least every three years thereafter?			/			/			/						
144	2010002B	Have they maintained records for the 60 calendar day inspection of the impressed-current system?			/			/			/						
145	2010002C	Have they maintained records for sacrificial anodes testing every three years?			/			/			/						
146	2010002D	Do they have written monitoring and maintenance records on-site or off-site at a readily available location if approved?			/		/			/							
147	2030004	Automatic tank gauge programmed to test the tank at least once per month at 0.1 gallons per hour?			/			/			/						
148	2030005	The 0.2 gallons per hour continuous in tank lek decteciton performed?			/			/			/						
149	2030006A	Monthly 0.2 gallons per hour automatic tank gauging performed?			/		/			/							
150	2030006B	Did the automatic tank gauge generate and print a hard copy of the monthly 0.2 gph test?			/		/			/							
151	2030009A	Was the impressed-current system inspected every 60 calendar days?			/			/			/						
152	2030009C	Was the impressed-current system inspected within six months of installation and at least every three years thereafter?			/			/			/						
153	2030009D	Were the sacrificial anodes tested once every three years in accordance with the manufacturer's instructions?			/			/			/						
154	2030015	Facility exhibited that the method used to monitor the tank meets the monitoring methods in 2643(f)?			/		/			/							
155	2030056	Was an annual SIR report submitted?			/			/			/						
156	2030030	Weekly manual tank gauging performed in accordance to the required specifications?			/			/			/						
157	2030057A	Did they notify of a possible release within 24 hours?			/			/			/						
158	2030057B	Was a copy of the release report submitted within 10 days?			/			/			/						
159	2030057C	Were records inspected for errors and the UST system physically inspected within 24 hours?			/			/			/						
160	2030057D	Were meters recalibrated within 48 hours of receipt of report?			/			/			/						
161	2030058A	Were measurements taken daily (SIR)?			/			/			/						
162	2030058B	Was monthly inventory calculated(SIR)?			/			/			/						
163	2030058C	Is the system capable of detecting a 0.2 gph release(SIR)?			/			/			/						
164	2030058D	Was a tank integrity test conducted every two years(SIR)?			/			/			/						
165	2030058E	Was piping test conducted within 15 days of receipt of two successive SIR reports which were inconclusive or which indicated a possible release(SIR)?			/			/			/						
166	2030058F	Were dispenser meters calibrated annually(SIR)?			/			/			/						
167	2060002	Automatic tank gauging/continuous in tank leak detection system installed/properly functioning?			/			/			/						
168	2060004A	Is UST corrosion protection installed?			/			/			/						
169	2060004B	Does field-installed cathodic protection meet the consensus standards?			/			/			/

NOTICE OF VIOLATION ORDER TO COMPLY

Date 10-10-14 Permit 55945

Owner/Operator JOE REBELO Site/File 006994-687311

Site Name BANK OF THE WEST Violation # 285364

Site Address 1977 SATURN ST City, Zip MONTEREY PARK CA. 91755

Mailing Address _____ City, Zip _____

A recent inspection of your facility revealed the following conditions and/or practices relating to hazardous materials underground storage tanks (USTs) which are violations of California Health and Safety Code (CH&SC) Chapter 6.7; Los Angeles County Code (LACC), Title 11, Division 4 and/or the conditions and limitations of the above permit.

YOU ARE HEREBY DIRECTED to submit to the office indicated below, the following items checked:

☐ **OPERATING WITHOUT A CERTIFIED / OPERATING MONITORING SYSTEM – CH&SC 25293**
YOU ARE HEREBY DIRECTED to have the monitoring system and the USTs certified immediately and the results received by this office no later than 7 Days from the date of this Notice or the contents of all underground storage tank systems are to be removed within this time period.

☑ **MISSING TEST RESULTS** – Test must be conducted and results received by this office.

- ☑ Secondary Containment Testing FAILED 10/7/14
- ☐ Tank Integrity Testing
- ☐ Corrosion Protection Certification
- ☐ AB 2481 Testing
- ☐ Line Testing
- ☐ Line Leak Detection Testing
- ☐ Financial Responsibility Certification
- ☐ Owner Statement of Designated Operator
- ☐ Facility Employee Training
- ☐ Missing Designated Operator Monthly Form
- ☐ Monitoring/Response Plan
- ☐ _____
- ☐ _____
- ☐ _____

☐ **UNREGISTERED TANKS – CH&SC 25286**

☐ **OPERATING WITHOUT A PERMIT DUE TO A CHANGE OF OWNERSHIP – CH&SC 25284 (c)**

- ☐ Complete and sign the Transfer of Ownership Application (yellow form).
- ☐ An application fee of $_____ payable to the County of Los Angeles Department of Public Works.
- ☐ verify that all Unified Program (UP) form data is accurate and uploaded to the California Environmental Reporting System (CERS) http://cersbusiness.calepa.ca.gov/Account/SignIn?ReturnUrl=%2f, including all UP UST Facility Information data, UP UST Tank Information data, for each UST, and UST Monitoring Plan data (You must include the Board of Equalization Number)
- ☐ Complete and sign the Certificate of Financial Responsibility Form
- ☐ completed and signed Response Plan
- ☐ completed and signed Owner Statement of Designated Operator
- ☐ Provide Monitoring System Certification, which is current (performed within the last 12 months).

☐ **OUT OF SERVICE UNDERGROUND STORAGE TANKS – CH&SC 25298**
Immediately remove all residual liquids, solids, or sludge stored within the USTs to a legal disposal facility. Provide copy of proof of legal disposal.

- ☐ Complete, and sign the Application for Closure.
- ☐ An Application for Closure fee of $_____ payable to the County of Los Angeles Department of Public Works.
- ☐ Complete and sign Permit Application Supplemental/Notice to File.
- ☐ verify that all Unified Program (UP) form data is accurate and uploaded to the California Environmental Reporting System (CERS) http://cersbusiness.calepa.ca.gov/Account/SignIn?ReturnUrl=%2f, including all UP UST Facility Information data, UP UST Tank Information data, for each UST, and UST Monitoring Plan data (You must include the Board of Equalization Number)
- ☐ Complete and sign the Certificate of Financial Responsibility Form
- ☐ An Operating Permit Application fee of $_____ payable to the County of Los Angeles, Department of Public Works.
- ☐ Submit an Annual Permit Maintenance fee of $_____ payable to the County of Los Angeles Department of Public Works.

YOU ARE FURTHER DIRECTED to submit to the office below evidence of compliance with the above directives by no later than fifteen (15) days from the date on this Notice, unless otherwise directed above. Failure to comply with the Underground Storage Tank laws and regulations may subject you to a civil penalty of not less than $500 or more than $5,000, or by one year in county jail or both. Additionally pursuant to LACC Title 1, § 1.25.040, each violation of any provision of this Code and each separate offense is subject to an administrative fine up to $1,000 for each separate day during which any violation occurs or continues. Furthermore, a noncompliance fee may be imposed to recover the cost incurred by this Department in the enforcement of LACC.

If you have any questions regarding this matter, please contact WALTER/ LIEUTENANT BE, ☑ Monday through Friday, 8 a.m. to 9:30 a.m. or [ ] Monday through Thursday, 7 a.m. to 5:30 p.m. at (323) 881-7031

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California
Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

A. General Information

Facility Name: Bank of the West Bldg. No.:

Site Address: 1977 Saturn City: Mission Viejo Zip: 92735

Facility Contact Person: Joe Rebelo Contact Phone No.: (949) 727-3636

Make/Model of Monitoring System: VR 775 350 Date of Testing/Servicing: 10/16/09

B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

Tank ID: West Diesel 10K	Tank ID: East Diesel 10K
☑ In-Tank Gauging Probe. Model: MAG1	☐ In-Tank Gauging Probe. Model:
☐ Annular Space or Vault Sensor. Model:	☐ Annular Space or Vault Sensor. Model:
☑ Piping Sump / Trench Sensor(s). Model: 794380-357	☑ Piping Sump / Trench Sensor(s). Model: 794380-357
☑ Fill Sump Sensor(s). Model: 794380-208	☑ Fill Sump Sensor(s). Model: 794380-208
☐ Mechanical Line Leak Detector. Model:	☐ Mechanical Line Leak Detector. Model:
☐ Electronic Line Leak Detector. Model:	☐ Electronic Line Leak Detector. Model:
☐ Tank Overfill / High-Level Sensor. Model:	☐ Tank Overfill / High-Level Sensor. Model:
☐ Other (specify equipment type and model in Section E on Page 2).	☐ Other (specify equipment type and model in Section E on Page 2).
Tank ID: 2K Diesel	Tank ID:
☐ In-Tank Gauging Probe. Model:	☐ In-Tank Gauging Probe. Model:
☑ Annular Space or Vault Sensor. Model: 794380-344	☐ Annular Space or Vault Sensor. Model:
☑ Piping Sump / Trench Sensor(s). Model: 794380-208	☐ Piping Sump / Trench Sensor(s). Model:
☑ Fill Sump Sensor(s). Model: 794380-208	☐ Fill Sump Sensor(s). Model:
☐ Mechanical Line Leak Detector. Model:	☐ Mechanical Line Leak Detector. Model:
☐ Electronic Line Leak Detector. Model:	☐ Electronic Line Leak Detector. Model:
☐ Tank Overfill / High-Level Sensor. Model:	☐ Tank Overfill / High Level Sensor Model:
☐ Other (specify equipment type and model in Section E on Page 2).	☐ Other (specify equipment type and model in Section E on Page 2).
Dispenser ID: NONE	Dispenser ID:
☐ Dispenser Containment Sensor(s). Model:	☐ Dispenser Containment Sensor(s). Model:
☐ Shear Valve(s).	☐ Shear Valve(s).
☐ Dispenser Containment Float(s) and Chain(s).	☐ Dispenser Containment Float(s) and Chain(s).
Dispenser ID:	Dispenser ID:
☐ Dispenser Containment Sensor(s). Model:	☐ Dispenser Containment Sensor(s). Model:
☐ Shear Valve(s).	☐ Shear Valve(s).
☐ Dispenser Containment Float(s) and Chain(s).	☐ Dispenser Containment Float(s) and Chain(s).
Dispenser ID:	Dispenser ID:
☐ Dispenser Containment Sensor(s). Model:	☐ Dispenser Containment Sensor(s). Model:
☐ Shear Valve(s)	☐ Shear Valve(s).
☐ Dispenser Containment Float(s) and Chain(s).	☐ Dispenser Containment Float(s) and Chain(s).

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. Certification

I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report (check all that apply): ☑ System set-up ☐ Alarm history report

Technician Name (print): Rick Huston Signature:

Certification No.: A2050 License No.: 517336

Testing Company Name: Orange Co. Tank Testing, Inc. Phone No.: (714) 776-0300

D. Results of Testing/Servicing

Software Version Installed: 9.0

Complete the following checklist:

☑ Yes	☐ No*	Is the audible alarm operational?
☑ Yes	☐ No*	Is the visual alarm operational?
☑ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☑ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☑ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☐ Yes	☐ No* ☑ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☐ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☐ Yes; ☐ No.
☐ Yes	☐ No* ☑ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? _____ %
☐ Yes*	☑ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☑ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☑ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☑ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments: OVERFILL BUCKETS TESTED WITH SB989 TEST ON THIS DATE.

F. In-Tank Gauging / SIR Equipment:

☐ Check this box if tank gauging is used only for inventory control.
☐ Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

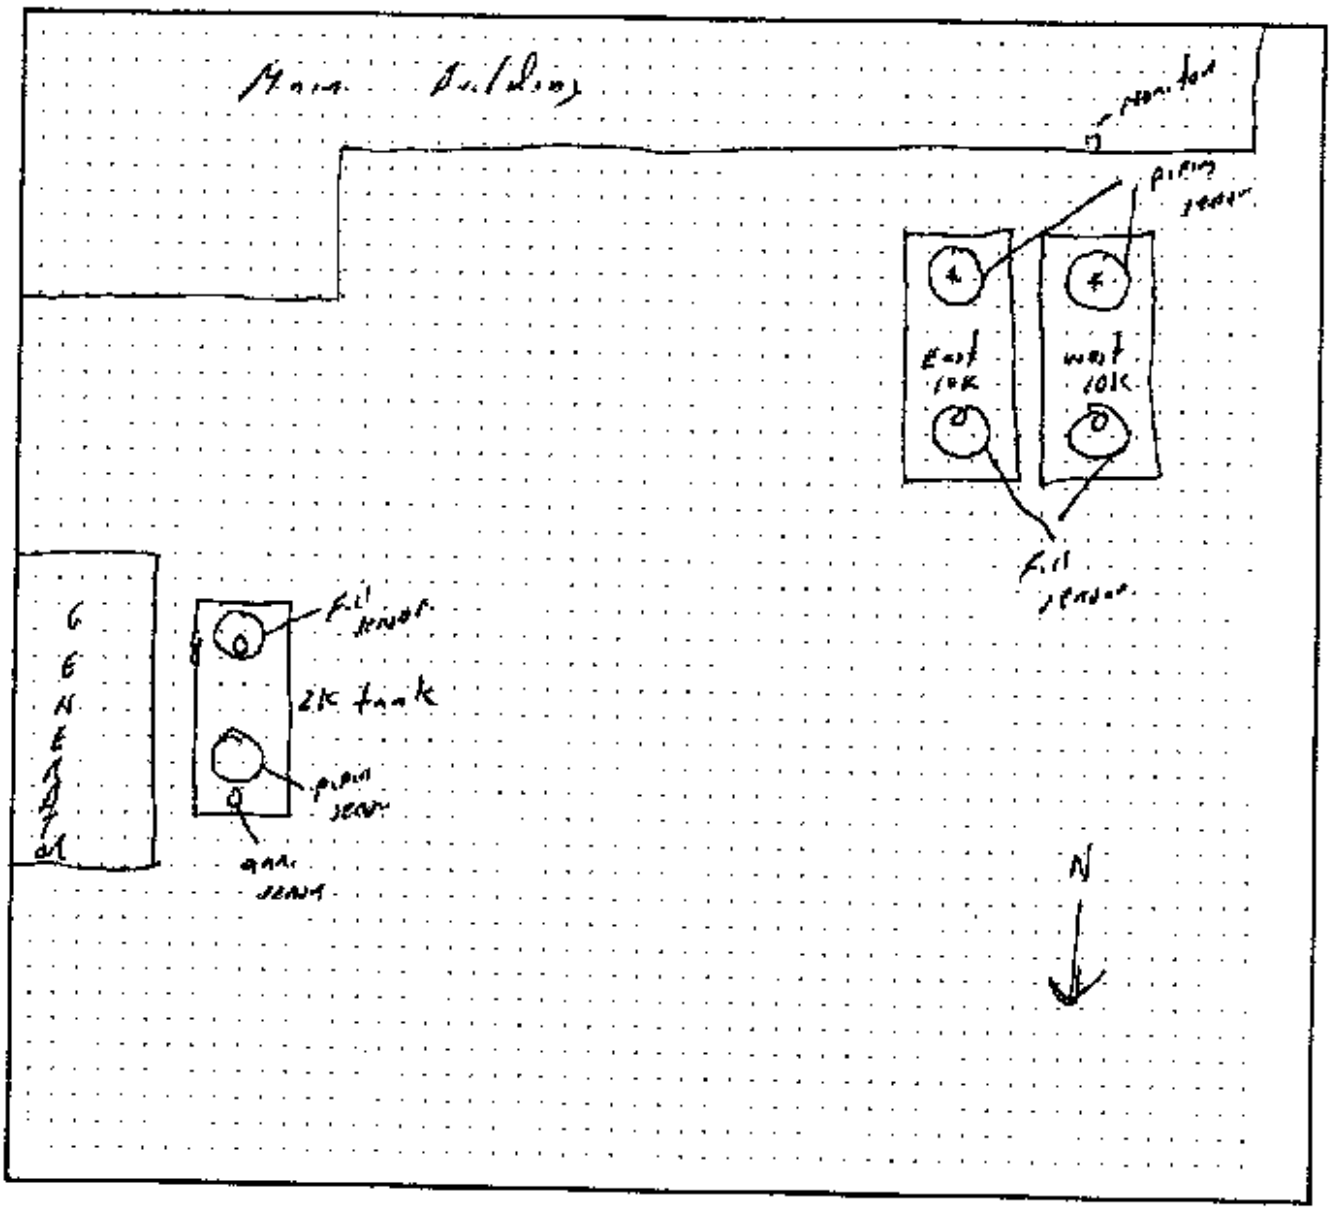
☑ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☑ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☑ Yes	☐ No*	Was accuracy of system product level readings tested?
☑ Yes	☐ No*	Was accuracy of system water level readings tested?
☑ Yes	☐ No*	Were all probes reinstalled properly?
☑ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD): ☑ Check this box if LLDs are not installed.

Complete the following checklist:

☐ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☐ 3 g.p.h.; ☐ 0.1 g.p.h.; ☐ 0.2 g.p.h.
☐ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☐ Yes	☐ No*	Was the testing apparatus properly calibrated?
☐ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?



* In the Section H, below, describe how and when these deficiencies were or will be corrected.

H. Comments:

Monitoring System Certification

UST Monitoring Site Plan

Site Address: 1977 Safeway

Date map was drawn: 12/4/07

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels, sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Secondary Containment Testing Report Form

This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

Appendix VI

(Copies of Monitoring System Certification form and UST Monitoring Plot Plan available at http://www.waterboards.ca.gov.)

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

A. General Information

Facility Name: Bank Of The West Bldg. No.

Site Address: 1977 Saturn St. City: Monterey Park Zip: 91755

Facility Contact Person: Joe Contact Phone No.: (323) -727-3636

Make/Model of Monitoring System: Veeder-Root TLS350 Date of Testing/Servicing: 10/15/2010

B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

Tank ID: WEST DIESEL 10K	Tank ID: 2K DIESEL
☑ In-Tank Gauging Probe. Model: MAG 1	☐ In-Tank Gauging Probe. Model:
☐ Annular Space or Vault Sensor. Model:	☑ Annular Space or Vault Sensor Model: 794390-357
☑ Piping Sump / Trench Sensor(s). Model: 794380-357	☑ Piping Sump / Trench Sensor(s). Mode: 794380-208
☑ Fill Sump Sensor(s). Model: 794390-208	☑ Fill Sump Sensor(s) Mode: 794390-208
☐ Mechanical Line Leak Detector Model:	☐ Mechanical Line Leak Detector. Mode
☐ Electronic Line Leak Detector. Model:	☐ Electronic Line Leak Detector. Model:
☐ Tank/Overfill / High-Level Sensor. Model:	☐ Tank/Overfill / High-Level Sensor. Model:
☐ Other (specify equipment type and model in Section E on Page 2).	☐ Other (specify equipment type and model in Section E on Page 2).
Tank ID: EAST DIESEL 10K	Tank ID:
☑ In-Tank Gauging Probe Model: MAG 1	☐ In-Tank Gauging Probe. Model:
☐ Annular Space or Vault Sensor. Model:	☐ Annular Space or Vault Sensor Mode
☑ Piping Sump / Trench Sensor(s). Model: 794390-357	☐ Piping Sump / Trench Sensor(s). Model:
☑ Fill Sump Sensor(s). Model: 794390-208	☐ Fill Sump Sensor(s). Model:
☐ Mechanical Line Leak Detector. Model:	☐ Mechanical Line Leak Detector. Model:
☐ Electronic Line Leak Detector Model:	☐ Electronic Line Leak Detector. Model:
☐ Tank/Overfill / High-Level Sensor Model:	☐ Tank/Overfill / High-Level Sensor. Model
☐ Other (specify equipment type and model in Section E on Page 2).	☐ Other (specify equipment type and model in Section E on Page 2).
Dispenser ID: DAY TANK 1-3	Dispenser ID:
☑ Dispenser Containment Sensor(s). Model:	☐ Dispenser Containment Sensor(s). Model:
☑ Shear Valve(s)	☐ Shear Valve(s).
☐ Dispenser Containment Float(s) and Chain(s)	☐ Dispenser Containment Float(s) and Chain(s).
Dispenser ID:	Dispenser ID:
☐ Dispenser Containment Sensor(s) Model:	☐ Dispenser Containment Sensor(s) Model:
☐ Shear Valve(s).	☐ Shear Valve(s).
☐ Dispenser Containment Float(s) and Chain(s)	☐ Dispenser Containment Float(s) and Chain(s).
Dispenser ID:	Dispenser ID:
☐ Dispenser Containment Sensor(s). Model:	☐ Dispenser Containment Sensor(s). Model:
☐ Shear Valve(s).	☐ Shear Valve(s)
☐ Dispenser Containment Float(s) and Chain(s)	☐ Dispenser Containment Float(s) and Chain(s).

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. **Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; (check all that apply):** ☑ System set-up ☐ Alarm history report

Technician Name (print): Rich Ruston Signature:

Certification No: A39930 License No: 517336

Testing Company Name: Orange County Tank Testing Phone No.: (714) 776-0300

Testing Company Address: 225 N. Loara Street, Anaheim, CA 92801 Date of Testing/Servicing: 10/15/2010

C672636

D. Results of Testing/Servicing

Software Version Installed: 9.0

Complete the following checklist:

✓ Yes	☐ No*	Is the audible alarm operational?
✓ Yes	☐ No*	Is the visual alarm operational?
✓ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
✓ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ✓ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☐ Yes	☐ No* ✓ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes, which sensors initiate positive shut-down? *(Check all that apply)* ☐ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shutdown due to leaks and sensor failure/disconnection? ☐ Yes* ☐ No.
☐ Yes	☐ No* ✓ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? ____ %
☐ Yes*	✓ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	✓ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
✓ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable.
✓ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments:

F. In-Tank Gauging / SIR Equipment:

☐ Check this box if tank gauging is used only for inventory control.
☐ Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

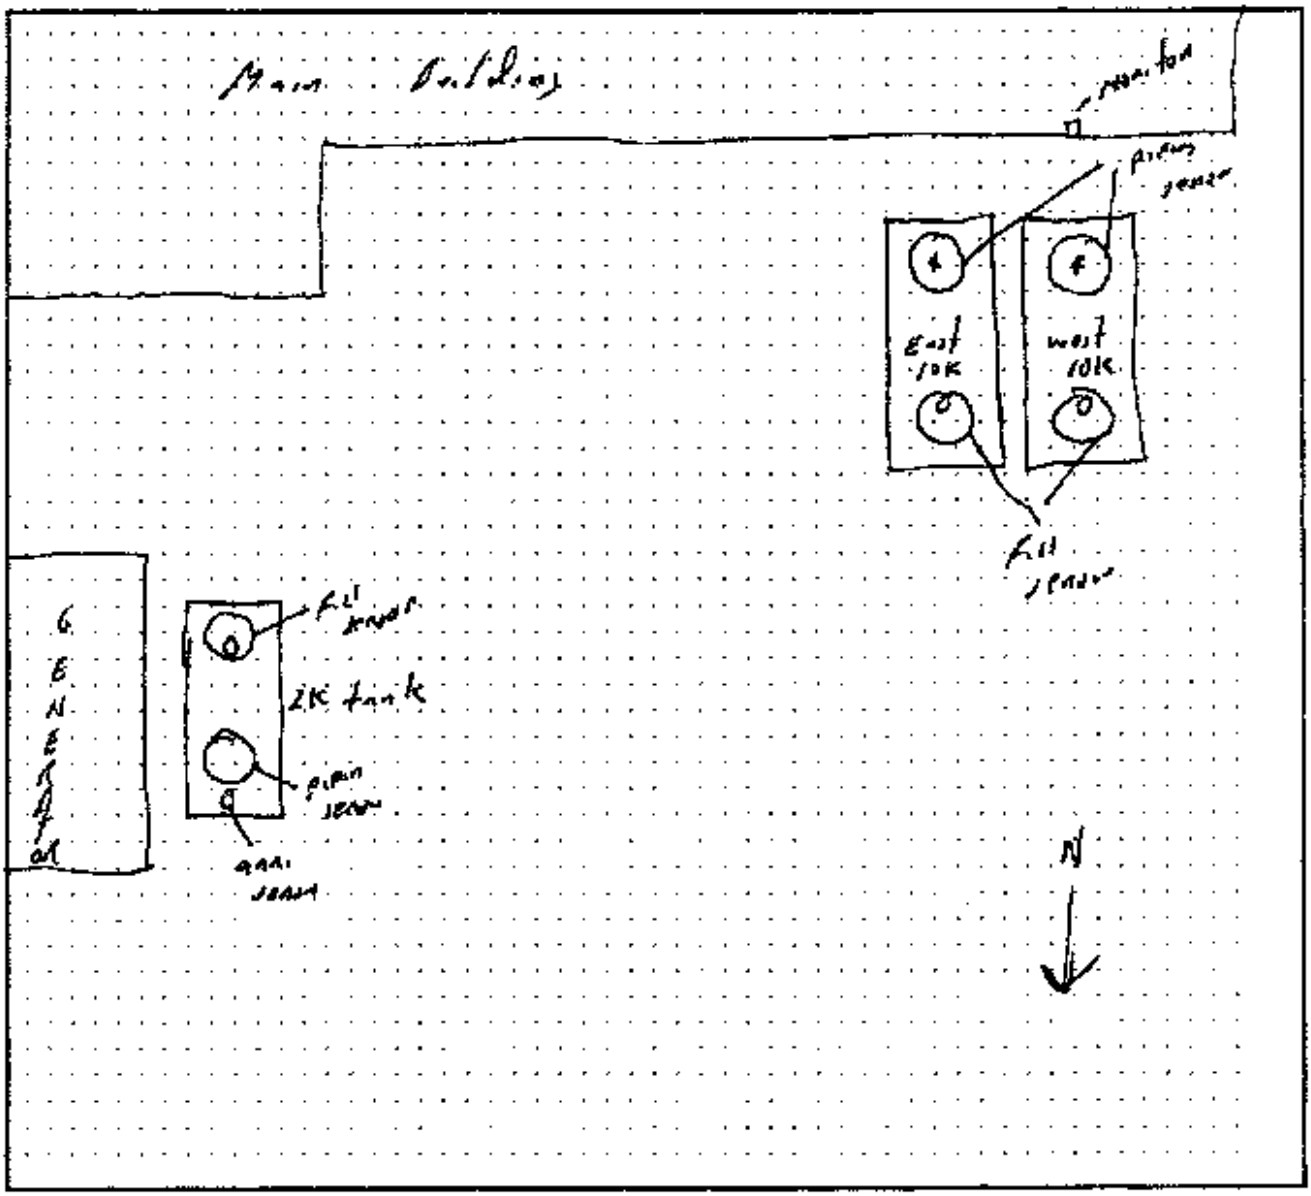
☑ Yes	☐ No*		Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☑ Yes	☐ No*		Were all tank gauging probes visually inspected for damage and residue buildup?
☑ Yes	☐ No*		Was accuracy of system product level readings tested?
☑ Yes	☐ No*		Was accuracy of system water level readings tested?
☑ Yes	☐ No*		Were all probes reinstalled properly?
☑ Yes	☐ No*		Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD): ☑ Check this box if LLDs are not installed.

Complete the following checklist:

☐ Yes	☐ No* ☐ N/A		For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: ☐ 3 g.p.h.; ☐ 0.1 g.p.h.; ☐ 0.2 g.p.h.
☐ Yes	☐ No*		Were all LLDs confirmed operational and accurate within regulatory requirements?
☐ Yes	☐ No*		Was the testing apparatus properly calibrated?
☐ Yes	☐ No* ☐ N/A		For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☐ N/A		For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☐ N/A		For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☐ N/A		For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☐ N/A		For electronic LLDs, have all accessible wiring connections been visually inspected?
☐ Yes	☐ No*		Were all items on the equipment manufacturer's maintenance checklist completed?



* In the Section H, below, describe how and when these deficiencies were or will be corrected.

H. Comments:

Double wall piping Suction System.

UST Monitoring Site Plan

Site Address: 1977 Safeway

Date map was drawn: 10/24/07

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name: Bank Of The West	Date of Testing: 10/15/2010
Facility Address: 1977 Saturn St.	
Facility Contact: Joe	Phone: 323-727-3836

BUSINESS SITE ADDRESS 1977 SATURN AVE 103 | CITY MONTEREY PARK 104

II. EQUIPMENT TESTING AND PREVENTIVE MAINTENANCE

Testing, preventive maintenance, and calibration of monitoring equipment (e.g., sensors, probes, line leak detectors, etc.) must be performed at the frequency specified by the equipment manufacturers' instructions, or annually, whichever is more frequent, and that such work must be performed by qualified personnel. (23 CCR §2632, 2634, 2638, 2641)

MONITORING EQUIPMENT IS SERVICED ☒ 1. ANNUALLY ☐ 99. OTHER (Specify): 490-3a 490-3b

III. MONITORING LOCATIONS

☐ 1. NEW SITE PLOT PLAN/MAP SUBMITTED WITH THIS PLAN. ☒ 2. SITE PLOT PLAN/MAP PREVIOUSLY SUBMITTED. (23 CCR §2632, 2634) 490-4

IV. TANK MONITORING IS PERFORMED USING THE FOLLOWING METHOD(S):

☒ 1. CONTINUOUS ELECTRONIC TANK MONITORING OF ANNULAR (INTERSTITIAL) SPACE(S) OR SECONDARY CONTAINMENT VAULT(S) WITH AUDIBLE AND VISUAL ALARMS. (23 CCR §2632, 2634) 490-5
SECONDARY CONTAINMENT IS: ☒ a. DRY ☐ b. LIQUID FILLED ☐ c. PRESSURIZED ☐ d. UNDER VACUUM 490-6

PANEL MANUFACTURER: VEEDERROOT 490-7 | MODEL #: TLS350 490-8

LEAK SENSOR MANUFACTURER: V/R 490-9 | MODEL #(S): 794380-344 490-10

☐ 2. AUTOMATIC TANK GAUGING (ATG) SYSTEM USED TO MONITOR SINGLE WALL TANK(S). (23 CCR §2643) 490-11

DETECTION OF A LEAK INTO THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS	☐ a. YES	☐ b. NO	490-59
UDC LEAK ALARM TRIGGERS AUTOMATIC PUMP SHUTDOWN	☐ a. YES	☐ b. NO	490-60
FAILURE / DISCONNECTION OF UDC MONITORING SYSTEM TRIGGERS AUTOMATIC PUMP SHUTDOWN.	☐ a. YES	☐ b. NO	490-61
UDC MONITORING STOPS THE FLOW OF PRODUCT AT THE DISPENSER.	☐ a. YES	☐ b. NO	490-62

2. UDC CONSTRUCTION IS ☐ 1. SINGLE-WALLED ☐ 2. DOUBLE-WALLED 490-63

IF DOUBLE WALLED: 490-64a

UDC INTERSTITIAL SPACE IS MONITORED BY: ☐ 1. LIQUID ☐ 2. PRESSURE ☐ 3. VACUUM

A LEAK WITHIN THE SECONDARY CONTAINMENT OF THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS ☐ a. YES ☐ b. NO 490-64b

VII. PERIODIC SYSTEM TESTING

☐ 1. ELD TESTING: THIS FACILITY HAS BEEN NOTIFIED BY THE STATE WATER RESOURCES CONTROL BOARD THAT ENHANCED LEAK DETECTION (ELD) MUST BE PERFORMED. PERIODIC ELD IS PERFORMED EVERY 36 MONTHS AS REQUIRED. (23 CCR §2644.1) 490-65

☒ 2. SECONDARY CONTAINMENT COMPONENTS ARE TESTED EVERY 36 MONTHS. 490-66

☒ 3. SPILL BUCKETS ARE TESTED ANNUALLY. 490-67

VIII. RECORDKEEPING

The following monitoring/maintenance records are kept for this facility:

☒ Alarm logs 490-68a ☐ Visual Inspection Records 490-68b
☒ Tank integrity testing results 490-68c
☐ SIR testing results (and supporting documentation records). 490-68d
☒ Tank gauging results (and supporting documentation records). 490-68e
☒ ATG Testing results (and supporting documentation records). 490-68f
☐ Corrosion Protection 60-day logs 490-68g
☒ Equipment maintenance and calibration records. 490-68h

IX. TRAINING

☒ Personnel with UST monitoring responsibilities are familiar with all of the following documents relevant to their job duties. 490-69a

REFERENCE DOCUMENTS MAINTAINED AT FACILITY (Check all that apply)

☒ THIS UNDERGROUND STORAGE TANK MONITORING PLAN (Required) 490-69b
☒ OPERATING MANUALS FOR ELECTRONIC MONITORING EQUIPMENT (Required) 490-69c
☐ CALIFORNIA UNDERGROUND STORAGE TANK REGULATIONS 490-69d
☐ CALIFORNIA UNDERGROUND STORAGE TANK LAW 490-69e
☐ STATE WATER RESOURCES CONTROL BOARD (SWRCB) PUBLICATION: "HANDBOOK FOR TANK OWNERS - MANUAL AND STATISTICAL INVENTORY RECONCILIATION" 490-69f
☐ SWRCB PUBLICATION: "UNDERSTANDING AUTOMATIC TANK GAUGING SYSTEMS" 490-69g
☐ OTHER (Specify). M69h, M69i

☒ This facility has a "Designated UST Operator" who has passed the California UST System Operator Exam administered by the International Code Council (ICC). The "Designated UST Operator" will train facility employees in the proper operation and maintenance of the UST systems annually, and within 30 days of hire. This training will include, but is not limited to, the following:

- Operation of the UST systems in a manner consistent with the facility's best management practices
- The facility employee's role with regard to the monitoring equipment as specified in this UST Monitoring Plan
- The facility employee's role with regard to spills and overfills as specified in the UST Response Plan
- Names of contact person(s) for emergencies and monitoring alarms. 490-70

X. COMMENTS/ADDITIONAL INFORMATION

Provide additional comments here or indicate how many pages with additional information on specific monitoring procedures are attached to this plan. 490-71

MONITOR RESPONSE PLANS LOCATED AT VEEDERROOT TLS350

XI. PERSONNEL RESPONSIBILITIES

The UST Owner/Operator is responsible for ensuring that: 1) the daily/routine UST monitoring activities and maintenance of UST leak detection equipment covered by this plan occurs, 2) all conditions that indicate a possible release are investigated, and 3) all monitoring records are maintained properly.
The following person(s) are responsible for performing the monitoring and equipment maintenance.

NAME JOE ROBELO 490-72 TITLE CHIEF ENGINEER 490-73

NAME LUIS FAVELA 490-74 TITLE 490-75

The Designated Operator shall perform a monthly visual inspection of the facility, provide a report to the owner/operator, and inform the owner/operator of any conditions that need follow-up action

XII. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

APPLICANT SIGNATURE 490-76: x Trinidad Mossman

DATE 490-77: x 12-23-10

REPRESENTING: ☐ 1. Tank Owner/Operator ☐ 2. Facility Owner/Operator ☒ 3. Authorized Representative of Owner

APPLICANT NAME (print) 490-78: x TRINIDAD MOSSMAN

APPLICANT TITLE 490-79: x AVP, FACILITIES MGR

UST Monitoring Plan – Page 2 Instructions

Complete a separate UST Monitoring Plan for each UST monitoring system at the facility. This form must be submitted with your initial UST Operating Permit Application and within 30 days of changes in the information it contains. Please note that your local agency may require you to obtain approval prior to installing or modifying monitoring equipment. (Note: Numbering of these instructions follows the data element numbers on the form.)

490-54a. MONITORING OF THE UNDER DISPENSER CONTAINMENT- Indicate the method used for UDC monitoring.
490-54b. SPECIFY-If 99 "Other" is checked, describe other method used
If VI-1-1, VI-1-2 or VI-1-3 or VI-1-99 is checked, complete 490-55 to 490-64b.
490-55. PANEL MANUFACTURER –Enter the name of the manufacturer of the monitoring system control panel (console) If there is no control panel (e.g., only an electrical relay box is installed) leave this space blank.
490-56. MODEL # - Enter the model number for the monitoring system control panel (console). If there is no control panel (e.g., only an electrical relay box is installed) leave this
space blank
490-57. LEAK SENSOR MANUFACTURER – Enter the name of the manufacturer of the sensor(s).
490-58. MODEL #(S) - Enter the model number of the sensor(s) installed. If additional space is needed, use Section X.
490-59. DETECTION OF A LEAK INTO THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS. Indicate Yes or No
490-60. UDC LEAK ALARM TRIGGERS PUMP SHUTDOWN - Indicate Yes or No
490-61. FAILURE/DISCONNECTION OF UDC MONITORING SYSTEM TRIGGERS AUTOMATIC PUMP SHUTDOWN - Indicate Yes or No
490-62. UDC MONITORING STOPS THE FLOW OF PRODUCT AT THE DISPENSER - Indicate Yes or No.
490-63. UDC CONSTRUCTION - Indicate if the construction of the UDC is single-walled, or double-walled.
490-64a. DOUBLE-WALLED INTERSTITIAL SPACE MONITORING - Indicate what is used to monitor the interstitial space.
490-64b. LEAK WITHIN THE SECONDARY CONTAINMENT OF UDC TRIGGERS AUDIBLE AND VISUAL ALARMS - Indicate Yes or No
490-65. VII-1 ELD TESTING - Check the box if you have been notified by the State Water Resources Control Board (SWRCB) that the UST(s) covered by this plan is/are subject to Enhanced Leak Detection Requirements (i.e., UST has any single-wall component and is located within 1,000 feet of a public drinking water well).
490-66. TESTING OF SECONDARY CONTAINMENT COMPONENTS EVERY 36 MONTHS - Check the box if you have secondary containment that requires testing.
490-67. SPILL BUCKET TESTING - Check the box if you have spill buckets.
490-68a-n. VIII RECORDKEEPING - Indicate which monitoring and equipment maintenance records are maintained for this facility.
490-69a IX TRAINING STATEMENT - Check the box to verify that the statement is true.
REFERENCE DOCUMENTS MAINTAINED AT FACILITY – Check the appropriate boxes to describe reference documents maintained at the facility. Note that the first two items on the list must be kept at the facility.
490-69b. MONITORING PLAN: Indicate that this plan is kept as a reference document.
490-69c. OPERATING MANUALS FOR ELECTRONIC EQUIPMENT: Indicate that this plan is kept as a reference document.
490-69d. CA UST REGULATIONS - Indicate that this is kept as a reference document.
490-69e. CA UST LAW - Indicate that this is kept as a reference document.
490-69f STATE WATER RESOURCES CONTROL BOARD (SWRCB) PUBLICATION - "HANDBOOK FOR TANK OWNERS - MANUAL AND STATISTICAL INVENTORY RECONCILIATION - Indicate that this is kept as a reference document.
490-69g SWRCB PUBLICATION: "UNDERSTANDING AUTOMATIC TANK GAUGING SYSTEMS": Indicate that this is kept as a reference document.
490-69h. OTHER - Indicate that other reference documents are kept.
490-69i SPECIFY If "OTHER" is checked, enter a brief description of the other document(s) maintained at the facility. If additional space is needed, see Section X.
490-70. DESIGNATED OPERATOR TRAINING - Check this box to verify that this statement is true.
490-71. COMMENTS/ADDITIONAL INFORMATION – Make additional comments or you may attach and identify the number of additional pages of information to describe any additional UST system monitoring-related information (e.g., additional information required by your local agency). Attach any monitoring logs that you will be using for the monitoring of your tank system.
490-72. NAME – Enter the name of the person who routinely conducts the monitoring and equipment maintenance under this plan.
490-73. TITLE - Enter the title of the person
490-74. NAME – Enter the name of the second person, if applicable, who routinely conducts the monitoring and equipment maintenance under this plan.
490-75. TITLE - Enter the title of the second person.
OWNER/OPERATOR SIGNATURE – The tank owner/operator, facility owner/operator, or an authorized representative of the owner shall sign in the space provided. This signature certifies that the signer believes that all information submitted is true, accurate, and complete, and that the training program specified in Section IX has been implemented
490-76. REPRESENTING – Check the appropriate box to indicate whether the signer is the UST owner/operator, the UST facility owner/operator, or an authorized representative of the owner.
490-77. DATE Enter the date the plan was signed.
490-78. APPLICANT NAME – Print or type the name of the person signing the plan.
490-79. APPLICANT TITLE – Enter the title of the person signing the plan.

UST Monitoring Plan – Page 2 Instructions

Complete a separate UST Monitoring Plan for each UST monitoring system at the facility. This form must be submitted with your initial UST Operating Permit Application and within 30 days of changes in the information it contains. Please note that your local agency may require you to obtain approval prior to installing or modifying monitoring equipment. (Note: Numbering of these instructions follows the data element numbers on the form.)

490-54a. MONITORING OF THE UNDER DISPENSER CONTAINMENT- Indicate the method used for UDC monitoring.
490-54b. SPECIFY-If 99 "Other" is checked, describe other method used.
If VI-1-1, VI-1-2 or VI-1-3 or VI-1-99 is checked, complete 490-55 to 490-64h
490-55. PANEL MANUFACTURER –Enter the name of the manufacturer of the monitoring system control panel (console). If there is no control panel (e.g., only an electrical relay box is installed) leave this space blank.
490-56. MODEL # - Enter the model number for the monitoring system control panel (console). If there is no control panel (e.g., only an electrical relay box is installed) leave this
space blank.
490-57. LEAK SENSOR MANUFACTURER – Enter the name of the manufacturer of the sensor(s).
490-58. MODEL #(S) – Enter the model number of the sensor(s) installed. If additional space is needed, use Section X.
490-59. DETECTION OF A LEAK INTO THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS. Indicate Yes or No
490-60. UDC LEAK ALARM TRIGGERS PUMP SHUTDOWN - Indicate Yes or No
490-61. FAILURE/DISCONNECTION OF UDC MONITORING SYSTEM TRIGGERS AUTOMATIC PUMP SHUTDOWN - Indicate Yes or No
490-62. UDC MONITORING STOPS THE FLOW OF PRODUCT AT THE DISPENSER - Indicate Yes or No.
490-63. UDC CONSTRUCTION - Indicate if the construction of the UDC is single-walled, or double-walled.
490-64a DOUBLE-WALLED INTERSTITIAL SPACE MONITORING - Indicate what is used to monitor the interstitial space.
490-64b LEAK WITHIN THE SECONDARY CONTAINMENT OF UDC TRIGGERS AUDIBLE AND VISUAL ALARMS - Indicate Yes or No
490-65. VII-1 ELD TESTING - Check the box if you have been notified by the State Water Resources Control Board (SWRCB) that the UST(s) covered by this plan is/are subject to Enhanced Leak Detection Requirements (i.e., UST has any single-wall component and is located within 1,000 feet of a public drinking water well).
490-66. TESTING OF SECONDARY CONTAINMENT COMPONENTS EVERY 36 MONTHS - Check the box if you have secondary containment that requires testing.
490-67. SPILL BUCKET TESTING - Check the box if you have spill buckets.
490-68a-h. VIII RECORDKEEPING -Indicate which monitoring and equipment maintenance records are maintained for this facility.
490-69a IX TRAINING STATEMENT - Check the box to verify that the statement is true.
REFERENCE DOCUMENTS MAINTAINED AT FACILITY – Check the appropriate boxes to describe reference documents maintained at the facility. Note that the first two items on the list must be kept at the facility.
490-69b. MONITORING PLAN: Indicate that this plan is kept as a reference document.
490-69c. OPERATING MANUALS FOR ELECTRONIC EQUIPMENT; Indicate that this plan is kept as a reference document
490-69d CA UST REGULATIONS - Indicate that this is kept as a reference document.
490-69e CA UST LAW - Indicate that this is kept as a reference document.
490-69f STATE WATER RESOURCES CONTROL BOARD (SWRCB) PUBLICATION - "HANDBOOK FOR TANK OWNERS - MANUAL AND STATISTICAL INVENTORY RECONCILIATION - Indicate that this is kept as a reference document.
490-69g. SWRCB PUBLICATION, "UNDERSTANDING AUTOMATIC TANK GAUGING SYSTEMS": Indicate that this is kept as a reference document
490-69h. OTHER - Indicate that other reference documents are kept
490-69i. SPECIFY-If "OTHER" is checked, enter a brief description of the other document(s) maintained at the facility. If additional space is needed, see Section X.
490-70. DESIGNATED OPERATOR TRAINING - Check this box to verify that this statement is true.
490-71. COMMENTS/ADDITIONAL INFORMATION – Make additional comments or you may attach and identify the number of additional pages of information to describe any additional UST system monitoring-related information (e.g., additional information required by your local agency). Attach any monitoring logs that you will be using for the monitoring of your tank system
490-72. NAME – Enter the name of the person who routinely conducts the monitoring and equipment maintenance under this plan
490-73. TITLE - Enter the title of the person.
490-74. NAME – Enter the name of the second person, if applicable, who routinely conducts the monitoring and equipment maintenance under this plan.
490-75. TITLE - Enter the title of the second person.
OWNER/OPERATOR SIGNATURE - The tank owner/operator, facility owner/operator, or an authorized representative of the owner shall sign in the space provided. This signature certifies that the signer believes that all information submitted is true, accurate, and complete, and that the training program specified in Section IX has been implemented.
490-76. REPRESENTING – Check the appropriate box to indicate whether the signer is the UST owner/operator, the UST facility owner/operator, or an authorized representative of the owner.
490-77. DATE – Enter the date the plan was signed
490-78. APPLICANT NAME – Print or type the name of the person signing the plan.
490-79. APPLICANT TITLE – Enter the title of the person signing the plan

FACILITY SITE ADDRESS R03 1977 SATURN AVE

CITY R04 MONTEREY PARK

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan.

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove to maintain hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material may be reused until it becomes too saturated to be effective. It will then be managed properly. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container.
- Facility personnel will determine whether or not any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, and supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON SITE, BUT AVAILABLE FOR USE IF NEEDED: (Complete only if applicable)

EQUIPMENT	LOCATION	AVAILABILITY
R10.	R20.	R30.
R11.	R21.	R31.
R12.	R22.	R32.
R13.	R23.	R33.
R14.	R24.	R34.
R15.	R25.	R35.

IV. RESPONSIBLE PERSONS

THE FOLLOWING PERSON(S) IS/ARE RESPONSIBLE FOR AUTHORIZING ANY WORK NECESSARY UNDER THIS RESPONSE PLAN:

NAME	TITLE
R40. X TRINIDAD MOSEMAN	R50. X AVP, FACILITIES MANAGER
R41. X JOE REBELO	R51. X CHIEF ENGINEER
R42.	R52.
R43.	R53.

V. INDIRECT HAZARD DETERMINATION

This information is required only when the presence of the hazardous substance can not be determined directly by the monitoring method used (e.g., where liquid level measurements in a tank annular space or secondary piping are used as the basis for leak determination).

THE FOLLOWING STEPS WILL BE TAKEN TO DETERMINE THE PRESENCE OR ABSENCE OF HAZARDOUS SUBSTANCE IN THE SECONDARY CONTAINMENT IF MONITORING INDICATES A POSSIBLE UNAUTHORIZED RELEASE:

R60.

OC CUPA

UNIFIED PROGRAM CONSOLIDATED FORM

UNDERGROUND STORAGE TANKS RESPONSE PLAN – PAGE 2

(one page per site)

VI. LEAK INTERCEPTION AND DETECTION SYSTEM

This information is required only for motor vehicle fuel UST systems constructed per the Alternate Construction Requirements of 23 CCR §2633, and only if the Leak Interception and Detection System (LIDS) does not meet the volumetric requirements of 23 CCR §2631(d)(1) through (5) (i.e., when accounting for rainfall and backfill material, the secondary containment volume is less than 100% of primary tank volume for a single UST; or in the case of multiple USTs in shared secondary containment, 150% of the largest primary tank volume or 10% of aggregate primary tank volume, whichever is greater).

ATTACH AN ADDITIONAL PAGE TO THIS PLAN CONTAINING THE FOLLOWING INFORMATION:

- The volume of the LIDS in relation to the volume of the primary container;
- The amount of time the LIDS shall provide containment related to the time between detection of an unauthorized release and cleanup of the leaked substance;
- The depth from the bottom of the LIDS to the highest anticipated level of groundwater;
- The nature of the unsaturated soils under the LIDS and their ability to absorb contaminants or to allow movement of contaminants;
- The methods and scheduling for removal of all hazardous substances which may have been discharged from primary containment and are located in the unsaturated soils between the primary containment and groundwater, including the LIDS sump.

VII. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water;
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

VIII. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

A. General Information

Facility Name: Bank Of The West Bldg No:

Site Address: 1977 Saturn St. City: Monterey Park Zip: 91755

Facility Contact Person: Joe Contact Phone No.: (323) -727-3636

Make/Mode of Monitoring System: Veeder-Root TLS 350 Date of Testing/Servicing: 10/7/2011

B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

Tank ID: #1 DIESEL EAST

- ■ In-Tank Gauging Probe. Model: MAG1
- □ Annular Space or Vault Sensor. Model:
- ■ Piping Sump / Trench Sensor(s). Model: 794380-208
- ■ Fill Sump Sensor(s). Model: 794380-208
- □ Mechanical Line Leak Detector Model:
- □ Electronic Line Leak Detector. Model:
- ■ Tank/Overfill / High-Level Sensor Mode: Flapper Valve
- □ Other (specify equipment type and model in Section E on Page 2).

Tank ID: #3 2K DIESEL

- □ In-Tank Gauging Probe Model:
- ■ Annular Space or Vault Sensor. Model: 794380-344
- ■ Piping Sump / Trench Sensor(s). Model: 794380-208
- ■ Fill Sump Sensor(s). Model: 794380-208
- □ Mechanical Line Leak Detector. Model:
- □ Electronic Line Leak Detector Model:
- □ Tank/Overfill / High-Level Sensor Model:
- □ Other (specify equipment type and model in Section E on Page 2).

Tank ID: #2 DIESEL WEST

- ■ In-Tank Gauging Probe. Model: MAG 1
- □ Annular Space or Vault Sensor. Model:
- ■ Piping Sump / Trench Sensor(s). Model: 794380-351
- ■ Fill Sump Sensor(s). Model: 794380-208
- □ Mechanical Line Leak Detector Model:
- □ Electronic Line Leak Detector Model:
- ■ Tank/Overfill / High-Level Sensor Model: Flapper Valve
- □ Other (specify equipment type and model in Section E on Page 2).

Tank ID:

- □ In-Tank Gauging Probe. Model
- □ Annular Space or Vault Sensor. Model:
- □ Piping Sump / Trench Sensor(s). Model:
- □ Fill Sump Sensor(s). Model:
- □ Mechanical Line Leak Detector. Model:
- □ Electronic Line Leak Detector Model:
- □ Tank/Overfill / High-Level Sensor. Model:
- □ Other (specify equipment type and model in Section E on Page 2).

Dispenser ID: DAY TANK

- ■ Dispenser Containment Sensor(s) Model:
- □ Shear Valve(s)
- □ Dispenser Containment Float(s) and Chain(s).

Dispenser ID:

- □ Dispenser Containment Sensor(s) Model
- □ Shear Valve(s).
- □ Dispenser Containment Float(s) and Chain(s)

Dispenser ID:

- □ Dispenser Containment Sensor(s). Model:
- □ Shear Valve(s).
- □ Dispenser Containment Float(s) and Chain(s).

Dispenser ID:

- □ Dispenser Containment Sensor(s). Model:
- □ Shear Valve(s).
- □ Dispenser Containment Float(s) and Chain(s)

Dispenser ID:

- □ Dispenser Containment Sensor(s). Model:
- □ Shear Valve(s).
- □ Dispenser Containment Float(s) and Chain(s).

Dispenser ID:

- □ Dispenser Containment Sensor(s). Model:
- □ Shear Valve(s).
- □ Dispenser Containment Float(s) and Chain(s).

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C 695033

C. **Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; (check all that apply):** ■ **System set-up** ■ **Alarm history report**

Technician Name (print): Rich Ruston Signature:

Certification No.: 5246183-vt A30050 License No.: 517336

Testing Company Name: Orange County Tank Testing Phone No.: (714) 776-0300

Testing Company Address: 225 N. Loara Street, Anaheim, CA 92801 Date of Testing/Servicing: 10/7/2011

D. Results of Testing/Servicing

Software Version Installed: 9.0

Complete the following checklist:

✔ Yes	No*	Is the audible alarm operational?
✔ Yes	No*	Is the visual alarm operational?
✔ Yes	No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
✔ Yes	No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
Yes	No* ✔ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
Yes	No* ✔ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* Sump/Trench Sensors; Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? Yes; No.
Yes	No* ✔ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? %
Yes*	✔ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
✔ Yes*	No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* Product; Water. If yes, describe causes in Section E, below.
✔ Yes	No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
✔ Yes	No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. **Comments:**

Small Amount of Water Removed at time of Inspection.

F. In-Tank Gauging / SIR Equipment:

Check this box if tank gauging is used only for inventory control.
Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

✓ Yes	No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
✓ Yes	No*	Were all tank gauging probes visually inspected for damage and residue buildup?
✓ Yes	No*	Was accuracy of system product level readings tested?
✓ Yes	No*	Was accuracy of system water level readings tested?
✓ Yes	No*	Were all probes reinstalled properly?
✓ Yes	No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In the Section H, below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD): ✓ Check this box if LLDs are not installed.

Complete the following checklist:

Yes	No* N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: : 3 g.p.h.; : 0.1 g.p.h ; 0.2 g.p.h.
Yes	No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
Yes	No*	Was the testing apparatus properly calibrated?
Yes	No* N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
Yes	No* N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
Yes	No* N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
Yes	No* N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
Yes	No* N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
Yes	No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In the Section H, below, describe how and when these deficiencies were or will be corrected.**

H. Comments:

Double Wall Suction System

SWRCB. January 2006

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency

1. FACILITY INFORMATION

Facility Name: Bank Of The West	Date of Testing: 10/7/2011
Facility Address: 1977 Saturn St.	
Facility Contact: Joe	Phone: 323-727-3636
Date Local Agency Was Notified of Testing:	
Name of Local Agency Inspector *(if present during testing)*: WARREN WATANABE	

2. TESTING CONTRACTOR INFORMATION

Company Name: ORANGE COUNTY TANK TESTING
Technician Conducting Test: Rich Ruston
Credentials [1]: ☐ CSLB Contractor ■ ICC Service Tech. ☐ SWRCB Tank Tester ☐ Other *(Specify)*
License Number(s): 517336 UT

3. SPILL BUCKET TESTING INFORMATION

Test Method Used: ■ Hydrostatic ☐ Vacuum ☐ Other

Test Equipment Used: VISUAL — Equipment Resolution:

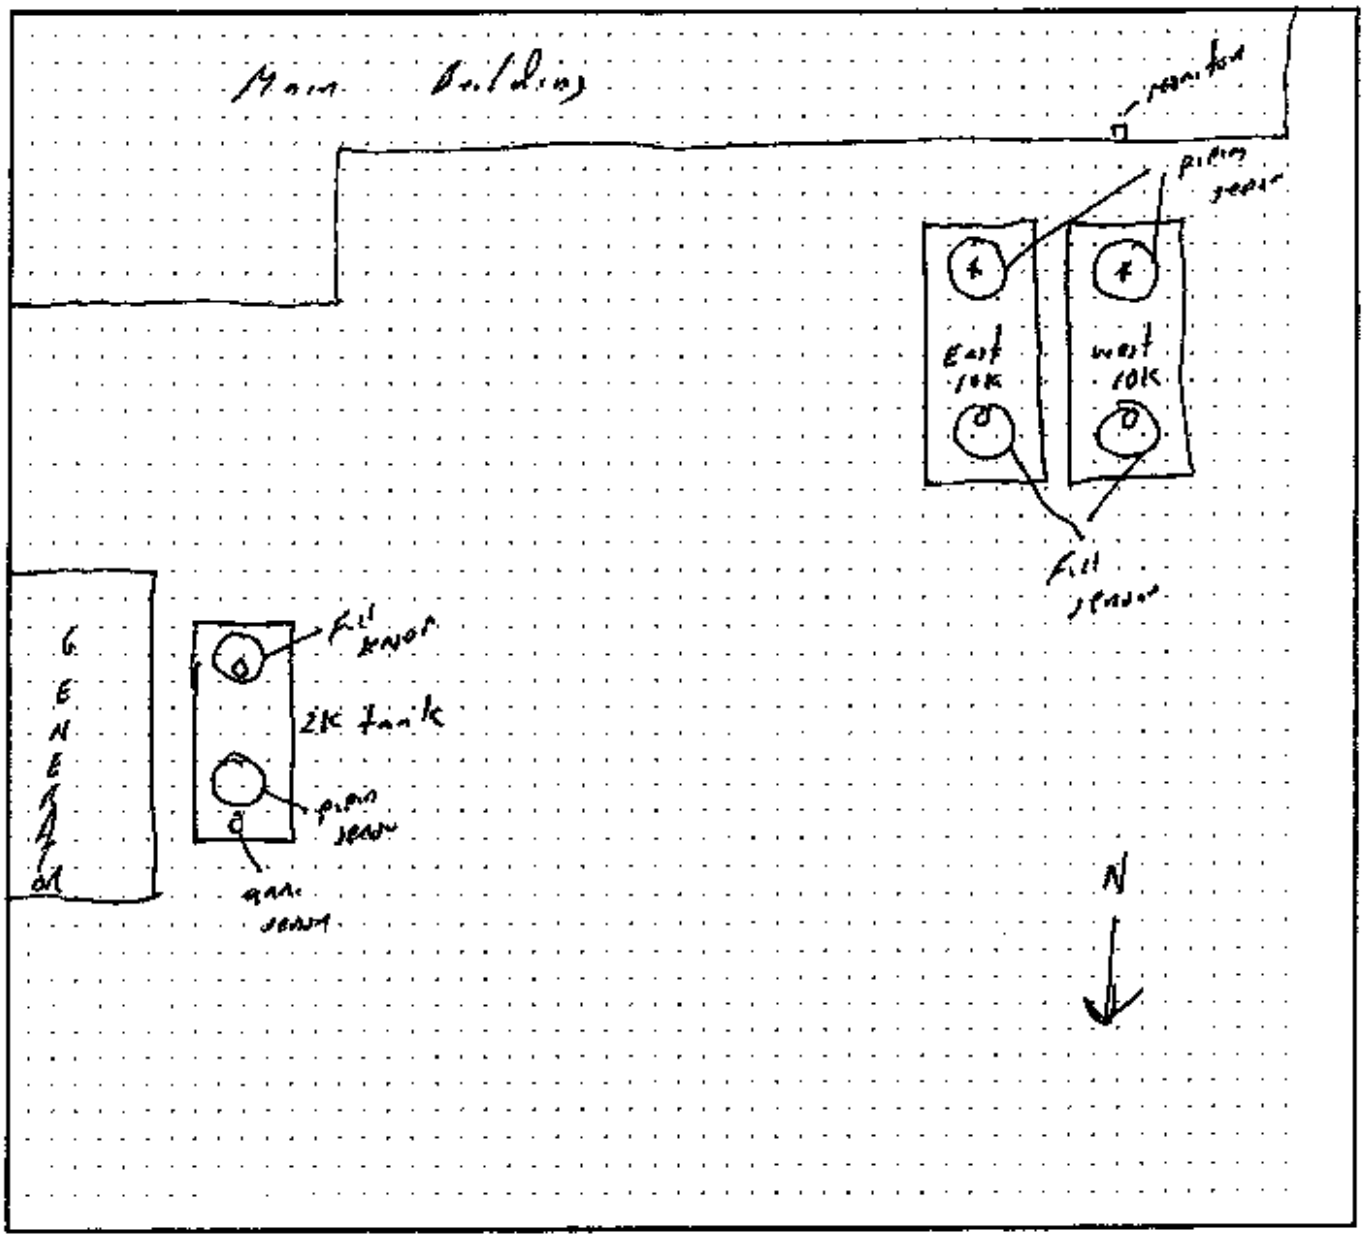
CERTIFICATION OF TECHNICIAN RESPONSIBLE FOR CONDUCTING THIS TESTING



I hereby certify that all the information contained in this report is true, accurate, and in full compliance with legal requirements.

Technician's Signature: _____ Date: 10/7/11

[1] State laws and regulations do not currently require testing to be performed by a qualified contractor. However, local requirement

UST Monitoring Site Plan

Site Address: 1977 Safeway

Date map was drawn: 10/24/07

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Testing Company Address: 225 N. Logre Street, Anaheim, CA 92801 Date of Testing/Servicing: 10/12/2012

D. Results of Testing/Servicing

Software Version Installed: 9.00

Complete the following checklist:

✓ Yes	No*	Is the audible alarm operational?
✓ Yes	No*	Is the visual alarm operational?
✓ Yes	No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
✓ Yes	No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
Yes	No* ✓ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
Yes	No* ✓ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes, which sensors initiate positive shutdown? (Check all that apply) Sump/Trench Sensors; Dispenser Containment Sensors. Did you confirm positive shutdown due to leaks and sensor failure/disconnection? Yes No
Yes	No* ✓ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? %
Yes*	✓ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
✓ Yes*	No	Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) Product; ✓ Water. If yes, see Section E, below.
✓ Yes	No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set-up reports, if applicable.
✓ Yes	No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments:

* Small Amount of Liquid found in 2K Diesel Tank. Removed at time of Inspection.

* Overfill Probes tested with Sump test on this date

F. In-Tank Gauging / SIR Equipment: ☐ Check this box if tank gauging is used only for inventory control.
☐ Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

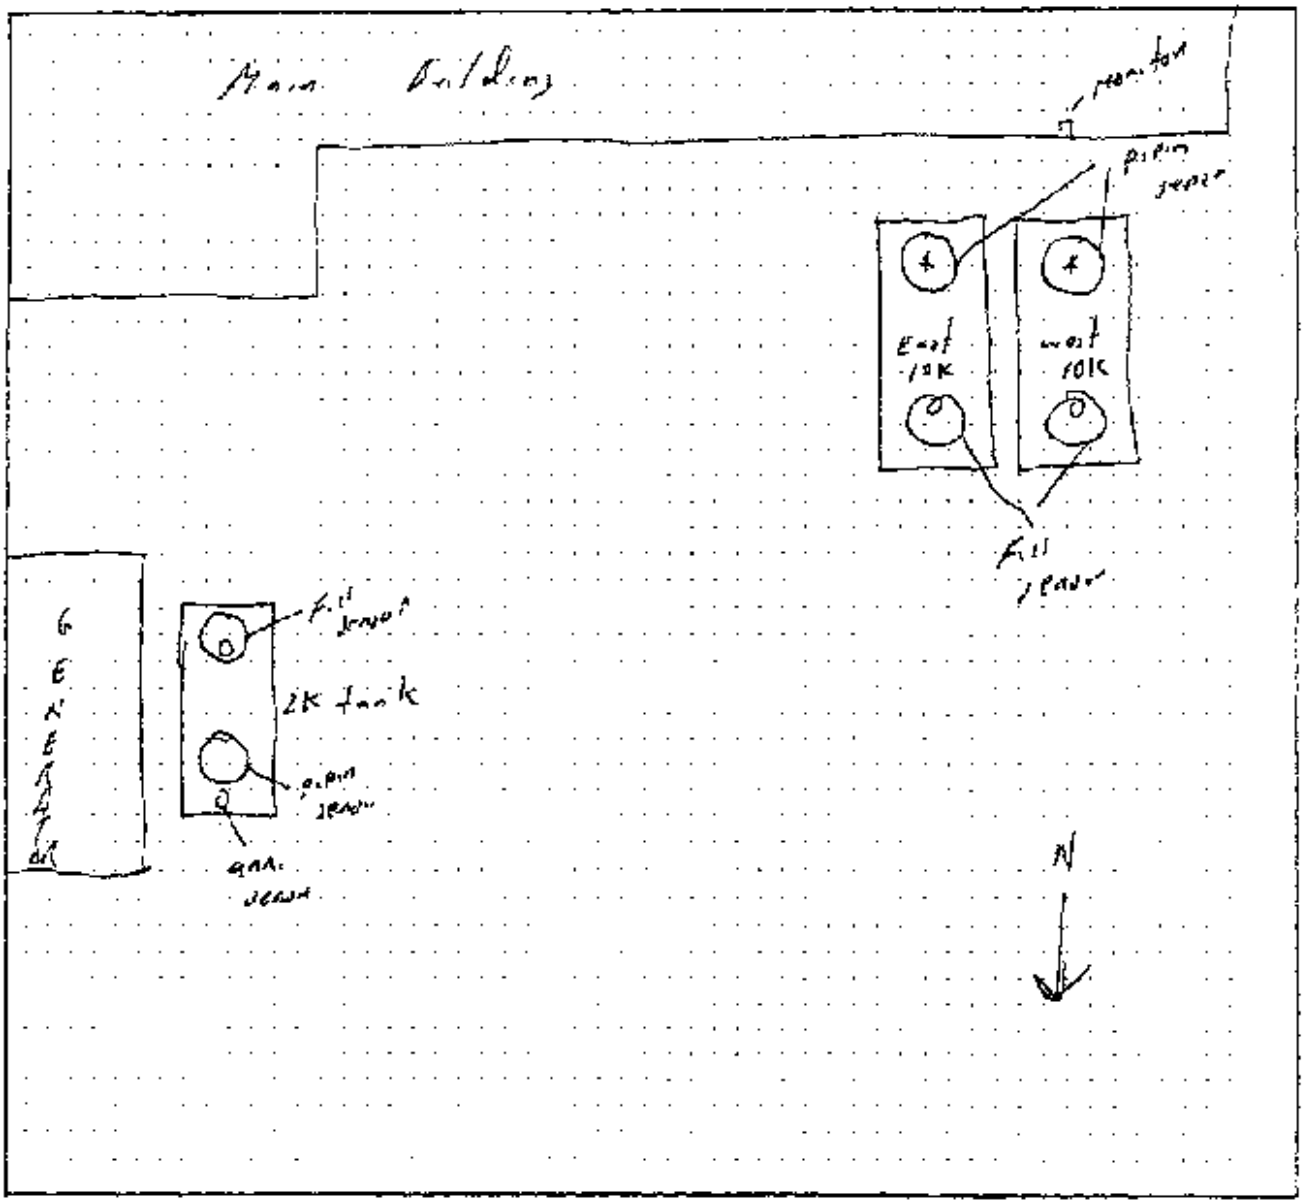
✓ Yes ☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?	
✓ Yes ☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?	
✓ Yes ☐ No*	Was accuracy of system product level readings tested?	
✓ Yes ☐ No*	Was accuracy of system water level readings tested?	
✓ Yes ☐ No*	Were all probes reinstalled properly?	
✓ Yes ☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?	

*In the Section H, below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD): ✓ Check this box if LLDs are not installed.

Complete the following checklist:

☐ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: ☐ 3 g.p.h. ☐ 0.1 g.p.h. ☐ 0.2 g.p.h.
☐ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☐ Yes	☐ No*	Was the testing apparatus properly calibrated?
☐ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?



*In the Section H, below, describe how and when these deficiencies were or will be corrected.

H. Comments:

Double Wall Suction System.

UST Monitoring Site Plan

Site Address: 1977 Safeway

Date map was drawn: 10/24/07

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Secondary Containment Testing Report Form

This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name:	Bank of the West	Date of Testing:	10/12/12
Facility Address:	1977 Saturn St, Monterey Park, CA 91755		
Facility Contact:		Phone:	
Date Local Agency Was Notified of Testing :		8/31/12 Notification # 3832	
Name of Local Agency Inspector *(if present during testing)*		Miguel Cervantes LA County Public Works	

2. TESTING CONTRACTOR INFORMATION

Company Name:	Clean Air Testing		
Technician Conducting Test:	Steven Loara		
Credentials:	x CSLB Licensed Contractor	SWRCB Licensed Tank Tester	
License Type:	C61 D40	License Number: 474291	

NOV 2012

Manufacturer Training

Manufacturer	Component(s)	Date Training Expires
ICC	California Service Tech – 8122800-UT	4/14/14
INCON	Level 4 Sump Test System – 559 163703	4/20/14

3. SUMMARY OF TEST RESULTS

Component	Pass	Fail	Not Tested	Repairs Made	Component	Pass	Fail	Not Tested	Repairs Made
W. Diesel Fill Bucket	X				2K Annular	X			
W. Diesel Fill Sump	X				2K Fill Sump		X		
W. Diesel STP Sump	X				2K STP Sump	X			
W. Diesel Secondary Supply	X				2K Sec.Supply to Day Tank	X			
W. Diesel Secondary Vent	X				2K Sec Return from Day Tank	X			
W. Diesel Secondary Return	X				2K Fill Bucket	X			
E. Diesel Fill Bucket	X				2K Vent Secondary	X			
E. Diesel Fill Sump	X								
E. Diesel STP Sump		X							
E. Diesel Secondary Supply	X								
E. Diesel Secondary Vent	X								
E. Diesel Secondary Return	X								

If hydrostatic testing was performed, describe what was done with the water after completion of tests:

Water kept in trailer mounted tank for re-use

CERTIFICATION OF TECHNICIAN RESPONSIBLE FOR CONDUCTING THIS TESTING

To the best of my knowledge, the facts stated in this document are accurate and in full compliance with legal requirements

Technician's Signature: _____ Date: 10/12/12

4. TANK ANNULAR TESTING

Test Method Developed By:	☐ Tank Manufacturer	x Industry Standard	☐ Professional Engineer
	☐ Other *(Specify)*		
Test Method Used:	☐ Pressure	x Vacuum	☐ Hydrostatic
	☐ Other *(Specify)*		
Test Equipment Used: Liquid filled vacuum gauge		Equipment Resolution: 0 to-30 Hg	1/10

	Tank 2K Diesel	Tank DSL West	Tank DSL East	Tank
Is Tank Exempt From Testing?	No	Yes	Yes	
Tank Capacity:	2,000	Single Wall	Single Wall	
Tank Material:	Steel/FRP			
Tank Manufacturer:	Modern Welding			
Product Stored:	Diesel			
Wait time between applying pressure/vacuum/water and starting test:	10 Min			
Test Start Time:	12:00			
Initial Reading (R_I):	-10.1 HG			
Test End Time:	1:00			
Final Reading (R_F):	-10.1 HG			
Test Duration:	1 Hr			
Change in Reading (R_F-R_I):	0			
Pass/Fail Threshold or Criteria:	0			
Test Result:	Pass	NA	NA	
Was sensor removed for testing?	Yes			
Was sensor properly replaced and verified functional after testing?	Yes			

Comments – *(include information on repairs made prior to testing, and recommended follow-up for failed tests)*

[1] Secondary containment systems where the continuous monitoring automatically monitors both the primary and secondary containment, such as systems that are hydrostatically monitored or under constant vacuum, are exempt from periodic containment testing. (California Code of Regulations, Title 23, Section 2637(a)(6))

5. SECONDARY PIPE TESTING

Test Method Developed By:	☐ Piping Manufacturer	x Industry Standard	☐ Professional Engineer
	☐ Other *(Specify)*		
Test Method Used:	x Pressure	☐ Vacuum	☐ Hydrostatic
	☐ Other *(Specify)*		
Test Equipment Used: Liquid filled pressure gauge		Equipment Resolution: 0-15 Psi 1/10

(Copies of Monitoring System Certification Form and UST Monitoring Plot Plan available at http://www.waterboards.ca.gov)

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

A. General Information

Facility Name: Bank Of The West Bldg No.

Site Address: 1977 Saturn St. City: Monterey Park Zip: 91755

Facility Contact Person: Joe Robelo Contact Phone No.: (323) 727-3636

Make/Model of Monitoring System: Veeder-Root TLS350 Date of Testing/Servicing: 10/11/2013

B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

Tank ID: #1 EAST DIESEL	Tank ID: #2 DIESEL
☑ In-Tank Gauging Probe — Model: MAG1	☐ In-Tank Gauging Probe — Model:

D. Results of Testing/Servicing

Software Version Installed: 9.00

Complete the following checklist:

✓ Yes	No*	Is the audible alarm operational?
✓ Yes	No*	Is the visual alarm operational?
✓ Yes	No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
✓ Yes	No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
Yes	No* ✓ N/A	If alarms are relayed to a remote monitoring station, is all communication equipment (e.g. modem) operational?
Yes	No* ✓ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes, which sensors initiate positive shut-down? *(Check all that apply)* Sump/Trench Sensors; Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failures set to operate? Yes No
Yes	No* ✓ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? %
Yes*	✓ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
Yes*	✓ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* Product; Water. If yes, describe causes in Section E, below.
✓ Yes	No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set-up reports, if applicable.
✓ Yes	No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments:

F. **In-Tank Gauging / SIR Equipment:** Check this box if tank gauging is used only for inventory control. Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

✓ Yes	No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
✓ Yes	No*	Were all tank gauging probes visually inspected for damage and residue buildup?
✓ Yes	No*	Was accuracy of system product level readings tested?
✓ Yes	No*	Was accuracy of system water level readings tested?
✓ Yes	No*	Were all probes reinstalled properly?
✓ Yes	No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

G. **Line Leak Detectors (LLD).** ✓ Check this box if LLDs are not installed.

Complete the following checklist:

Yes	No* N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: 3 g p h 0.1 g p h 0.2 g p h
Yes	No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
Yes	No*	Was the testing apparatus properly calibrated?
Yes	No* N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
Yes	No* N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
Yes	No* N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
Yes	No* N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
Yes	No* N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
Yes	No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

H. **Comments:**

Double Wall Suction System for Emergency Generators

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name: Bank Of The West	Date of Testing: 10/11/2013
Facility Address: 1977 Saturn St	
Facility Contact: Joe	Phone: 323-727 3636
Date Local Agency Was Notified of Testing:	
Name of Local Agency Inspector *(If present during testing)*:	

2. TESTING CONTRACTOR INFORMATION

Company Name: ORANGE COUNTY TANK TESTING	
Technician Conducting Test: Rich Ruston	
Credentials [1]: ☑ CSLB Contractor ☑ ICC Service Tech. ☐ SWRCB Tank Tester ☐ Other *(Specify)*	
License Number(s): 517336	5246183-UC

3. SPILL BUCKET TESTING INFORMATION

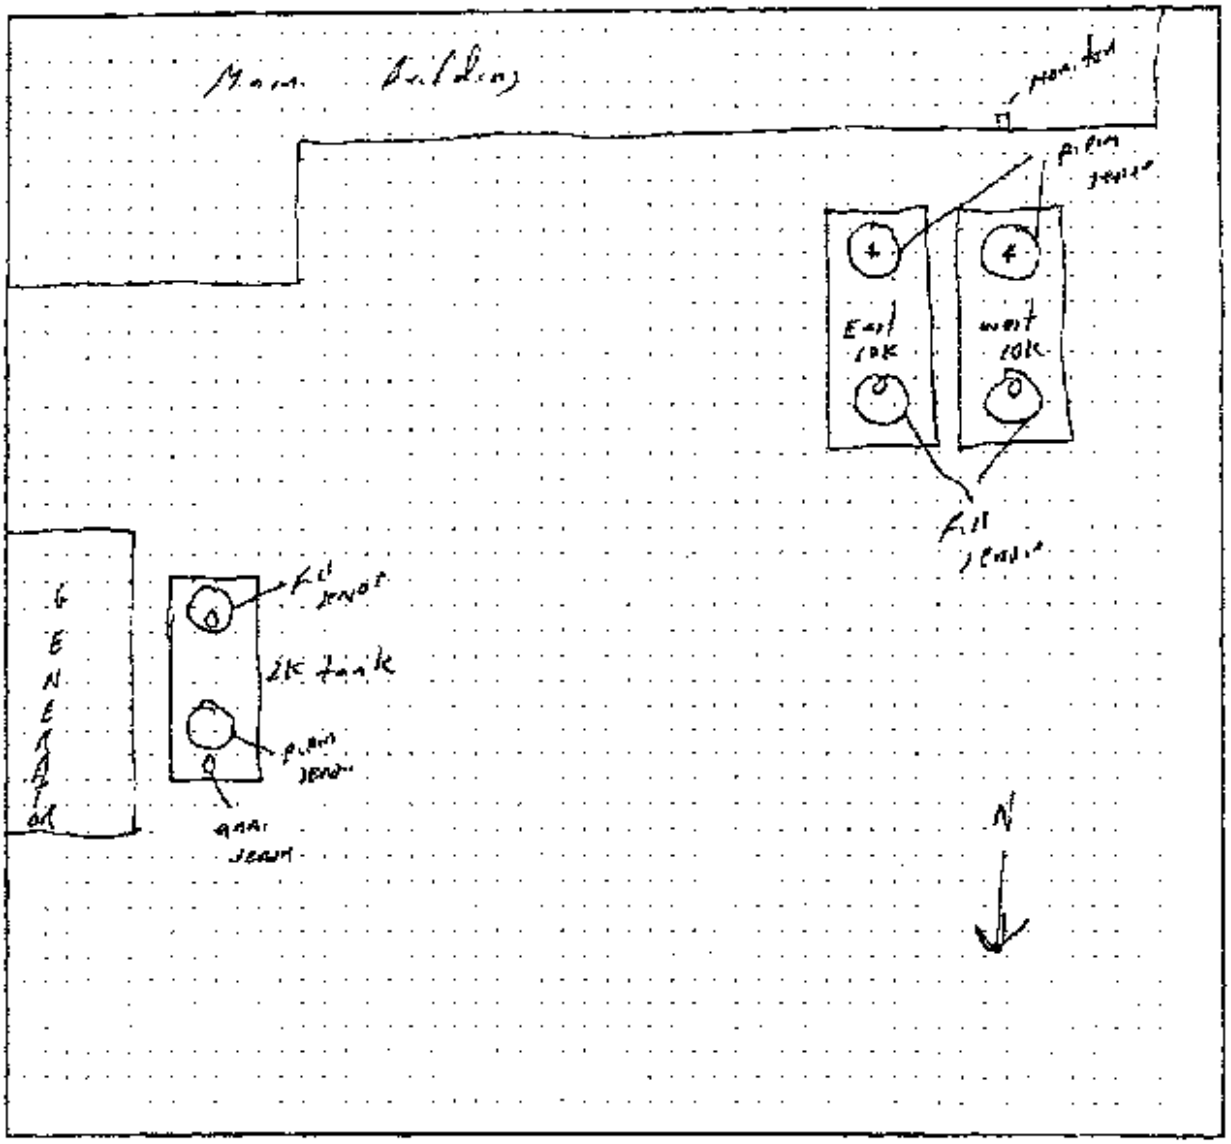
Test Method Used: ☑ Hydrostatic ☐ Vacuum ☐ Other

Test Equipment Used: Visual — Equipment Resolution:

Identify Spill Bucket *(By Tank Manifold, Stored Product, etc.)*	1 W. Diesel	2 E. Diesel	3 ZK Diesel	4
Bucket Installation Type:	☐ Direct Bury ☑ Contained in Sump	☐ Direct Bury ☑ Contained in Sump	☐ Direct Bury ☑ Contained in Sump	☐ Direct Bury ☐ Contained in Sump
Bucket Diameter	12"	12"	12"	
Bucket Depth:	14"	14"	13"	
Wait time between applying vacuum/water and start of test:	15 MIN.	15 MIN.	15 MIN.	15 MIN.
Test Start Time (T_S):	9:00	9:00	9:00	
Initial Reading (R_I):	13.5"	12.5"	11.75"	
Test End Time (T_E):	10:00	10:00	10:00	
Final Reading (R_F):	13.5"	12.5"	11.75"	
Test Duration ($T_E - T_S$):	1HR.	1HR	1HR	
Change in Reading ($R_F - R_I$):	-.00	-.00	-.00	
Pass/Fail. Threshold or Criteria:	± .00	± .00	± .00	
Test Result:	☑ Pass ☐ Fail	☑ Pass ☐ Fail	☑ Pass ☐ Fail	☐ Pass ☐ Fail

Comments *(include information on repairs made prior to testing, and recommended follow-up for failed tests)*

CERTIFICATION OF TECHNICIAN RESPONSIBLE FOR CONDUCTING THIS TESTING



I hereby certify that all the information contained in this report is true, accurate, and in full compliance with legal requirements.

Technician's Signature: _____ Date: 10/11/13

[1] State laws and regulations do not currently require testing to be performed by a qualified contractor. However, local requirement may be more stringent.

UST Monitoring Site Plan

Site Address: 1477 Salinas

Date map was drawn: 11/24/07

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: in-tank monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

STORAGE TANK CERTIFICATE OF INSURANCE TO DEMONSTRATE FINANCIAL RESPONSIBILITY STATE OF CALIFORNIA

Facility Name and Address:
Monterey Park Service Center (Data Center) located at 1977 Saturn Street in Monterey Park, CA 91755

Insurer Name and Address:
ACE American Insurance Company c/o ACE Environmental Risk, P.O. Box 1000, 436 Walnut Street WA07A, Philadelphia, PA 19106

Policy Number: UST G27168747 001

RECEIVED

NOV 06 2013

DEPARTMENT OF PUBLIC WORKS ENVIRONMENTAL PROGRAM

Policy Period:
From 12:01am December 5, 2012 to 12:01am December 5, 2013

Insured Name and Address:
Bank of the West located at 2527 Camino Ramon NC-B07-2L-I in San Ramon, CA 94583

I. The Insurer, as identified above, hereby certifies that it has issued liability insurance covering the following Underground Storage Tanks:

Facility	Identification No.	Number of Tanks
Monterey Park Service Center (Data Center)	N/A	3

for taking corrective action and/or compensating third parties for bodily injury and property damage caused by either sudden accidental releases or non-sudden accidental releases or accidental releases in accordance with and subject to the limits of liability, exclusions, conditions, and other terms of the Policy arising from operating the underground storage tanks identified above.

The Limits of Liability are:

a.	$1,000,000	Each Occurrence
b.	$2,000,000	Annual Aggregate

exclusive of legal defense costs, which are subject to a separate limit under the policy. This coverage is provided under policy number UST G27168747 001. The effective date of said policy is December 5, 2012

II. The Insurer further certifies the following with respect to the insurance described in Paragraph I:

A. Bankruptcy or insolvency of the insured shall not relieve the Insurer of its obligations under the Policy to which this certificate applies.

B. The Insurer is liable for the payment of amounts within any deductible applicable to the Policy to the provider of corrective action or a damaged third party, with a right of reimbursement by the insured for any such payment made by the Insurer. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95-280.102.

C. Whenever requested by a Director of an implementing agency, the Insurer agrees to furnish to the Director a signed duplicate original of the Policy and all endorsements.

ACE USA Copyright 2007

D. Cancellation or any other termination of the Insurance by the Insurer, except for non-payment of premium or misrepresentation by the Insured will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the Insured. Cancellation for non-payment of premium or misrepresentation by the Insured will be effective only upon written notice and only after expiration of a minimum of 10 days after a copy of such written notice is received by the Insured.

E. The Insurance covers claims otherwise covered by the Policy that are reported to the Insurer within six months of the effective date of cancellation or non-renewal of the Policy except where the new or renewed Policy has the same Retroactive Date or a Retroactive Date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the Policy Retroactive Date, if applicable, and prior to such renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the Policy.

I hereby certify that the wording of this instrument is identical to the wording in 40 CFR 280.97 (b) (2) and that the Insurer is eligible to provide insurance as an excess or surplus lines insurer in one or more states

Appendix VI

(Copies of Monitoring System Certification form and UST Monitoring Plot Plan available at http://www.waterboards.ca.gov.)

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

A. General Information

Facility Name: Bank Of The West Bldg. No: _____

Site Address: 1977 Saturn St. City: Monterey Park Zip: 91755

Facility Contact Person: Joe Robelo Contact Phone No.: (323) -727-3636

Make/Model of Monitoring System: Veeder-Root TLS 350 Date of Testing/Servicing: 10/10/2014

B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

Tank ID: #1 Diesel EAST TANK ☑ In-Tank Gauging Probe. Model: MAG ☐ Annular Space or Vault Sensor. Model: _____ ☑ Piping Sump / Trench Sensor(s). Model: 794390-357 ☑ Fill Sump Sensor(s). Model: 794380-208 ☐ Mechanical Line Leak Detector. Model: _____ ☐ Electronic Line Leak Detector. Model: _____ ☑ Tank Overfill / High-Level Sensor. D. Results of Testing/Servicing

Software Version Installed: 9.00

Complete the following checklist:

✓ Yes	☐ No*	Is the audible alarm operational?
✓ Yes	☐ No*	Is the visual alarm operational?
✓ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
✓ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ✓ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☐ Yes	☐ No* ✓ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes, which sensors initiate positive shut-down? *(Check all that apply)* ☐ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☐ Yes; ☐ No.
☐ Yes	☐ No* ✓ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? ____%.
☐ Yes*	✓ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	✓ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
✓ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable.
✓ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments:

Double Wall Safe Suction System for Emergency Generators

F. **In-Tank Gauging / SIR Equipment:**

☐ Check this box if tank gauging is used only for inventory control.
☐ Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☑ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☑ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☑ Yes	☐ No*	Was accuracy of system product level readings tested?
☑ Yes	☐ No*	Was accuracy of system water level readings tested?
☑ Yes	☐ No*	Were all probes reinstalled properly?
☑ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In the Section H, below, describe how and when these deficiencies were or will be corrected.**

G. **Line Leak Detectors (LLD):** ☑ Check this box if LLDs are not installed.

Complete the following checklist:

☐ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☐ 3 g.p.h.; ☐ 0.1 g.p.h.; ☐ 0.2 g.p.h.
☐ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☐ Yes	☐ No*	Was the testing apparatus properly calibrated?
☐ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In the Section H, below, describe how and when these deficiencies were or will be corrected.**

H. **Comments:**

Double Wall Steel Suction System.

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name: Bank Of The West	Date of Testing: 10/10/2014
Facility Address: 1977 Saturn St.	
Facility Contact: Joe Robello	Phone: 323-727-3636
Date Local Agency Was Notified of Testing:	
Name of Local Agency Inspector *(if present during testing)*	

2. TESTING CONTRACTOR INFORMATION

Company Name: ORANGE COUNTY TANK TESTING	
Technician Conducting Test: Rich Ruston	
Credentials[1]: ☐ CSLB Contractor ☑ ICC Service Tech. ☑ SWRCB Tank Tester ☐ Other *(Specify)*	
License Number(s): 517336 524182-UT	

3. SPILL BUCKET TESTING INFORMATION

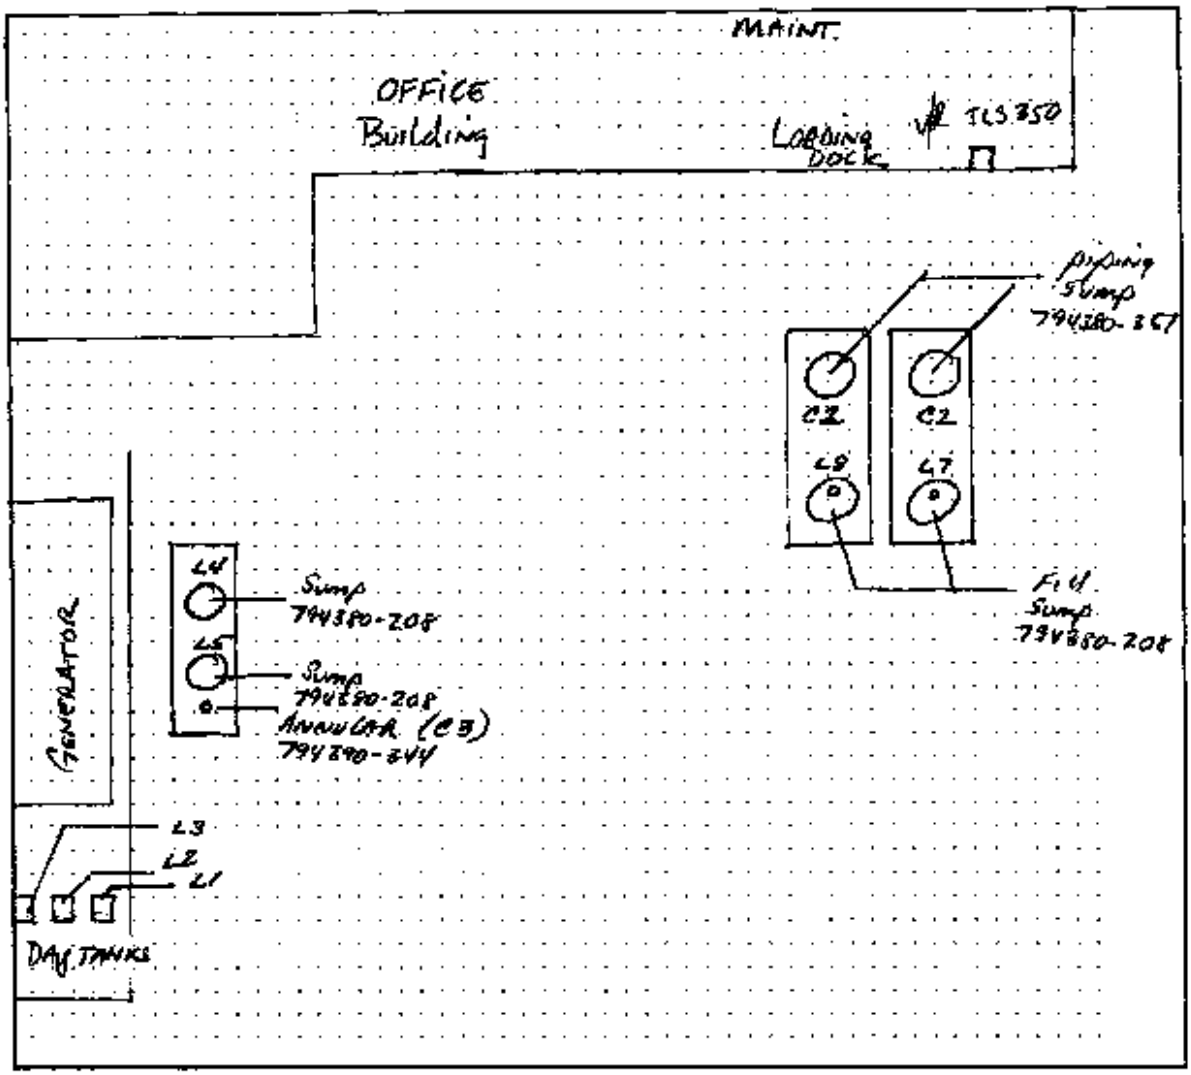
Test Method Used: ☑ Hydrostatic ☐ Vacuum ☐ Other

Test Equipment Used: Visual — Equipment Resolution:

Identify Spill Bucket: *(By Tank Number, Stored Product, etc.)*	1 W. Diesel Fill	2 E. Diesel Fill	3	4
Bucket Installation Type:	☐ Direct Bury ☑ Contained in Sump	☐ Direct Bury ☑ Contained in Sump	☐ Direct Bury ☐ Contained in Sump	☐ Direct Bury ☐ Contained in Sump
Bucket Diameter	12"	12"		
Bucket Depth:	14"	14"		
Wait time between applying vacuum/water and start of test:	15 MIN.	15 MIN.	15 MIN	15 MIN
Test Start Time (T_i):	9:00	9:00		
Initial Reading (R_i):	13.25"	12.75		
Test End Time (T_f):	10:00	10:00		
Final Reading (R_f):	13.25"	12.75		
Test Duration ($T_f - T_i$):	1HR	1HR		
Change in Reading ($R_f - R_i$):	-.00	-.00		
Pass/Fail Threshold or Criteria:	±.00	±.00		
Test Result:	☑ Pass ☐ Fail	☑ Pass ☐ Fail	☐ Pass ☑ Fail	☐ Pass ☐ Fail

Comments - *(include information on repairs made prior to testing, and recommended follow up for failed tests)*

CERTIFICATION OF TECHNICIAN RESPONSIBLE FOR CONDUCTING THIS TESTING



I hereby certify that all the information contained in this report is true, accurate, and in full compliance with legal requirements.

Technician's Signature: _____ Date: 10/10/14

[1]State laws and regulations do not currently require testing to be performed by a qualified contractor. However, local requirements may be more stringent.

UST Monitoring Site Plan

Site Address: 1977 Saturn St., Monterey Park, California 91755

Date map was drawn 10 / 10 / 14

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels, sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

		SINGLE WALLED TANK MONITORING						☐ Check this box is following section is N/A									
60	2010002D	Do they have written monitoring and maintenance records on-site or off-site at a readily available location if approved			✓			✓			✓						
61	2030004	Automatic tank gauge test the tank at least once per month at 0.1 gallons per hour			✓			✓			✓						
62	2030005	The 0.2 gallons per hour continuous in tank leak detection performed			✓		✓			✓							
63	2030006A	Monthly 0.2 gallons per hour automatic tank gauging performed			✓			✓			✓						
64	2030006B	Did the automatic tank gauge generate and print a hard copy of the monthly 0.2 gph test					✓			✓							
65	2060004A	Is UST corrosion protection installed			✓			✓			✓						
66	2060004B	Does field-installed cathodic protection meet the consensus standards			✓			✓			✓						
67	2030009A	Was the impressed-current system inspected every 60 calendar days			✓			✓			✓						
68	2030009C	Was the impressed-current system inspected by a cathodic protection tester within six months of installation and at least every three years thereafter			✓			✓			✓						
69	2030009D	Were the sacrificial anodes checked by a cathodic protection tester once every three years in accordance with the manufacturer's instructions			✓			✓			✓						
70	2030015	Facility exhibited that the method used to monitor the tank meets the monitoring methods in 2643(f)			✓			✓			✓						
71	2060002	Automatic tank gauging/continuous in tank leak detection system installed/properly functioning			✓			✓			✓						
		DOUBLE WALLED PRE 2003 TANKS						☐ Check this box is following section is N/A									
72	2060005	Was system constructed with a monitoring system capable of detecting entry into secondary containment		✓				✓			✓						
		TANKS 2003 - PRESENT						☑ Check this box is following section is N/A									
73	2060006	Was enhanced leak detection testing performed before the tank was placed in use															
74	2060022A	Is the UST system installed on or after July 1, 2003 and before July 1, 2004, and designed and constructed with a monitoring system capable of detecting the entry of the hazardous substance stored in the primary containment into the secondary containment (Including Vent/Vapor Piping)															
75	2060022B	Is the UST system installed on or after July 1, 2003 and before July 1, 2004, and capable of detecting water intrusion into the secondary containment (Including Vent/Vapor Piping)															
76	2030065	Is the interstitial space maintained under constant vacuum, pressure, or hydrostatic conditions, such that a breach in the primary or secondary containment is detected before the liquid or vapor phase of the hazardous substance stored in the UST tank is released into the environment? (VPH - 7/2004)															
77	2060023	Is the UST system installed on or after July 1, 2004, and designed and constructed so as to detect the entry of the liquid or vapor-phase of the hazardous substance stored in the primary containment into the secondary containment and capable of detecting water intrusion into the secondary containment (VPH)															
		SPILL BUCKETS															
78	2060020A	Are spill buckets installed			✓		✓			✓							
79	2060020B	Does the spill bucket/container have a functional drain valve or other liquid removal method			✓		✓			✓							
80	2060020C	Is the spill bucket resistant to galvanic corrosion			✓		✓			✓							
		SUMPS															
81	2030008C	Are the sumps in good condition		✓			✓			✓							
82	2030008D	Are the sumps free of debris/liquid		✓			✓			✓							
83	2030008E	Is the secondary containment in good condition		✓			✓			✓							
84	2030008F	Is the secondary containment free of debris/liquid		✓			✓			✓							
85	2030040	Is the secondarily contained piping allowed to drain back into the sump in the event of a leak		✓			✓			✓

86	2030016C	Are the sumps continuously monitored such that the leak detection activates an audible/visual alarm when a leak is detected		✓			✓			✓							
87	2030062	Is leak detection equipment set up such that the monitoring system would detect a leak at the earliest opportunity and/or alert the owner/operator of a leak (** exludes test port location at 6 o'clock postion, see line 130)		✓			✓			✓							
88	2060015	Are the sensors located in the proper position/location		✓			✓			✓							
		UDC															
89	2030008A	Are the UDCs in good condition	H/B														
90	2030008B	Are the UDCs free of debris/liquid	↓														
		Sensor Model # or Type	↓														
		OVERFILL PROTECTION															
91	2030035	Was the UST system operated to prevent spills and/or overfills		✓			✓			✓							
92	2030036A	**Overfill prevention system to meet one of the following requirements:** 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm (Ball float or external alarm at 90%); **or**			✓			✓			✓						
93	2030036B	2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills (Ball float and external alarm); **or**			✓			✓			✓						
94	2030036C	3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity (Flapper at 95%); **or**		✓			✓			✓							
95	2030036D	4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling (Flapper below tank top fitting)		✓			✓			✓							
		LINE LEAK DETECTORS															
96	2030075	Does the emergency generator system meet requirement for no LLD: system has audible and visual alarm, monitoring system is checked daily and/or logged.			✓			✓			✓						
97	2060012	Does the pressurized piping system have a line leak detector installed			✓			✓			✓						
		PIPING															
		Single walled Pressurized Piping — ✓ Check this box is following section is N/A															
98	2030027	Does the pump shut down when a leak is detected or when line leak detector is disconnected (Positive shutdown/failsafe)															
99	2030052	Was pressurized pipe containing motor vehicle fuel monitored at least hourly at any pressure and a 0.2 gph monthly line integrity test or 0.1 gph annual line integrity test performed															
		Single Walled Conventional Suction Piping — ✓ Check this box is following section is N/A															
100	2030049	Was daily monitoring conducted for air in the pipe and were the results logged															
101	2030050	Was a 0.1 gph piping integrity test conducted every three years															
		Single Walled Gravity Piping — ✓ Check this box is following section is N/A															
102	2030051	Was a 0.1 gph piping integrity test or overfill integrity test conducted every two yrs.															
		Single Walled Safe Suction Piping — ✓ Check this box is following section is N/A															
103	2030053A	Does piping drain back into UST if the suction is released															
104	2030053B	Does piping have a check valve on the piping located directly below the suction pump															
		Double Walled Pressurized Piping — ✓ Check this box is following section is N/A															
105	2030042A	Was an annual line integrity test performed for pressurized pipe that does not utilize fail safe or shut down															
106	2030042B	Was a passing result achieved on the annual line integrity test for pressurized pipe that does not utilize fail safe or shut down															
107	2030016B	Is the piping continuously monitored such that the leak detection activates an audible/visual alarm when a leak is detected															
108	2030017	Product piping outside the UDC is fail-safe and shuts down the pump or restricts flow

ENVIRONMENTAL PROGRAMS DIVISION
NOTICE OF VIOLATION ORDER TO COMPLY

Date 11-2-17 Permit 847830

Owner-Operator DEAN CHRISTIAN Facility 006994-6627 062151

Site Name 1977 SATURN ST Violation # 875125

Site Address 1977 SATURN ST City, Zip MONTEREY PARK, 91755

Mailing Address 801 N BRAND AVE SUITE 220 City, Zip GLENDALE 91203

A recent inspection of your facility revealed the following conditions and/or practices relating to hazardous substance underground storage tanks (UST) which are in violation of California Health and Safety Code (CH&SC) Chapter 6.7 and/or Title 31 Los Angeles County Code (LACC) Title 31, Division 4 and/or the conditions and limitations of the above permit. YOU ARE HEREBY DIRECTED to submit to this office indicated below the following items checked:

☐ OPERATING WITHOUT A CERTIFIED/OPERATING MONITORING SYSTEM – CH&SC 25293

YOU ARE HEREBY DIRECTED to have the monitoring system and the UST system certified immediately and the results reviewed by this office no later than 7 Days from the date of this Notice or the contents of all UST systems are to be removed within this time period.

☑ MISSING TEST RESULTS / DOCUMENTS – Required testing/documentation must be conducted and results reviewed by this office:

- ☑ Secondary Containment Testing (6 MONTH PIST PIPING)
- ☐ Tank Integrity Testing
- ☐ Corrosion Protection Certification
- ☐ API 2481 Testing
- ☐ Line Testing
- ☐ Line Leak Detector Testing
- ☐ Facility Employee Training
- ☐ Missing Designated Operator Monthly Form(s)
- ☐ _____

☑ REQUIRED DOCUMENTS / ITEMS MUST BE SUBMITTED TO THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS) –

- ☐ Facility Information Page
- ☐ Tank Information Page
- ☐ Tank Plot Plan
- ☑ Financial Responsibility Certification (EXPIRED)
- ☐ Other Financial Officer Letter
- ☐ Owner Statement of Designated Operator
- ☑ Monitoring Plan
- ☐ Response Plan
- ☐ Owner/Operator Agreement
- ☑ Corrections needed as of time in the attached CERS printout
- ☐ _____

☑ OTHER

- YOU MUST RESUBMIT THE SB989 RESULTS DATED 04/26/17 TO HAVE THE CORRECT TEST DATE. THE TEST WAS ACTUALLY PERFORMED ON 04/18/17.
- YOU MUST RESUBMIT THE SB989 RESULTS DATED 11/22/16 TO INCLUDE THE ANNULAR SPACE (2K DIESEL) ON THE SUMMARY PAGE.
- YOU MUST RESUBMIT THE 6 MONTH PIST REPAIR SB989 TEST FOR THE REPAIRED SUMPS AND DIESEL SPILL BUCKET. REPAIR TEST DATE INITIAL RETURN TEST DATE WAS 04/26/17.

YOU ARE FURTHER DIRECTED to submit to this office below evidence of compliance with the above directives by no later than fifteen (15) days from the date of this Notice, unless otherwise noted above. Failure to comply with the Underground Storage Tank laws and regulations may subject you to civil penalties of not less than $500 or more than $5000, or by one year in county jail or both. Finally, pursuant to Title 1 of the Los Angeles County Code, Sections 1.12.045 and 11.56.060, it is a misdemeanor to violate any of the laws and regulations governing USTs, including provisions of CH&SC Division 20, Chapter 6.7 and 6.11 or Legislative findings set forth in the CCR, Title 23, Division 3, Chapter 16. Failure to comply with this Notice may therefore result in criminal prosecution. Furthermore, a penalty of up to $5000 per day may be imposed to recover the cost incurred by this Department in the enforcement of ACC.

If you have any questions regarding this matter, please contact LARRY LASTRADE ☑ Monday through Friday, 8 a.m. to 9:30 a.m. or ☐ Monday through Thursday 7 a.m. to 5:30 p.m. at (626) 851-7031

Date (HAND) 11-2-17 Permit 842875

Owner/Operator DEAN CHRISTIAN Site File 006774 – 00275

Site Name 1977 SOUTH ATLANTIC ST Violation # 879925

Site Address 1977 SOUTH ATLANTIC ST City, Zip MONTEREY PARK 91755

Mailing Address 301 N BRAND AVE SUITE 220 City, Zip GLENDALE CA. 91203

A recent inspection of your facility revealed the following conditions and/or practices relating to hazardous substance underground storage tanks (USTs) which are in violation of California Health and Safety Code (CH&SC) Chapter 6.7 & 6.11; Los Angeles County Code (LACC) Title 11, Division 4 and/or the conditions and limitations of the above permit. YOU ARE HEREBY DIRECTED to submit to the office indicated below, the following items checked:

☐ **ADDITIONS/MODIFICATIONS TO THE UNDERGROUND STORAGE TANK FACILITY – CH&SC 25284**

- ☐ Complete and sign the Application for Modification.
- ☐ An application fee (to be determined at time of submittal) payable to the County of Los Angeles Department of Public Works.
- ☐ Verify that all Unified Program (UP) form data is accurate and uploaded to the California Environmental Reporting System (CERS) https://cersbusiness.calepa.ca.gov/Account/Signin?ReturnUrl=%2f including all UP UST Facility Information data, UP UST Tank Information data, for each UST, and UST Monitoring Plan data, Certificate of Financial Responsibility, UP UST Response Plan, Owner Statement of Designated Operator. (CH&SC 25404)
- ☐ Scope of Work including all of the additions/modifications.
- ☐ Four (4) sets of plans indicating the location of all additions/modifications copies of contractor's licenses, ICC and manufacturer's certifications

Noted discrepancies from approved plans dated ____

(1) YOUR PERMIT TEMPORARY CLOSURE PERMIT EXPIRED ON 10/24/17

As-builts showing the above modifications and any other modifications which were not indicated on plans approved by this office.

☐ **OPERATING WITHOUT A PERMIT DUE TO A CHANGE OF OWNERSHIP – CH&SC 25284 (c) – MUST be submitted within thirty days of the transfer.**

- ☐ Complete and sign the Transfer of Ownership Application
- ☐ An application fee (to be determined at time of submittal) payable to the County of Los Angeles Department of Public Works.
- ☐ Verify that all Unified Program (UP) form data is accurate and uploaded to the California Environmental Reporting System (CERS) https://cersbusiness.calepa.ca.gov/Account/Signin?ReturnUrl=%2f including all UP UST Facility Information data, UP UST Tank Information data, for each UST, and UST Monitoring Plan data, Certificate of Financial Responsibility, UP UST Response Plan, Owner Statement of Designated Operator. You must include a valid the Board of Equalization Number. The submittal must be made under the existing CERS ID number for the site. (CH&SC 25404)

(2) ☑ **OUT OF SERVICE UNDERGROUND STORAGE TANKS – CH&SC 25298**

Immediately remove all residual liquids, solids, or sludge stored within the USTs to a legal disposal facility. Provide copy of proof of legal disposal.

- ☑ Complete and sign the Application for Closure and Signature Date the Closure Report Requirements Form.
- ☑ Submit a Tank Location Plot Plan
- ☑ An Application for Closure fee (to be determined at time of submittal) payable to the County of Los Angeles Department of Public Works.
- ☑ Complete and sign Permit Application Supplement/Notice to File.
- ☑ Verify that all Unified Program (UP) form data is accurate and uploaded to the California Environmental Reporting System (CERS) https://cersbusiness.calepa.ca.gov/Account/Signin?ReturnUrl=%2f including all UP UST Facility Information data, UP UST Tank Information data, for each UST, and UST Monitoring Plan data, Certificate of Financial Responsibility, UP UST Response Plan, Owner Statement of Designated Operator. You must include the Board of Equalization Number if applicable. (CH&SC 25404)
- ☑ An Operating Permit Application fee (to be determined at time of submittal) payable to the County of Los Angeles, Department of Public Works.
- ☑ Submit an Annual Permit Maintenance fee (to be determined at time of submittal) payable to the County of Los Angeles Department of Public Works.

YOU ARE FURTHER DIRECTED to submit to the office below evidence of compliance with the above directives by no later than fifteen (15) days from the date on this Notice, unless otherwise directed above. Failure to comply with the Underground Storage Tank laws and regulations may subject you to a civil penalty of not less than $500 or more than $5,000, or by one year in county jail or both. Finally, pursuant to Title 11 of the Los Angeles County Code, Sections 11.72.045 and 11.86.020, it is a misdemeanor to violate any of the laws and regulations governing USTs including provisions of CH&SC, Division 20, Chapter 6.7 and 6.11 and regulations that are set forth in the CCR, Title 23, Division 3, Chapter 16. Failure to comply with this Notice may therefore result in criminal prosecution. Furthermore, a non-compliance fee may be imposed to recover the cost incurred by this Department in the enforcement of LACC.

If you have any questions regarding this matter, please contact EMANUEL CARRANZA Monday through Friday, 8 a.m. to 9:30 a.m. or Monday through Thursday, 7 a.m. to 5:30 p.m. at (323) 881-7023

Secondary Containment ReTest Report Form

This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name: 1977 Saturn Ave	Date of Testing: 11/16/2017

 Complete Certification of Compliance with Los Angeles County Lobbyist Ordinance on back ClosApp FORMAT DPW Rev. 07/17

UNDERGROUND STORAGE TANKS
CLOSURE INFORMATION

1. This authorization to temporarily or permanently close an underground storage tank (UST) pursuant to Los Angeles County Code, Title 11, Division 4. This authorization may also be used for product piping removal associated with an existing or removed USTs.

2. This authorization will not be approved unless a valid Hazardous Substance Underground Storage Permit (HSUSP) application is on file with the DPW or an Unified Program Facility Permit has been issued by the Certified Unified Program Agency (CUPA).

3. Submittals, including this authorization, made on behalf of the UST owner, operator, or Unified Program permit owner or operator shall be accompanied by written authorization.

4. USTs closed on site by removal, or cleaning and filling with an inert solid substance prior to January 1, 1984, need not comply with current closure requirements, however, contamination related to these USTs must be reported and investigated.

5. All work shall be carried out in full compliance with all applicable federal, state and local laws, ordinances, rules and regulations.

6. All fees due to DPW and/or to the CUPA for the operation and/or maintenance of the facility subject to closure through the date of closure shall be paid in full.

7. Closure authorizations are site specific and may be subject to additional sampling and site characterization requirements as necessary to protect the public health and safety, underground and surface water supplies, and may include requirements, requested by Federal, State or other regulatory agencies.

8. All inspection notification(s) shall be made as directed by the attached conditions of this approval.

9. Within 30 days after closure, all requirements of this Closure authorization shall be furnished to the DPW in a closure report per the DPW Closure Report Requirements and Supplements, describing; all work completed, results of any required sampling, disposition of any contaminated soils or substances found and any other requirements made part of the closure application as well as submittal to the CERS database of the Unified Program LIST FACILITY and LIST TANK information for each UST permanently closed. http://cers.calepa.ca.gov/

10. In all cases, closure authorizations expire 180 days from the date of issue unless otherwise specified. It is the responsibility of the owner or operator to make sure that the final report contains the required information and is submitted to the DPW within 30 days from the sampling date or 180 days from the date of the permit issuance, whichever is earlier. The total number of tanks listed on the HSUSP or UP Permit and the yearly annual permit maintenance billing will remain uncharged until the closure report is received by the DPW. Only one copy of the closure report needs to be submitted unless otherwise directed.

11. This Closure Authorization is considered complete when all requirements of this Closure Authorization and the Permit have been met.

12. The DPW will review the closure report and will issue closure certification with no further action when all requirements of this Closure Authorization and Permit have been met, and where no unauthorized release has been found.

13. If an unauthorized release has occurred or any detected constituent in soil or groundwater is found above the method detection limit of an analytical method as identified in the laboratory testing requirements, reporting of this unauthorized release must comply with the Health and Safety Code Division 20, Chapter 6.7.

14. Where an unauthorized release has occurred, referral of the closure report will be made to a Regional Water Quality Control Board or State Water Resources Control Board who will then provide further direction until closure certification is issued.

15. All correspondence related to this closure authorization shall include the SITE-FILE numbers listed on the front of this document, found in the upper right box and be addressed to the following location:

SUPPLEMENT
APPLICATION FOR TEMPORARY CLOSURE

COUNTY OF LOS ANGELES
DEPARTMENT OF PUBLIC WORKS
Environmental Programs Division

DPW USE ONLY:

SITE FILE NO. 6914 - [illegible] RO 314

APPLICATION NO. [illegible]

This supplement must be submitted with the Application For Closure. You must notify this office two working days in advance to schedule an appointment for an inspection of the temporary closure.

Pursuant to California Code of Regulations (CCR), Title 23, Division 3, Chapter 16, Article 7:

1. All residual liquid, solids, or sludge shall be removed and handled in accordance with the applicable provisions of Chapter 6.5 and Chapter 6.7 of Division 20 of the California Health and Safety Code (CH&SC). Copies of all completed hazardous waste manifests and bills of lading must be provided to this office prior to final approval of temporary closure.
2. If the underground storage tank(s) contained a hazardous substance that could produce flammable vapors at standard temperature and pressure, then the underground storage tank(s) shall be inerted, as often as necessary, to levels that will preclude an explosion or to such lower levels as may be required by this office.
3. Except for required venting, all fill and access locations and piping shall be sealed using locking caps or concrete plugs.
4. Power service shall be disconnected from all pumps associated with the use of the underground storage tank(s) unless the power services some other equipment which is not being closed, such as the impressed-current cathodic protection system, and/or the monitoring system and sensors.
5. The underground storage tank(s) shall be inspected by the owner or operator at least once every three months to verify that the temporary closure measures are still in place. The inspection shall include at least the following actions:
    a. Visual inspection of all locked caps and/or concrete plugs.
    b. If locking caps are used, at least one shall be removed to determine if any liquids or other substances have been added to the underground storage tank(s) or if there has been a change in the quantity or type of liquid added.

All approved monitoring requirements remain in place throughout the duration of the Temporary Closure. Monitoring equipment must continue to be certified annually.

Other:

_____

_____

_____

The owner may terminate the temporary closure at any time and reuse the underground storage tank(s) only if the USTs meet the requirements of CH&SC Division 20, Chapter 6.7, CCR Title 23, Division 3, Chapter 16 and with approval from this office. The Temporary Closure will expire 180 days from date of issuance (County Code 11.82.020 B). The Temporary Closure may be extended for an additional 180 days for one half the Closure Permit fee. At the conclusion of 12 months the extended Temporary Closure Permit is expired. Pursuant to CCR Title 23, Division 3, Chapter 16 Section 2670 (b), at the end of 12 consecutive months during which the tank is temporarily closed, this office may approve an extension of the temporary closure period for a maximum additional period of up to 12 months. Owners and operators shall complete a site assessment in accordance with CCR Title 23, Division 3, Chapter 16, Section 2672 (d) before an extension may be granted by this office.

Facility Address: 1777 Saroni st City: Monterey Park Zip: 91755
Tank Owner Contact: Maya Celtric Title: property Manager
Contractor Name: George Bryant Construction Phone: 909 944 3517
Contractor License No.: 718466 Class(s): A B C21 C22 HAZ

Contractor's Duty: Before Hazardous Substance Removal Complete "HAZ" Section of Form & Provide to Owner/Operator. (Cal. Code Regs., Tit. 8, Sec. 1532.1, Subd. (e)(2)(A))

NUMBER OF USTs TO BE CLOSED	UST ID NO (DPW USE ONLY)	CAPACITY (GALLONS)	SUBSTANCE STORED (PAST/PRESENT)	CLOSURE FEE
1				$ 1,143.00
2				$1,653.00
3				$1,407.00
4				$1,959.00
5				$2,151.00
6 = ATTACH LIST				$281.00 + $282.00 per UST

Closure of Underground Storage Tanks (USTs) shall be in compliance with Los Angeles County Code Title 11, Division 4

COMPLETE SURVEY:

	YES	NO
Has an unauthorized release ever occurred at this site?	☐	☒
Has a structural repair ever been made to these underground storage tanks?	☐	☒
Will these underground storage tanks be removed after closure?	☐	☒
Will any wells, including monitoring wells, be abandoned?	☐	☒

NOTICE: CONTAMINATED TANKS AND RESIDUES IN TANKS TO BE CLOSED, MAY BE HAZARDOUS WASTE WHICH MUST BE TRANSPORTED AND DISPOSED OF PURSUANT TO CALIFORNIA HEALTH AND SAFETY CODE DIVISION 20, CHAPTER 6.5 AND MUST BE REPORTED IN THE CLOSURE REPORT. FAILURE TO COMPLY MAY BE PROSECUTED AS A FELONY VIOLATION.

By signature below, you certify that all statements and disclosures above are true and correct.
You have read and agree to abide by this authorization and all conditions and limitations on the back and attached.

Authorization Recipient (Print Name): Ronnie Franklin Phone: 909 944 3517
Recipient's Signature: Date: 10/25/18
Recipient is: UST Owner ☐ UST Operator ☐ or Contractor ☑ Written authorization is required for all entities made to act on the owner/operator's behalf

TO BE COMPLETED BY THE DEPARTMENT OF PUBLIC WORKS

PURSUANT TO SECTION 11.36.070B, LOS ANGELES COUNTY CODE, PERMISSION IS HEREBY GRANTED TO PROCEED WITH THE CLOSURE DESCRIBED ABOVE SUBJECT TO THE ATTACHED CONDITIONS AND LIMITATIONS.

THIS AUTHORIZATION EXPIRES: 04/29/2019 ***SEE ATTACHMENTS***

MARK PESTRELLA
Director of Public Works

By: Date: 10/25/2018

UNDERGROUND STORAGE TANKS
CLOSURE INFORMATION

1. This authorization to temporarily or permanently close an underground storage tank (UST) pursuant to Los Angeles County Code, Title 11, Division 4. This authorization may also be used for product piping removal associated with an existing or removed USTs.

2. This authorization will not be approved unless a valid Hazardous Substance Underground Storage Permit (HSUSP) application is on file with the DPW or an Unified Program Facility Permit has been issued by the Certified Unified Program Agency (CUPA).

3. Submittals, including this authorization, made on behalf of the UST owner, operator, or Unified Program permit owner or operator shall be accompanied by written authorization.

4. USTs closed on site, by removal, or cleaning and filling with an inert solid substance prior to January 1, 1984, need not comply with current closure requirements. However, contamination related to those USTs must be reported and investigated.

5. All work shall be carried out in full compliance with all applicable federal, state and local laws, ordinances, rules and regulations.

6. All fees due to DPW and/or to the CUPA for the operation or the maintenance of the facility subject to closure through the date of closure shall be paid in full.

7. Closure authorizations are site specific and may be subject to additional sampling and site characterization requirements as necessary to protect the public health and safety, underground and surface water supplies, and may include requirements requested by Lenders, State or other regulatory agencies.

8. All inspection notification(s) shall be made as directed by the attached conditions of this approval.

9. Within 30 days of the closure, all requirements of this Closure Authorization shall be furnished to the DPW in a closure report per the DPW Closure Report Requirements and Supplements, describing all work completed, results of any required sampling, disposition of any contaminated soils or substances found and any other requirements made part of the closure application as well as submittal to the CERS database of the Unified Program UST FACILITY and UST TANK information for each UST permanently closed. http://cers.calepa.ca.gov/

10. In all cases, closure authorizations expire 180 days from the date of issue unless otherwise specified. It is the responsibility of the owner or operator to make sure that the final report contains the required information and is submitted to the DPW within 30 days from the sampling date or 180 days from the date of the permit issuance, whichever is earlier. The total number of tanks listed on the HSUSP or UF Permit and the yearly annual permit maintenance billing will remain unchanged until the closure report is received by the DPW. Only one copy of the closure report needs to be submitted - unless otherwise directed.

11. This Closure Authorization is considered complete when all requirements of this Closure Authorization and the Permit have been met.

12. The DPW will review the closure report and will issue closure certification within 90 days after all requirements of this Closure Authorization and Permit have been met, and where no unauthorized release has been found.

13. If an unauthorized release has occurred or any detected constituent in soil or groundwater is found above the method detection limit of an analytical method as identified in the laboratory testing requirements, reporting of this unauthorized release must comply with the Health and Safety Code Division 20, Chapter 6.7.

14. Where an unauthorized release has occurred, referral of the closure report will be made to a Regional Water Quality Control Board or State Water Resources Control Board who will then provide further direction until closure certification is issued.

15. All correspondence related to this closure authorization shall include the SITE-FILE numbers listed on the front of this document, found in the upper right box and be addressed to the following location:

DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 SOUTH FREMONT AVENUE
ALHAMBRA, CA 91803-1331

CERTIFICATION OF COMPLIANCE WITH
LOS ANGELES COUNTY LOBBYIST ORDINANCE

ENVIRONMENTAL PROGRAMS DIVISION

CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the County of Los Angeles Department of Public Works, Environmental Programs Division, P.O. Box 1460, Alhambra, California 91802-1460, containing:

1. File number of facility and closure permit number.
2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets, and north arrow.
3. Description of methods for obtaining, handling, and transporting samples.
4. Time and date samples were obtained.
5. Soil sampling certification (including but not limited to soils classification, boring logs, sample procedures, sample locations, initiating chain-of-custody, and groundwater location) for Underground Storage Tank closure shall be certified by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils. The certification must clearly state that all work was performed under the supervision of the person signing.
6. Chain-of-custody documentation initiated by person obtaining sample through person at a California Department of Health Services certified laboratory.
7. Disposal destination of tanks and evidence of legal disposal.
8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction, and methods of analysis.
9. Documentation as to depth of groundwater at facility.
10. Manifests to document hazardous waste disposal of any removed soil and tank rinsate.
11. Evidence of legal disposal of soils designated as nonhazardous.
12. Any observations of site contamination.
13. Report to be signed by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils.
14. Submit to the California Environmental Reporting System (CERS) the date the UST was permanently closed for all tanks removed or closed in-place.

UST Facility Operating Permit Application: [redacted]

Home » Prepare Submittal » UST: UST Facility Operating Permit Application (Draft)

You must complete this form within 30 days of all new permits, permit changes, or facility information changes. You will also need to update/confirm your tank monitoring plan and other pertinent UST-related forms.

All facilities **must** provide a BOE Number. Valid numbers are 8 digits long starting with the numbers 44... State and federal facilities should use 44032062. If **ALL** underground tanks at your facility **ONLY** contain NON petroleum productions, you can provide this generic BOE Number: 44000000. Contact your local regulator if you are unsure what number to provide.

The former paper version of this form was called "UST Operating Permit Application-Facility Information" (Form A).

More information about UST Financial Responsibility Mechanisms is available at the Water Board's Underground Storage Tank Cleanup Fund Financial Responsibility Web page.

CLOSURE – UNDERGROUND STORAGE TANKS

CONDITIONS A – GENERAL

1. Closure shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer – Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Department shall be notified in advance of any closure in accordance with the following:

   a. Removal of tank shall require a three (3)-business-day advance notification.
   b. Permanent closure of a tank in place or a temporary closure shall require a 30-day advance notification.

3. Consult current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their original construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74 – 81, December, 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies the California Regional Water Quality Board, the Los Angeles County Department of Health Services and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

   a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original ingredients stored and its constituents.
   b. The personnel shall be sufficiently skilled to safely carry out such operations.
   c. Contaminated materials removed from such facility shall be disposed of at a legal point of discharge.
   d. The operations shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B – TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, "Abandonment or Removal of Underground Tanks," Part A and any other applicable Parts.

2. A temporary closure shall not exceed 180 days.

CONDITION C – PERMANENT TANK(S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Part B and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction of the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried out by the County Engineer.

4. If an appointment has been arranged with a County Engineer Inspector to inspect the removal of a tank, the Inspector will only wait on the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tank shall be transported to a legal disposal point.

6. If the tank has stored materials other than motor fuel, fuel oil, or waste oil, site integrity will be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be filled and compacted in accordance with the requirements of CBC.

CONDITIONS D – PERMANENT

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Parts B or C and any other applicable Parts.

2. Owners/operators shall demonstrate soil site integrity as follows:

   a. Test borings shall be standard to intercept a point beneath the center of the tank, if possible. If standard drilling is not feasible, the test borings may be drilled vertically and for the reason stated in the report at 2.h. below.
   b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank, along the major axis of the tank.
   c. For multiple tanks, as a minimum, borings shall be placed at 20-foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered as single tanks for the purposes of test location and placement.
   d. Soil samples shall be taken at depths of 5, 10, 20, 30 and all feet below grade level.
   e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.
   f. Soil samples shall not be exposed to the local air or be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.
   g. A report containing the results of the above analysis shall be submitted to the County Engineer.

3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation, as described in Chapter V of the County's "Underground Storage of Hazardous Materials – Guidelines."

4. A report shall be submitted to the County Engineer containing the results of the site investigation.

CLOSURE APPLICATION SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

PART 1 OF 3

FOR OFFICE USE ONLY
FACILITY ID NO. Comp - 6215
APPLICATION NO. 96509

To satisfy the permanent closure requirements for underground storage tanks storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

***** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. *****

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	3-4 feet beneath	TPH/D	8015M
2A, 2B	tank invert	BTEX, MTBE	
3A, 3B		Fuel Oxygenates	8260B
		Organic Lead	DOHS Meth
1 sample	3-4 feet below	same as	same as
	each UST	above	above
1 sample	3-4 feet below	same as	same as
	piping, dispenser	above	above
	and vent pipe		

Continued on Page 2

3. All soil samples obtained shall be discrete, undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date/time of sampling shall be included in the final report.

4. Conform to the analytical requirements table below for petroleum hydrocarbon sites. Apply EPA Method 5035 specified in the USEPA SW-846 version III (12/1996) for soil sample preparation and preservation in order to minimize volatile organic losses. Use the sample collection devices, or equivalent, specified in the method (e.g., the Encore[TM] sampler). If the Encore[TM] sampler is used, analyze sample within 48 hours from the collection. Analyze sample within 10 days for soil samples stored under frozen conditions.

UST CONTENTS	Analyte	Analytical Method	Required MDL Soil (ug/kg)	Required MDL Water (ug/L)
GASOLINE OR DIESEL	Total Petroleum Hydrocarbons (TPH) - Gasoline	EPA Method 8015 (M)	100-200	50-100
	Total Petroleum Hydrocarbons (TPH) - Diesel	EPA Method 8015 (M)	1,000	500
	Benzene	EPA Method 8260B (8021B)	1	0.5
	Toluene	EPA Method 8260B (8021B)	1	0.5
	Ethylbenzene	EPA Method 8260B (8021B)	1	0.5
	Xylenes (Total)	EPA Method 8260B (8021B)	1	0.5
	Methyl Tertiary Butyl Ether (MTBE)	EPA Method 8260B	2	1
	Diisopropyl ether (DIPE)	EPA Method 8260B	2	1
	Ethyl tertiary butyl ether (ETBE)	EPA Method 8260B	2	1
	Tertiary amyl methyl ether (TAME)	EPA Method 8260B	2	1
	Tertiary butyl alcohol (TBA)	EPA Method 8260B	20	10
	Ethanol	EPA Method 8260B	500	250
	Methanol	EPA Method 8015 (M)	1000	500
OTHER, WASTE OIL UNKNOWN	Total Recoverable Petroleum Hydrocarbons (TRPH) - Waste Oil	EPA Method 418.1 or EPA Method 8260B	1000	500

UST Permitted Contents,
all VOC's (EPA Method 8260)
+ To Be Determined

Continued on Page 3

5. All soil/groundwater samples shall be analyzed by a laboratory approved by the California Environmental Accreditation Laboratory Program (ELAP).

6. Analytical results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) Detection limits for each analytical procedure and determination; d) The method of analysis; e) Signature of chemist certifying results.

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

10. A final report that contains all of the above required information shall be submitted to the office above within one (1) month form the sampling date or 180 days from the date of this permit, whichever is earlier.

11. All electronic data shall be submitted to the State Water Resources Control Board Geotracker database.

STATE OF CALIFORNIA
California Regional Water Quality Control Board
Los Angeles Region
(Underground Storage Tank Program)

General Laboratory Testing Requirements for Petroleum Hydrocarbon Impacted Sites

The purpose of this document is to supplement the Regional Board's Laboratory Report form (6/00) in order to update obsolete testing requirements and set forth the new requirements for fuel oxygenates and natural attenuation testing. Each analytical method used must be certified by the California Environmental Accreditation Laboratory Program (ELAP).

1. General Laboratory QA/QC Requirements

Conform to the Regional Board's Laboratory Report Form (6/00) in general except for items specified below:

2. Compounds to be Tested

Total petroleum hydrocarbons in gasoline range (TPHg) (C4 – C12); Total petroleum hydrocarbons in diesel range (TPHd) (C13 – C22); benzene, toluene, ethylbenzene, xylenes (BTEX); methyl tertiary butyl ether (MTBE); di-isopropyl ether (DIPE); ethyl tertiary butyl ether (ETBE); tertiary amyl methyl ether (TAME); tertiary butyl alcohol (TBA). If the gasoline tanks historically or currently contain methanol or ethanol, these compounds are also to be tested.

3. Analytical Test Methods and Detection Limits

Conform to Table 1 below. Report any concentration detected between the method detection limit (MDL) and estimated quantitation limit (EQL) for reporting limit (RL) in a numerical value with a "J" flag indicator. All "Non-Detect" (ND) shall be reported in the format with "< (numerical MDL)." Integrate all fuel oxygenate additive concentrations into total petroleum hydrocarbons (TPH) and report it as TPH. EPA Method 8021B may be used to substitute EPA Method 8260B at the sites where all fuel oxygenates have not been identified by EPA Method 8260B in soil and/or groundwater.

Table 1: Analytical Requirements

		Required MDL (Method detection limit)	
Analyte	Analytical Method	Soil (ug/kg)	Water (ug/L)
BTEX	EPA Method 8260B(8021B)	1	0.5
MTBE	EPA Method 8260B	2	1
DIPE	EPA Method 8260B	2	1
ETBE	EPA Method 8260B	2	1
TAME	EPA Method 8260B	2	1
TBA	EPA Method 8260B	20	10
TPHg	Cal-LUFT GC/FID or GC/MS	100-200	50-100
TPHd	Cal-LUFT GC/FID	1000	500
Methanol	Cal-LUFT GC/FID	1000	500
Ethanol	Cal-LUFT GC/FID(EPA8260B)	500	250

4. Use of EPA Method 5035 for Soil Samples

Apply EPA Method 5035A specified in the USEPA SW-846, (7/2002) for soil sample preparation and preservation in order to minimize volatile organic losses. Use the sample collection devices, or equivalent, specified in the method (e.g., the Encore™ sampler). If the Encore™ sampler is used, analyze sample within 48 hours from the collection. Analyze sample within 14 days for soil samples stored under frozen conditions.

5. Natural Attenuation Parameters

Natural attenuation processes include dispersion, dilution, sorption, volatilization, biodegradation, and chemical or biological transformation. A carefully controlled monitoring program for the natural attenuation can be used to confirm site-specific mass reduction and achieve remedial objectives. In order to test parameters to confirm the occurrence of natural attenuation, site characterization must be complete first.

5.1 Primary Natural Attenuation Criteria

Meet the following conditions prior to testing for the secondary natural attenuation parameters:

a) Groundwater contaminant plume must be fully defined.

b) Groundwater monitoring program on a quarterly basis must be completed for at least two years including data of MTBE and other oxygenates

c) Groundwater concentration has consistently decreased or been stable

d) Determination of site-specific hydraulic conductivity must be conducted. Refer the ASTM D4044-91 for the slug test procedures. Other field methods (e.g., pumping test) are also acceptable to determine hydraulic conductivity.

e) Characterization of MTBE and other oxygenates plume vertical extent must be completed with discrete multi-depth groundwater sampling at all groundwater vulnerable areas designated by the Board.

5.2 Secondary Natural Attenuation Parameters

Analyze the secondary natural attenuation parameters only after the primary natural attenuation criteria are met. Analyze the secondary natural attenuation parameters at all groundwater monitoring wells inside and outside of the plume. Conform to Table 2 below for parameters and testing methods

Table 2 Analytical Requirements for Secondary Natural Attenuation Parameters

Parameters	Test Method	Required MDL
pH	EPA Method 150.2 or Field instrument	n/a
Dissolved oxygen (DO)	EPA Method 360.1 or Field instrument	n/a
Redox potential (ORP)	Field instrument	n/a
Sulfate (SO_4)	EPA Method 300	5 mg/L
Nitrate (NO_3)	EPA Method 300	0.1 mg/L
Ferrous iron (Fe^{2+})	EPA Method 200	0.1 mg/L
Methane (CH_4)	EPA Method 8015(M)	5 µg/L

6. Electronic Submittal of Data Reporting

All analytical results shall be uploaded in an electronic format to the State GeoTracker Database.

NOTICE TO CLOSURE PERMIT APPLICANTS

The South Coast Air Quality Management District (SCAQMD) has adopted Rule 1166 regulating emissions of Volatile Organic Compounds (VOC) from decontamination of soil effective **August 5, 1988.**

In addition to the requirements of your Closure Permit, persons excavating any underground storage tank that previously contained VOCs must:

- Notify the SCAQMD by telephone at (909) 396-2326 or by fax at (909) 396-3342 using the SCAQMD notification form 24 hours prior to tank excavation. [1166(c)(4)(A)]
- Monitor the excavated material during the excavation for VOC contamination. [1166(c)(4)]
- When VOC contamination is detected:
  - Cease excavation.
  - Cover the contaminated soil until implementation of approved mitigation measures. [1166(c)(4)(C)]
  - Notify the SCAQMD at (909) 396-2326 within 24 hours of detection of VOC contaminated soil. [1166(c)(4)(A)]
- A person shall not engage in or allow any on- or off-site spreading of VOC contaminated soil which results in uncontrolled evaporation of VOC to the atmosphere. [1166(c)(3)]

Exemptions

- Treatment of less than one (1) cubic yard of contaminated soil. [1166(c)(1)(A)]
- Decontamination of soil containing organic compounds that have an initial boiling point of 302°F or greater, Reid Vapor Pressure less than 80 mm Hg or Absolute Vapor Pressure less than 36 mm Hg at 20°C. [1166(c)(1)(B)(i-ii)]
- Removal of soil for sampling purposes pursuant to Environmental Protection Agency methods. [1166(c)(1)(C)]
- Accidental spillage of five (5) gallons or less of VOC. [1166(c)(1)(D)]
- Documentation of soil which is contaminated through natural seepage of VOC from oil and gas wells or other natural sources. [1166(c)(1)(E)]

SPECIFIC QUESTIONS ON RULE 1166 SHOULD BE REFERRED TO THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT (909) 396-2326

ATTENTION CONTRACTOR
NOTIFICATION/PERMIT REQUIREMENT COMPLIANCE

This Authorization is issued subject to compliance with all applicable laws and regulations relating to the performance of work including, but not limited to, business license requirements, Building Codes, Fire Codes, Air Quality regulations, Health and Safety Codes, Water Codes, and Transportation regulations.

Pursuant to Los Angeles County Code, Section 11.78.045, and the Conditions and Limitations of the attached Hazardous Substance Underground Storage Closure and/or New Construction/Addendum Authorization, you are required to complete **ALL** of the agency notifications indicated below within the time period specified prior to commencement of work.

**[X] 72 HOUR ELECTRONIC NOTIFICATION – DEPARTMENT OF PUBLIC WORKS, ENVIRONMENTAL PROGRAMS DIVISION

The owner/operator or contractor shall provide electronic notification to Public Works at least 72 working hours prior to the commencement of any of the following work:

- Closure Authorization Permit - Prior to sampling and backfilling any excavation
- New Construction/Addendum Permit - Prior to backfilling any excavation

Notifications shall only be made at the following link:

- http://dpw.lacounty.gov/GO/DPWJST/

[X] 48 HOUR (OR AS REQUIRED)–LOCAL FIRE DEPARTMENT FIRE PREVENTION INSPECTOR:

[X] City of Alhambra Fire Dept

[ ] Los Angeles County Fire Department

[X] 24 HOUR–SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

[X] SOUTH COAST AQMD – Rule 1149 and Rule 1166
Telephone: (909) 396-2326
Fax: (909) 396-3342

[ ] ANTELOPE VALLEY AQMD – Rule 1149 and Rule 1166
Telephone: (661) 723-8070

[ ] COUNTY SERVES AS BUILDING OFFICIAL, SEE ATTACHED

[X] CITY SERVES AS BUILDING OFFICIAL

FAILURE TO PROVIDE NOTICE AS REQUIRED ABOVE MAY RESULT IN PERMIT REVOCATION, ADDITIONAL SITE ASSESSMENT REQUIREMENTS, AND/OR ADMINISTRATIVE PENALTIES AS PROVIDED BY LAW.

** See attached closure permit supplement for Public Works notification requirements.

As a condition of the closure permit, it is required that the contractor create a profile in this office's electronic notification system in order to schedule inspections.

As of January 12, 2016

County of Los Angeles Department of Public Works Underground Storage Tank Electronic Notification system will now accept notifications for Emergency Repair Work, Prior to Backfill appointments and Closure appointment. Notifications shall only be made at the following link.

http://dpw.lacounty.gov/GO/DPW_UST/

Faxes, emails or Telephone calls will not be accepted.

COUNTY OF LOS ANGELES

ADDITIONAL CONDITIONS FOR UST CLOSURE/SITE ASSESSMENT

TITLE 23: CALIFORNIA CODE OF REGULATIONS - WATERS
DIVISION 3: STATE WATER RESOURCES CONTROL BOARD (SWRCB)
CHAPTER 30: ELECTRONIC SUBMITTAL OF INFORMATION

Article 1 – GENERAL PROVISIONS

Section 3890. General Intent, Content, and Applicability of Regulations

(a) The regulations in this Chapter are intended to provide electronic access to reports, including soil, vapor, and water data, prepared for the purpose of subsurface investigation or remediation of: (1) an unauthorized discharge or deposit of waste as defined in section 13050 of the Water Code, (2) an unauthorized release of a hazardous substance as defined in section 25281 of the Health and Safety Code, or (3) a discharge of waste to land subject to Division 2 of Title 27 or Division 3, Chapter 15, of Title 23 of the California Code of Regulations (CCR).

(b) The regulations in this Chapter require persons responsible for submitting certain reports to the State Board, a regional board, or a local agency to submit these reports electronically over the Internet to the State Board's Geotracker system.

(c) The requirements of this Chapter are in addition to, and not superseded by, any other applicable reporting requirements.

(d) Except as provided in Section 3895(b), the electronic reporting requirements of this Chapter are intended to replace requirements for the submittal of paper copies of reports, beginning July 1, 2005.

Authority cited: Sections 13196 and 13198(c), Water Code.

Reference: Sections 13196 and 13198, Water Code.

Article 2. - ELECTRONIC SUBMITTAL OF INFORMATION

Section 3891. Definition of Terms

"COELT" is the United States Army Corps of Engineers Loading Tool program. It is a relational database application that is designed to run with the Microsoft Windows operating system. COELT places laboratory data into the standardized Electronic Deliverable Format (EDF). The program can accept data from Laboratory Information Management System (LIMS) or manually entered data. COELT is an optional software application that is intended to help laboratories that require new software to produce the EDF data deliverable. COELT includes a report utility that allows hard copy laboratory reports to be printed that match the actual electronic data. For purposes of the requirements of this chapter, version 1.2a of COELT may be used. The program (coelt12i.exe) and documents (coelt 1.2i manual.zip) for version 1.2i of COELT are available through links provided at http://www.waterboards.ca.gov/ust "CSRS-H" is the California Spatial Reference System-Horizontal, which includes the High Precision Geodetic Network (HPGN), the High Precision Geodetic Network–Densification (HPGN-D) and other geodetic control positions. These control positions have been determined by Global Positioning System survey methods in accordance with first order or better standards and specifications from the Federal Geodetic Control Subcommittee (FGCS) of the Federal Geographic Data Committee. These control positions are published by the National Geodetic Survey, California Spatial Reference Center or its successor.

"EDCC" is the Electronic Deliverable Consistency Checker program, which was developed for the EDF 1.2i format, described below. The EDCC program is run upon completion of an EDF report and produces an error report. This error report identifies problems within the given data set based upon the EDF database structure, guidelines, restrictions, and valid values. The error report also indicates the nature of each problem, so that the submitter can correct them. For purposes of the requirements of this chapter, the interactive web-version 1.2i or personal computer version 1.2i of EDCC shall be used. Programs (edcc.zip and edccservicepack1.zip) for version 1.2i of EDCC are available through links provided at http://www.waterboards.ca.gov/ust.

"EDF" is the Electronic Deliverable Format, originally developed for the United States Army Corps of Engineers. It is a data standard designed to facilitate transfer of electronic data files from analytical laboratories to end-users. It is a relational database whose files are related to one another through key fields. Laboratories can produce electronic EDF files by using their own LIMS or COELT software. The data components include chain-of-custody information, laboratory results, and quality assurance information. For purposes of the requirements of this chapter, version 1.2i of EDF shall be used. Specifications for version 1.2i of EDF (The Electronic Deliverable Format [EDF] Version 1.2i data dictionary are available in Title 27, Division 3, Subdivision 2, Chapter 1 (Laboratory Results) CCR, through links provided at http://www.waterboards.ca.gov/ust.

"Geotracker" is the State Board's Internet-accessible database system used by the State Board, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage tanks. This system consists of a relational database, on-line compliance reporting features, a geographical information system (GIS) interface and other features that are utilized by the State Board, regional boards, local agencies, regulated industry and the public to input, manage, or access compliance and regulatory tracking data. Geotracker, initially known as the Geographical Environmental Information Management System (GEIMS) database, is available at http://geotracker.swrcb.ca.gov.

"PDF" means Portable Document Format. "PDF" files are self-contained and cross-platform documents. A PDF file will look the same on the screen and in print, regardless of what type of computer or printer a person uses or which software package originally created the file. Although PDF files contain the complete formatting of the original document, including fonts and images, they are highly compressed, allowing efficient transfer of complex information.

"Permanent monitoring well" means any artificial excavation by any method made for the purpose of monitoring fluctuations in groundwater levels, the quality of groundwater, or the concentration of contaminants in groundwater and which is used for at least thirty days.

"Report" means any document or item that is required for submittal in order for a person to comply with a regulation, directive, or order issued by the State Board, a regional board, or a local agency, including but not limited to, any analysis of material by a laboratory that has accreditation or certification pursuant to Article 3 (commencing with Section 100825) of Chapter 4 of Part 1 of Division 101 of the Health and Safety Code.

Authority cited: Sections 13196 and 13198 (e), Water Code.
Reference: Sections 13195 (b) and 13196, Water Code.

Section 3892. Reports

The following reports are subject to the requirements of this Chapter, when those reports are required for the purpose of subsurface investigation or remediation of: (1) an unauthorized discharge or deposit of waste as defined in section 13050 of the Water Code, (2) an unauthorized release of a hazardous substance as defined in section 25281 of the Health and Safety Code, or (3) a discharge of waste to land subject to Division 2 of Title 27 or Division 3, Chapter 15 of Title 23 of the California Code of Regulations (CCR).

(a) Reports submitted pursuant to Division 3, Chapter 16, Article 11 of Title 23 of the CCR.

(b) Reports submitted pursuant to Division 2 of Title 27 or Division 3, Chapter 15 of Title 23 of the CCR.

(c) Reports submitted pursuant to section 13304 of the Water Code.

(d) Reports submitted pursuant to section 13267 of the Water Code.

(e) Reports submitted pursuant to any order or directive of the State Board, a regional board or a local agency.

(f) Reports submitted pursuant to the Two-year Joint Cooperative Agreement Execution Plans under the Defense / State Memorandum of Agreement and Navy Cost Recovery Cooperative Agreement, for the State of California.

Authority cited: Sections 13196 and 13198 (c), Water Code

Reference: Sections 13196 (a) and 13198 (c), Water Code.

Section 3893. Electronic Submittal of Reports

(a) Persons responsible for submitting reports pursuant to this Chapter shall submit the following information described in subdivision (b) electronically over the Internet to the State Board's Geotracker system in conformance with data dictionaries found in Title 27, Division 3, Subdivision 2 (Monitoring and Release Information) and specifications contained in the State Water Resources Control Board EDF Guidelines and Restrictions (version 1.2) and Survey XYZ Guidelines and Restrictions (Version 6). These data dictionaries and documents are available through links provided at http: www.waterboards.ca.gov/ust.

(b) Data generated after the effective date of the regulations by chemical analysis of soil, vapor, or water samples (including surface water, groundwater and influent/effluent water samples from remediation systems), shall be submitted in EDF format. All data submitted in EDF format shall be checked for errors prior to and during submittal using the EDCC software consistency-checking tool. All data submitted in EDF format must pass this error-checking tool as well as meet normal regulatory requirements in order to be considered valid data. In addition, when required for reports subject to this Chapter, the following shall also be submitted electronically:

(1) The latitude and longitude of any permanent monitoring well for which data is reported in EDF format, accurate to within 1 meter and referenced to a minimum of two reference points from the California Spatial Reference System (CSRS-H), if available.

(2) The surveyed elevation relative to a geodetic datum of any permanent monitoring well.

(3) The elevation of groundwater in any permanent monitoring well relative to the surveyed elevation

(4) A site map or maps showing the location of all sampling points referred to in the report.

(5) The depth to the screened interval and the length of screened interval for any permanent monitoring well.

(6) Boring logs, in PDF format.

(7) A complete copy of the report, in PDF format, which includes the signed transmittal letter and professional certification.

(c) All deadlines and timeframes for submittals of reports are applicable to the information submitted electronically pursuant to this Chapter.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 and13198 (c), Water Code.

Section 3894. Timing of Electronic Reporting Requirements

(a) Electronic submittals of information for sites subject to the requirements of Title 23, Division 3, Chapter 16, Article 11 of the California Code of Regulations, shall begin on December 16, 2004.

(b) Unless otherwise specifically noted, all other electronic submittals required pursuant to this Chapter shall begin January 1, 2005.

(c) Until July 1, 2005, the electronic reporting requirements of this Chapter are in addition to any existing paper or other reporting requirements.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 (a) and 13198 (c), Water Code.

Section 3895. Submittal of Alternate Forms of Reports

(a) Beginning July 1, 2005, the successful submittal of electronic information in accordance with this Chapter shall replace the requirement for the submittal of a paper copy, except as provided in subdivision (b).

(b) In addition to the electronic submittal of reports required pursuant to this Chapter, a regulatory agency may require the submittal of a report, or portions thereof, in diskette, compact disc or other form if the agency determines that the alternative form is necessary. The burden, including cost, of these alternative forms shall bear a reasonable relationship to the need for alternative form and benefits to be obtained from the alternative form.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 (a) and 13198 (c), Water Code

NOTICE: Original paper reports with wet ink signature and seal must continue to be submitted to this office pursuant to CCR Title 23, Division 3, Chapter 30, Article 2, Section 3895 (b), regardless if such report is required by regulation to be electronically uploaded to Geotracker.

NOTICE OF VIOLATION ORDER TO COMPLY

Date: 11-15-16 Permit: 812530

Owner/Operator: KAIYUNG JUNES Site/Fac: 006994 - 062151

Site Name: ~~1977~~ 1977 SATURN Violation #: 8470916

Site Address: 1977 SATURN ST City, Zip: MONTEREY PARK, CA. 91755

Mailing Address: 801 N BRAND AVE SUITE 220 City, Zip: GLENDALE, CA. 91203

A recent inspection of your facility revealed the following conditions and/or practices relating to hazardous substance underground storage tanks (USTs) which are in violation of California Health and Safety Code (CH&SC) Chapter 6.7 and/or 6.11, Los Angeles County Code (LACC) Title 11 Division 4 or applicable conditions and limitations of the above permit. YOU ARE HEREBY DIRECTED to submit to the office indicated below the following items checked:

☐ OPERATING WITHOUT A CERTIFIED/OPERATING MONITORING SYSTEM – CH&SC 25290

YOU ARE HEREBY DIRECTED to have the monitoring system and the UST system certified, tested and its results reviewed by this office no later than 7 days from the date of this Notice and the contents of all UST systems are to be removed within this time period.

☐ MISSING TEST RESULTS / DOCUMENTS – Required testing/items must be conducted and results reviewed by this office

- ☐ Secondary Containment Testing
- ☐ Tank Integrity Testing
- ☐ Corrosion Protection Certification
- ☐ AB 2481 Testing
- ☐ Line Testing
- ☐ Line Leak Detector Testing
- ☐ Facility Employee Training
- ☐ Missing Designated Operator Monthly Form(s)
- ☐

☑ REQUIRED DOCUMENTS / ITEMS MUST BE SUBMITTED TO THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS) –

- ☐ Facility Information Page
- ☐ Tank Information Page
- ☐ Tank Plot Plan
- ☐ Financial Responsibility Certification
- ☐ Chief Financial Officer Letter
- ☐ Owner Statement of Designated Operator
- ☐ Monitoring Plan
- ☐ Response Plan
- ☐ Owner/Operator Agreement
- ☑ Corrections needed as outline in the attached CERS printout
- ☐

YOU ARE FURTHER DIRECTED to submit to the office below evidence of compliance with the above directives by no later than fifteen (15) days from the date of this Notice. Unless otherwise noted above, failure to comply with the Underground Storage Tank laws and regulations may subject you to a civil penalty of not less than $500 or more than $5000, or by one year in county jail or both. Finally, pursuant to Title 11 of the Los Angeles County Code, Sections 11.72.015 and 11.96.020, it is a misdemeanor to violate any of the laws and regulations governing USTs including provisions of CH&SC, Division 20, Chapter 6.7 and 6.11 and regulations that are set forth in the CCR, Title 23, Division 3, Chapter 16. Failure to comply with this Notice may therefore result in criminal prosecution. Furthermore, a reinspection fee may be imposed to recover the cost incurred by this Department in the enforcement of LACC.

If you have any questions regarding this matter, please contact: LAUREN MARANAGE ☑ Monday through Friday, 8 a.m. to 9:30 a.m. or ☐ Monday through Thursday, 7 a.m. to 8:00 a.m. at (323) 890-4145

NOTICE OF VIOLATION ORDER TO COMPLY

Date 11/23/16

Owner/Operator Dean Christian

Site Name 1977 Saturn

Site Address 1977 Saturn St.

Mailing Address 401 N. Brand Ave. Ste 220

Permit #42830

Site/File 6994-62151

Violation # 647333

City/Zip Monterey Park, 91755

City/Zip Glendale, 91203

A recent inspection of your facility revealed the following conditions and/or practices relating to hazardous substance underground storage tanks (USTs) which are in violation of California Health and Safety Code (CH&SC) Chapter 6.7 and/or Title 11 Los Angeles County Code (LACC) Title 11 Division 4 and/or the conditions and limitations of the above permit. YOU ARE HEREBY DIRECTED to submit to the office indicated below the following items checked:

X OPERATING WITHOUT A CERTIFIED/OPERATING MONITORING SYSTEM CH&SC 25293

(1) YOU ARE HEREBY DIRECTED to have the monitoring system and the UST system each tested annually and the results received by this office no later than 7 Days from the date of this Notice or the contents of all UST systems are to be removed within this time period.

X MISSING TEST RESULTS / DOCUMENTS – Required testing/items must be conducted and results received by this office.

- X Secondary Containment Testing (2)
- ☐ Tank Integrity Testing
- ☐ Corrosion Protection Certification
- ☐ AB 2481 Testing
- ☐ Line Testing
- ☐ Line Leak Detection Testing
- X Facility Employee Training
- X Missing Designated Operator Monthly Form(s)
- X Underground Storage tank operating permit (keep on site)

X REQUIRED DOCUMENTS / ITEMS MUST BE SUBMITTED TO THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS) –

- ☐ Facility Information Page
- X Tank Information Page
- ☐ Tank Diagram
- ☐ Financial Responsibility Certification
- ☐ Chief Financial Officer Letter
- X Owner Statement of Designated Operator
- ☐ Monitoring Plan
- X Response Plan
- X Certain/Corrosion Agreement
- X Corrections needed as outlined on the attached CERS printout
- ☐ _____

X OTHER

(1) You are required to submit your monitoring system certification test results for 2015 and 2016.

(2) A permit may be required to make repairs on previously failing items.

YOU ARE FURTHER DIRECTED to submit to the office below evidence of compliance with the above directives by no later than fifteen (15) days from the date of this Notice unless otherwise directed above. Failure to comply with the Underground Storage Tank laws and regulations may subject you to a civil penalty of not less than $500 or more than $5000, or by one year in county jail or both. Finally, pursuant to Title 11 of the Los Angeles County Code, Sections 11.72.045 and 11.36.020, it is a misdemeanor to violate any of the laws and regulations governing USTs, including provisions of CH&SC, Division 20, Chapter 6.7 and 6.11 and regulations that are set forth in the CCR, Title 23, Division 3, Chapter 16. Failure to comply with this Notice may therefore result in criminal prosecution. Furthermore, a noncompliance fee may be imposed to recover the costs incurred by the Department in the enforcement of LACC.

If you have any questions regarding this matter, please contact William Edwards at (626) 652-8605 X Monday through Friday, 8 a.m. to 5:00 p.m. or ☐ Monday through Thursday, 7 a.m. to 5:30 p.m.

June 7, 2017

Mr. Dean Christian
BRE CA Office Owner LLC
801 North Brand Avenue, Suite 220
Glendale, CA 91203-3245

Dear Mr. Christian:

NOTICE OF RED TAGGING AND ORDER TO COMPLY (V861516)
NONCOMPLIANT UNDERGROUND STORAGE TANK
1977 SATURN
FACILITY LOCATED AT 1977 SATURN ST, MONTEREY PARK

A review of office records indicates 1977 Saturn has failed to comply with the following Notices:

- Notice of Violation and Order to Comply (V834769) dated June 20, 2016
- Notice of Violation and Order to Comply (V847096) dated November 15, 2016
- Notice of Violation and Order to Comply (V847333) dated November 23, 2016

Pursuant to California Code of Regulations (CCR), Title 23, Division 3, Chapter 16; California Health and Safety Code (CH&SC), Division 20, Chapter 6.7 and 6.11, and Los Angeles County Code (LACC), Title 11, Division 4, 1977 Saturn is directed to fully comply with this Notice and correct the following outstanding underground storage tank (UST) violation:

Records indicate that the UST's are out of service and temporary closure permit A842831 expired on April 24, 2017. Pursuant to the CH&SC, Division 20, Chapter 6.7, and LACC, Title 11, Division 4, no person shall abandon, or temporarily cease operating a UST system.

UST permanently taken out of service (Removed). In order to place the USTs permanently out of service, the following items are required to be submitted to this office:

1. completed and signed Permanent Closure Permit Application (enclosed)
2. closure application fee of $1,182 payable to the County of Los Angeles Department of Public Works
3. a plot plan to scale showing the location of the tank(s) in relation to other structures or equipment
4. Verify that all Unified Program (UP) form data is accurate and uploaded to the California Environmental Reporting System (CERS) https://cers2.calepa.ca.gov/Account/SignIn?ReturnUrl=%2F, including all UP UST Facility Information data, UP UST Tank Information data, for each UST and UST Monitoring Plan data, UST Response Plan, Certificate of Financial Responsibility and Owner Statement of Designated Operator.
5. documentation that the contents of USTs have been properly removed

You are directed to submit all correspondence items to our office no later than June 19, 2017.

1977 Saturn is cautioned that the fees quoted are based on a review of office records indicating three USTs exist at the facility; should the number of USTs at the facility differ, additional fees will be required.

Additionally, pursuant to CCR, Title 23, Division 3, Chapter 16, Article 10.5, Section 2717(a)(3), 1977 Saturn has engaged in a pattern of neglect or disregard with respect to the requirements of the CH&SC, Division 20, Chapter 6.7, resulting in a "significant violation". Therefore, pursuant to CH&SC, Division 20, Chapter 6.7, Section 25292.3, 1977 Saturn is notified that failure to comply entirely with this Notice will result in inspectors from this office affixing red tags to the USTs at the facility on or after June 20, 2017. No owner or operator of a facility may deposit or allow the deposit of petroleum into a UST system that has a red tag affixed to the system's fill pipe.

Furthermore, pursuant to the CH&SC, Division 20, Chapter 6.7, as well as the LACC, any operator or owner of a UST system may be liable for civil or administrative penalties of as much as five thousand dollars ($5,000) for each UST, for each day of a violation.

Additionally, pursuant to LACC, Title 11, Division 4, Sections 11.82.014 and 11.82.040, upon determination that significant violations(s) exist for any UST, if a Red Tag is

affixed to said UST(s) a permit noncompliance fee of $1,486 shall be collected from the permittee. The permit noncompliance fee is separate from and in addition to any civil or criminal fines or penalties that may also be imposed for violations.

Finally, pursuant to LACC, Title 11, Division 4, Sections 11.72.045 and 11.86.020, it is a misdemeanor to violate any of the laws and regulations governing USTs, including provisions of CH&SC, Division 20, Chapter 6.7, and regulations that are set forth in the CCR, Title 23, Division 3, Chapter 16. Failure to comply with this Notice may therefore result in criminal prosecution.

Your cooperation in this matter is appreciated. If you have any questions, please contact Mr. Joseph Balocco at (626) 458-3559, Monday through Thursday, 7 a.m. to 5:30 p.m.

Very truly yours,

MARK PESTRELLA

Appendix VI

(Copies of Monitoring System Certification form and UST Monitoring Plot Plan available at http://www.waterboards.ca.gov.)

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

D Results of Testing/Servicing

Software Version Installed:

Complete the following checklist:

X Yes		No*	Is the audible alarm operational?
X Yes		No*	Is the visual alarm operational?
X Yes		No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
X Yes		No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
Yes	X	No* N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
Yes	X	No* N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment sensing system detects a leak, fails to operate, or is electrically disconnected? If yes, which sensors initiate positive shut-down? *(Check all that apply)* Sump/Trench Sensors. Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? Yes No
Yes	X	No* N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger?
Yes*	X	No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
Yes*	X	No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* Product. Water. If yes, describe causes in Section E, below.
X Yes		No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable.
X Yes		No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments:

F. In-Tank Gauging / SIR Equipment: X Check this box if tank gauging is used only for inventory control.
Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

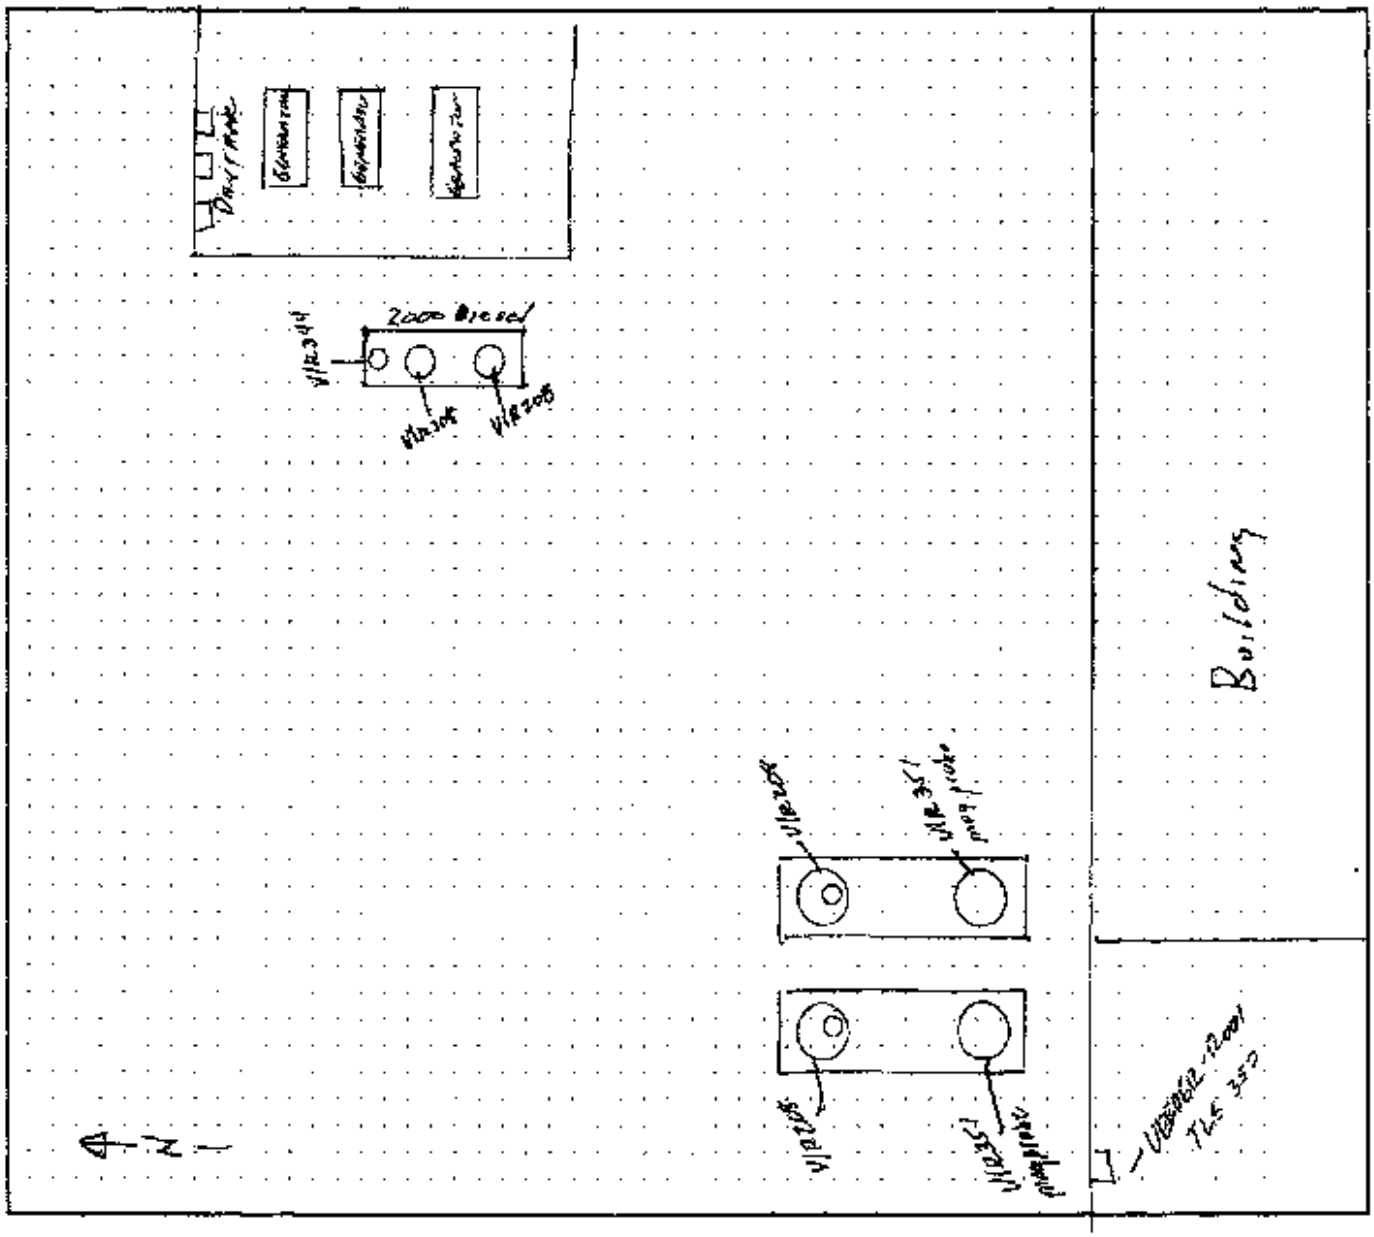
Complete the following checklist:

X Yes	No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
X Yes	No*	Were all tank gauging probes visually inspected for damage and residue buildup?
X Yes	No*	Was accuracy of system product level readings tested?
X Yes	No*	Was accuracy of system water level readings tested?
X Yes	No*	Were all probes reinstalled properly?
X Yes	No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD): X Check this box if LLDs are not installed

Complete the following checklist:



Yes	No* N/A	✓ For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: 3 g.p.h; 0.1 g.p.h; 0.2 g.p.h
Yes	No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
Yes	No*	Was the testing apparatus properly calibrated?
Yes	No* N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
Yes	No* N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
Yes	No* N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
Yes	No* N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
Yes	No* N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
Yes	No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

UST Monitoring Site Plan

Site Address: 1977 Saturn Ave Mooring Leak Co

Date map was drawn: ____/____/____.

Instructions

If you already have a diagram that shows all required information you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

SUBJECT: SOIL SAMPLING RESULTS RELATED TO UST SYSTEM REMOVALS
1977 SATURN STREET
MONTEREY PARK, CALIFORNIA 91755

Dear Sirs:

This report summarizes the results of tank system removals, and associated soil sampling activities completed at the subject site in Monterey Park, California (see attached Site Location Map - **Figure 1**).

The soil sampling activities were completed in general accordance with guidelines of Los Angeles County Department of Public Works (LADPW) and the Los Angeles Regional Water Quality Control Board (LARWQCB).

A copy of the UST removal permit is provided in attached **Appendix A.**

The tank removal activities were conducted by George Bryant Construction of Alta Loma, California (contractor). Soil sampling was completed by ALTA EM, Inc. (environmental consultant). A representative of the LACDPW (Mr. William Edwards) was scheduled to be on-site, but called the site contractor on-site within a few minutes of the scheduled inspection time, indicating he would not be able to be on site. Mr. Edwards authorized the UST removals and soil sampling to commence without his presence. A representative of ALTA EM, Inc. also spoke with Mr. Edwards verifying these approvals and provided him our contact info, and the license number of the responsible Professional Geologist prior to proceeding.

Site Setting / Hydrogeology

The site is located at the northern edge of the Coastal Plain of Los Angeles County, in the Merced / Montebello Hills. These hills consist of sedimentary rocks of the Pico Formation, and the site area is dominated by the structural feature known as the Montebello Anticline. The site area is not known to contain large-scale regional aquifers, as is the nearby/adjoining LA County Coastal Plain just to the south. The site is located just north and outside of the Montebello Forebay Area of the LA Coastal Plain Groundwater basin (DWR, 1961).

A review of the LACDPW water well database revealed no listed wells within one mile of the subject site (LACDPW, 2018). ALTA EM, Inc. also contacted a nearby cemetery east of the subject site (see **Figure 1**) asking about any potential well information at this location. The cemetery staff reported they have no wells (Resurrection Cemetery, 2018). A review of the Geotracker database for nearby LUST cases, with well data, revealed one facility approximately 0.5 miles south-southwest of the site with groundwater at approximately 70 feet deep in 2005. All other LUST sites with groundwater well data were greater than 0.75 miles away (Geotracker, 2018).

A-905166

C-9414-21

The site is located at the foot of a small hill, on a large graded earthen pad built for the construction of the commercial office complex which occupies the property. Atop the hill overlooking the site are large municipal water storage tanks, a landscaping nursery (Chuys Nursery) and a community park (Le Lorna Park) (see attached **Figure 2**).

While a regional aquifer is not anticipated beneath the site area, an accumulation of relatively shallow groundwater does exists beneath the site. The source of this groundwater is unknown (i.e. from nearby or on-site irrigation water? an accumulation of natural precipitation? an on-site water leak? combination of these sources?). Groundwater was initially encountered in the larger UST pit at approximately 6 feet, but stabilized at approximately 11.5 feet bgs overnight after it was pumped out to facility the UST removals. It is noted that groundwater appeared to be shallowest in the western-most portion of the area of investigation, even being encountered in a couple of the piping trench soil samples at 4 feet bgs.

Three monitoring wells were noted around the perimeter of the larger UST pit. All three wells appeared to have been partially destroyed (i.e. cement backfilled in their wells boxes). During excavation, the upper three to five feet of several of the wells was exposed and observed to be 4" PVC casing (presumed to also be backfilled). It is unknown if these wells were installed as groundwater monitoring wells or possibly vapose wells when groundwater was absent or deeper.

In summary, while a regional aquifer is not anticipated beneath the site area, an accumulation of relatively shallow groundwater exists beneath the site at 4 to 11.5 feet bgs. The direction of groundwater flow is unknown, though topography of the site would strongly indicate it is likely toward the west to southwest. This is contradicted by on site observations indicating the shallowest groundwaters in the western-most portion of the area investigated.

Tank Contents, Capacity, Construction

Details of the removed tanks were reported by the contractor as follows:

	Content	Capacity	Size	Construction
Tank #1	Diesel Fuel	10,000 gals	34' by 8'	Single-wall fiberglass w/rounded ends
Tank #2	Diesel Fuel	10,000 gals	34' by 8'	Single-wall fiberglass w/rounded ends
Tank #3	Diesel Fuel	2,500 gals	12' by 6'	Double-wall fiberglass coated steel

Larger Tanks 1 & 2 were located in a cluster, while Tank 3 was located approximately 140 feet east of the others. All three tanks contained diesel fuel, and were used to supply emergency generators. All three thanks were buried 3 to 4 feet bgs.

Attached **Figure 3** and **Photo nos. 1 and 2** show the two tank pit areas.

Soil Sampling Methods & Locations

All samples were collected on November 6, 2015.

Samples along the fuel product lines were collected at depths ranging from 3.5 to 5 feet bgs (at least 2 feet beneath removed lines), and were designated as samples no. PS1 to PS13. Attached **Photo nos. 3 through 7** show the various product line trenches which were sampled.

The Tanks 1 & 2 pit contained groundwater at approximately 11.5 feet bgs, and a large concrete pad underlying the tanks at approximately 13.5 feet bgs, precluding reasonable soil sampling. Attached **Photo no. 8** shows groundwater in the tank pit and the concrete pad depth. Given soil samples could not reasonably be collected, alternative groundwater samples were collected from this UST pit with a disposable polyethylene sampling bailer. Attached **Figure no. 3** shows the approximate locations of these two groundwater samples, designated TPGW1 and TPGW2.

The Tank 3 pit also contained an underlying concrete pad throughout the pit bottom at approximately 11.5 feet bgs, but no groundwater. This pad also precluded the reasonable collection of soil samples beneath

the concrete. Alternatively, soil samples were collected from the pit sidewalls just above the concrete pad level, at diagonally opposing corners of the former tank. The locations of these soil samples, designated T3-1-10 and T3-2-10, are shown on attached **Figure 3**.

Soil samples were obtained with the aid of a hand auger or backhoe. Samples were retained in general accordance with EPA method no. 5035 protocol. An additional amount of each sample (for non-VOC analyses) was also collected in laboratory approved 4 oz. glass jars. **Appendix B** includes further details of the sampling procedures.

Attached **Photos 9 & 10** show both UST pits after the tanks had been removed.

Field Observations

During the soil sampling, olfactory and visual observations, as well as soil types were recorded and are summarized in the table below:

SAMPLE NO.	SAMPLE LOCATION	SAMPLE DEPTH (feet bgs)	ODOR	COLOR	SOIL TYPE
PS1-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, damp, clayey F. SAND
PS2-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, silty F. SAND
PS3-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, F. SAND; with trace silt
PS4-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, F. SAND; with trace silt
PS5-5	Piping trench	5	No Odor	No Discoloration	Yellowish brown, damp to moist, clayey gravelly F. SAND
PS6-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist, F. SAND
PS7-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist, gravelly F. SAND
PS8-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist, F. SAND
PS9-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist to wet, silty F. SAND
PS10-3.5	Piping trench	3.5	No Odor	No Discoloration	Yellowish brown, moist to wet, silty F. SAND
PS11-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, saturated, clayey silty F. SAND
PS12-3.5	Piping trench	3.5	No Odor	No Discoloration	Yellowish brown, damp to moist, clayey silty F. SAND
PS13-4	Piping trench	4	Very slight HC odor	No Discoloration	Yellowish brown, wollive motling, moist, sandy SILT; with trace clay
T3-1-10	Tank #3 pit	10	No Odor	No Discoloration	Yellowish orange brown, damp, clayey F. SAND
T3-2-10	Tank #3 pit	10	No Odor	No Discoloration	Yellowish brown, damp, F. SAND, with trace silt and Med Sand.

During the groundwater sampling, olfactory and visual observations were recorded and are also summarized in the table below:

SAMPLE NO.	SAMPLE LOCATION	SAMPLE DEPTH (feet bgs)	ODOR & VISUAL OBSERVATIONS	COMMENT
TPGW1	Tank #1 pit - North	11.5	No odor or sheen	Groundwater sample
TPGW2	Tank #1 pit - South	11.5	No odor or sheen	Groundwater sample

Analytical Methods / Results

All soil and groundwater samples were analyzed for TPH diesel (C_{10}-C_{28}), BTEX and Fuel Oxygenates. The UST removal permit initially indicated that organic lead analyses were also required; however, follow-up communications with Kattya Batres of the LACDPW confirmed the lead analyses were not required if the USTs historically only contained diesel fuel (which is the case) (see Appendix A).

The analyses were completed in general accordance with modified EPA method no. 8015 (for TPH diesel) and EPA method no. 5035/8260B (for BTEX & FUEL OXYENATES). Results are summarized as follows:

SOIL SAMPLES (all results in mg/kg)				
SAMPLE NO.	SAMPLE DEPTH (feet bgs)	TPH DIESEL (C_{10}-C_{28})	BTEX	FUEL OXYGENATES (MTBE, ETBE, DIPE, TAME, TBA)
PS1-4	4	ND	ND	ND
PS2-4	4	ND	ND	ND
PS3-4	4	ND	ND	ND
PS4-4	4	ND	ND	ND
PS5-5	5	ND	ND	ND
PS6-4	4	ND	ND	ND
PS7-4	4	ND	ND	ND
PS8-4	4	ND	ND	ND
PS9-4	4	ND	ND	ND
PS10-3.5	3.5	ND	ND	ND
PS11-4	4	ND	ND	ND
PS12-3.5	3.5	ND	ND	ND
PS13-4	4	15.2	ND	ND
T3-1-10	10	10.5	ND	ND
T3-2-10	10	ND	ND	ND
PQLs	N/A	10	0.005-0.01	0.005 - 0.05

GROUNDWATER SAMPLES (all results in ug/L)				
SAMPLE NO.	SAMPLE DEPTH (feet bgs)	TPH DIESEL (C_{10}-C_{28})	BTEX	FUEL OXYGENATES (MTBE, ETBE, DIPE, TAME, TBA)
TPGW1	11.5	ND	ND	ND
TPGW2	11.5	ND	ND	ND
PQLs	N/A	500	1-3	3-50

In summary, no significant TPH (C_{10}-C_{28}), BTEX or Fuel Oxygenates were detected in any of the soil or groundwater samples. Two soil samples were reported to contain minor detected TPH (C_{10}-C_{28}) at concentration of 15.2 and 10.5 mg/kg. No field evidence indicating major fuel impacts was observed at or nearby these two samples with detections. A laboratory report further detailing the results of the soil/water sample analyses is provided in attached **Appendix C**.

Other Documentation

Provide in attached **Appendix D** are copies of the tank cleaning rinsate manifest, and the tank destruction/recycling certificates.

Conclusions

Three USTs were removed from the subject site. Two UST were located in one pit, and the third was approximately 140 feet away. Soil samples PS-3-4 (piping trench) and T3-1.0 (Tank 3 pit) were reported to contain 15.2 and 10.5 mg/kg of TPH (C_9-C_{20}), but no detected BTEX or Fuel Oxygenates. Every other soil sample was reported to contain no detected TPH (C_{13}-C_{28}), BTEX or Fuel Oxygenates.

Shallow groundwater was encountered in the Tank 1 & 2 pit, as well as a concrete pad underlying the tanks. Two groundwater samples collected from this tank pit were also reported to contain no detected TPH (C_{13}-C_{28}), BTEX or Fuel Oxygenates.

Based on the field observations and laboratory data, there is no evidence to indicate a significant release of diesel fuel from the removed UST systems. No further action is recommended, and a no further action letter is requested from the responsible party. At the time of this report the site had no Geotracker case or global ID assigned, so this report and associated data could not be uploaded.

The opportunity to be of service is greatly appreciated. If you have any questions or comments, please do not hesitate to contact the office at (909) 476-2120.

Very Truly Yours,
ALTA ENV, INC.

ROBERT B. HANSEN

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION

CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the County of Los Angeles Department of Public Works, Environmental Programs Division, P.O. Box 1460, Alhambra, California 91802-1460, containing:

1. File number of facility and closure permit number.

2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets, and north arrow.

3. Description of methods for obtaining, handling, and transporting samples.

4. Time and date samples were obtained.

5. Soil sampling certification (including but not limited to soils classification, boring logs, sample procedures, sample locations, initiating chain-of-custody, and groundwater location) for Underground Storage Tank closure shall be certified by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils. The certification must clearly state that all work was performed under the supervision of the person signing.

6. Chain-of-custody documentation initiated by person obtaining sample through person at a California Department of Health Services certified laboratory.

7. Disposal destination of tanks and evidence of legal disposal.

8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction, and methods of analysis.

9. Documentation as to depth of groundwater at facility.

10. Manifests to document hazardous waste disposal of any removed soil and tank rinsate.

11. Evidence of legal disposal of soils designated as nonhazardous.

12. Any observations of site contamination.

13. Report to be signed by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils.

14. Submit to the California Environmental Reporting System (CERS) the date the UST was permanently closed for all tanks removed or closed in-place.

UST Facility Operating Permit Application:

Home » Prepare Submittal » UST: UST Facility Operating Permit Application (Draft)

Instructions/Help

You must complete this form within 30 days of all new permits, permit changes, or facility information changes. You will also need to update/confirm your tank, monitoring plan, and other pertinent UST-related forms.

All facilities **must** provide a BOE Number--valid numbers are 6 digits long starting with the numbers 44. . State and federal facilities should use 44032002. If **ALL** underground tanks at your facility **ONLY** contain NON-petroleum productions, you can provide this generic BOE Number: 44000000. Contact your local regulator if you are unsure what number to provide.

The former paper version of this form was called "UST Operating Permit Application-Facility Information" (Form A).

More information about UST Financial Responsibility Mechanisms is available at the Water Board's Underground Storage Tank Cleanup Fund Financial Responsibility web page.

CLOSURE – UNDERGROUND STORAGE TANKS

CONDITIONS A – GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County Department of County Engineer – Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

   a. Removal of tank shall require a three (3)-business day advance notification.
   b. Permanent closure of a tank in place or a temporary closure shall require a 30-working notification.

3. Consult current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, where such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74 – 81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 20 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

   a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.
   b. The personnel shall be sufficiently skilled to safely carry out such operation.
   c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.
   d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B – TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, "Abandonment or Removal of Underground Tanks, "Part A and any other applicable Parts.

2. A temporary closure shall not exceed 180 days.

CONDITION C – PERMANENT TANK(S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Part B and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tank shall be transported to a legal disposal point.

6. If the tank has stored materials other than motor fuel, fuel oil or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be filled and re-compacted to a relative compaction of 90%.

CONDITIONS D – PERMANENT

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Part B or C and any other applicable Parts.

2. Owners/operators shall demonstrate site integrity as follows:

   a. Test borings shall be slant drilled to intercept a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test boring may be drilled vertically and the reason stated in the report in 2.h. below.
   b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.
   c. For multiple tanks, as a minimum, boring shall be placed at 20 foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test locations and placement.
   d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 50 feet below grade level.
   e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.
   f. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.
   g. A report containing the results of the above analysis shall be submitted to the County Engineer.

3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials – Guidelines."

4. A report shall be submitted to the County Engineer containing the results of the site investigation.

CLOSURE APPLICATION SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

PART 1 OF 3

DPW USE ONLY
SITE FILE NO. G994-62151
APPLICATION NO 905099

To satisfy the permanent closure requirements for underground storage tanks storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

***** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. *****

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2-4 feet beneath	TPHD	→ 8015M
2A, 2B	tank invert	BTEX, MTBE	→ 8260B
3A, 3B		Fuel Oxygenates	→ 8260B
		Organic lead	→ DOHS Method
1 sample	2-4 feet below	Same as	Same as
each UDC		above	above
1 sample	2-4 feet below	Same as	Same as
piping, every 20 feet		above	above
starting from UDC's			

* Apply EPA Method 5035 for soil sample collection, preparation and analysis.

~~Test for organic lead if past UST contents or tested, or if it is unknown whether past UST contents were leaded.~~

Continued on Page 2

3. All soil samples obtained shall be discrete, undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date/time of sampling shall be included in the final report.

4. Conform to the analytical requirements table below for petroleum hydrocarbon sites. Apply EPA Method 5035 specified in the USEPA SW-846, version III (12/1996) for soil sample preparation and preservation in order to minimize volatile organic losses. Use the sample collection devices, or equivalent, specified in the method (e.g., the Encore™ sampler). If the Encore™ sampler is used, analyze sample within 48 hours from the collection. Analyze sample within 10 days for soil samples stored under frozen conditions.

UST CONTENTS	Analyte	Analytical Method	Required MDL Soil (mg/kg)	Required MDL Water (ug/L)
GASOLINE OR DIESEL	Total Petroleum Hydrocarbons (TPH) - Gasoline	EPA Method 8015 (M)	100-200	50-100
	Total Petroleum Hydrocarbons (TPH) - Diesel	EPA Method 8015 (M)	1000	500
	Benzene	EPA Method 8260B (8021B)	1	0.5
	Toluene	EPA Method 8260B (8021B)	1	0.5
	Ethylbenzene	EPA Method 8260B (8021B)	1	0.5
	Xylenes (Total)	EPA Method 8260B (8021B)	1	0.5
	Methyl Tertiary Butyl ether (MTBE)	EPA Method 8260B	2	1
	Diisopropyl ether (DIPE)	EPA Method 8260B	2	1
	Ethyl tertiary butyl ether (ETBE)	EPA Method 8260B	2	1
	Tertiary amyl methyl ether (TAME)	EPA Method 8260B	2	1
	Tertiary butyl alcohol (TBA)	EPA Method 8260B	20	10
	Ethanol	EPA Method 8260B	500	250
	Naphthalene	EPA Method 8015 (M)	1000	500
OTHER, WASTE OIL UNKNOWN	Total Recoverable Petroleum Hydrocarbons (TRPH) - Waste Oil	EPA Method 418.1 or EPA Method 1664A	1000	500
	UST Permitted Contents, all VOC's (EPA Method 8260) + To Be Determined			

Continued on Page 3

5. All soil/groundwater samples shall be analyzed by a laboratory approved by the California Environmental Accreditation Laboratory Program (ELAP).

6. Analytical results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) Detection limits for each analytical procedure and determination; d) The method of analysis; e) Signature of chemist certifying results.

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

10. A final report that contains all of the above required information shall be submitted to the office above within one (1) month form the sampling date or 180 days from the date of this permit, whichever is earlier.

11. All electronic data shall be submitted to the State Water Resources Control Board Geotracker database.

Subject: 1977 Saturn St

Ron,

Attached you can find the pdf copy of the approved tank removal permit. In the soil sample laboratory analysis specification sheet, you can see that we require the samples to be analyzed for Organic Lead, with a note clarifying to test for it if the tanks' contents used to be leaded or if it is unknown whether they were leaded or not.
If the owner is sure these tanks never contained leaded fuel, the Organic Lead analysis can be disregarded. If there is some doubt, then it has to be included.

Best regards,
Kattya Batres

These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

***** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. *****

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	3-4 feet beneath	TPHD	→ 8015M
2A, 2B	tank bottom	BTEX, MTBE	→ 8260B
3A, 3B		fuel oxygenates	
		? Organic lead	→ DOHS Meth.
1 sample	3-4 feet below	Same as	Same as
	each UST	above	above
1 sample	2-4 feet below	Same as	Same as
	piping, every 20 feet	above	above
	trench, from UST		

? Apply EPA Method 8015 for all sample collection, preservation and procedure.

Test for organic lead if past UST contents were leaded, or if it is [illegible]

Continued on Page 2

APPENDIX B

SOIL & GROUNDWATER SAMPLING PROCEDURES

APPENDIX B

SOIL & GROUNDWATER SAMPLING PROCEDURES

Soil Samples

- Soil samples collected from the piping trenches were obtained using a hand auger. Soil samples collected from the tank pit were obtained with a backhoe.
- A relatively undisturbed portion of each sample was also retained in general accordance with EPA method no. 5035 protocol, using an EASYDRAW® syringe. An approximate five gram sample was collected with the syringe and ejected each into four pre-tared, 40 ml glass VOA vials (two vials containing pre-measured quantities of $NaHSO_4$, one vial containing MeOH, and one vial with no preservative).
- Additional sample (for non-VOC analyses) was also collected in a laboratory approved, 4-Oz. glass jar at each location.
- All collected samples was labeled with the sample number, date and project number.
- All samples were stored in an ice chest kept at approximately 40 to 50 degrees Fahrenheit prior to transportation to a State of California, Department of Health Services certified laboratory under strict chain-of-custody procedures.
- All reusable soil sampling equipment was washed prior to each sampling events with a solution of LIQUINOX (a phosphate free detergent), rinsed with potable tap water, and then rinsed again with de-ionized water.

Groundwater Samples

- Groundwater samples were obtained with a disposable polyethylene sampling bailer lowered into the groundwater in the bottom of the UST pit.
- The groundwater samples were each retained in a 1-liter amber glass bottle containing H_2SO_4, and three 40-ml glass VOA vials with no preservative.
- All collected samples was labeled with the sample number, date and project number.
- All samples were stored in an ice chest kept at approximately 40 to 50 degrees Fahrenheit prior to transportation to a State of California, Department of Health Services certified laboratory under strict chain-of-custody procedures.

Lab I.D.: **181109-36 through -52**

Dear Mr. Hansen:

The **analytical results** for the soil and water samples, received by our laboratory on November 9, 2018, are attached. The samples were received chilled, intact, and accompanying chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manager

SUBJECT: SOIL SAMPLING RESULTS RELATED TO UST SYSTEM REMOVALS
1977 SATURN STREET
MONTEREY PARK, CALIFORNIA 91755

Dear Sirs:

This report summarizes the results of tank system removals, and associated soil sampling activities, completed at the subject site in Monterey Park, California (see attached Site Location Map - **Figure 1**).

The soil sampling activities were completed in general accordance with guidelines of Los Angeles County Department of Public Works (LADPW) and the Los Angeles Regional Water Quality Control Board (LARWQCB).

A copy of the UST removal permit is provided in attached **Appendix A**.

The tank removal activities were conducted by George Bryant Construction of Alta Loma, California (contractor). Soil sampling was completed by ALTA EM, Inc. (environmental consultant). A representative of the LACDPW (Mr. William Edwards) was scheduled to be on-site, but called the site contractor on-site within a few minutes of the scheduled inspection time, indicating he would not be able to be on site. Mr. Edwards authorized the UST removals and soil sampling to commence without his presence. A representative of ALTA EM, Inc. also spoke with Mr. Edwards verifying these approvals, and provided him our contact info, and the license number of the responsible Professional Geologist prior to proceeding.

Site Setting / Hydrogeology

The site is located at the northern edge of the Coastal Plain of Los Angeles County, in the Merced / Montebello Hills. These hills consist of sedimentary rocks of the Pico Formation, and the site area is dominated by the structural feature known as the Montebello Anticline. The site area is not known to contain large-scale regional aquifers, as is the nearby/adjoining LA County Coastal Plain just to the south. The site is located just north and outside of the Montebello Forebay Area of the LA Coastal Plain Groundwater basin (DWR, 1961).

A review of the LACDPW water well database revealed no listed wells within one mile of the subject site (LACDPW, 2018). ALTA EM, Inc. also contacted a nearby cemetery east of the subject site (see **Figure 1**) asking about any potential well information at this location. The cemetery staff reported they have no wells (Resurrection Cemetery, 2018). A review of the Geotracker database for nearby LUST cases, with well data, revealed one facility approximately 0.5 miles south-southwest of the site with groundwater at approximately 70 feet deep in 2005. All other LUST sites with groundwater well data were greater than 0.75 miles away (Geotracker, 2018).

The site is located at the foot of a small hill, on a large graded earthen pad built for the construction of the commercial-office complex which occupies the property. Atop the hill overlooking the site are large municipal water storage tanks, a landscaping nursery (Chuys Nuersery), and a community park (La Loma Park) (see attached **Figure 2**).

While a regional aquifer is not anticipated beneath the site area, an accumulation of relatively shallow groundwater *does* exists beneath the site. The source of this groundwater is unknown (i.e. from nearby or on-site irrigation water? an accumulation of natural precipitation? an on-site water leak? combination of these sources?). Groundwater was initially encountered in the larger UST pit at approximately 5 feet, but stabilized at approximately 11.5 feet bgs overnight after it was pumped out to facility the UST removals. It is noted that groundwater appeared to be shallowest in the western-most portion of the area of investigation, even being encountered in a couple of the piping trench soil samples at 4 feet bgs.

Three monitoring wells were noted around the perimeter of the larger UST pit. All three wells appeared to have been partially destroyed (i.e. cement backfilled in their wells boxes). During excavation, the upper three to five feet of several of the wells was exposed and observed to be 4" PVC casing (presumed to also be backfilled). It is unknown if these wells were installed as groundwater monitoring wells, or possibly vadose wells when groundwater was absent or deeper.

In summary, while a regional aquifer is not anticipated beneath the site area, an accumulation of relatively shallow groundwater exists beneath the site at 4 to 11.5 feet bgs. The direction of groundwater flow is unknown, though topography of the site would strongly indicate it is likely toward the west to southwest. This is contradicted by on-site observations indicating the shallowest groundwater is in the western-most portion of the area investigated.

Tank Contents, Capacity, Construction

Details of the removed tanks were reported by the contractor as follows:

	Content	Capacity	Size	Construction
Tank #1	Diesel Fuel	10,000 gals	34' by 8'	Single-wall fiberglass w/rounded ends
Tank #2	Diesel Fuel	10,000 gals	34' by 8'	Single-wall fiberglass w/rounded ends
Tank #3	Diesel Fuel	2,500 gals	12' by 6'	Double-wall fiberglass coated steel

Larger Tanks 1 & 2 were located in a cluster, while Tank 3 was located approximately 140 feet east of the others. All three tanks contained diesel fuel, and were used to supply emergency generators. All three thanks were buried 3 to 4 feet bgs.

Attached **Figure 3** and **Photo nos. 1 and 2** show the two tank pit areas.

Soil Sampling Methods & Locations

All samples were collected on November 8, 2018.

Samples along the fuel product lines were collected at depths ranging from 3.5 to 5 feet bgs (at least 2 feet beneath removed lines), and were designated as samples no. PS1 to PS13. Attached **Photo nos. 3 through 7** show the various product line trenches which were sampled.

The Tanks 1 & 2 pit contained groundwater at approximately 11.5 feet bgs, and a large concrete pad underlying the tanks at approximately 13.5 feet bgs, precluding reasonable soil sampling. Attached **Photo no. 8** shows groundwater in the tank pit and the concrete pad depth. Given soil samples could not reasonably be collected, alternative groundwater samples were collected from this UST pit with a disposable polyethylene sampling bailer. Attached **Figure no. 3** shows the approximate locations of these two groundwater samples, designated TPGW1 and TPGW2.

The Tank 3 pit also contained an underlying concrete pad throughout the pit bottom at approximately 11.5 feet bgs, but no groundwater. This pad also precluded the reasonable collection of soil samples beneath

the concrete. Alternatively, soil samples were collected from the pit sidewalls, just above the concrete pad level, at diagonally opposing corners of the former tank. The locations of these soil samples, designated T3-1-10 and T3-2-10, are shown on attached **Figure 3**.

Soil samples were obtained with the aid of a hand auger or backhoe. Samples were retained in general accordance with EPA method no. 5035 protocol. An additional amount of each sample (for non-VOC analyses) was also collected in laboratory approved 4-oz. glass jars. **Appendix B** includes further details of the sampling procedures.

Attached **Photos 9 & 10** show both UST pits after the tanks had been removed.

Field Observations

During the soil sampling, olfactory and visual observations, as well as soil types, were recorded and are summarized in the table below:

SAMPLE NO.	SAMPLE LOCATION	SAMPLE DEPTH (feet bgs)	ODOR	COLOR	SOIL TYPE
PS1-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, damp, clayey F. SAND
PS2-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, silty F. SAND
PS3-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, F. SAND; with trace silt
PS4-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, F. SAND; with trace silt
PS5-5	Pipingt rench	5	No Odor	No Discoloration	Yellowish brown, damp to moist, clayey gravelly F. SAND
PS6-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist, F. SAND
PS7-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist, gravelly F. SAND
PS8-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, most , F. SAND
PS9-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist to wet, silty F. SAND
PS10-3.5	Piping trench	3.5	No Odor	No Discoloration	Yellowish brown, moist to wet, silty F. SAND
PS11-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, saturated, clayey silty F. SAND
PS12-3.5	Piping trench	3.5	No Odor	No Discoloration	Yellowish brown, damp to moist, clayey silty F. SAND
PS13-4	Piping trench	4	Very slight HC odor	No Discoloration	Yellowish brown w/olive mottling, moist, sandy SILT; with trace clay
T3-1-10	Tank #3 pit	10	No Odor	No Discoloration	Yellowish orange brown, damp, clayey F. SAND
T3-2-10	Tank #3 pit	10	No Odor	No Discoloration	Yellowish brown, damp, F. SAND; with trace silt and Med Sand.

During the groundwater sampling, olfactory and visual observations were recorded and are also summarized in the table below:

SAMPLE NO.	SAMPLE LOCATION	SAMPLE DEPTH (feet bgs)	ODOR & VISUAL OBSERVATIONS	COMMENT
TPGW1	Tank #1 pit - North	11.5	No odor or sheen	Groundwater sample
TPGW2	Tank #1 pit - South	11.5	No odor or sheen	Groundwater sample

Analytical Methods / Results

All soil and groundwater samples were analyzed for TPH diesel (C_{10}-C_{28}), BTEX and Fuel Oxygenates. The UST removal permit initially indicated that organic lead analyses were also required; however follow-up communications with Kattya Batres of the LACDPW confirmed the lead analyses were not required if the USTs historically only contained diesel fuel (which is the case) (see Appendix A).

The analyses were completed in general accordance with modified EPA method no. 8015 (for TPH diesel) and EPA method no. 5035/8260B (for BTEX & FUEL OXYENATES). Results are summarized as follows:

SOIL SAMPLES (all results in mg/kg)				
SAMPLE NO.	**SAMPLE DEPTH (feet bgs)**	**TPH DIESEL (C_{10}-C_{28})**	**BTEX**	**FUEL OXYGENATES (MTBE, ETBE, DIPE, TAME, TBA)**
PS1-4	4	ND	ND	ND
PS2-4	4	ND	ND	ND
PS3-4	4	ND	ND	ND
PS4-4	4	ND	ND	ND
PS5-5	5	ND	ND	ND
PS6-4	4	ND	ND	ND
PS7-4	4	ND	ND	ND
PS8-4	4	ND	ND	ND
PS9-4	4	ND	ND	ND
PS10-3.5	3.5	ND	ND	ND
PS11-4	4	ND	ND	ND
PS12-3.5	3.5	ND	ND	ND
PS13-4	4	**15.2**	ND	ND
T3-1-10	10	**10.5**	ND	ND
T3-2-10	10	ND	ND	ND
PQLs	**N/A**	**10**	**0.005-0.01**	**0.005 - 0.05**

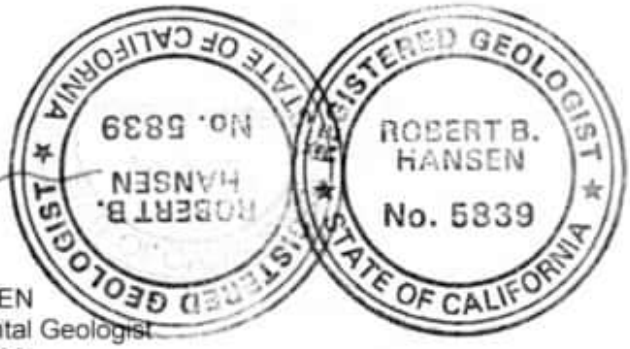
GROUNDWATER SAMPLES (all results in ug/L)				
SAMPLE NO.	**SAMPLE DEPTH (feet bgs)**	**TPH DIESEL (C_{10}-C_{28})**	**BTEX**	**FUEL OXYGENATES (MTBE, ETBE, DIPE, TAME, TBA)**
TPGW1	11.5	ND	ND	ND
TPGW2	11.5	ND	ND	ND
PQLs	**N/A**	500	1-3	3-50

In summary, no significant TPH (C_{10}-C_{28}), BTEX or Fuel Oxygenates were detected in any of the soil or groundwater samples. Two soil samples were reported to contain minor detected TPH (C_{10}-C_{28}) at concentration of 15.2 and 10.5 mg/kg. No field evidence indicating major fuel impacts was observed at or nearby these two samples with detections. A laboratory report further detailing the results of the soil/water sample analyses is provided in attached **Appendix C**.

Other Documentation

Provide in attached **Appendix D** are copies of the tank cleaning rinsate manifest, and the tank destruction/recycling certificates.

Conclusions



Three USTs were removed from the subject site. Two UST were located in one pit, and the third was approximately 140 feet away. Soil samples PS13-4 (piping trench) and T3-1-10 (Tank 3 pit) were reported to contain 15.2 and 10.5 mgkg of TPH (C_{10}-C_{28}), but no detected BTEX or Fuel Oxygenates. Every other soil sample was reported to contain no detected TPH (C_{10}-C_{28}), BTEX or Fuel Oxygenates.

Shallow groundwater was encountered in the Tank 1 & 2 pit, as well as a concrete pad underlying the tanks. Two groundwater samples collected from this tank pit were also reported to contain no detected TPH (C_{10}-C_{28}), BTEX or Fuel Oxygenates.

Based on the field observations and laboratory data, there is no evidence to indicate a significant release of diesel fuel from the removed UST systems. No further action is recommended, and a no further action letter is requested from the responsible party. At the time of this report, the site had no Geotracker case or global ID assigned, so this report and associated data could not be uploaded.

The opportunity to be of service is greatly appreciated. If you have any questions or comments, please do nothesitate to contact the office at (909) 476-2120.

Very Truly Yours,
ALTA EM, INC.

ROBERT B. HANSEN

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION

CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the County of Los Angeles Department of Public Works, Environmental Programs Division, P.O. Box 1460, Alhambra, California 91802-1460, containing:

1. File number of facility and closure permit number.
2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets, and north arrow.
3. Description of methods for obtaining, handling, and transporting samples.
4. Time and date samples were obtained.
5. Soil sampling certification (including but not limited to soils classification, boring logs, sample procedures, sample locations, initiating chain-of-custody, and groundwater location) for Underground Storage Tank closure shall be certified by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils. The certification must clearly state that all work was performed under the supervision of the person signing.
6. Chain-of-custody documentation initiated by person obtaining sample through person at a California Department of Health Services certified laboratory.
7. Disposal destination of tanks and evidence of legal disposal.
8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction, and methods of analysis.
9. Documentation as to depth of groundwater at facility.
10. Manifests to document hazardous waste disposal of any removed soil and tank rinsate.
11. Evidence of legal disposal of soils designated as nonhazardous.
12. Any observations of site contamination.
13. Report to be signed by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils.
14. Submit to the California Environmental Reporting System (CERS) the date the UST was permanently closed for all tanks removed or closed in-place.

UST Facility Operating Permit Application:

Home » Prepare Submittal » UST: UST Facility Operating Permit Application (Draft)

Instructions/Help

You must complete this form withing 30 days of all new permits, permit changes, or facility information changes. You will also need to update/confirm your tank, monitoring plan, and other pertinent UST-related forms.

All facilities **must** provide a BOE Number--valid numbers are 8 digits long starting with the numbers 44... State and federal facilities should use 44032062. If **ALL** underground tanks at your facility **ONLY** contain NON-petroleum productions, you can provide this generic BOE Number: 44000000. Contact your local regulator if you are unsure what number to provide.

The former paper version of this form was called "UST Operating Permit Application-Facility Information" (Form A).

More information about UST Financial Responsibility Mechanisms is available at the Water Board's Underground Storage Tank Cleanup Fund Financial Responsibility web page.

Click this field to reflect permanent UST closure.

CLOSURE – UNDERGROUND STORAGE TANKS

CONDITIONS A – GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer – Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

   a. Removal of tank shall require a three (3)-business day advance notification.
   b. Permanent closure of a tank in place or a temporary closure shall require a 30-written notification.

3. Consult current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74 – 81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

   a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.
   b. The personnel shall be sufficiently skilled to safely carry out such operation.
   c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.
   d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B – TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, "Abandonment or Removal of Underground Tanks, "Part A and any other applicable Parts.

2. A temporary closure shall not exceed 180 days.

CONDITION C – PERMANENT TANK (S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Part D and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer Inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tank shall be transported to a legal disposal point.

6. If the tank has stored materials other than motor fuel, fuel oil or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be filled and re-compacted to a relative compaction of 90%.

CONDITIONS D – PERMANENT

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Parts B or C, and any other applicable Parts.

2. Owners/operators shall demonstrate part site integrity as follows:

   a. Test borings shall be slant drilled to intercept a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test boring may be drilled vertically and the reason stated in the report in 2.h. below.
   b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.
   c. For multiple tanks, as a minimum, boring shall be placed at 20-foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test location and placement.
   d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 40 feet below grade level.
   e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.
   f. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.
   g. A report containing the results of the above analysis shall be submitted to the County Engineer.

3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials – Guidelines."

4. A report shall be submitted to the County Engineer containing the results of the site investigation.

CLOSURE APPLICATION SUPPLEMENT **PART 1 OF 3**
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

DPW USE ONLY:
SITE-FILE NO. 6994-62151
APPLICATION NO. 905099

To satisfy the permanent closure requirements for underground storage tanks storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

***** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. *****

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2-4 feet beneath	TPHD	→ 8015M
2A, 2B	tank invert	BTEX, MTBE	→ 8260B
3A, 3B		Fuel Oxygenates	→ 8260B
		# Organic Lead	→ DOHS Method
1 sample	2-4 feet below	same as	same as
	each UDC	above	above
1 sample	2-4 feet below	Same as	Same as
	piping, every 20 feet	above	above
	starting from UDC's		

- Apply EPA Method 5035 for soil sample collection, preparation and preservation.

~~# Test for organic lead if past UST contents were tested, or if it is unknown whether past UST contents were leaded.~~

Continued on Page 2

3. All soil samples obtained shall be discrete, undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date/time of sampling shall be included in the final report.

4. Conform to the analytical requirements table below for petroleum hydrocarbon sites. Apply EPA Method 5035 specified in the USEPA SW-846, version III (12/1996) for soil sample preparation and preservation in order to minimize volatile organic losses. Use the sample collection devices, or equivalent, specified in the method (e.g., the Encore™ sampler). If the Encore™ sampler is used, analyze sample within 48 hours from the collection. Analyze sample within 10 days for soil samples stored under frozen conditions.

UST CONTENTS	Analyte	Analytical Method	Required MDL	
			Soil (ug/kg)	Water (ug/L)
GASOLINE OR DIESEL	Totoal Petroleum Hydrocarbons(TPH) - Gasoline	EPA Method 8015 (M)	100-200	50-100
	Total Petroleum Hydrocarbons (TPH) - Diesel	EPA Method 8015 (M)	1000	500
	Benzene	EPA Method 8260B (8021B)	1	0.5
	Toluene	EPA Method 8260B (8021B)	1	0.5
	Ethylbenzene	EPA Method 8260B (8021B)	1	0.5
	Xylenes (Total)	EPA Method 8260B (8021B)	1	0.5
	Methyl Tertiary Butyl Ether (MTBE)	EPA Method 8260B	2	1
	Di-isopropyl ether (DIPE)	EPA Method 8260B	2	1
	Ethyl tertiary butyl ether (ETBE)	EPA Method 8260B	2	1
	Tertiary amyl methyl ether (TAME)	EPA Method 8260B	2	1
	Tertiary butyl alcohol (TBA)	EPA Method 8260B	20	10
	Ethanol	EPA Method 8260B	500	250
	Methanol	EPA Method 8015 (M)	1000	500
WASTE OIL	Total Recoverable Petroleum Hydrocarbons (TRPH) - Waste Oil	EPA Method 418 + EPA Method 8260B	1000	500
OTHER, UNKNOWN	UST Permitted Contents, all VOC's (EPA Method 8260) + To Be Determined			

Continued on Page 3

5. All soil/groundwater samples shall be analyzed by a laboratory approved by the California Environmental Accreditation Laboratory Program (ELAP).

6. Analytical results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) Detection limits for each analytical procedure and determination; d) The method of analysis; e) Signature of chemist certifying results.

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

10. A final report that contains all of the above required information shall be submitted to the office above within one (1) month form the sampling date or 180 days from the date of this permit, whichever is earlier.

11. All electronic data shall be submitted to the State Water Resources Control Board Geotracker database.

Subject: 1977 Saturn St

Ron,

Attached you can find the pdf copy of the approved tank removal permit. In the soil sample laboratory analysis specification sheet, you can see that we require the samples to be analyzed for Organic Lead, with a note clarifying to test for it if the tanks' contents used to be leaded or if it is unknown whether they were leaded or not.
If the owner is sure these tanks never contained leaded fuel, the Organic Lead analysis can be disregarded. If there is some doubt, then it has to be included.

Best regards,
Kattya Batres

	starting from UDCs		

° Apply EPA Method 5035 for soil sample collection, preparation and preservation

* Test for organic lead if past UST contents were leaded, or if it is unknown whether past UST contents were leaded.

Continued on Page 2

APPENDIX B

SOIL & GROUNDWATER SAMPLING PROCEDURES

APPENDIX B

SOIL & GROUNDWATER SAMPLING PROCEDURES

Soil Samples

- Soil samples collected from the piping trenches were obtained using a hand auger. Soil samples collected from the tank pit were obtained with a backhoe.
- A relatively undisturbed portion of each sample was also retained in general accordance with EPA method no. 5035 protocol, using an EASYDRAW® syringe. An approximate five gram sample was collected with the syringe and ejected each into four pre-tared, 40 ml glass VOA vials (two vials containing pre-measured quantities of $NaHSO_4$, one vial containing MeOH, and one vial with no preservative).
- Additional sample (for non VOC anlayses) was also collected in a laboratory approved, 4-Oz. glass jar at each location.
- All collected samples was labeled with the sample number, date and project number.
- All samples were stored in an ice chest kept at approximately 40 to 50 degrees Fahrenheit prior to transportation to a State of California, Department of Health Services certified laboratory under strict chain-of-custody procedures.
- All re-usable soil sampling equipment was washed prior to each sampling events with a solution of LIQUINOX (a phosphate free detergent), rinsed with potable tap water, and then rinsed again with de-ionized water.

Groundwater Samples

- Groundwater samples were obtained with a disposable polyethylene sampling bailer lowered into the groundwater in the bottom of the UST pit.
- The groundwater samples were each retained in a 1-liter amber glass bottle containing H_2SO_4, and three 40-ml glass VOA vials with no preservative.
- All collected samples was labeled with the sample number, date and project number.
- All samples were stored in an ice chest kept at approximately 40 to 50 degrees Fahrenheit prior to transportation to a State of California, Department of Health Services certified laboratory under strict chain-of-custody procedures.

Project: **GBC - Monterey Park / 18738-01**
Lab I.D.: **181109-36 through -52**

Dear Mr. Hansen:

The **analytical results** for the soil and water samples, received by our laboratory on November 9, 2018, are attached. The samples were received chilled, intact, and accompanying chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manager

SUBJECT: SOIL SAMPLING RESULTS RELATED TO UST SYSTEM REMOVALS
1977 SATURN STREET
MONTEREY PARK, CALIFORNIA 91755

Dear Sirs:

This report summarizes the results of tank system removals, and associated soil sampling activities, completed at the subject site in Monterey Park, California (see attached Site Location Map - **Figure 1**).

The soil sampling activities were completed in general accordance with guidelines of Los Angeles County Department of Public Works (LADPW) and the Los Angeles Regional Water Quality Control Board (LARWQCB).

A copy of the UST removal permit is provided in attached **Appendix A**.

The tank removal activities were conducted by George Bryant Construction of Alta Loma, California (contractor). Soil sampling was completed by ALTA EM, Inc. (environmental consultant). A representative of the LACDPW (Mr. William Edwards) was scheduled to be on-site, but called the site contractor on-site within a few minutes of the scheduled inspection time, indicating he would not be able to be on site. Mr. Edwards authorized the UST removals and soil sampling to commence without his presence. A representative of ALTA EM, Inc. also spoke with Mr. Edwards verifying these approvals, and provided him our contact info, and the license number of the responsible Professional Geologist prior to proceeding.

Site Setting / Hydrogeology

The site is located at the northern edge of the Coastal Plain of Los Angeles County, in the Merced / Montebello Hills. These hills consist of sedimentary rocks of the Pico Formation, and the site area is dominated by the structural feature known as the Montebello Anticline. The site area is not known to contain large-scale regional aquifers, as is the nearby/adjoining LA County Coastal Plain just to the south. The site is located just north and outside of the Montebello Forebay Area of the LA Coastal Plain Groundwater basin (DWR, 1961).

A review of the LACDPW water well database revealed no listed wells within one mile of the subject site (LACDPW, 2018). ALTA EM, Inc. also contacted a nearby cemetery east of the subject site (see **Figure 1**) asking about any potential well information at this location. The cemetery staff reported they have no wells (Resurrection Cemetery, 2018). A review of the Geotracker database for nearby LUST cases, with well data, revealed one facility approximately 0.5 miles south-southwest of the site with groundwater at approximately 70 feet deep in 2005. All other LUST sites with groundwater well data were greater than 0.75 miles away (Geotracker, 2018).

The site is located at the foot of a small hill, on a large graded earthen pad built for the construction of the commercial-office complex which occupies the property. Atop the hill overlooking the site are large municipal water storage tanks, a landscaping nursery (Chuys Nuersery), and a community park (La Loma Park) (see attached **Figure 2**).

While a regional aquifer is not anticipated beneath the site area, an accumulation of relatively shallow groundwater *does* exists beneath the site. The source of this groundwater is unknown (i.e. from nearby or on-site irrigation water? an accumulation of natural precipitation? an on-site water leak? combination of these sources?). Groundwater was initially encountered in the larger UST pit at approximately 5 feet, but stabilized at approximately 11.5 feet bgs overnight after it was pumped out to facility the UST removals. It is noted that groundwater appeared to be shallowest in the western-most portion of the area of investigation, even being encountered in a couple of the piping trench soil samples at 4 feet bgs.

Three monitoring wells were noted around the perimeter of the larger UST pit. All three wells appeared to have been partially destroyed (i.e. cement backfilled in their wells boxes). During excavation, the upper three to five feet of several of the wells was exposed and observed to be 4" PVC casing (presumed to also be backfilled). It is unknown if these wells were installed as groundwater monitoring wells, or possibly vadose wells when groundwater was absent or deeper.

In summary, while a regional aquifer is not anticipated beneath the site area, an accumulation of relatively shallow groundwater exists beneath the site at 4 to 11.5 feet bgs. The direction of groundwater flow is unknown, though topography of the site would strongly indicate it is likely toward the west to southwest. This is contradicted by on-site observations indicating the shallowest groundwater is in the western-most portion of the area investigated.

Tank Contents, Capacity, Construction

Details of the removed tanks were reported by the contractor as follows:

	Content	Capacity	Size	Construction
Tank #1	Diesel Fuel	10,000 gals	34' by 8'	Single-wall fiberglass w/rounded ends
Tank #2	Diesel Fuel	10,000 gals	34' by 8'	Single-wall fiberglass w/rounded ends
Tank #3	Diesel Fuel	2,500 gals	12' by 6'	Double-wall fiberglass coated steel

Larger Tanks 1 & 2 were located in a cluster, while Tank 3 was located approximately 140 feet east of the others. All three tanks contained diesel fuel, and were used to supply emergency generators. All three thanks were buried 3 to 4 feet bgs.

Attached **Figure 3** and **Photo nos. 1 and 2** show the two tank pit areas.

Soil Sampling Methods & Locations

All samples were collected on November 8, 2018.

Samples along the fuel product lines were collected at depths ranging from 3.5 to 5 feet bgs (at least 2 feet beneath removed lines), and were designated as samples no. PS1 to PS13. Attached **Photo nos. 3 through 7** show the various product line trenches which were sampled.

The Tanks 1 & 2 pit contained groundwater at approximately 11.5 feet bgs, and a large concrete pad underlying the tanks at approximately 13.5 feet bgs, precluding reasonable soil sampling. Attached **Photo no. 8** shows groundwater in the tank pit and the concrete pad depth. Given soil samples could not reasonably be collected, alternative groundwater samples were collected from this UST pit with a disposable polyethylene sampling bailer. Attached **Figure no. 3** shows the approximate locations of these two groundwater samples, designated TPGW1 and TPGW2.

The Tank 3 pit also contained an underlying concrete pad throughout the pit bottom at approximately 11.5 feet bgs, but no groundwater. This pad also precluded the reasonable collection of soil samples beneath

the concrete. Alternatively, soil samples were collected from the pit sidewalls, just above the concrete pad level, at diagonally opposing corners of the former tank. The locations of these soil samples, designated T3-1-10 and T3-2-10, are shown on attached **Figure 3**.

Soil samples were obtained with the aid of a hand auger or backhoe. Samples were retained in general accordance with EPA method no. 5035 protocol. An additional amount of each sample (for non-VOC analyses) was also collected in laboratory approved 4-oz. glass jars. **Appendix B** includes further details of the sampling procedures.

Attached **Photos 9 & 10** show both UST pits after the tanks had been removed.

Field Observations

During the soil sampling, olfactory and visual observations, as well as soil types, were recorded and are summarized in the table below:

SAMPLE NO.	SAMPLE LOCATION	SAMPLE DEPTH (feet bgs)	ODOR	COLOR	SOIL TYPE
PS1-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, damp, clayey F. SAND
PS2-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, silty F. SAND
PS3-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, F. SAND, with trace silt
PS4-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, F. SAND, with trace silt
PS5-5	Pipingt rench	5	No Odor	No Discoloration	Yellowish brown, damp to moist, clayey gravelly F. SAND
PS6-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist, F. SAND
PS7-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist, gravelly F. SAND
PS8-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, most , F. SAND
PS9-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist to wet, silty F. SAND
PS10-3.5	Piping trench	3.5	No Odor	No Discoloration	Yellowish brown, moist to wet, silty F. SAND
PS11-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, saturated, clayey silty F. SAND
PS12-3.5	Piping trench	3.5	No Odor	No Discoloration	Yellowish brown, damp to moist, clayey silty F. SAND
PS13-4	Piping trench	4	Very slight HC odor	No Discoloration	Yellowish brown w/olive mottling, moist, sandy SILT; with trace clay
T3-1-10	Tank #3 pit	10	No Odor	No Discoloration	Yellowish orange brown, damp, clayey F. SAND
T3-2-10	Tank #3 pit	10	No Odor	No Discoloration	Yellowish brown, damp, F. SAND, with trace silt and Med Sand.

During the groundwater sampling, olfactory and visual observations were recorded and are also summarized in the table below:

SAMPLE NO.	SAMPLE LOCATION	SAMPLE DEPTH (feet bgs)	ODOR & VISUAL OBSERVATIONS	COMMENT
TPGW1	Tank #1 pit - North	11.5	No odor or sheen	Groundwater sample
TPGW2	Tank #1 pit - South	11.5	No odor or sheen	Groundwater sample

Analytical Methods / Results

All soil and groundwater samples were analyzed for TPH diesel (C_{10}-C_{28}), BTEX and Fuel Oxygenates. The UST removal permit initially indicated that organic lead analyses were also required; however follow-up communications with Kattya Batres of the LACDPW confirmed the lead analyses were not required if the USTs historically only contained diesel fuel (which is the case) (see Appendix A).

The analyses were completed in general accordance with modified EPA method no. 8015 (for TPH diesel) and EPA method no. 5035/8260B (for BTEX & FUEL OXYENATES). Results are summarized as follows:

SOIL SAMPLES (all results in mg/kg)				
SAMPLE NO.	**SAMPLE DEPTH (feet bgs)**	**TPH DIESEL (C_{10}-C_{28})**	**BTEX**	**FUEL OXYGENATES (MTBE, ETBE, DIPE, TAME, TBA)**
PS1-4	4	ND	ND	ND
PS2-4	4	ND	ND	ND
PS3-4	4	ND	ND	ND
PS4-4	4	ND	ND	ND
PS5-5	5	ND	ND	ND
PS6-4	4	ND	ND	ND
PS7-4	4	ND	ND	ND
PS8-4	4	ND	ND	ND
PS9-4	4	ND	ND	ND
PS10-3.5	3.5	ND	ND	ND
PS11-4	4	ND	ND	ND
PS12-3.5	3.5	ND	ND	ND
PS13-4	4	**15.2**	ND	ND
T3-1-10	10	**10.5**	ND	ND
T3-2-10	10	ND	ND	ND
PQLs	**N/A**	**10**	**0.005-0.01**	**0.005 - 0.05**

GROUNDWATER SAMPLES (all results in ug/L)				
SAMPLE NO.	**SAMPLE DEPTH (feet bgs)**	**TPH DIESEL (C_{10}-C_{28})**	**BTEX**	**FUEL OXYGENATES (MTBE, ETBE, DIPE, TAME, TBA)**
TPGW1	11.5	ND	ND	ND
TPGW2	11.5	ND	ND	ND
PQLs	**N/A**	500	1-3	3-50

In summary, no significant TPH (C_{10}-C_{28}), BTEX or Fuel Oxygenates were detected in any of the soil or groundwater samples. Two soil samples were reported to contain minor detected TPH (C_{10}-C_{28}) at concentration of 15.2 and 10.5 mg/kg. No field evidence indicating major fuel impacts was observed at or nearby these two samples with detections. A laboratory report further detailing the results of the soil/water sample analyses is provided in attached **Appendix C**.

Other Documentation

Provide in attached **Appendix D** are copies of the tank cleaning rinsate manifest, and the tank destruction/recycling certificates.

Conclusions

Three USTs were removed from the subject site. Two UST were located in one pit, and the third was approximately 140 feet away. Soil samples PS13-4 (piping trench) and T3-1-10 (Tank 3 pit) were reported to contain 15.2 and 10.5 mgkg of TPH (C_{10}-C_{28}), but no detected BTEX or Fuel Oxygenates. Every other soil sample was reported to contain no detected TPH (C_{10}-C_{28}), BTEX or Fuel Oxygenates.

Shallow groundwater was encountered in the Tank 1 & 2 pit, as well as a concrete pad underlying the tanks. Two groundwater samples collected from this tank pit were also reported to contain no detected TPH (C_{10}-C_{28}), BTEX or Fuel Oxygenates.

Based on the field observations and laboratory data, there is no evidence to indicate a significant release of diesel fuel from the removed UST systems. No further action is recommended, and a no further action letter is requested from the responsible party. At the time of this report, the site had no Geotracker case or global ID assigned, so this report and associated data could not be uploaded.

The opportunity to be of service is greatly appreciated. If you have any questions or comments, please do nothesitate to contact the office at (909) 476-2120.

Very Truly Yours,
ALTA EM, INC.

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION

CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the County of Los Angeles Department of Public Works, Environmental Programs Division, P.O. Box 1460, Alhambra, California 91802-1460, containing:

1. File number of facility and closure permit number.
2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets, and north arrow.
3. Description of methods for obtaining, handling, and transporting samples.
4. Time and date samples were obtained.
5. Soil sampling certification (including but not limited to soils classification, boring logs, sample procedures, sample locations, initiating chain-of-custody, and groundwater location) for Underground Storage Tank closure shall be certified by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils. The certification must clearly state that all work was performed under the supervision of the person signing.
6. Chain-of-custody documentation initiated by person obtaining sample through person at a California Department of Health Services certified laboratory.
7. Disposal destination of tanks and evidence of legal disposal.
8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction, and methods of analysis.
9. Documentation as to depth of groundwater at facility.
10. Manifests to document hazardous waste disposal of any removed soil and tank rinsate.
11. Evidence of legal disposal of soils designated as nonhazardous.
12. Any observations of site contamination.
13. Report to be signed by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils.
14. Submit to the California Environmental Reporting System (CERS) the date the UST was permanently closed for all tanks removed or closed in-place.

UST Facility Operating Permit Application:

Home » Prepare Submittal » UST: UST Facility Operating Permit Application (Draft)

Instructions/Help

You must complete this form withing 30 days of all new permits, permit changes, or facility information changes. You will also need to update/confirm your tank, monitoring plan, and other pertinent UST-related forms.

All facilities **must** provide a BOE Number--valid numbers are 8 digits long starting with the numbers 44... State and federal facilities should use 44032062. If **ALL** underground tanks at your facility **ONLY** contain NON-petroleum productions, you can provide this generic BOE Number: 44000000. Contact your local regulator if you are unsure what number to provide.

The former paper version of this form was called "UST Operating Permit Application-Facility Information" (Form A).

More information about UST Financial Responsibility Mechanisms is available at the Water Board's Underground Storage Tank Cleanup Fund Financial Responsibility web page.

Click this field to reflect permanent UST closure.

CLOSURE – UNDERGROUND STORAGE TANKS

CONDITIONS A – GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer – Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

   a. Removal of tank shall require a three (3)-business day advance notification.
   b. Permanent closure of a tank in place or a temporary closure shall require a 30-written notification.

3. Consult current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74 – 81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

   a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.
   b. The personnel shall be sufficiently skilled to safely carry out such operation.
   c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.
   d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B – TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, "Abandonment or Removal of Underground Tanks, "Part A and any other applicable Parts.

2. A temporary closure shall not exceed 180 days.

CONDITION C – PERMANENT TANK (S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Part D and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer Inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tank shall be transported to a legal disposal point.

6. If the tank has stored materials other than motor fuel, fuel oil or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be filled and re-compacted to a relative compaction of 90%.

CONDITIONS D – PERMANENT

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Parts B or C, and any other applicable Parts.

2. Owners/operators shall demonstrate part site integrity as follows:

   a. Test borings shall be slant drilled to intercept a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test boring may be drilled vertically and the reason stated in the report in 2.h. below.
   b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.
   c. For multiple tanks, as a minimum, boring shall be placed at 20-foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test location and placement.
   d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 40 feet below grade level.
   e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.
   f. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.
   g. A report containing the results of the above analysis shall be submitted to the County Engineer.

3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials – Guidelines."

4. A report shall be submitted to the County Engineer containing the results of the site investigation.

CLOSURE APPLICATION SUPPLEMENT **PART 1 OF 3**
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

DPW USE ONLY:
SITE-FILE NO. 6994-62151
APPLICATION NO. 905099

To satisfy the permanent closure requirements for underground storage tanks storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

***** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. *****

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2-4 feet beneath	TPHD	→ 8015M
2A, 2B	tank invert	BTEX, MTBE	→ 8260B
3A, 3B		Fuel Oxygenates	→ 8260B
		# Organic Lead	→ DOHS Method
1 sample	2-4 feet below	same as	same as
	each UDC	above	above
1 sample	2-4 feet below	Same as	Same as
	piping, every 20 feet	above	above
	starting from UDC's		

° Apply EPA Method 5035 for soil sample collection, preparation and preservation.

~~# Test for organic lead if past UST contents are tested, or if it is unknown whether past UST contents were leaded.~~

Continued on Page 2

3. All soil samples obtained shall be discrete, undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date/time of sampling shall be included in the final report.

4. Conform to the analytical requirements table below for petroleum hydrocarbon sites. Apply EPA Method 5035 specified in the USEPA SW-846, version III (12/1996) for soil sample preparation and preservation in order to minimize volatile organic losses. Use the sample collection devices, or equivalent, specified in the method (e.g., the Encore™ sampler). If the Encore™ sampler is used, analyze sample within 48 hours from the collection. Analyze sample within 10 days for soil samples stored under frozen conditions.

UST CONTENTS	Analyte	Analytical Method	Required MDL	
			Soil (ug/kg)	Water (ug/L)
GASOLINE OR DIESEL	Totoal Petroleum Hydrocarbons(TPH) - Gasoline	EPA Method 8015 (M)	100-200	50-100
	Total Petroleum Hydrocarbons (TPH) - Diesel	EPA Method 8015 (M)	1000	500
	Benzene	EPA Method 8260B (8021B)	1	0.5
	Toluene	EPA Method 8260B (8021B)	1	0.5
	Ethylbenzene	EPA Method 8260B (8021B)	1	0.5
	Xylenes (Total)	EPA Method 8260B (8021B)	1	0.5
	Methyl Tertiary Butyl Ether (MTBE)	EPA Method 8260B	2	1
	Di-isopropyl ether (DIPE)	EPA Method 8260B	2	1
	Ethyl tertiary butyl ether (ETBE)	EPA Method 8260B	2	1
	Tertiary amyl methyl ether (TAME)	EPA Method 8260B	2	1
	Tertiary butyl alcohol (TBA)	EPA Method 8260B	20	10
	Ethanol	EPA Method 8260B	500	250
	Methanol	EPA Method 8015 (M)	1000	500
WASTE OIL	Total Recoverable Petroleum Hydrocarbons (TRPH) - Waste Oil	EPA Method 418 + EPA Method 8260B	1000	500
OTHER, UNKNOWN	UST Permitted Contents, all VOC's (EPA Method 8260) + To Be Determined			

Continued on Page 3

5. All soil/groundwater samples shall be analyzed by a laboratory approved by the California Environmental Accreditation Laboratory Program (ELAP).

6. Analytical results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) Detection limits for each analytical procedure and determination; d) The method of analysis; e) Signature of chemist certifying results.

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

10. A final report that contains all of the above required information shall be submitted to the office above within one (1) month form the sampling date or 180 days from the date of this permit, whichever is earlier.

11. All electronic data shall be submitted to the State Water Resources Control Board Geotracker database.

Ron,

Attached you can find the pdf copy of the approved tank removal permit. In the soil sample laboratory analysis specification sheet, you can see that we require the samples to be analyzed for Organic Lead, with a note clarifying to test for it if the tanks' contents used to be leaded or if it is unknown whether they were leaded or not.
If the owner is sure these tanks never contained leaded fuel, the Organic Lead analysis can be disregarded. If there is some doubt, then it has to be included.

Best regards,
Kattya Batres

CLOSURE APPLICATION SUPPLEMENT **PART 1 OF 3**
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

DPW USE ONLY
SITE-FILE NO 6994-62151
APPLICATION NO 905099

To satisfy the permanent closure requirements for underground storage tanks storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

***** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. *****

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2-4 feet beneath	TPHD	→ 8015M
2A, 2B	tank invert	BTEX, MTBE	→ 8260B
3A, 3B		Fuel Oxygenates	→ 8260B
		* Organic Lead	→ DOHS Method
1 sample	2-4 feet below	Same as	Same as
	each UDC	above	above
1 sample	2-4 feet below	Same as	Same as
	piping, every 20 feet	above	above
	starting from UDCs		

° Apply EPA Method 5035 for soil sample collection, preparation and preservation.

* Test for organic lead if past UST contents were leaded, or if it is unknown whether past UST contents were leaded.

Continued on Page 2

APPENDIX B

SOIL & GROUNDWATER SAMPLING PROCEDURES

APPENDIX B

SOIL & GROUNDWATER SAMPLING PROCEDURES

Soil Samples

- Soil samples collected from the piping trenches were obtained using a hand auger. Soil samples collected from the tank pit were obtained with a backhoe.
- A relatively undisturbed portion of each sample was also retained in general accordance with EPA method no. 5035 protocol, using an EASYDRAW® syringe. An approximate five gram sample was collected with the syringe and ejected each into four pre-tared, 40 ml glass VOA vials (two vials containing pre-measured quantities of $NaHSO_4$, one vial containing MeOH, and one vial with no preservative).
- Additional sample (for non VOC anlayses) was also collected in a laboratory approved, 4-Oz. glass jar at each location.
- All collected samples was labeled with the sample number, date and project number.
- All samples were stored in an ice chest kept at approximately 40 to 50 degrees Fahrenheit prior to transportation to a State of California, Department of Health Services certified laboratory under strict chain-of-custody procedures.
- All re-usable soil sampling equipment was washed prior to each sampling events with a solution of LIQUINOX (a phosphate free detergent), rinsed with potable tap water, and then rinsed again with de-ionized water.

Groundwater Samples

- Groundwater samples were obtained with a disposable polyethylene sampling bailer lowered into the groundwater in the bottom of the UST pit.
- The groundwater samples were each retained in a 1-liter amber glass bottle containing H_2SO_4, and three 40-ml glass VOA vials with no preservative.
- All collected samples was labeled with the sample number, date and project number.
- All samples were stored in an ice chest kept at approximately 40 to 50 degrees Fahrenheit prior to transportation to a State of California, Department of Health Services certified laboratory under strict chain-of-custody procedures.

Dear Mr. Hansen:

The **analytical results** for the soil and water samples, received by our laboratory on November 9, 2018, are attached. The samples were received chilled, intact, and accompanying chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manager

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
UNDERGROUND STORAGE TANK PROGRAM

NOTICE OF VIOLATION ORDER TO COMPLY

Date: 3/27/2019 — Permit #: 892942

Contact/Owner: MS. KATRINA JONES — Site/Fac #: 006994 - 665226

Site Name: BRE CA SATURN LLC — Violation #: 91754-8

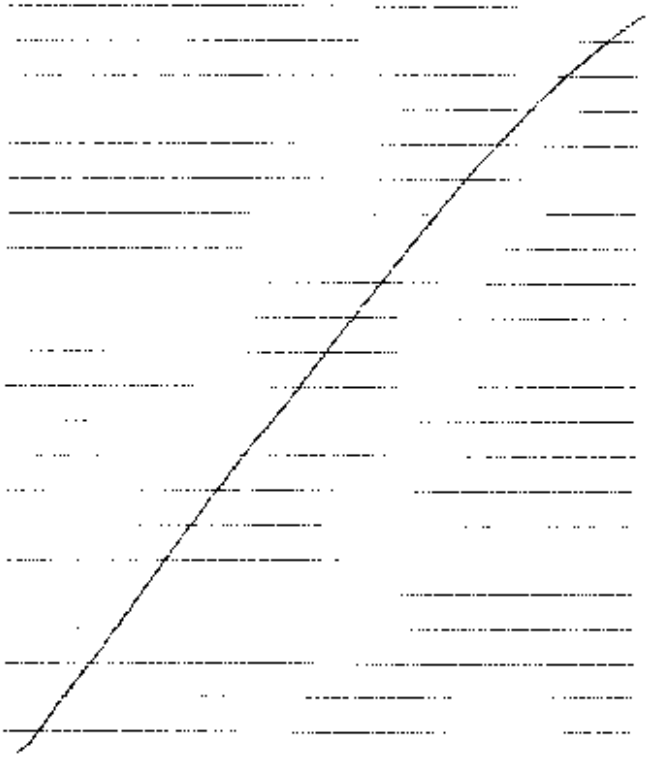
Site Address: 1977 SATURN ST — City/Zip: MONTEREY PARK, 91755

Mailing Address: SAME AS ABOVE — City, Zip:

A recent inspection of your facility revealed that the following conditions exist for petroleum underground storage tanks (USTs) which are in violation of California Health and Safety Code (H&SC) Chapter 6.7 and/or 23 California Code of Regulations (CCR) Division 3, and/or the conditions and limitations of the above permit. YOU ARE HEREBY DIRECTED to take the actions listed below on or before the following date(s) indicated:

☐ OPERATING WITHOUT A CERTIFIED / OPERATING MONITORING SYSTEM – CHSC 25292

YOU ARE HEREBY DIRECTED to have the monitoring system certified by an individual who meets the qualifications specified by this office by (Date): _____. The date of the last failure on the double-walled UST systems are to be resolved within the 45 period.



☐ MISSING TEST RESULTS / DOCUMENTS – Required testing/documents must be conducted and/or documents received by this office:

- ☐ Secondary Containment Testing
- ☐ Tank Integrity Testing
- ☐ Piping or Secondary Containment Testing
- ☐ Annual Testing
- ☐ Line Testing
- ☐ Line Leak Detector Testing
- ☐ Facility Employee Training
- ☐ Monthly Designated Operator Monitoring Form(s)
- ☐ _____

☑ REQUIRED DOCUMENTS / ITEMS MUST BE SUBMITTED TO THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS) –

- ☐ Facility Information Page
- ☑ Tank Information Page
- ☐ Tank Profile
- ☑ Proof of Financial Responsibility Certificate
- ☐ Chief Financial Officer Letter
- ☐ Owner Statement of Designated Operator
- ☑ Monitoring Plan
- ☐ Response Plan
- ☐ Owner/Operator Agreement
- ☑ Current monitoring results and/or alarm history report (CERS printout)
- ☐ _____

☐ OTHER

YOU ARE HEREBY DIRECTED to submit to this office written evidence of compliance with the above directives by the later of the following: sixty days from the date on this Notice, or any other specific date above. Failure to comply with the underground storage tank laws and regulations may subject you to a civil penalty of not less than $500 or more than $10,000 or by one year in county jail or both. Finally, pursuant to Title 23 of the Los Angeles County Code, Section 7.24.040 and H&SC 25299.76, it is a misdemeanor to violate any of the laws and regulations governing USTs, including provisions of CHSC, Division 20, Chapter 6.7 and 23 CCR, Division 3, Chapter 16. Failure to comply with this Notice may therefore result in criminal prosecution. Furthermore, a notice of violation may be imposed to recover the cost incurred by this Department in the enforcement of this.

If you have any questions regarding this matter, please contact: ANDISH DEHBASHI
[ ] Monday through Friday, 8 a.m. to 3:30 p.m. or [ ] Monday through Thursday, 7 a.m. to 5:30 p.m. at (626) 430-7631

Dear Mr. Christian:

HAZARDOUS SUBSTANCES UNDERGROUND STORAGE
CLOSURE/SITE ASSESSMENT REPORT
CLOSURE APPLICATION NO. 905166
FACILITY LOCATED AT 1977 SATURN STREET, MONTEREY PARK (3M)

This office reviewed the soil sampling report dated December 7, 2018, for the subject facility.

Pursuant to the California Health and Safety Code, Division 20, Chapter 6.7, Section 25297(b), and since the California Regional Water Quality Control Board (CRWQCB) is the lead agency for the subject facility mitigation, we are referring this matter to the said agency. For further information regarding the CRWQCB's requirements, please contact Mr. Yue Rong at 320 West 4th Street, Suite 200, Los Angeles, CA 90013-2343, (213) 576-6710. Any future requirements are subject to the direction and approval of the CRWQCB.

Please submit all future correspondences to the CRWQCB with a copy sent to this office.

If you have any questions, please contact me or you staff may contact Mr. John Awujo at (626) 458-3507 or JAWUJO@pw.lacounty.gov, Monday through Thursday, 7 a.m. to 5:30 p.m.

Very truly yours,

APPLICATION FOR TRANSFER OF HAZARDOUS SUBSTANCES UNDERGROUND STORAGE PERMIT
COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
Environmental Programs Division
900 South Fremont Avenue, 3rd Floor Alhambra Building
Alhambra, CA 91803-1331
(626) 458-3517 FAX (626) 458-3541

Pursuant to Los Angeles County Code Title 11, Division 4, Section 11.80.170 application is hereby made for the transfer of ownership of an existing Hazardous Substances Underground Storage Permit (Permit) or Unified Program (UP) Facility Permit which incorporates Underground Storage Tanks (USTs).

COMPLETE THE FOLLOWING.

Date of Transfer _____ California Environmental Reporting System (CERS) ID# _____

New Facility Name _____

Facility Address _____ City _____

Assessor Parcel Number (APN) Map Book No _____ Page No _____ Parcel No _____

New Permittee name _____ Number of USTs _____

Email Address _____ Existing Permit No _____

THE NEW PERMITTEE IS:

☐ UST Owner and Operator ☐ UST Owner Only ☐ UST Operator Only
☐ Unified Program facility owner and operator (complete below)
☐ Unified Program facility owner only

IF UST OPERATOR IS NOT THE UST OWNER, AND IS NOT NAMED ON THE UNIFIED PROGRAM FACILITY PERMIT, COMPLETE THE FOLLOWING:

UST Operator Name _____ Telephone _____

UST Operator Address _____ State _____ Zip _____

***No fee required to notify of operator change if not replacing a person named in the Unified Program Facility Permit ***

This Application for Transfer must be signed and accompanied with the following:

- **OPERATING PERMIT TRANSFER FEE PAYABLE TO: "COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS"**

APPLICATION FOR TRANSFER FEE **$658.00** ( ) CASH ( ) CHECK # 137070

- SUBMIT TO CERS UST FACILITY DATA
- SUBMIT TO CERS UST TANK FORM DATA (ALL USTS)
- SUBMIT TO CERS UST MONITORING PLAN DATA
- SUBMIT TO CERS DESIGNATED OPERATOR FORM
- SUBMIT TO CERS FINANCIAL RESPONSIBILITY FORMS
- SUBMIT TO CERS RESPONSE PLAN FORM

BY SIGNING BELOW, THE PERMIT TRANSFER APPLICANT ACKNOWLEDGES HAVING READ ALL CONDITIONS FOR TRANSFER ON THE REVERSE SIDE OF THIS FORM, AGREES TO COMPLY WITH THE CONDITIONS AND LIMITATIONS OF AND ASSUMES THE OBLIGATIONS OF THE HAZARDOUS SUBSTANCE UNDERGROUND STORAGE PERMIT OR UNIFIED PROGRAM FACILITY PERMIT FOR WHICH TRANSFER IS REQUESTED.

INSTRUCTIONS

Hazardous Substances Underground Storage Permit (Permit) Application for Transfer Supplement

This Application for Permit Transfer form is to be used only for the transfer of an existing Permit or underground storage tank (UST) authorized under a Unified Program (UP) Facility Permit to a new owner or operator of a facility within the jurisdiction of the County of Los Angeles Department of Public Works (DPW).

The new Permit owner must complete and submit an Application for Transfer and Transfer Fee to DPW within 30 days of transfer. The application must be accompanied with uploaded UP form data to the California Environmental Reporting System (CERS), Business Portal: https://cers.calepa.ca.gov/ including all UP - UST FACILITY INFORMATION data, UP UST TANK INFORMATION data, UP UST MONITORING PLAN data, as well as uploaded and signed DESIGNATED OPERATOR FORM, FINANCIAL RESPONSIBILITY FORM (petroleum USTs), and UST RESPONSE PLAN FORM.

By applying for transfer of an existing Permit, the new Permit owner agrees to assume all obligations under the existing Permit including all fee installments, installation and maintenance of approved monitoring systems, and all reporting requirements. **IT IS THE APPLICANTS RESPONSIBILITY TO DETERMINE IF DELINQUENT FEES OR OTHER OUTSTANDING SUBMITTAL REQUIREMENTS, INCLUDING VIOLATION CORRECTIONS, ARE OWED TO DPW OR CUPA.**

The DPW may review and modify, or terminate the Transfer of Permit if it is determined the facility is not providing or threatens not to provide for the safe underground storage of hazardous substances.

The owner or operator of USTs shall monitor the facility using the method specified in the Permit. If the permittee of a facility is not the UST owner or UST operator, the Permittee shall provide a copy of the Permit to both the owner and operator. If the Permittee is a person other than the UST operator of the USTs, that person shall do all of the following: a) enter into a written contract with the UST operator which requires the UST operator to monitor the USTs as set forth in the Permit, b) provide the UST operator with a copy of California Health and Safety Code, Division 20, Chapter 6.7 and California Code of Regulations Title 23, Division 3, Chapter 16, and c) inform DPW within thirty (30) days of any change of UST operator.

The Permit annual maintenance fee will be billed under the County of Los Angeles Certified Unified Program Agency (CUPA) Consolidated Permit (Los Angeles County Code Title 12, Section 12.50.070) the following Fiscal Year (July 1 to June 30) to the Permittee authorized here, unless other specific arrangements have been approved by the DPW and CUPA. Regardless of billing arrangements, the UST owner is responsible for insuring payment of all fees and compliance with all monitoring requirements.

The Permittee, UST owner and UST operator shall comply with provisions of California Health and Safety Code, Division 20, Chapter 6.7, California Code of Regulations Title 23, Division 3, Chapter 16 and Chapter 18, and Los Angeles County Code, Title 11, Division 4.

CERTIFICATION OF COMPLIANCE WITH
LOS ANGELES COUNTY LOBBYIST ORDINANCE

I hereby certify that the person applicant for the project listed at

LOCATION ADDRESS

am in full compliance with the requirements of Los Angeles County Code, Chapter 2.160 et seq., relating to the Los Angeles County Lobbyist Ordinance and that no person acting on behalf of myself has supplied and will subsequently supply any gift through the application process.

UNDERGROUND STORAGE TANKS
CLOSURE INFORMATION

1. This authorization to temporarily or permanently close an underground storage tank (UST) pursuant to Los Angeles County Code, Title 11, Division 4. This authorization may also be used for product piping removal associated with an existing or removed USTs.

2. This authorization will not be approved unless a valid Hazardous Substance Underground Storage Permit (HSUSP) application is on file with the DPW or an Unified Program Facility Permit has been issued by the Certified Unified Program Agency (CUPA).

3. Submittals, including this authorization, made on behalf of the UST owner, operator, or Unified Program permit owner or operator shall be accompanied by written authorization.

4. USTs closed on site, by removal, or cleaning and filling with an inert solid substance prior to January 1, 1984, need not comply with current closure requirements. However, contaminations related to these USTs must be reported and investigated.

5. All work shall be carried out in full compliance with all applicable federal, state and local laws, ordinances, rules and regulations.

6. All fees due to DPW and/or to the CUPA for the operation and maintenance of the facility subject to closure through the date of closure shall be paid in full.

7. Closure authorizations are site specific and may be subject to additional sampling and site characterization requirements as necessary to protect the public health and safety, underground and surface water supplies, and may include requirements requested by Federal, State or other regulatory agencies.

8. All inspection notification(s) shall be made as directed by the attached conditions of this approval.

9. Within 30 days after closure, all requirements of this Closure authorization shall be furnished to the DPW in a closure report per the DPW Closure Report Requirements and Supplements, describing all work completed, results of any required sampling, disposition of any contaminated soils or substances found and any other requirements made part of the closure application as well as submittal to the CERS database of the Unified Program UST FACILITY and UST TANK information for each UST permanently closed. http://cers.calepa.ca.gov/

10. In all cases, closure authorizations expire 180 days from the date of issue unless otherwise specified. It is the responsibility of the owner or operator to make sure that the final report contains the required information and is submitted to the DPW within 30 days from the sampling date or 180 days from the date of the permit issuance, whichever is earlier. The total number of tanks listed on the HSUSP or UFP Permit and the yearly annual permit maintenance billing will remain unchanged until the closure report is received by the DPW. Only one copy of the closure report needs to be submitted, unless others are directed.

11. This Closure Authorization is considered complete when all requirements of this Closure Authorization and the Permit have been met.

12. The DPW will review the closure report and will issue closure certification with no further action when all requirements of this Closure Authorization and Permit have been met, and where no unauthorized release has been found.

13. If an unauthorized release has occurred or any detected constituent in soil or groundwater is found above the method detection limit of an analytical method as identified in the laboratory testing requirements, reporting of this unauthorized release must comply with the Health and Safety Code Division 20, Chapter 6.7.

14. Where an unauthorized release has occurred, referral of the closure report will be made to a Regional Water Quality Control Board or State Water Resources Control Board who will then provide further direction until closure certification is issued.

15. All correspondence related to this closure authorization shall include the SITE-FILE numbers listed on the front of this document found in the upper right box and be addressed to the following location:

DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 SOUTH FREMONT AVENUE
ALHAMBRA, CA 91803-1331

CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the County of Los Angeles Department of Public Works, Environmental Programs Division, P.O. Box 1460, Alhambra, California 91802-1460, containing:

1. File number of facility and closure permit number.
2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets, and north arrow.
3. Description of methods for obtaining, handling, and transporting samples.
4. Time and date samples were obtained.
5. Soil sampling certification (including but not limited to soils classification, boring logs, sample procedures, sample locations, initiating chain-of-custody, and groundwater location) for Underground Storage Tank closure shall be certified by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils. The certification must clearly state that all work was performed under the supervision of the person signing.
6. Chain-of-custody documentation initiated by person obtaining sample through person at a California Department of Health Services certified laboratory.
7. Disposal destination of tanks and evidence of legal disposal.
8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction, and methods of analysis.
9. Documentation as to depth of groundwater at facility.
10. Manifests to document hazardous waste disposal of any removed soil and tank rinsate.
11. Evidence of legal disposal of soils designated as nonhazardous.
12. Any observations of site contamination.
13. Report to be signed by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils.
14. Submit to the California Environmental Reporting System (CERS) the date the UST was permanently closed for all tanks removed or closed in-place.

UST Facility Operating Permit Application:

Home » Prepare Submittal » UST: UST Facility Operating Permit Application (Draft)

You must complete this form within 30 days of all new permits, permit changes, or facility information changes. You will also need to update/confirm your tank monitoring plan and other pertinent UST-related forms.

All facilities **must** provide a BOE Number - valid numbers are 8 digits long starting with the numbers 44 . State and federal facilities should use 44032062. If **ALL** underground tanks at your facility **ONLY** contain NON petroleum productions, you can provide this generic BOE Number: 44000000. Contact your local regulator if you are unsure what number to provide.

The former paper version of this form was called "UST - Operating Permit Application-Facility Information" (Form A)

More information about UST Financial Responsibility Mechanisms is available at the Water Board's Underground Storage Tank Cleanup Fund Finance & Responsibility web page.

CLOSURE – UNDERGROUND STORAGE TANKS

CONDITIONS A – GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer – Facilities; Los Angeles County Fire Department, Fire Prevention Division; or the appropriate City Fire Department; South Coast Air Quality Management District and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

   a. Removal of tank shall require a three (3)-business day advance notification.
   b. Permanent closure of a tank in place or a temporary closure shall require a 30-written notification.

3. Consult current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74 – 81 December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

   a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the stored liquid stored and its components.
   b. The personnel shall be sufficiently skilled to safely carry out such operation.
   c. Contaminated materials removed from each facility shall be disposed of at legal point of discharge.
   d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B – TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, "Abandonment or Removal of Underground Tanks," Part A and any other applicable Parts.

2. A temporary closure shall not exceed 180 days.

CONDITION C – PERMANENT TANK (S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Part D and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish soil integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer Inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tanks shall be transported to a legal disposal point.

6. If the tank has stored operations other than motor fuel, fuel oil or waste oil, the integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be filled and compacted to the above ground level.

CONDITIONS D – PERMANENT

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division Supplement #A – Inspection Guide #6, Parts B to G, and any other applicable Parts.

2. Owners/operators shall demonstrate soil integrity as follows:

   a. Test borings shall be strategically drilled to intercept a point beneath the center of the tank, if possible. If such drilling is not feasible, the test boring may be drilled vertically and the reason stated in the report in 2.b. below.
   b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the longer axis of the tank.
   c. For multiple tanks, as a minimum, borings shall be placed at 20-foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test location and placement.
   d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 40 feet below grade level.
   e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.
   f. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.
   g. A report containing the results of the above analysis shall be submitted to the County Engineer.

3. If the soil analysis in 2. above indicates the presence of contaminants the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials – Guidelines."

4. A report shall be submitted to the County Engineer containing the results of the site investigation.

CLOSURE APPLICATION SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

PART 1 OF 3

FOR OFFICE USE ONLY
SITE/FACILITY NO. 6494-[illegible]
APPLICATION NO. 4C5[illegible]

To satisfy the permanent closure requirements for underground storage tanks storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

***** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. *****

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2nd feet beneath	TPHD	8015M
2A, 2B	[illegible]	BTEX, MTBE	8260B
3A, 3B		Fuel Oxygenates	
		Organic lead	DOHS Meth.
1 sample	Soil feet below	[illegible]	Same as
	[illegible]	above	above
1 sample	2nd feet below	[illegible]	Same as
	[illegible]	above	above

[illegible]

Continued on Page 2

3. All soil samples obtained shall be discrete, undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date/time of sampling shall be included in the final report.

4. Conform to the analytical requirements table below for petroleum hydrocarbon sites. Apply EPA Method 5035 specified in the USEPA SW-846, version III (12/1996) for soil sample preparation and preservation in order to minimize volatile organic losses. Use the sample collection devices, or equivalent, specified in the method (e.g., the Encore™ sampler). If the Encore™ sampler is used, analyze sample within 48 hours from the collection. Analyze sample within 10 days for soil samples stored under frozen conditions.

UST CONTENTS	Analyte	Analytical Method	Required MDL: Soil (mg/kg)	Required MDL: Water (ug/L)
GASOLINE OR DIESEL	Total Petroleum Hydrocarbons (TPH) - Gasoline	EPA Method 8015 (M)	100-200	50-100
	Total Petroleum Hydrocarbons (TPH) - Diesel	EPA Method 8015 (M)	1000	500
	Benzene	EPA Method 8260B (8021B)	1	0.5
	Toluene	EPA Method 8260B (8021B)	1	0.5
	Ethylbenzene	EPA Method 8260B (8021B)	1	0.5
	Xylenes (total)	EPA Method 8260B (8021B)	1	0.5
	Methyl Tertiary Butyl Ether (MTBE)	EPA Method 8260B	2	1
	Diisopropyl ether (DIPE)	EPA Method 8260B	2	1
	Ethyl tertiary butyl ether (ETBE)	EPA Method 8260B	2	1
	Tertiary amyl methyl ether (TAME)	EPA Method 8260B	2	1
	Tertiary butyl alcohol (TBA)	EPA Method 8260B	20	10
	Ethanol	EPA Method 8260B	200	100
	Methanol	EPA Method 8015 (M)	500	500
WASTE OIL	Total Recoverable Petroleum Hydrocarbons (TRPH) - Waste Oil	EPA Method 418.1 EPA Method 8260B	1000	500
OTHER, UNKNOWN	UST Permitted Contents, all VOC's (EPA Method 8260) + To Be Determined			

Continued on Page 3

5. All soil/groundwater samples shall be analyzed by a laboratory approved by the California Environmental Accreditation Laboratory Program (ELAP).

6. Analytical results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted, b) The method of extraction (if applicable); c) Detection limits for each analytical procedure and determination; d) The method of analysis; e) Signature of chemist certifying results.

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

10. A final report that contains all of the above required information shall be submitted to the office above within one (1) month form the sampling date or 180 days from the date of this permit, whichever is earlier.

11. All electronic data shall be submitted to the State Water Resources Control Board Geotracker database.

STATE OF CALIFORNIA
California Regional Water Quality Control Board
Los Angeles Region
(Underground Storage Tank Program)

General Laboratory Testing Requirements for Petroleum Hydrocarbon Impacted Sites

The purpose of this document is to supplement the Regional Board's Laboratory Report Form (6/00) in order to update obsolete testing requirements and set forth the new requirements for fuel oxygenates and natural attenuation testing. Each analytical method used must be certified by the California Environmental Accreditation Laboratory Program (ELAP).

1. General Laboratory QA/QC Requirements

Conform to the Regional Board's Laboratory Report Form (6/00) in general, except for items specified below.

2. Compounds to be Tested

Total petroleum hydrocarbons in gasoline range (TPH[g]) (C4 – C12); Total petroleum hydrocarbons in diesel range (TPH[d]) (C13 – C22); benzene, toluene, ethylbenzene, xylenes (BTEX); methyl tertiary butyl ether (MTBE); di-isopropyl ether (DIPE); ethyl tertiary butyl ether (ETBE); tertiary amyl methyl ether (TAME); tertiary butyl alcohol (TBA). If the gasoline tanks historically or currently contain methanol or ethanol, these compounds are also to be tested.

3. Analytical Test Methods and Detection Limits

Conform to Table 1 below. Report any concentration detected between the method detection limit (MDL) and estimated quantitation limit (EQL) or reporting limit (RL) in a numerical value with a "J" flag indicator. All "Non-Detect" (ND) shall be reported in the format with "< (numerical MDL)." Integrate all fuel oxygenate additive concentrations into total petroleum hydrocarbons (TPH) and report it as TPH. EPA Method 8021B may be used to substitute EPA Method 8260B at the sites where all fuel oxygenates have not been identified by EPA Method 8260B in soil and/or groundwater.

Table 1: Analytical Requirements

		Required MDL (Method detection limit)	
Analyte	Analytical Method	Soil (µg/kg)	Water (µg/L)
BTEX	EPA Method 8260B(8021B)	1	0.5
MTBE	EPA Method 8260B	2	1
DIPE	EPA Method 8260B	2	1
ETBE	EPA Method 8260B	2	1
TAME	EPA Method 8260B	2	1
TBA	EPA Method 8260B	20	10
TPHg	Cal-LUFT GC/FID or GC/MS	100-200	50-100
TPHd	Cal-LUFT GC/FID	1000	500
Methanol	Cal-LUFT GC/FID	1000	500
Ethanol	Cal-LUFT GC/FID(EPA8260B)	500	250

4. Use of EPA Method 5b35 for Soil Samples

Apply EPA Method 5035A specified in the USEPA SW 846, (7/2002) for soil sample preparation and preservation in order to minimize volatile organic losses. Use the sample collection devices, or equivalent, specified in the method (e.g., the Encore™ sampler). If the Encore™ sampler is used, analyze sample within 48 hours from the collection. Analyze sample within 14 days for soil samples stored under frozen conditions.

5. Natural Attenuation Parameters

Natural attenuation processes include dispersion, dilution, sorption, volatilization, biodegradation, and chemical or biological transformation. A carefully controlled monitoring program for the natural attenuation can be used to confirm site-specific mass reduction and achieve remedial objectives. In order to test parameters to confirm the occurrence of natural attenuation, site characterization must be complete first.

5.1 Primary Natural Attenuation Criteria

Meet the following conditions prior to testing for the secondary natural attenuation parameters:

a) Groundwater contaminant plume must be fully defined.

b) Groundwater monitoring program on a quarterly basis must be completed for at least two years including data of MTBE and other oxygenates.

c) Groundwater concentration has consistently decreased or been stable.

d) Determination of site-specific hydraulic conductivity must be conducted. Refer the ASTM D4044-91 for the slug test procedures. Other field methods (e.g., pumping test) are also acceptable to determine hydraulic conductivity.

e) Characterization of MTBE and other oxygenates plume vertical extent must be completed with discrete multi-depth groundwater sampling at all groundwater vulnerable areas designated by the Board.

5.2 Secondary Natural Attenuation Parameters

Analyze the secondary natural attenuation parameters only after the primary natural attenuation criteria are met. Analyze the secondary natural attenuation parameters at all groundwater monitoring wells inside and outside of the plume. Conform to Table 2 below for parameters and testing methods.

Table 2: Analytical Requirements for Secondary Natural Attenuation Parameters

Parameters	Test Method	Required MDL
pH	EPA Method 150.2 or Field instrument	n/a
Dissolved oxygen (DO)	EPA Method 360.1 or Field instrument	n/a
Redox potential (ORP)	Field instrument	n/a
Sulfate (SO_4)	EPA Method 300	5 mg/L
Nitrate (NO_3)	EPA Method 300	0.1 mg/L
Ferrous iron (Fe^{+2})	EPA Method 200	0.1 mg/L
Methane (CH_4)	EPA Method 8015(M)	5 µg/L

6. Electronic Submittal of Data Reporting

All analytical results shall be uploaded in an electronic format to the State GeoTracker Database.

NOTICE TO CLOSURE PERMIT APPLICANTS

The South Coast Air Quality Management District (SCAQMD) has adopted Rule 1166 regulating emissions of Volatile Organic Compounds (VOC) from decontamination of soil effective **August 5, 1988**.

In addition to the requirements of your Closure Permit, persons excavating any underground storage tank that previously contained VOCs must:

- Notify the SCAQMD by telephone at (909) 396-2326 or by fax at (909) 396-3342 using the SCAQMD notification form 24 hours prior to tank excavation. 1166(d)(2)
- Monitor the excavated material during the excavation for VOC contamination 1166(c)(1)(E)
- When VOC contamination is detected,
  - Cease excavation.
  - Cover the contaminated soil until implementation of approved mitigation measures. 1166(c)(1)(C)
  - Notify the SCAQMD at (909) 396-2326 within 24 hours of detection of VOC contaminated soil. 1166(c)(1)(A)
- A person shall not engage in or allow any on- or off-site spreading of VOC contaminated soil which results in uncontrolled evaporation of VOC to the atmosphere. 1166(c)(3)

Exemptions

- Treatment of less than one (1) cubic yard of contaminated soil. 1166(d)(1)(A)
- Decontamination of soil containing organic compounds that have an initial boiling point of 302°F or greater, Reid Vapor Pressure less than 80 mm Hg or Absolute Vapor Pressure less than 38 mm Hg at 20°C. 1166(d)(1)(B)(i)
- Removal of soil for sampling purposes pursuant to Environmental Protection Agency methods. 1166(c)(1)(D)
- Accidental spillage of five (5) gallons or less of VOC. 1166(d)(1)(D)
- Documentation of soil which is contaminated through natural seepage of VOC from oil and gas wells or other natural sources. 1166(d)(1)(E)

SPECIFIC QUESTIONS ON RULE 1166 SHOULD BE REFERRED TO THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT (909) 396-2326

ATTENTION CONTRACTOR
NOTIFICATION/PERMIT REQUIREMENT COMPLIANCE

This Authorization is issued subject to compliance with all applicable laws and regulations relating to the performance of work including, but not limited to, business license requirements, Building Codes, Fire Codes, Air Quality regulations, Health and Safety Codes, Water Codes, and Transportation regulations.

Pursuant to Los Angeles County Code, Section 11.78.045, and the Conditions and Limitations of the attached Hazardous Substance Underground Storage Closure and/or New Construction/Addendum Authorization, you are required to complete ALL of the agency notifications indicated below within the time period specified prior to commencement of work.

**[X] 72 HOUR ELECTRONIC NOTIFICATION – DEPARTMENT OF PUBLIC WORKS, ENVIRONMENTAL PROGRAMS DIVISION

The owner/operator or contractor shall provide electronic notification to Public Works at least 72 working hours prior to the commencement of any of the following work:

- Closure Authorization Permit – Prior to sampling and backfilling any excavation
- New Construction/Addendum Permit – Prior to backfilling any excavation

Notifications shall only be made at the following link:

- http://dpw.lacounty.gov/GO/DPWJST/

[X] 48 HOUR (OR AS REQUIRED)–LOCAL FIRE DEPARTMENT FIRE PREVENTION INSPECTOR:

[X] City of Monterey Park

[ ] Los Angeles County Fire Department

24 HOUR–SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

[X] SOUTH COAST AQMD – Rule 1149 and Rule 1166
Telephone: (909) 396-2626
Fax: (909) 396-3342

[ ] ANTELOPE VALLEY AQMD – Rule 1149 and Rule 1166
Telephone: (661) 723-8070

[ ] COUNTY SERVES AS BUILDING OFFICIAL, SEE ATTACHED

[X] CITY SERVES AS BUILDING OFFICIAL

FAILURE TO PROVIDE NOTICE AS REQUIRED ABOVE MAY RESULT IN PERMIT REVOCATION, ADDITIONAL SITE ASSESSMENT REQUIREMENTS AND/OR ADMINISTRATIVE PENALTIES AS PROVIDED BY LAW.

** See attached closure permit supplement for Public Works notification requirements.

As a condition of the closure permit, it is required that the contractor create a profile in this office's electronic notification system in order to schedule inspections.

As of January 12, 2016

County of Los Angeles Department of Public Works Underground Storage Tank Electronic Notification system will now accept notifications for Emergency Repair Work, Prior to Backfill appointments and Closure appointment. Notifications shall only be made at the following link.

http://dpw.lacounty.gov/GO/DPWUST/

Faxes, emails or Telephone calls will not be accepted.

ADDITIONAL CONDITIONS FOR UST CLOSURE/SITE ASSESSMENT

TITLE 23: CALIFORNIA CODE OF REGULATIONS - WATERS
DIVISION 3: STATE WATER RESOURCES CONTROL BOARD (SWRCB)
CHAPTER 30: ELECTRONIC SUBMITTAL OF INFORMATION

Article 1 GENERAL PROVISIONS

Section 3890. General Intent, Content, and Applicability of Regulations

(a) The regulations in this Chapter are intended to provide electronic access to reports, including soil, vapor, and water data, prepared for the purpose of subsurface investigation or remediation of: (1) an unauthorized discharge or deposit of waste as defined in section 13050 of the Water Code, (2) an unauthorized release of a hazardous substance as defined in section 25281 of the Health and Safety Code, or (3) a discharge of waste to land subject to Division 2 of Title 27 or Division 3, Chapter 15, of Title 23 of the California Code of Regulations (CCR).

(b) The regulations in this Chapter require persons responsible for submitting certain reports to the State Board, a regional board, or a local agency to submit these reports electronically over the Internet to the State Board's Geotracker system.

(c) The requirements of this Chapter are in addition to, and not superseded by, any other applicable reporting requirements.

(d) Except as provided in Section 3895(b), the electronic reporting requirements of this Chapter are intended to replace requirements for the submittal of paper copies of reports, beginning July 1, 2005.

Authority cited: Sections 13196 and 13198(c), Water Code.

Reference: Sections 13196 and 13198, Water Code.

Article 2. - ELECTRONIC SUBMITTAL OF INFORMATION

Section 3891. Definition of Terms

"COELT" is the United States Army Corps of Engineers Loading Tool program. It is a relational database application that is designed to run with the Microsoft Windows operating system. COELT places laboratory data into the standardized Electronic Deliverable Format (EDF). The program can accept data from Laboratory Information Management System (LIMS) or manually entered data. COELT is an optional software application that is intended to help laboratories that require new software to produce the EDF data deliverable. COELT includes a report utility that allows hard copy laboratory reports to be printed that match the actual electronic data. For purposes of the requirements of this chapter, version 1.2a of COELT may be used. The program (coelt12i.exe) and documents (coelt 1.2i manual.zip) for version 1.2i of COELT are available through links provided at http://www.waterboards.ca.gov/ust. "CSRS-H" is the California Spatial Reference System-Horizontal, which includes the High Precision Geodetic Network (HPGN), the High Precision Geodetic Network–Densification (HPGN-D) and other geodetic control positions. These control positions have been determined by Global Positioning System survey methods in accordance with first order or better standards and specifications from the Federal Geodetic Control Subcommittee (FGCS) of the Federal Geographic Data Committee. These control positions are published by the National Geodetic Survey, California Spatial Reference Center or its successor.

"EDCC" is the Electronic Deliverable Consistency Checker program, which was developed for the EDF1.2i format, described below. The EDCC program is run upon completion of an EDF report and produces an error report. This error report identifies problems within the given data set based upon the EDF database structure, guidelines, restrictions, and valid values. The error report also indicates the nature of each problem, so that the submitter can correct them. For purposes of the requirements of this chapter, the interactive web-version 1.2i or personal computer version 1.2i of EDCC shall be used. Programs (edcczip and edccservicepack.zip) for version 1.2i of EDCC are available through links provided at http://www.waterboards.ca.gov/lust.

"EDF" is the Electronic Deliverable Format, originally developed for the United States Army Corps of Engineers. It is a data standard designed to facilitate transfer of electronic data files from analytical laboratories to end-users. It is a relational database whose files are related to one another through key fields. Laboratories can produce electronic EDF files by using their own LIMS or COELT software. The data components include chain-of custody information, laboratory results, and quality assurance information. For purposes of the requirements of this chapter, version 1.2i of EDF shall be used. Specifications for version 1.2i of EDF (The Electronic Deliverable Format "EDF) Version 1.2i data dictionary are available in Title 27, Division 3, Subdivision 2, Chapter 7 (Laboratory Results) CCR, through links provided at http://www.waterboards.ca.gov/lust.

"Geotracker" is the State Board's Internet-accessible database system used by the State Board, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage tanks. This system consists of a relational database, on-line compliance reporting features, a geographical information system (GIS) interface and other features that are utilized by the State Board, regional boards, local agencies, regulated industry and the public to input, manage, or access compliance and regulatory tracking data. Geotracker, initially known as the Geographical Environmental Information Management System (GEIMS) database, is available at http://geotracker.swrcb.ca.gov/.

"PDF" means Portable Document Format. "PDF" files are self-contained and cross-platform documents. A PDF file will look the same on the screen and in print, regardless of what type of computer or printer a person uses or which software package originally created the file. Although PDF files contain the complete formatting of the original document, including fonts and images, they are highly compressed, allowing efficient transfer of complex information.

"Permanent monitoring well" means any artificial excavation by any method made for the purpose of monitoring fluctuations in groundwater levels, the quality of groundwater, or the concentration of contaminants in groundwater and which is used for at least thirty days.

"Report" means any document or item that is required for submittal in order for a person to comply with a regulation, directive, or order issued by the State Board, a regional board, or a local agency, including but not limited to, any analysis of material by a laboratory that has accreditation or certification pursuant to Article 3 (commencing with Section 100825) of Chapter 4 of Part 1 of Division 101 of the Health and Safety Code.
Authority cited: Sections 13196 and 13198 (c), Water Code.
Reference: Sections 13195 (b) and 13196, Water Code.

Section 3892. Reports

The following reports are subject to the requirements of this Chapter, when those reports are required for the purpose of subsurface investigation or remediation of: (1) an unauthorized discharge or deposit of waste as defined in section 13050 of the Water Code; (2) an unauthorized release of a hazardous substance as defined in section 25281 of the Health and Safety Code, or (3) a discharge of waste to land subject to Division 2 of Title 27 or Division 3, Chapter 15 of Title 23 of the California Code of Regulations (CCR).

(a) Reports submitted pursuant to Division 3, Chapter 16, Article 11 of Title 23 of the CCR.

(b) Reports submitted pursuant to Division 2 of Title 27 or Division 3, Chapter 15 of Title 23 of the CCR.

(c) Reports submitted pursuant to section 13304 of the Water Code.

(d) Reports submitted pursuant to section 13267 of the Water Code.

(e) Reports submitted pursuant to any order or directive of the State Board, a regional board or a local agency.

(f) Reports submitted pursuant to the Two-year Joint Cooperative Agreement Execution Plans under the DoD/State Memorandum of Agreement and Navy Cost Recovery Cooperative Agreement, for the State of California.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 (a) and 13198 (c), Water Code.

Section 3893. Electronic Submittal of Reports

(a) Persons responsible for submitting reports pursuant to this Chapter shall submit the following information described in subdivision (b) electronically over the Internet to the State Board's Geotracker system in conformance with data dictionaries found in Title 27, Division 3, Subdivision 2 (Monitoring and Release Information) and specifications contained in the State Water Resources Control Board EDF Guidelines and Restrictions (version 1.2) and Survey XYZ Guidelines and Restrictions (Version 6). These data dictionaries and documents are available through links provided at http://www.waterboards.ca.gov/ust

(b) Data generated after the effective date of the regulations by chemical analysis of soil, vapor, or water samples (including surface water, groundwater and influent/effluent water samples from remediation systems), shall be submitted in EDF format. All data submitted in EDF format shall be checked for errors prior to and during submittal using the EDOC software consistency checking tool. All data submitted in EDF format must pass this error-checking tool as well as meet normal regulatory requirements in order to be considered valid data. In addition, when required for reports subject to this Chapter, the following shall also be submitted electronically:

(1) The latitude and longitude of any permanent monitoring well for which data is reported in EDF format, accurate to within 1 meter and referenced to a minimum of two reference points from the California Spatial Reference System (CSRS-H), if available.

(2) The surveyed elevation relative to a geodetic datum of any permanent monitoring well.

(3) The elevation of groundwater in any permanent monitoring well relative to the surveyed elevation.

(4) A site map or maps showing the location of all sampling points referred to in the report.

(5) The depth to the screened interval and the length of screened interval for any permanent monitoring well.

(6) Boring logs, in PDF format.

(7) A complete copy of the report in PDF format, which includes the signed transmittal letter and professional certification.

(c) All deadlines and timeframes for submittals of reports are applicable to the information submitted electronically pursuant to this Chapter.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 and13198 (c), Water Code.

Section 3894. Timing of Electronic Reporting Requirements

(a) Electronic submittals of information for sites subject to the requirements of Title 23, Division 3, Chapter 16, Article 11 of the California Code of Regulations, shall begin on December 16, 2004.

(b) Unless otherwise specifically noted, all other electronic submittals required pursuant to this Chapter shall begin January 1, 2005.

(c) Until July 1, 2005, the electronic reporting requirements of this Chapter are in addition to any existing paper or other reporting requirements.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 (a) and 13198 (c), Water Code.

Section 3895. Submittal of Alternate Forms of Reports

(a) Beginning July 1, 2005, the successful submittal of electronic information in accordance with this Chapter shall replace the requirement for the submittal of a paper copy, except as provided in subdivision (b).

(b) In addition to the electronic submittal of reports required pursuant to this Chapter, a regulatory agency may require the submittal of a report, or portions thereof, in diskette, compact disc or other form if the agency determines that the alternative form is necessary. The burden, including cost, of these alternative forms shall bear a reasonable relationship to the need for alternative form and benefits to be obtained from the alternative form

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 (a) and 13198 (c), Water Code

NOTICE: Original paper reports with wet ink signature and seal must continue to be submitted to this office pursuant to CCR Title 23, Division 3, Chapter 30, Article 2, Section 3895 (b), regardless if such report is required by regulation to be electronically uploaded to Geotracker.

SUBJECT: SOIL SAMPLING RESULTS RELATED TO UST SYSTEM REMOVALS
1977 SATURN STREET
MONTEREY PARK, CALIFORNIA 91755

Dear Sirs:

This report summarizes the results of tank system removals, and associated soil sampling activities completed at the subject site in Monterey Park, California (see attached Site Location Map - **Figure 1**).

The soil sampling activities were completed in general accordance with guidelines of Los Angeles County Department of Public Works (LADPW) and the Los Angeles Regional Water Quality Control Board (LARWQCB).

A copy of the UST removal permit is provided in attached **Appendix A.**

The tank removal activities were conducted by George Bryant Construction of Alta Loma, California (contractor). Soil sampling was completed by ALTA EM, Inc. (environmental consultant). A representative of the LACDPW (Mr. William Edwards) was scheduled to be on-site, but called the site contractor on-site within a few minutes of the scheduled inspection time, indicating he would not be able to be on site. Mr. Edwards authorized the UST removals and soil sampling to commence without his presence. A representative of ALTA EM, Inc. also spoke with Mr. Edwards verifying these approvals and provided him our contact info, and the license number of the responsible Professional Geologist prior to proceeding.

Site Setting / Hydrogeology

The site is located at the northern edge of the Coastal Plain of Los Angeles County, in the Merced / Montebello Hills. These hills consist of sedimentary rocks of the Pico Formation, and the site area is dominated by the structural feature known as the Montebello Anticline. The site area is not known to contain large-scale regional aquifers, as is the nearby/adjoining LA County Coastal Plain just to the south. The site is located just north and outside of the Montebello Forebay Area of the LA Coastal Plain Groundwater basin (DWR, 1961).

A review of the LACDPW water well database revealed no listed wells within one mile of the subject site (LACDPW, 2018). ALTA EM, Inc. also contacted a nearby cemetery east of the subject site (see **Figure 1**) asking about any potential well information at this location. The cemetery staff reported they have no wells (Resurrection Cemetery, 2018). A review of the Geotracker database for nearby LUST cases, with well data, revealed one facility approximately 0.5 miles south-southwest of the site with groundwater at approximately 70 feet deep in 2005. All other LUST sites with groundwater well data were greater than 0.75 miles away (Geotracker, 2018).

A-905166

C-9414-21

The site is located at the foot of a small hill, on a large graded earthen pad built for the construction of the commercial office complex which occupies the property. Atop the hill overlooking the site are large municipal water storage tanks, a landscaping nursery (Chuys Nursery) and a community park (Le Lorna Park) (see attached **Figure 2**).

While a regional aquifer is not anticipated beneath the site area, an accumulation of relatively shallow groundwater does exists beneath the site. The source of this groundwater is unknown (i.e. from nearby or on-site irrigation water? an accumulation of natural precipitation? an on-site water leak? combination of these sources?). Groundwater was initially encountered in the larger UST pit at approximately 6 feet, but stabilized at approximately 11.5 feet bgs overnight after it was pumped out to facility the UST removals. It is noted that groundwater appeared to be shallowest in the western-most portion of the area of investigation, even being encountered in a couple of the piping trench soil samples at 4 feet bgs.

Three monitoring wells were noted around the perimeter of the larger UST pit. All three wells appeared to have been partially destroyed (i.e. cement backfilled in their wells boxes). During excavation, the upper three to five feet of several of the wells was exposed and observed to be 4" PVC casing (presumed to also be backfilled). It is unknown if these wells were installed as groundwater monitoring wells or possibly vapose wells when groundwater was absent or deeper.

In summary, while a regional aquifer is not anticipated beneath the site area, an accumulation of relatively shallow groundwater exists beneath the site at 4 to 11.5 feet bgs. The direction of groundwater flow is unknown, though topography of the site would strongly indicate it is likely toward the west to southwest. This is contradicted by on site observations indicating the shallowest groundwaters in the western-most portion of the area investigated.

Tank Contents, Capacity, Construction

Details of the removed tanks were reported by the contractor as follows:

	Content	Capacity	Size	Construction
Tank #1	Diesel Fuel	10,000 gals	34' by 8'	Single-wall fiberglass w/rounded ends
Tank #2	Diesel Fuel	10,000 gals	34' by 8'	Single-wall fiberglass w/rounded ends
Tank #3	Diesel Fuel	2,500 gals	12' by 6'	Double-wall fiberglass coated steel

Larger Tanks 1 & 2 were located in a cluster, while Tank 3 was located approximately 140 feet east of the others. All three tanks contained diesel fuel, and were used to supply emergency generators. All three thanks were buried 3 to 4 feet bgs.

Attached **Figure 3** and **Photo nos. 1 and 2** show the two tank pit areas.

Soil Sampling Methods & Locations

All samples were collected on November 6, 2015.

Samples along the fuel product lines were collected at depths ranging from 3.5 to 5 feet bgs (at least 2 feet beneath removed lines), and were designated as samples no. PS1 to PS13. Attached **Photo nos. 3 through 7** show the various product line trenches which were sampled.

The Tanks 1 & 2 pit contained groundwater at approximately 11.5 feet bgs, and a large concrete pad underlying the tanks at approximately 13.5 feet bgs, precluding reasonable soil sampling. Attached **Photo no. 8** shows groundwater in the tank pit and the concrete pad depth. Given soil samples could not reasonably be collected, alternative groundwater samples were collected from this UST pit with a disposable polyethylene sampling bailer. Attached **Figure no. 3** shows the approximate locations of these two groundwater samples, designated TPGW1 and TPGW2.

The Tank 3 pit also contained an underlying concrete pad throughout the pit bottom at approximately 11.5 feet bgs, but no groundwater. This pad also precluded the reasonable collection of soil samples beneath

the concrete. Alternatively, soil samples were collected from the pit sidewalls just above the concrete pad level, at diagonally opposing corners of the former tank. The locations of these soil samples, designated T3-1-10 and T3-2-10, are shown on attached **Figure 3**.

Soil samples were obtained with the aid of a hand auger or backhoe. Samples were retained in general accordance with EPA method no. 5035 protocol. An additional amount of each sample (for non-VOC analyses) was also collected in laboratory approved 4 oz. glass jars. **Appendix B** includes further details of the sampling procedures.

Attached **Photos 9 & 10** show both UST pits after the tanks had been removed.

Field Observations

During the soil sampling, olfactory and visual observations, as well as soil types were recorded and are summarized in the table below:

SAMPLE NO.	SAMPLE LOCATION	SAMPLE DEPTH (feet bgs)	ODOR	COLOR	SOIL TYPE
PS1-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, damp, clayey F. SAND
PS2-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, silty F. SAND
PS3-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, F. SAND; with trace silt
PS4-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, F. SAND; with trace silt
PS5-5	Piping trench	5	No Odor	No Discoloration	Yellowish brown, damp to moist, clayey gravelly F. SAND
PS6-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist, F. SAND
PS7-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist, gravelly F. SAND
PS8-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist, F. SAND
PS9-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist to wet, silty F. SAND
PS10-3.5	Piping trench	3.5	No Odor	No Discoloration	Yellowish brown, moist to wet, silty F. SAND
PS11-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, saturated, clayey silty F. SAND
PS12-3.5	Piping trench	3.5	No Odor	No Discoloration	Yellowish brown, damp to moist, clayey silty F. SAND
PS13-4	Piping trench	4	Very slight HC odor	No Discoloration	Yellowish brown, wollive motling, moist, sandy SILT; with trace clay
T3-1-10	Tank #3 pit	10	No Odor	No Discoloration	Yellowish orange brown, damp, clayey F. SAND
T3-2-10	Tank #3 pit	10	No Odor	No Discoloration	Yellowish brown, damp, F. SAND, with trace silt and Med Sand.

During the groundwater sampling, olfactory and visual observations were recorded and are also summarized in the table below:

SAMPLE NO.	SAMPLE LOCATION	SAMPLE DEPTH (feet bgs)	ODOR & VISUAL OBSERVATIONS	COMMENT
TPGW1	Tank #1 pit - North	11.5	No odor or sheen	Groundwater sample
TPGW2	Tank #1 pit - South	11.5	No odor or sheen	Groundwater sample

Analytical Methods / Results

All soil and groundwater samples were analyzed for TPH diesel (C_{10}-C_{28}), BTEX and Fuel Oxygenates. The UST removal permit initially indicated that organic lead analyses were also required; however, follow-up communications with Kattya Batres of the LACDPW confirmed the lead analyses were not required if the USTs historically only contained diesel fuel (which is the case) (see Appendix A).

The analyses were completed in general accordance with modified EPA method no. 8015 (for TPH diesel) and EPA method no. 5035/8260B (for BTEX & FUEL OXYENATES). Results are summarized as follows:

SOIL SAMPLES (all results in mg/kg)				
SAMPLE NO.	SAMPLE DEPTH (feet bgs)	TPH DIESEL (C_{10}-C_{28})	BTEX	FUEL OXYGENATES (MTBE, ETBE, DIPE, TAME, TBA)
PS1-4	4	ND	ND	ND
PS2-4	4	ND	ND	ND
PS3-4	4	ND	ND	ND
PS4-4	4	ND	ND	ND
PS5-5	5	ND	ND	ND
PS6-4	4	ND	ND	ND
PS7-4	4	ND	ND	ND
PS8-4	4	ND	ND	ND
PS9-4	4	ND	ND	ND
PS10-3.5	3.5	ND	ND	ND
PS11-4	4	ND	ND	ND
PS12-3.5	3.5	ND	ND	ND
PS13-4	4	15.2	ND	ND
T3-1-10	10	10.5	ND	ND
T3-2-10	10	ND	ND	ND
PQLs	N/A	10	0.005-0.01	0.005 - 0.05

GROUNDWATER SAMPLES (all results in ug/L)				
SAMPLE NO.	SAMPLE DEPTH (feet bgs)	TPH DIESEL (C_{10}-C_{28})	BTEX	FUEL OXYGENATES (MTBE, ETBE, DIPE, TAME, TBA)
TPGW1	11.5	ND	ND	ND
TPGW2	11.5	ND	ND	ND
PQLs	N/A	500	1-3	3-50

In summary, no significant TPH (C_{10}-C_{28}), BTEX or Fuel Oxygenates were detected in any of the soil or groundwater samples. Two soil samples were reported to contain minor detected TPH (C_{10}-C_{28}) at concentration of 15.2 and 10.5 mg/kg. No field evidence indicating major fuel impacts was observed at or nearby these two samples with detections. A laboratory report further detailing the results of the soil/water sample analyses is provided in attached **Appendix C**.

Other Documentation

Provide in attached **Appendix D** are copies of the tank cleaning rinsate manifest, and the tank destruction/recycling certificates.

Conclusions

Three USTs were removed from the subject site. Two UST were located in one pit, and the third was approximately 140 feet away. Soil samples PS-3-4 (piping trench) and T3-1.0 (Tank 3 pit) were reported to contain 15.2 and 10.5 mg/kg of TPH (C_9-C_{20}), but no detected BTEX or Fuel Oxygenates. Every other soil sample was reported to contain no detected TPH (C_{13}-C_{28}), BTEX or Fuel Oxygenates.

Shallow groundwater was encountered in the Tank 1 & 2 pit, as well as a concrete pad underlying the tanks. Two groundwater samples collected from this tank pit were also reported to contain no detected TPH (C_{13}-C_{28}), BTEX or Fuel Oxygenates.

Based on the field observations and laboratory data, there is no evidence to indicate a significant release of diesel fuel from the removed UST systems. No further action is recommended, and a no further action letter is requested from the responsible party. At the time of this report the site had no Geotracker case or global ID assigned, so this report and associated data could not be uploaded.

The opportunity to be of service is greatly appreciated. If you have any questions or comments, please do not hesitate to contact the office at (909) 476-2120.

Very Truly Yours,
ALTA ENV, INC.

ENVIRONMENTAL PROGRAMS DIVISION

CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the County of Los Angeles Department of Public Works, Environmental Programs Division, P.O. Box 1460, Alhambra, California 91802-1460, containing:

1. File number of facility and closure permit number.

2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets, and north arrow.

3. Description of methods for obtaining, handling, and transporting samples.

4. Time and date samples were obtained.

5. Soil sampling certification (including but not limited to soils classification, boring logs, sample procedures, sample locations, initiating chain-of-custody, and groundwater location) for Underground Storage Tank closure shall be certified by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils. The certification must clearly state that all work was performed under the supervision of the person signing.

6. Chain-of-custody documentation initiated by person obtaining sample through person at a California Department of Health Services certified laboratory.

7. Disposal destination of tanks and evidence of legal disposal.

8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction, and methods of analysis.

9. Documentation as to depth of groundwater at facility.

10. Manifests to document hazardous waste disposal of any removed soil and tank rinsate.

11. Evidence of legal disposal of soils designated as nonhazardous.

12. Any observations of site contamination.

13. Report to be signed by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils.

14. Submit to the California Environmental Reporting System (CERS) the date the UST was permanently closed for all tanks removed or closed in-place.

UST Facility Operating Permit Application:

Home » Prepare Submittal » UST: UST Facility Operating Permit Application (Draft)

Instructions/Help

You must complete this form within 30 days of all new permits, permit changes, or facility information changes. You will also need to update/confirm your tank, monitoring plan, and other pertinent UST-related forms.

All facilities **must** provide a BOE Number--valid numbers are 6 digits long starting with the numbers 44. . State and federal facilities should use 44032002. If **ALL** underground tanks at your facility **ONLY** contain NON-petroleum productions, you can provide this generic BOE Number: 44000000. Contact your local regulator if you are unsure what number to provide.

The former paper version of this form was called "UST Operating Permit Application-Facility Information" (Form A).

More information about UST Financial Responsibility Mechanisms is available at the Water Board's Underground Storage Tank Cleanup Fund Financial Responsibility web page.

CLOSURE – UNDERGROUND STORAGE TANKS

CONDITIONS A – GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County Department of County Engineer – Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

   a. Removal of tank shall require a three (3)-business day advance notification.
   b. Permanent closure of a tank in place or a temporary closure shall require a 30-working notification.

3. Consult current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, where such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74 – 81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 20 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

   a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.
   b. The personnel shall be sufficiently skilled to safely carry out such operation.
   c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.
   d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B – TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, "Abandonment or Removal of Underground Tanks, "Part A and any other applicable Parts.

2. A temporary closure shall not exceed 180 days.

CONDITION C – PERMANENT TANK(S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Part B and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tank shall be transported to a legal disposal point.

6. If the tank has stored materials other than motor fuel, fuel oil or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be filled and re-compacted to a relative compaction of 90%.

CONDITIONS D – PERMANENT

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Part B or C and any other applicable Parts.

2. Owners/operators shall demonstrate site integrity as follows:

   a. Test borings shall be slant drilled to intercept a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test boring may be drilled vertically and the reason stated in the report in 2.h. below.
   b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.
   c. For multiple tanks, as a minimum, boring shall be placed at 20 foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test locations and placement.
   d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 50 feet below grade level.
   e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.
   f. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.
   g. A report containing the results of the above analysis shall be submitted to the County Engineer.

3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials – Guidelines."

4. A report shall be submitted to the County Engineer containing the results of the site investigation.

CLOSURE APPLICATION SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

PART 1 OF 3

DPW USE ONLY
SITE FILE NO. G994-62151
APPLICATION NO 905099

To satisfy the permanent closure requirements for underground storage tanks storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

***** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. *****

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2-4 feet beneath	TPHD	→ 8015M
2A, 2B	tank invert	BTEX, MTBE	→ 8260B
3A, 3B		Fuel Oxygenates	→ 8260B
		Organic lead	→ DOHS Method
1 sample	2-4 feet below	Same as	Same as
each UDC		above	above
1 sample	2-4 feet below	Same as	Same as
piping, every 20 feet		above	above
starting from UDC's			

* Apply EPA Method 5035 for soil sample collection, preparation and analysis.

~~Test for organic lead if past UST contents or tested, or if it is unknown whether past UST contents were leaded.~~

Continued on Page 2

3. All soil samples obtained shall be discrete, undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date/time of sampling shall be included in the final report.

4. Conform to the analytical requirements table below for petroleum hydrocarbon sites. Apply EPA Method 5035 specified in the USEPA SW-846, version III (12/1996) for soil sample preparation and preservation in order to minimize volatile organic losses. Use the sample collection devices, or equivalent, specified in the method (e.g., the Encore™ sampler). If the Encore™ sampler is used, analyze sample within 48 hours from the collection. Analyze sample within 10 days for soil samples stored under frozen conditions.

Continued on Page 3

5. All soil/groundwater samples shall be analyzed by a laboratory approved by the California Environmental Accreditation Laboratory Program (ELAP).

6. Analytical results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) Detection limits for each analytical procedure and determination; d) The method of analysis; e) Signature of chemist certifying results.

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

10. A final report that contains all of the above required information shall be submitted to the office above within one (1) month form the sampling date or 180 days from the date of this permit, whichever is earlier.

11. All electronic data shall be submitted to the State Water Resources Control Board Geotracker database.

Here is the reply for the lead samples. The tanks were always permitted as diesel fuel

Subject: 1977 Saturn St

Ron,

Attached you can find the pdf copy of the approved tank removal permit. In the soil sample laboratory analysis specification sheet, you can see that we require the samples to be analyzed for Organic Lead, with a note clarifying to test for it if the tanks' contents used to be leaded or if it is unknown whether they were leaded or not.
If the owner is sure these tanks never contained leaded fuel, the Organic Lead analysis can be disregarded. If there is some doubt, then it has to be included.

Best regards,
Kattya Batres

CLOSURE APPLICATION SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

PART 1 OF 3

DEPT LOG NO. STR 6497-6215
APP. NO. 9850497

To satisfy the permanent closure requirements for underground storage tanks storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

***** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. *****

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	3-4 feet beneath	TPHD	→ 8015M
2A, 2B	tank bottom	BTEX, MTBE	→ 8260B
3A, 3B		fuel oxygenates	
		? Organic lead	→ DOHS Meth.
1 sample	3-4 feet below	Same as	Same as
	each UST	above	above
1 sample	2-4 feet below	Same as	Same as
	piping, every 20 feet	above	above
	trench, from UST		

? Apply EPA Method 8015 for all sample collection, preservation and procedure.

Test for organic lead if past UST contents were leaded, or if it is [illegible]

Continued on Page 2

APPENDIX B

SOIL & GROUNDWATER SAMPLING PROCEDURES

APPENDIX B

SOIL & GROUNDWATER SAMPLING PROCEDURES

Soil Samples

- Soil samples collected from the piping trenches were obtained using a hand auger. Soil samples collected from the tank pit were obtained with a backhoe.
- A relatively undisturbed portion of each sample was also retained in general accordance with EPA method no. 5035 protocol, using an EASYDRAW® syringe. An approximate five gram sample was collected with the syringe and ejected each into four pre-tared, 40 ml glass VOA vials (two vials containing pre-measured quantities of $NaHSO_4$, one vial containing MeOH, and one vial with no preservative).
- Additional sample (for non-VOC analyses) was also collected in a laboratory approved, 4-Oz. glass jar at each location.
- All collected samples was labeled with the sample number, date and project number.
- All samples were stored in an ice chest kept at approximately 40 to 50 degrees Fahrenheit prior to transportation to a State of California, Department of Health Services certified laboratory under strict chain-of-custody procedures.
- All reusable soil sampling equipment was washed prior to each sampling events with a solution of LIQUINOX (a phosphate free detergent), rinsed with potable tap water, and then rinsed again with de-ionized water.

Groundwater Samples

- Groundwater samples were obtained with a disposable polyethylene sampling bailer lowered into the groundwater in the bottom of the UST pit.
- The groundwater samples were each retained in a 1-liter amber glass bottle containing H_2SO_4, and three 40-ml glass VOA vials with no preservative.
- All collected samples was labeled with the sample number, date and project number.
- All samples were stored in an ice chest kept at approximately 40 to 50 degrees Fahrenheit prior to transportation to a State of California, Department of Health Services certified laboratory under strict chain-of-custody procedures.

Dear Mr. Hansen:

The **analytical results** for the soil and water samples, received by our laboratory on November 9, 2018, are attached. The samples were received chilled, intact, and accompanying chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets

PERMIT/CERTIFICATE

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS

A1

Environmental Programs Division
P.O. Box 1460
Alhambra, CA 91802–1460

INDUSTRIAL WASTE DISPOSAL PERMIT CONDITIONS AND LIMITATIONS

PART A: ON-SITE DISPOSAL – PUBLIC SEWER

1. Disposal of industrial wastewater to the public sanitary sewer shall be limited to the flow indicated on the industrial waste disposal permit.

2. Pretreatment, monitoring and control facilities required under this permit shall consist of the system(s) indicated on the approved plans.

3. Industrial Wastewater shall at all times meet the effluent quality, indicated on the attached Part D, if applicable prior to discharge to the sanitary sewer system.

4. If applicable, the permittee shall submit periodic compliance reports, as indicated on the attached Part E and/or any self-monitoring or industrial wastewater treatment surcharge reports which may be required by the County Sanitation Districts of Los Angeles County. **Note: Self-monitoring reports required by the Sanitation Districts are to be submitted directly to the Sanitation Districts.**

5. All required industrial wastewater collection, pretreatment, monitoring, disposal and sampling facilities must be installed in accordance with approved plans prior to initiating any discharge to the sewer.

6. Dilution prohibited as substitute for treatment. Except where expressly authorized to do so by an applicable Pretreatment Standard or Requirement, no Industrial User shall ever increase the use of process water, or in any other way attempt to dilute a Discharge as a partial or complete substitute for adequate treatment to achieve compliance with a Pretreatment Standard or Requirement. The Control Authority may impose mass limitations on Industrial Users which are using dilution to meet applicable Pretreatment Standards or Requirements, or in other cases where the imposition of mass limitations is appropriate. 40 CFR 403.6(d)

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
INDUSTRIAL WASTE DISPOSAL PERMIT

AP

PART A: ON-SITE DISPOSAL - PUBLIC SEWER (CONTINUED)

6. Discharge of any toxic, flammable, explosive, corrosive, radioactive or non-biodegradable substance to the sewer is prohibited except as provided in **Part A.3** above.

7. Discharge of uncontaminated cooling water, groundwater, storm water or surface drainage water to the sanitary sewer is prohibited except as specifically authorized by this permit.

8. Discharge of industrial wastewater to the sanitary sewer with temperatures exceeding 140° F is prohibited.

9. Other: **PRIOR TO INITIATING ANY DISCHARGE TO THE SANITARY SEWER, THE APPLICANT SHALL SUBMIT A NEW APPLICATION FOR AN INDUSTRIAL WASTE DISPOSAL PERMIT (IWDP) AND SHALL SECURE SUCH IWDP. ALL PRETREATMENT SYSTEMS SHALL BE MAINTAINED IN A DRY AND SANITARY CONDITION AT ALL TIMES.**

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
INDUSTRIAL WASTE DISPOSAL PERMIT

B1

PART B: WASTES NOT AUTHORIZED FOR DISCHARGE OR DEPOSIT IN PART A

1. Industrial wastes not specifically authorized for on-site pretreatment, storage, deposit, discharge or disposal in Part A of this permit shall be stored in leakproof containers within an area designated on plans approved by the Department of Public Works pending transport to a legal point of disposal.

2. The Permittee shall determine if industrial wastes stored pursuant to Part B.1 above are hazardous wastes as defined in the California Health and Safety Code, Chapter 6.5 and as determined by California Administrative Code, Title 22, Division 4, Chapter 30 and shall manage such wastes as prescribed therein.

3. Hazardous wastes shall only be removed from the premises under a Uniform Hazardous Waste Manifest unless a variance from such documentation has been granted by the California EPA Department of Toxic Substances Control (Cal EPA). Generator copies of the Uniform Hazardous Waste Manifest shall be maintained by the Permittee for not less than three years or as directed by Cal EPA.

4. The Permittee shall maintain records of the sources, quantity, name and address of hauler, date hauled, and point of legal disposal for nonhazardous industrial wastes and wastes granted a Cal EPA variance as described in Part B.3 above. Such records shall be kept a minimum of three years. A legal point of disposal is defined as one for which waste discharge requirements have been prescribed by a California Regional Water Quality Control Board and which is in full compliance therewith or a facility authorized to receive such wastes by the jurisdiction(s) regulating the facility and is in full compliance with all permits, regulations and requirements.

5. Discharge of industrial wastewater to a channel, stormdrain, stream, river, lake, ocean or other surface waters is prohibited unless authorized by a National Pollutant Discharge Elimination System (NPDES) permit issued by a California Regional Water Quality Control Board or the U.S. Environmental Protection Agency (EPA).

6. The Permittee shall immediately notify the County of Los Angeles Department of Public Works (LACDPW) at (626) 458-3517 and the Publicly Owned Treatment Works (POTW) of all discharges that could cause problems to the POTW including slug loading, spills, bypasses, upsets, etc. A follow-up written notification describing the discharge is required to be submitted within 5 days of the incident.

7. The Permittee shall conform to the discharge prohibitions outlined in 40CFR 403.5 (a) (1) and 40CFR 403.5 (b).

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
INDUSTRIAL WASTE DISPOSAL PERMIT

C5

PART C: GENERAL CONDITIONS AND LIMITATIONS, NON-USE

1. The owner or operator of an existing industrial waste pretreatment facility who desires to maintain the facility for future reuse shall submit to the County of Los Angeles, Department of Public Works (DPW), Environmental Programs Division an application for revised Industrial Waste Disposal permit and fee pursuant to the Los Angeles County Code, Title 20, or appropriate City Code/Ordinance.

2. This application for maintain only with zero discharge is applicable to only pretreatment facilities which meet current County standards/Policies. Any pretreatment facility not in use which does not meet current County Standards/Policies must be formally closed.

3. All accumulated industrial and hazardous wastes shall be removed from the pretreatment facility to a legal point of disposal.

4. Furnish DPW with evidence of legal disposal for all wastes removed for disposal in the form of completed hazardous waste manifests or other appropriate documents.

5. Outlets associated with the pretreatment facility and which are the last open connection shall have a water tight plug or equivalent approved device installed.

6. All inlets and plumbing receptors (floor sink, floor drains, trenches, etc.) associated with and/or tributary to a pretreatment facility shall have a water tight plug or equivalent approved device installed.

7. Any severing, capping, or plugging of outlet and inlet discharge lines shall be carried out such that all applicable plumbing code regulations are complied with.

8. Any rain diversion devices shall be removed and all operations tributary to a rain diversion system shall cease.

PART C: GENERAL CONDITIONS AND LIMITATIONS, NON-USE (CONTINUED)

9. An adequate treatment system subject to this office's approval shall be installed for any discharge tributary a storm drain system.

10. Upon completion of Item Nos. 2-9 above, an inspection shall be scheduled with a DPW Waste Control Engineering Inspector. Copies of any documentation pertaining to Items 3 and 7 shall be made available to the Inspector at the time of inspection.

11. Compliance with Items 2-10 shall take place within 90 days of the issue date of this permit.

12. Pretreatment facilities capped for future use shall be kept free of dirt, debris, water, wastewater, explosive or toxic gases, and shall not be used for the temporary or permanent storage of any materials without authorization by DPW.

13. The permittee shall inform DPW in writing within five days of any change in facts required to be stated on the application for a permit.

14. The permittee shall obtain approval from DPW prior to effecting any of the following waste discharge conditions:

    A. Change in method of disposal;
    B. Change in disposal point;
    C. Change in discharge volume effecting treatment or storage facilities; or
    D. Change in character of the waste discharge.

15. Prior to this office permitting a pretreatment facility to be reactivated said facility must conform to current County Standards/Policies.

RETURN THIS APPLICATION, REQUIRED PLANS, SUPPORTING INFORMATION, AND AN APPLICATION/PLAN REVIEW FEE (CHECK FOR FEE AMOUNT) OF:	PAYABLE TO:
$ ...	COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS

Items to consider when applying for Industrial Waste Disposal Permit in Los Angeles County:

Application Form:

- The Permit application must be completely filled out and signed by the person responsible for the waste discharge. Since this is an operating permit application, the signature of the consultant is NOT acceptable.
- Alternatively, the responsible party can give their consent through a letter of authorization to another person such as a contractor or an architect. The authorization letter needs to be provided to us and must contain contact information of person responsible for the permit.
- Any proposed permit application may be subject to joint permit with County Sanitation District.

Plan Requirements:

- Two (2) sets of plans for Domestic Waste Clearance (i.e. sanitary waste only)
- Four (4) sets of plans for Public Works Industrial Waste:
  - All plans shall be to scale with minimum size of 11" x 17" and preferably 24" x 36"
  - Site plan shows location of existing buildings on the property with the proposed pre-treatment system(s) indicated, address, property line, sanitary sewer and sewer connections where applies, parking spaces, occupancies of all adjoining suites, the direction North, etc.
  - Architectural floor plan identifying each area in the building by its use, i.e., food preparation, car wash, plating, laboratory, storage, office, restrooms, etc.
  - Plumbing plan showing all drains including floor drains, floor sinks, trench drains, service sinks, and supply/waste lines and facilities handling industrial wastewater from the point of origin to the connection to the point of disposal, i.e. public sewer, private disposal system, and/or holding facility for offsite disposal. All equipment or facilities generating industrial wastewater must be identified on the plans.
  - Detail drawings of all pretreatment systems with dimensions and manufacturer's specifications.

Rain Diversion System Guidelines:

- To obtain guidelines for the discharge of rainwater, please refer to County Sanitation District's website:
  - http://www.lacsd.org/wastewater/industrial_waste/typical_businesses/waterdischarges.asp

Fees:

- A permit processing fee and a plan check fee will be determined based on the type of industry and the facility location. Please contact this office for further information.

Mr. Jake Wagner
StratCap Global Data Center Group
2598 York Road
Nolensville, Tennessee 37135

Subject: Phase I Environmental Site Assessment
1977 Saturn
1977 Saturn Street
Monterey Park, California 91755
Partner Project No. 22-395605.1

Dear Mr. Wagner:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the Phase I Environmental Site Assessment (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (513) 315-7931.

Sincerely,

Robert Knight
National Client Manager

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by StratCap Global Data Center Group for the property located at 1977 Saturn Street in Monterey Park, Los Angeles County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide StratCap Global Data Center Group with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the northern side of Saturn Street and the western side of South Orange Avenue within a mixed residential and commercial area of Los Angeles County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Address:	1977 Saturn Street, Monterey Park, California
Property Use:	Commercial
Land Acreage (Ac):	16.026 acres (per ALTA Survey)
Number of Buildings:	Two (Main Building and Generator Building)
Number of Floors:	Main Building: Two-story; Generator Building: One-story
Gross Building Area (SF):	209,597 SF
Net Rentable Area (SF):	205,628 SF
Date of Construction:	1979
Parcel Number:	5265-026-054
Type of Construction:	Structural steel-framed
Current Tenants:	Vacant
Site Assessment Performed By:	Destiny Johnson of Partner
Site Assessment Conducted On:	March 22, 2023
Regulatory Database Report Date:	March 17, 2023
Lien Search Date:	Not Applicable (N/A)
Report Date:	April 3, 2023
FOIAs Date:	March 2023

The subject property is improved with a vacant, two-story, split-level commercial building that was formerly occupied by Bank of the West for use as a banking office and data center until 2016. The split-level construction of the subject property building is comprised of Levels A and C on the western portion and Levels B and D on the eastern portion. Current on-site operations consist of routine general property management and maintenance. In addition to the current building, the subject property is improved with a hydraulic passenger elevator, asphalt-paved parking areas, concrete-paved walkways and flatwork, four loading docks, a utility building housing an emergency diesel generator on the northern portion, a utility

building housing utility service equipment on the southern portion, a three-stage clarifier on the southern exterior of the subject property building, a plugged dry hole on the southwestern portion, stormwater drainage features, and associated landscaping.

According to available historical sources, the subject property was formerly unimproved land as early as 1894 and developed with the current structure in 1979.

Tenants on the subject property have included Lloyds Bank (1979-1984), Sanwa Bank (1986-2007), United California Bank (2002), Union California Bank (2003), Bank of the West (2008-2016), and FIS (2016).

The adjoining properties are tabulated below:

Adjoining Properties	
North:	A single-family residence (2204 Iris Way), La Loma Park (1950 Fulton Avenue), and La Loma Reservoir (1980 Clover Drive)
Northeast:	Chuy's Nursery (1996 South Orange Avenue) on the east and west sides of South Orange Avenues
East:	South Orange Avenue followed by vacant land
South:	Saturn Street, beyond which are a commercial office building (1938 and 1968 Saturn Street), parking lots, and MUFG (1980 Saturn Street)
West:	A commercial office building (2001 Saturn Street) and a single-family residence (2000 Clover Drive)

According to a previous subsurface investigation conducted on the subject property (*Soil Sampling Results Related to UST System Removals* prepared by ALTA EM, Inc. (AEM) and dated December 5, 2018), "while a regional aquifer is not anticipated beneath the subject property area, an accumulation of relatively shallow groundwater does exist beneath the subject property at 4 to 11.5 feet below the ground surface (bgs)." Based on topographic map interpretation, groundwater flow is inferred to be toward the west-southwest.

Findings and Opinions

Recognized Environmental Condition

A recognized environmental condition (REC) refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.

- Partner did not identify evidence of RECs during the course of this assessment.

Controlled Recognized Environmental Condition

A controlled recognized environmental condition (CREC) refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- The subject property, identified as BRE CA Saturn, LLC at 1977 Saturn Street, is listed as a Non-Case Information site under the regulatory oversight of the Los Angeles Regional Water Quality Control Board (RWQCB) (Case Number T10000018576). According to information made available on the

State Water Resources Control Board (SWRCB) GeoTracker database, along with review of regulatory database listings and previous environmental reports, Case Number T10000018576 was previously recorded as a Leaking Underground Storage Tanks (LUST) Cleanup site in association with removal and assessment activities, conducted under the oversight of the Los Angeles County Department of Public Works (LACDPW), for three historical underground storage tanks (USTs) installed on the subject property. According to available regulatory records, building records, and previous reports two 10,000-gallon, single-walled, fiberglass, diesel fuel (USTs) (Tanks 1 and 2) were installed on the northern exterior of the subject property building in 1980 and one, 2,500-gallon steel double-walled, fiberglass coated, diesel fuel UST (Tank 3) was installed on the western exterior of the utility building located on the northern portion of the subject property in 1991. The three USTs operated to supply an on-site emergency generator system associated with former tenants of the subject property.

As further discussed in Section 5.2.6, according to a *Soil Sampling Results Related to UST System Removals* report prepared by AEM and dated December 7, 2018, upon removal of the USTs in 2018, soil samples and groundwater samples were collected and analyzed for total petroleum hydrocarbons as diesel (TPH-d), benzene, toluene, ethylbenzene, and xylenes (BTEX), and fuel oxygenates in accordance with modified Environmental Protection Agency (EPA) method no. 8015 (for TPH-d) and EPA method no. 5035/8260B (for BTEX and fuel oxygenates). Two detections of TPH-d were reported in a sample collected from beneath the piping system (15.2 milligrams per kilogram [mg/kg]) and at 10 feet bgs in the sidewall of the Tank 3 tank pit (10.5 mg/kg). BTEX and fuel oxygenates were not detected above their respective laboratory method reporting limits in any of the soil or groundwater samples and TPH-d was not detected above the laboratory method reporting limit in either of the groundwater samples.

On April 27, 2020, the LADCPW issued a letter to the RWQCB that indicated their review of the 2018 *Soil Sampling Results Related to UST System Removals* report and referral of the matter to the RWQCB for further action.

According to a letter prepared by the Los Angeles RWQCB and dated June 28, 2022, based on their review of the documentation, the Los Angeles RWQCB determined that "residual concentrations of fuel constituents [in the areas of the three historic USTs] pose low threat to human health and the environment." Therefore, no further action was required. Furthermore, the Los Angeles RWQCB indicated that subject property "data indicated that there may be residual concentrations of pollutants in soil at the subject property that could pose an unacceptable risk as a result of future construction/redevelopment activities, and/or change to a more sensitive land use from commercial use. Responsible parties, landowners, and contractors performing subsurface activities at the site should be prepared to manage properly to avoid threats to human health or the environment."

Based on the regulatory closure, reported removal of the identified USTs, completion of assessment and remedial activities, and indicated analytical results meeting the applicable regulatory standards for commercial use, the historical USTs and closed LUST case are considered a CREC, and no further investigation appears warranted at this time.

Historical Recognized Environmental Condition

A historical recognized environmental condition (HREC) refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- Partner did not identify evidence of HRECs during the course of this assessment.

Business Environmental Risk

A *Business Environmental Risks (BER)* is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. The following was identified during the course of this assessment:

- Due to the age of the subject property building, there is a potential that asbestos-containing materials (ACMs) are present. Readily visible suspect ACMs were observed in fair to good condition. Should these materials be disturbed, the identified suspect ACMs would need to be sampled to confirm the presence or absence of asbestos prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants.

No significant data gaps affecting the ability of the Environmental Professional to identify a REC were encountered during this assessment.

Conclusions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM E1527-13 of 1977 Saturn Street in Monterey Park, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of RECs or HRECs in connection with the subject property; however, a CREC and BER were identified. Based on the conclusions of this assessment, Partner recommends no further investigation of the subject property at this time.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 1977 Saturn Street in Monterey Park, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "landowner liability protections," or "LLPs"). ASTM Standard E1527-13 constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjoining site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions,

which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

StratCap Global Data Center Group engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of StratCap Global Data Center Group . Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers,

employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past or current owners, operators, and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens and a title search. This information was not provided at the time of the assessment. This data gap is not expected to alter the findings of this assessment.
- Partner submitted a Freedom of Information Act (FOIA) request to the Los Angeles Department of Public Health - Public Health Investigation (PHI) Administration for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property. As of this writing, this agency has not responded to Partner's request. Based on information obtained from other resources, this limitation is not expected to alter the overall findings of this assessment.

Due to time constraints associated with this report, the Client has requested the report despite the above-listed limitations.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 1977 Saturn Street in Monterey Park, California is located on the northern side of Saturn Street and the western side of South Orange Avenue. According to information obtained the Los Angeles County Assessor, the subject property is legally described as "**(EX OF ST) LOT 5*TR=PARCEL MAP AS PER BK 80 P 45-46 OF P M AND (EX OF ST) LOTS 1 THRU 3 AND 16 TRACT NO 33910*," and ownership has been vested in BRE CA Saturn, LLC since 2018.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is improved with a vacant, two-story, split-level commercial building that was formerly occupied by Bank of the West for use as a banking office and data center until 2016. The split level construction of the subject property building is comprised of Levels A and C on the western portion and Levels B and D on the eastern portion. Current on-site operations consist of routine general property management and maintenance. In addition to the current building, the subject property is improved with a hydraulic passenger elevator, asphalt-paved parking areas, concrete-paved walkways and flatwork, four loading docks, a utility building housing an emergency diesel generator on the northern portion, a utility building housing utility service equipment on the southern portion, a three-stage clarifier on the southern exterior of the subject property building, a plugged dry hole on the southwestern portion, stormwater drainage features, and associated landscaping.

The subject property is designated as "O-P Office Professional" with a "P-D Planned Development" overlay for commercial development by the City of Monterey Park.

The subject property is identified as a Los Angeles County - Certified Unified Program Agency Program Records (CUPA LA COUNTY), Delisted California Environmental Reporting System Tanks (DELISTED CTNK), Delisted Storage Tanks (DELISTED TNK), Toxic Pollutant Emissions Facilities (EMISSIONS), Facility Registry Service/Facility Index (FINDS/FRS), Sites in GeoTracker (GEOTRACKER), Generators from Hazardous Waste Manifest Data (HAZ GEN), Historical Hazardous Waste Manifest Data (HIST MANIFEST), Los Angeles County - Hazardous Materials System List (HMS LA), Leaking Underground Fuel Tank Reports (LUST), Resource Conservation and Recovery Act Non-Generators (RCRA NON GEN), Resource Conservation and Recovery Act - Small Quantity Generators List (RCRA SQG), Permitted Underground Storage Tank in GeoTracker (UST), and Underground Storage Tank Statewide Environmental Evaluation and Planning System (UST SWEEPS) site in the regulatory database report, as further discussed in Section 4.2.2.

2.3 Current Use of Adjoining Properties

The subject property is located within a mixed residential and commercial area of Los Angeles County. During the vicinity reconnaissance, Partner observed the land uses on adjoining properties as defined in ASTM E1527-13 as any real property or properties the border of which is contiguous or partially contiguous with that of the property, or that would be contiguous or partially contiguous with that of the property but

for a street, road, or other public thoroughfare separating them. The adjoining properties are tabulated below:

Adjoining Properties	
North:	A single-family residence (2204 Iris Way), La Loma Park (1950 Fulton Avenue), and La Loma Reservoir (1980 Clover Drive)
Northeast:	Chuy's Nursery (1996 South Orange Avenue) on the east and west sides of South Orange Avenues
East:	South Orange Avenue followed by vacant land
South:	Saturn Street, beyond which are a commercial office building (1938 and 1968 Saturn Street), parking lots, and MUFG (1980 Saturn Street)
West:	A commercial office building (2001 Saturn Street) and a single-family residence (2000 Clover Drive)

The adjoining properties are identified as CUPA LA COUNTY, California Environmental Reporting System Tanks (CERS TANK), DELISTED TNK, EMISSIONS, FINDS/FRS, HAZ GEN, Handlers from Hazardous Waste Manifest Data (HAZNET), HIST MANIFEST, HMS LA, RCRA NON GEN, UST, UST SWEEPS, and/or DELISTED CTNK sites in the regulatory database report, as further discussed in Section 4.2.3.

2.4 Physical Setting Sources

2.4.1 Topography

The 2022 United States Geological Survey (USGS) *El Monte and Los Angeles, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property elevation ranges from approximately 360 to 420 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping moderately towards the west-southwest.

A copy of the reviewed topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

While under natural and undisturbed conditions shallow groundwater flow most frequently follows the topography of the land surface, natural or man-made features can affect flow direction, and the presumed flow may not match the actual flow directions at the subject property and vicinity. Topographic map interpretation suggests the direction of groundwater flow in the vicinity of the subject property is inferred to be toward the west-southwest.

According to a previous subsurface investigation conducted on the subject property (*Soil Sampling Results Related to UST System Removals* prepared by AEM and dated December 5, 2018), "while a regional aquifer is not anticipated beneath the subject property area, an accumulation of relatively shallow groundwater does exist beneath the subject property at 4 to 11.5 feet bgs."

The nearest surface water in the vicinity of the subject property is the Garvey Reservoir located approximately 0.4 miles north of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the City of Monterey Park Public Works Water Department serves the subject property vicinity. The sources of public water for the City of Monterey Park are production wells located in the Main San Gabriel Groundwater Basin (Main Basin) and water purchased from the San Gabriel Water Company, which also pumps groundwater from the Main Basin. No public supply wells were identified at the subject property of the adjoining properties.

2.4.3 Geology/Soils

The subject property is situated within the Peninsular Ranges Physiographic Province of the State of California. The Peninsular Ranges is a series of ranges separated by northwest trending valleys, subparallel to faults branching from the San Andreas Fault. The trend of topography is similar to the Coast Ranges, but the geology is akin the Sierra Nevada, with granitic rock intruding the older metamorphic rocks. The Peninsular Ranges extend into lower California and are bounded on the east by the Colorado Desert. According to the Environmental Risk Information Services (ERIS) Physical Setting Report, the shallow subsurface directly beneath the subject property consists of Miocene to Pleistocene Pliocene marine rocks comprised of sandstone, siltstone, shale, and conglomerate.

Based on information obtained from the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey online database, the subject property is mapped as 1210: Urban land-Montebello-Xerorthents complex, zero to 15 percent slopes, terraced and 1232: Counterfeit-Urban land complex, 10 to 35 percent slopes, terraced. Urban land is described as areas where soils have been significantly altered in the past due to anthropogenic activities. The Montebello series consists of deep, well-drained soils that are formed in human-transported materials on graded alluvial fans that originate from granitic sources. Xerorthents refers to man-modified material, including soils rearranged in a cut and fill or as tailings heaps. The Counterfeit series consists of deep soils that formed from human-transported material which originated from material weathered from calcareous sedimentary rocks.

In addition, according to a previous Phase I ESA report prepared by Northgate Environmental Management, Inc. (Northgate) and dated March 31, 2022, which included review of a 2007 Limited Subsurface Investigation Report prepared by BVNAI, lithology beneath the pea gravel associated with former on-site USTs included clayey sand from 8 to 12 feet bgs, sandy clay from 12 to 17 feet bgs, and sand from 17 to 18 feet bgs.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map (FIRM), published by the Federal Emergency Management Agency (FEMA). According to Community Panel Number 06037C1665F, dated September 26, 2008, the subject property appears to be located in Zone X (unshaded); defined as minimal risk areas outside the 1-percent and 0.2-percent-annual-chance floodplains.

A copy of the reviewed flood map is included in Appendix B of this report.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Years	**Resource**	**Description/Use**
1894-1976	Aerial Photographs, Previous Reports, Topographic Maps	Unimproved Land
1979-Present	Aerial Photographs, Building Records, City Directories, Client-Provided Information, Interview, Los Angeles County Assessor Records, Previous Reports, Site Observations	Commercial

According to available historical sources, the subject property was formerly unimproved land as early as 1894 and developed with the current structure in 1979. Tenants on the subject property have included Lloyds Bank (1979-1984), Sanwa Bank (1986-2007), United California Bank (2002), Union California Bank (2003), Bank of the West (2008-2016), and FIS (2016).

Partner's review of historical documentation, agency records, and previous reports indicates that the subject property was historically occupied by a printing facility/micro-film laboratory from at least 1982 to an unknown date (likely 2016, according to generated regulated hazardous waste on-site documented on the California Department of Toxic Substances Control [DTSC] - Hazardous Waste Tracking System [HWTS] database). Based on the operation during a time of stringent regulatory oversight, lack of violations or compliance deficiencies noted, and lack of information indicating an unauthorized release of hazardous materials, the historical use of the subject property as a printing facility/micro-film laboratory is considered a BER and no further investigation appears warranted.

Potential environmental concerns were identified in association with the former use of the subject property, as further discussed in Sections 3.3 and 4.0.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Risk Information Services (ERIS) on March 17, 2023. The inferred uses of the subject property and adjoining properties as interpreted from the aerial photographs in Appendix B are tabulated below:

Date:	***1927, 1938, 1948***	***Scale:***	***1"=500'***
Subject Property:	Appears to be unimproved land; an apparent stream and unpaved road are visible on the southern portion		
North:	Appears to be unimproved land		
Northeast:	Appears to be unimproved land		
East:	Appears to be unimproved land		
South:	Appears to be unimproved land		
West:	Appears to be unimproved land		

Date:	1956, 1964	Scale:	1"=500'
Subject Property:	No significant changes visible		
North:	Appears to be developed with the current residential structure on the eastern portion and one of two current water tanks on the eastern portion		
Northeast:	An apparent channel is visible; the remaining areas appear to be unimproved land		
East:	No significant changes visible		
South:	No significant changes visible		
West:	Appears to be developed with the current residential structure on the northern portion		

Date:	1972, 1976	Scale:	1"=500'
Subject Property:	No significant changes visible		
North:	Appears to be developed with the current park on the central portion		
Northeast:	No significant changes visible		
East:	No significant changes visible		
South:	No significant changes visible		
West:	No significant changes visible		

Date:	1987, 1994	Scale:	1"=500'
Subject Property:	Appears to be developed with the current commercial structure on the central portion and parking areas on the remaining portions		
North:	No significant changes visible		
Northeast:	Appears to be agricultural land		
East:	No significant changes visible		
South:	Appears to be developed with the current commercial structure and parking areas on the central and western portions across a roadway (Saturn Street)		
West:	Appears to be developed with the current commercial structure		

Date:	2005	Scale:	1"=500'
Subject Property:	No significant changes visible		
North:	Appears to be developed with the second current water tank on the eastern portion		
Northeast:	No significant changes visible		
East:	No significant changes visible		
South:	No significant changes visible		
West:	No significant changes visible		

Date:	2009, 2010, 2012, 2014, 2016, 2018, 2021	Scale:	1"=500'
Subject Property:	No significant changes visible		

Date:	2009, 2010, 2012, 2014, 2016, 2018, 2021	Scale:	1"=500'
North:	No significant changes visible		
Northeast:	No significant changes visible		
East:	No significant changes visible		
South:	Appears to be developed with the current commercial structure on the eastern portion across a roadway (Saturn Street)		
West:	No significant changes visible		

Copies of reviewed aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner contracted with ERIS to search for fire insurance map (FIM) coverage of the subject property and surrounding area. ERIS's FIM search revealed no coverage for the subject property or adjoining properties.

A copy of the no coverage documentation is included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from ERIS on March 23, 2023 for past names and businesses that were listed for the subject property and adjoining properties. The findings are tabulated below:

City Directory Search for 1977 Saturn Street (Subject Property)	
Year(s)	**Occupant Listed**
1985	XXXX
2003	United California Bank
2008, 2011	Bank of the West
2016	ATM, FIS, Bank of the West

** XXXX= A phone number is present but is not registered to a tenant or is disconnected*

Based on the city directory review, no environmentally sensitive listings were identified for the subject property address.

City Directory Search for 1980 Saturn Street (South Adjoining Property)	
Year(s)	**Occupant Listed**
1990	Dataserv Cmpta Mntc
1995, 1996, 2000, 2001	XXXX
2008	Bank One Uboc Primary, Union Bank California Na, Eads Telecom North America, Investment Development Services
2016	Union Bank, Union Bank ATM
2020, 2022	Union Bank

** XXXX= A phone number is present but is not registered to a tenant or is disconnected*

City Directory Search for 2001 Saturn Street (West Adjoining Property)	
Year(s)	**Occupant Listed**
2000, 2001	Tyler Trafficante Inc.
City Directory Search for 2000 Clover Drive (West Adjoining Property)	
Year(s)	**Occupant Listed**
1963	Baker Ernest C
1970	Menges Roger C
1972	Menges Roger
1975	Officer Ronald
1979, 1985, 1990, 1995, 1996	Okazaki Mas
2000, 2001	Okazaki Ben, Okazaki Mas
2003	Mas Okazaki
2008	Ben Okazaki, Mas Okazaki
2016	Mas Okazaki, Catalina Kamimura, Benjamin Okazaki
2020	Benjamin Okazaki, Catalina Kamimura
2022	Benjamin Okazaki

Based on the city directory review, no environmentally sensitive listings were identified for the adjoining property addresses.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from ERIS on March 17, 2023. The following inferred uses of the subject property and adjoining properties interpreted from topographic maps in Appendix B and are tabulated below:

Date:	***1894, 1896, 1900, 1924***
Subject Property:	Depicted as unimproved land
North:	Depicted as unimproved land
Northeast:	Depicted as unimproved land
East:	Depicted as unimproved land
South:	Depicted as unimproved land
West:	Depicted as unimproved land

Date:	***1926, 1953***
Subject Property:	Depicted with a narrow wash on the southern portion
North:	No significant changes depicted

Northeast:	Depicted with a narrow wash on the central portion
East:	No significant changes depicted
South:	No significant changes depicted
West:	Roads are depicted in 1953

Date:	***1966, 1972, 1981, 1991, 1994***
Subject Property:	No significant changes depicted
North:	Depicted with a water tank on the central portion; shaded to depict urban development on the western portion
Northeast:	Previously depicted narrow wash is no longer visible
East:	No significant changes depicted
South:	No significant changes depicted
West:	Shaded to depict urban development; depicted as developed with a commercial building on the southern portion by 1991

Date:	***2015, 2018, 2022***
Subject Property:	Only landmark features and roadways are depicted
North:	Only landmark features and roadways are depicted
Northeast:	Only landmark features and roadways are depicted
East:	Only landmark features and roadways are depicted
South:	Only landmark features and roadways are depicted
West:	Only landmark features and roadways are depicted

Copies of reviewed topographic maps are included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 State Department

Regulatory Agency Data	
Name of Agency:	California Environmental Protection Agency (CalEPA)
Point of Contact:	https://siteportal.calepa.ca.gov/nsite/map/help
Agency Address:	1001 I Street, Sacramento, California
Agency Phone Number:	(916) 323-2514
Date of Contact:	March 16, 2023
Method of Communication:	Online Research
Summary of Communication: The CalEPA Regulated Site Portal is a database and interactive map, which combines information from multiple state and federal data sources. The database provides an overview of regulated equipment, materials and activities for each site, such as underground and aboveground storage tanks, hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and/or toxic materials. The subject property is not identified on the CalEPA Regulated Site Portal as a regulated site.	

4.1.2 Health Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Department of Public Health - Public Health Investigation (PHI) Administration
Point of Contact:	http://publichealth.lacounty.gov/phi/admin.htm
Agency Address:	313 North Figueroa Street, Los Angeles, California
Agency Phone Number:	(213) 240-7785
Date of Contact:	March 16, 2023
Method of Communication:	Emailed Request
Summary of Communication: The PHI Administration serves as the Custodian of Records for the Department of Public Health. As of the date of this report, Partner has not received a response from the PHI Administration for inclusion in this report.	

4.1.3 Fire Department

Regulatory Agency Data	
Name of Agency:	Los Angeles County Fire Department (LACoFD) Health Hazardous Materials Division (HHMD)
Point of Contact:	https://www.fire.lacounty.gov/hhmd/public-records-requests/
Agency Address:	1320 North Eastern Avenue, Los Angeles, California
Agency Phone Number:	(323) 267-7217

Date of Contact:	March 16, 2023
Method of Communication:	Online Research

Summary of Communication:

As of July 1, 2017, all Los Angeles County hazardous material report requests are handled by the LACoFD HHMD.

According to a search of available information, the subject property, identified as 1977 Saturn at 1977 Saturn Street, is listed on a CUPA Inactive Facility Inventory List under Facility ID Number FA0024090, CERS ID Number 10268983, and PE Numbers 7124, 1001, and 3002. The reviewed document on file with the LACoFD, in association with 1977 Saturn, was an Inspection Report summarizing an inspection conducted on July 1, 2015. According to notes indicated in the report, Bank of the West, the most recent occupant, moved from the subject property in 2015 and no hazardous waste was observed to be left at the building premises. In addition, hazardous material and hazardous program elements associated with Bank of the West were reported to be inactivated.

4.1.4 Building Department

Regulatory Agency Data	
Name of Agency:	City of Monterey Park Community Development Department - Building and Safety Division / City of Monterey Park - City Clerk
Point of Contact:	https://aca-prod.accela.com/MONTEREYPARK/Default.aspx
Agency Address:	320 West Newmark Avenue, Monterey Park, California
Agency Phone Number:	(626) 307-1300
Date of Contact:	March 16, 2023
Method of Communication:	Online Research/Online Request

Summary of Communication:

Records were available for review, as further discussed in the following table:

Building Records Reviewed the Subject Property		
Year(s)	**Owner/Applicant**	**Description**
1979	Lloyds Bank California	Building Permit - New construction of an office building (shell only)
1980	Lloyds Bank California	Building Permit - New construction of an office building (remaining structure)
1980	Lloyds Bank	Building Permit - Installation of sprinklers above a fuel oil line
1980	Lloyds Bank of California	Plumbing Permit - Installation of a sewer connection
1982	Lloyds Bank	Building Permit - Installation of interior partition walls for a micro-film photo laboratory
1983	Lloyds Bank California	Building Permit - Wall relocation and building alteration work
1984	Lloyds Bank	Building Permit - Interior partitions and second floor office wall extensions

Building Records Reviewed the Subject Property		
Year(s)	**Owner/Applicant**	**Description**
1986	Sanwa Bank of California	Building Permit - Office rearrangement and installation of non-bearing partitions
1987	Sanwa Bank	Building Permit - Remodeling of interior walls
1987	Sanwa Bank California	Building Permit - Installation of a 1,500-gallon grease interceptor
1988	Sanwa Bank	Plumbing Permit - Installation of one outlet for a commercial grease interceptor
1991	Sanwa Bank California	Building Permit - New construction of a 4,000-square foot utility building
1993	Sanwa Bank	Building Permit - Installation of nonbearing partitions
1994	Sanwa Bank of California	Building Permit - Rooftop structural reinforcement for seismic
1995	Sanwa Bank	Building Permit - Demolition and construction of non-bearing partitions
2004	Sanwa Bank	Building Permit - Reroof work
2007	Sanwa Bank	Building Permit - Replacement of diesel lines for a generator
2012	1977 Saturn, LLC	Certificate of Occupancy - 205,628-square foot administrative office, Occupancy Group B, Construction Type I-A
2018	1977 Saturn, LLC	Building Permit - Interior demolition on Level A
2018	1977 Saturn, LLC	Building Permit - Interior demolition on Level C
2020	1977 Saturn, LLC	Building Permit - Generator replacement
2021	1977 Saturn, LLC	Building Permit - Interior demolition on Level A
2021	1977 Saturn, LLC	Building Permit - Interior demolition on Level C

4.1.5 Planning Department

Regulatory Agency Data	
Name of Agency:	City of Monterey Park Community Development Department - Planning Division
Point of Contact:	https://www.montereypark.ca.gov/543/Zoning-Information---Development-Standard
Agency Address:	320 West Newmark Avenue, Monterey Park, California
Agency Phone Number:	(626) 307-1315
Date of Contact:	March 16, 2023
Method of Communication:	Online Research
Summary of Communication: According to reviewed online documents, the subject property is zoned as "O-P Office Professional" with a "P-D Planned Development" overlay for commercial development by the City of Monterey Park.	

4.1.6 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	California Department of Conservation (DOC), Geologic Energy Management Division (CalGEM)
Point of Contact:	https://www.conservation.ca.gov/calgem/Pages/WellFinder.aspx
Agency Address:	715 P Street, MS 1803, Sacramento, California
Agency Phone Number:	(916) 322-1080
Date of Contact:	March 16, 2023
Method of Communication:	Online Research

Summary of Communication:

According to information obtained from the DOC CalGEM database, one dry hole (Wellbore Number 040372012-00) was installed on the southwestern portion of the subject property. A Report of Well Abandonment prepared by the DOC Division of Oil, Gas, and Geothermal Resources (DOGGR) and dated August 9, 1967 was available for review on the DOC CalGEM database. According to the report, the dry hole was installed to a total depth of 7,920 feet and was not used to produce oil or gas. Furthermore, on July 20, 1967, the dry hole was plugged to a depth of 3,550 feet and abandoned. The DOC DOGGR indicated that their review of associated reports and records determined that all requirements relative to plugging and abandonment of the well, removal of the well equipment and junk, and filling of the well records were fulfilled. As such, the plugged dry hole is not expected to represent a significant environmental concern.

The subject property is not mapped within the boundary of a designated oil field.

4.1.7 Office of the Assessor

Regulatory Agency Data	
Name of Agency:	Los Angeles County Office of the Assessor
Point of Contact:	https://assessor.lacounty.gov/
Agency Address:	500 West Temple Street, Los Angeles, California
Agency Phone Number:	(916) 322-1080
Date of Contact:	March 16, 2023
Method of Communication:	Online Research

Summary of Communication:

According to records reviewed, the subject property is identified by Assessor Parcel Number (APN) 5265-026-054 and ownership has been vested in BRE CA Saturn, LLC since 2018. The current building was constructed in 1979 and totals approximately 205,628 square feet on a 16.026-acre lot.

4.1.8 Air Pollution Control Agency

Regulatory Agency Data	
Name of Agency:	South Coast Air Quality Management District (AQMD)
Point of Contact:	http://www.aqmd.gov/nav/FIND

Agency Address:	21865 Copley Drive, Diamond Bar, California
Agency Phone Number:	(909) 396-2000
Date of Contact:	March 16, 2023
Method of Communication:	Online Research

Summary of Communication:

According to a search of available information made available on the South Coast AQMD - Facility Information Detail (FIND) Database, one listing is associated with the subject property address. Pertinent information is summarized below:

Bank of the West at 1977 Saturn Street is recorded under Facility ID Number 63620. Although the status of the facility is indicated as "Active," observations made during Partner's site reconnaissance indicate that Bank of the West no longer occupies the subject property; therefore, the status is likely outdated. Under the recorded Facility ID Number, the subject property was issued Permits to Operate (PTOs) for various equipment:

- On March 1, 1989, Sanwa Bank California (currently known as Bank of the West) was issued PTOs for two 10,000-gallon, diesel USTs (Permit Numbers: D06057 and D06058; Permit Statuses: Inactive) and one natural gas boiler (Permit Number: D06059; Permit Status: Inactive).
- On May 22, 1989, Sanwa Bank California was issued PTOs for two diesel-fueled emergency electrical generators (Permit Numbers: D07828 and D07831; Permit Status: Inactive).
- On September 17, 1990, Bank of the West was issued a PTO for a natural gas charbroiler (Permit Number: D27227; Permit Status: Inactive).
- On May 3, 1991, Bank of the West was issued a PTO for a 2,000-gallon, diesel-fuel UST (Permit Number: D38071; Permit Status: Inactive).
- On August 6, 1992, Bank of the West was issued PTOs for three diesel-fueled emergency electrical generators (Permit Numbers: D59892, D59893, and D59829; Permit Statuses: Inactive).
- On January 1, 2001, Bank of the West was issued PTOs for three diesel-fueled emergency electrical generators (Permit Numbers D5982, D59892, and D59893; Permit Statuses: Unknown).
- In addition, on July 24, 2008, Bank of the West was issued a Notice to Comply (NTC) for failure to submit Rule 1415 registration for all refrigerant units greater than 50 pounds along with a work site filing fee by the appropriate deadline. The NTC was subsequently returned to compliance following re-evaluation on August 22, 2008.

4.1.9 Regional Water Quality Agency

Regulatory Agency Data	
Name of Agency:	State Water Resources Control Board (SWRCB)
Point of Contact:	https://geotracker.waterboards.ca.gov/
Agency Address:	1001 I Street, Sacramento, California
Agency Phone Number:	(213) 576-6600
Date of Contact:	March 16, 2023
Method of Communication:	Online Research
Summary of Communication:	

GeoTracker is the SWRCB's data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

The subject property, identified as BRE CA Saturn, LLC at 1977 Saturn Street, is listed as a Non-Case Information site under the regulatory oversight of the Los Angeles Regional Water Quality Control Board (RWQCB) (Case Number T10000018576). According to information available on the SWRCB GeoTracker database, along with review of regulatory database listings and previous reports, Case Number T10000018576 was recorded as a Leaking Underground Storage Tanks (LUST) Cleanup site in association with removal and assessment activities for three historical USTs installed on the subject property conducted under the oversight of the LACDPW in 2018. For further discussion of procedures completed with respect to the three historic USTs as well as additional assessment activities dating back to 2006, refer to Section 5.2.6. Pertinent information from documents made available on the SWRCB GeoTracker database under Case Number T10000018576 is summarized below:

- According to a letter prepared by the LACDPW and dated April 27, 2020, the LACDPW reviewed a *Soil Sampling Results Related to UST System Removals* report prepared by AEM and dated December 7, 2018, which is further discussed in Section 5.2.6. As the California RWQCB is the lead agency for the subject property mitigation, the LACDPW indicated that they have referred the matter to the said agency.
- According to a letter prepared by the Los Angeles RWQCB and dated June 28, 2022, based on their review of the aforementioned *Soil Sampling Results Related to UST System Removals* report, the Los Angeles RWQCB determined that "residual concentrations of fuel constituents [in the areas of the three historic USTs] pose low threat to human health and the environment." Therefore, no further action was required at the time of the 2022 letter. Furthermore, the Los Angeles RWQCB indicated that subject property "data indicated that there may be residual concentrations of pollutants in soil at the subject property that could pose an unacceptable risk as a result of future construction/redevelopment activities, and/or change to a more sensitive land use from commercial use. Responsible parties, landowners, and contractors performing subsurface activities at the site should be prepared to manage properly to avoid threats to human health or the environment."'

As of June 28, 2022, the status of the subject property Non-Case Information listing (Case Number T10000018576) is reported to be "Informational Item/Review Complete."

4.1.10 Department of Toxic Substances Control

Regulatory Agency Data	
Name of Agency:	California Department of Toxic Substances Control (DTSC)
Point of Contact:	http://www.envirostor.dtsc.ca.gov/public/ http://hwts.dtsc.ca.gov
Agency Address:	1001 I Street, Sacramento, California
Agency Phone Number:	(916) 323-7811
Date of Contact:	March 16, 2023
Method of Communication:	Online Research
Summary of Communication:	

The EnviroStor database is the DTSCs data management system for tracking cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known contamination or sites where there may be reason to investigate further. No records were identified for the subject property address on the EnviroStor database.

The web based DTSC Hazardous Waste Tracking System (HWTS) was researched for hazardous waste manifest data submitted to the California DTSC. According to available information, the subject property was issued Environmental Protection Agency (EPA) Handler ID Numbers for the generation of regulated hazardous and non-hazardous waste. For further details, refer to Section 4.2.2.

4.1.11 County Department of Public Works

Regulatory Agency Data	
Name of Agency:	Los Angeles County Department of Public Works (LACDPW)
Point of Contact:	https://ladpw.org/epd/cleanla/OpenFileReview.aspx
Agency Address:	900 South Fremont Avenue, Alhambra, California
Agency Phone Number:	(626) 458-5100
Date of Contact:	March 16, 2023
Method of Communication:	Online Research

Summary of Communication:

According to available information, five File Numbers associated with subject property are on file with the LACDPW. Notable information from reviewed available documents is summarized below:

- Bank of the West is recorded under File Numbers 006994-007311 and 006994-I07311. Records filed under File Number 006994-I07311, if any, were not readily available for review. Reviewed records on file under File Number 006994-007311 included various UST integrity and compliance documents prepared between 2009 and 2014 in association with three historical USTs installed on the subject property including Monitoring System Certifications, Secondary Containment Testing Report Forms, a UST Monitoring Plan, Owner Statements of Designated UST Operators, a Storage Tank Certificate of Insurance, UST Inspection Reports, and a 2014 Notice of Violation (NOV) pertaining to missing results from a secondary containment test.
- 1977 Saturn is recorded under File Number 006994-062151. Reviewed records included various UST integrity compliance documents prepared between 2016 and 2017 in association with three historic USTs installed on the subject property including UST Inspection Reports, a Monitoring System Certification, and a Secondary Containment Re-Test Report Form. In addition, NOVs were issued in 2016 and 2017 pertaining to missing test results and compliance documents and recommendations to perform compliance tests. Furthermore, a Closure Authorization for Hazardous Substance USTs was issued on October 25, 2018 to Equity Office for permanent removal of on-site USTs.
- BRE CA Saturn, LLC is recorded under File Number 006994-065226. In addition to previously discussed documents in Section 4.1.5 and a 2018 *Soil Sampling Results Related to UST System Removals* report further discussed in Section 5.2.6., reviewed documents included an NOV issued in 2019 pertaining to submission of required documents and items to the California Environmental Report System (CERS).

- 1977 Saturn Street is recorded under File Number 006994-065372. On July 3, 2018, 1977 Saturn Street was issued an Industrial Waste Disposal Permit (Permit Number 865772) for a 1,500-gallon three-stage clarifier, also known as a grease interceptor, located on the southern exterior of the subject property building. In 2019, 1977 Saturn Street was issued a NOV pertaining to excessive oil/grease/solids and/or prohibited substances in the Industrial Waste Treatment Facility (IWTF) and failure to provide the most recent pumping records/manifest of the IWTF.

4.1.12 County Sanitation District

Regulatory Agency Data	
Name of Agency:	Los Angeles County Sanitation District (LACSD)
Point of Contact:	https://www.lacsd.org/about-us/who-we-are/contact-us/public-record-requests
Agency Address:	1955 Workman Mill Road, Whittier, California
Agency Phone Number:	(562) 908-4288 ext. 2301
Date of Contact:	March 16, 2023
Method of Communication:	Emailed Request
Summary of Communication: No records were identified for the subject property address with the LACSD.	

Copies of pertinent documents are included in Appendix B of this report.

4.2 Mapped Database Records Search

The regulatory database report provided by ERIS documents the listing of sites identified on federal, state, county, city, and tribal (when applicable) standard source environmental databases within the approximate minimum search distance (AMSD) specified by ASTM E1527-13. The data from these sources are updated as these data are released and integrated into one database. The information contained in this report was compiled from publicly available sources.

The environmental database information is used to identify environmental concerns in connection with the subject property. The listings also serve to identify the known indications of the storage, use, generation, disposal, or release of hazardous substance at the subject property and the potential for contaminants to migrate onto the subject property from off-site sources in groundwater or soil in the form of liquids or vapor.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the regulatory database report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

The following table lists the sites as categorized by the regulatory database within the prescribed AMSD. The locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Database Report Data				
Database	**AMSD Radius (mile)**	**Listings Identified**		
Federal NPL	1.00	**Subject Property**	**Adjoining Properties**	**Surrounding Area Sites of Concern**
Delisted NPL Site	0.50	No	No	No
Federal SEMS Site	0.50	No	No	No
Federal SEMS-ARCHIVE	0.50	No	No	No
Federal RCRA CORRACTS Facility	1.00	No	No	No
Federal RCRA TSDF Facility	0.50	No	No	No
Federal RCRA Generators Site (LQG, SQG, VSQG, CESQG, NON GEN)	Subject and Adjoining	**Yes**	**Yes**	N/A
Federal IC/EC Registries	Subject Property	No	N	N
Federal ERNS Site	Subject Property	No	N	N
State/Tribal Equivalent NPL	1.00	No	No	No
State/Tribal Equivalent CERCLIS	1.00	No	No	No
State/Tribal Landfill/Solid Waste Disposal Site	0.50	No	No	No
State/Tribal Leaking Storage Tank Site (LUST/LPST)	0.50	**Yes**	No	No
State/Tribal Registered Storage Tank Sites (UST/AST)	Subject and Adjoining	**Yes**	**Yes**	N/A
State/Tribal IC/EC Registries	Subject and Adjoining	No	No	N/A
State/Tribal Voluntary Cleanup Sites (VCP)	0.50	No	No	No
State/Tribal Spills	0.25	No	No	No
Federal Brownfield Sites	0.50	No	No	No
State Brownfield Sites	0.50	No	No	No
Additional Environmental Records	Subject and Adjoining	No	**Yes**	N/A

4.2.2 Subject Property Listings

The subject property is identified as a CUPA LA COUNTY, DELISTED CTNK, DELISTED TNK, EMISSIONS, FINDS/FRS, GEOTRACKER, HAZ GEN, HIST MANIFEST, HMS LA, LUST, RCRA NON GEN, RCRA SQG, UST, and UST SWEEPS site in the regulatory database report, as discussed below:

Subject Property Database Listing	
Database:	CUPA LA COUNTY, DELISTED CTNK, HMS LA, UST
Site Name:	1977 Saturn; 1977 Saturn Street
Address:	1977 Saturn Street
Substance Involved:	One, 2,000-gallon diesel UST Two 10,000-gallon diesel USTs
Years of Operation:	1980 (two, 10,000-gallon diesel USTs installed) to 2018 (two, 10,000-gallon diesel USTs removed) 1991 (one, 2,000-gallon diesel UST installed) to 2018 (one, 2,000-gallon diesel UST removed)
Status:	Inactive
Discussion:	According to the CUPA LA COUNTY listing, 1977 Saturn is listed under Facility ID Number FA0024090, CERS ID Number 10268983, and PE Numbers 1001, 7124, and 3002 as an inactive CUPA program facility that is out of business and/or no longer regulated by the HHMD of the LACoFD. For further discussion of a reviewed record on file with the LACoFD in association with this listing, refer to Section 4.1.3. The HMS LA listing indicates that 1977 Saturn/1977 Saturn Street is listed under Site Number 006994 in the LACDPW Hazardous Materials System (HMS) Database. 1977 Saturn/1977 Saturn Street is recorded under File Numbers 062151 and 065372 and was issued a UST Operating Permit (Permit Number: 000842830; Permit Status: Closed) and an Operating Industrial Waste Permit for discharge to the local sewer (Permit Number: 000895772; Permit Status: Equipment Permitted). For further discussion of reviewed records on file with the LACDPW in association with this listing, refer to Section 4.1.11. The DELISTED CTNK and UST listings indicate that 1977 Saturn is recorded under Site ID Number 10890 and Facility ID Number LACoFA0024090 on a list of AST and UST sites that were removed from the CalEPA Regulated Site Portal and was issued permits to operate three USTs. For further discussion of the historical use of the subject property as a banking data center, in conjunction with the operations of three formerly on-site USTs, and respective environmental concerns, refer to Sections 3.0, 4.1, and 5.2.6.

Subject Property Database Listing	
Database:	DELISTED TNK, EMISSIONS, FINDS/FRS, HAZ GEN, HIST MANIFEST, HMS LA, RCRA SQG, UST SWEEPS
Site Name:	Sanwa Bank; Sanwa Bank California; Bank of the West

Address	1977 Saturn Street
Substance Involved:	One, 2,000-gallon petroleum UST Two waste USTs (unknown capacity)
Years of Operation:	1989 to 2016 (hazardous waste generation)
Status:	Inactive

Discussion: According to the two EMISSIONS listings, Sanwa Bank/Sanwa Bank California is listed under Facility ID Number 63620 and SIC Code 6021 (National Commercial Banks) on a list of criteria and toxic pollutant emissions data for facilities in California made available by the CalEPA - Air Resources Board (ARB). Recorded years for Criteria Data and Toxic Data ranged from 1990 to 1995; however, further details regarding types of quantities of pollutants emitted were not made available.

The FINDS/FRS listing indicates that Bank of the West is listed as a facility subject to environmental regulations under Registry ID Number 110065977090 and the interest type of "state master."

According to the HMS LA listing, Bank of the West is listed under Site Number 006994 in the LACDPW HMS Database. Bank of the West is recorded under File Numbers 007311 and I07311 and was issued a UST Operating Permit (Permit Number: 00005594T; Permit Status: Closed) and an Operating Industrial Waste Permit for discharge to the local sewer (Permit Number: 000009804; Permit Status: Closed). For further discussion of reviewed records on file with the LACDPW in association with this listing, refer to Section 4.1.11.
According to the HAZ GEN, HIST MANIFEST, and RCRA SQG listings, coupled with information from the California DTSC HWTS database, Sanwa Bank California/Bank of the West was issued EPA Handler ID Number CAD982463895 to generate regulated hazardous waste from June 1989 to June 2016, when the issued EPA Handler ID Number expired. Reported quantities of waste generated ranged from 0.08-tons (2007) to 1.06-tons (1994). As of January 2023, there are no Compliance Monitoring and Enforcement (violation) records associated with the Sanwa Bank California/Bank of the West (EPA Handler ID Number CAD982463895).

The DELISTED TNK and UST SWEEPS listings indicate that Sanwa Bank is recorded under Facility ID Number 7311 and CC Number A19-000-7311 on a list of storage tank sites that were removed by the SWRCB and was issued permits to operate three USTs. Although the UST SWEEPS listing indicates that two waste USTs are of unknown capacity, the features are likely in reference to the aforementioned two, 10,000-gallon diesel USTs associated with the UST listing for 1977 Saturn.

For further discussion of the historical use of the subject property as a banking data center, in conjunction with the operations of three formerly on-site USTs, and respective environmental concerns, refer to Sections 3.0, 4.1, and 5.2.6.

Subject Property Database Listing	
Database:	FINDS/FRS

Site Name:	United CA Bank
Address	1977 Saturn Street
Substance Involved:	Not reported
Years of Operation:	Not reported
Status:	Inactive
Discussion:	The FINDS/FRS listing indicates that United CA Bank is listed as a facility subject to environmental regulations under Registry ID Number 110018947773 and the interest type of "small quantity generator and state master." For further discussion of the historical use of the subject property as a banking data center, in conjunction with the operations of three formerly on-site USTs, and respective environmental concerns, refer to Sections 3.0, 4.1, and 5.2.6.

Subject Property Database Listing	
Database:	FINDS/FRS, RCRA NON GEN
Site Name:	Equity Office
Address	1977 Saturn Street
Substance Involved:	Tank bottom waste
Years of Operation:	2018 to 2019 (non-hazardous waste generation)
Status:	Inactive
Discussion:	The FINDS/FRS listing indicates that Equity Office is listed as a facility subject to environmental regulations under Registry ID Number 110070439637 and the interest type of "other hazardous waste activities." According to the RCRA NON GEN listing, coupled with information from the California DTSC HWTS database, Equity Office was issued EPA Handler ID Number CAC002986628 to generate regulated non-hazardous waste from October 2018 to January 2019, when the issued EPA Handler ID Number expired. A 2018 Uniform Hazardous Waste Manifest listing made available on the DTSC HWTS database indicates that 4.17 tons of non-RCRA hazardous waste liquid (water with trace hydrocarbons) was removed from the subject property for disposal. As of January 2023, there are no Compliance Monitoring and Enforcement (violation) records associated with Equity Office (EPA Handler ID Numbers CAC002986628). Based on the observed and reported inactive status of the facility, limited duration of hazardous waste generation, and the nature of the generated waste, these listings are not expected to represent an environmental concern.

Subject Property Database Listing	
Database:	HAZ GEN, HMS LA
Site Name:	BRE CA Saturn, LLC; BRE CA Office Owner, LLC

Address	1977 Saturn Street
Substance Involved:	Tank bottom waste
Years of Operation:	2016 to 2017 (hazardous waste generation)
Status:	Inactive
Discussion:	According to the HAZ GEN listing, coupled with information from the California DTSC HWTS database, BRE CA Office Owner, LLC was issued EPA Handler ID Number CAC002886409 to generate regulated hazardous waste from November 2016 to February 2017, when the issued EPA Handler ID Number expired. A 2018 Uniform Hazardous Waste Manifest listing made available on the DTSC HWTS database indicates that 1.88-tons of non-RCRA hazardous waste liquid (water with trace hydrocarbons) was removed from the subject property for disposal. The HMS LA listing indicates that BRE CA Saturn, LLC is listed under Site Number 006994 in the LACDPW HMS Database. BRE CA Saturn, LLC is recorded under File Number 065226 and was issued a UST Operating Permit (Permit Number: 000892942; Permit Status: Equipment Removed). For further discussion of reviewed records on file with the LACDPW in association with this listing, refer to Section 4.1.11. For further discussion of the historical use of the subject property as a banking data center, in conjunction with the operations of three formerly on-site USTs, and respective environmental concerns, refer to Sections 3.0, 4.1, and 5.2.6.

Subject Property Database Listing	
Database:	GEOTRACKER, LUST
Site Name:	BRE CA Saturn, LLC
Address	1977 Saturn Street
Date of Release:	2018
Substance Released:	Gasoline
Media Impacted:	Soil
Date of Closure:	June 28, 2022
Responsible Party:	BRE CA Saturn, LLC
Status:	Closed
Discussion:	According to the GEOTRACKER listing the subject property, identified as BRE CA Saturn, LLC at 1977 Saturn Street, is listed as a Non-Case Information site under the regulatory oversight of the Los Angeles Regional Water Quality Control Board (RWQCB) (Case Number T10000018576). In association with historical operations, two 10,000-gallon, single-walled, fiberglass, diesel fuel USTs (Tanks 1 and 2) were installed at the subject property in 1980 and one, 2,000-gallon steel double-walled, fiberglass coated, diesel fuel UST (Tank 3) was installed in 1991. Case Number T10000018576 was previously recorded as a Leaking Underground Storage Tanks (LUST) Cleanup site in association with removal of the three historical USTs on the subject property conducted under the oversight of the

	LACDPW in 2018. The subject property subsequently underwent site assessment activities and, after a review of analytical results, the Los Angeles RWQCB opined that no further action was required for the UST areas. As of June 28, 2022 the status of the subject property is indicated to be "Informational Item/Review Complete." For further discussion of procedures completed with respect to the Non-Case Information listing (formerly a LUST Cleanup Site listing) and a timeline that summarizes overall assessment and remedial procedures performed on the subject property dating back to 2006, refer to Section 5.2.6.

4.2.3 Adjoining Property Listings

The adjoining properties are identified as CUPA LA COUNTY, CERS TANK, DELISTED TNK, EMISSIONS, FINDS/FRS, HAZ GEN, HAZNET, HIST MANIFEST, HMS LA, RCRA NON GEN, UST, UST SWEEPS, and DELISTED CTNK sites in the regulatory database report, as discussed below:

Adjoining Property Database Listing	
Property Name:	T-Mobile West Site ID # IE04996A
Address:	1970 Saturn Street
Direction:	South across Saturn Street
Hydrological Gradient:	Down-gradient
Database Listing:	CUPA LA COUNTY
Substance Involved:	Not reported
Years of Operation:	Not reported
Status:	Inactive
Discussion:	According to the CUPA LA COUNTY listing, T-Mobile West Site ID # IE04996A is listed under Facility ID Number FA0041161 as an inactive CUPA program facility that is out of business and/or no longer regulated by the HHMD of the LACoFD. Based on the inactive status of the facility, inferred groundwater flow direction, lack of violations or compliance deficiencies noted, and lack of information indicating an unauthorized release of hazardous substances this listing is not expected to represent an environmental concern to the subject property.

Adjoining Property Database Listing	
Property Name:	Union Bank; Union Bank Operations Center; Union Bank (Volk Center); Daniel Rosales; Jones Lange Lasalle; Union Bank of California; CBRE Agent for Union Bank; 1X Union Bank
Address:	1980 Saturn Street
Direction:	South across Saturn Street
Hydrological Gradient:	Down-gradient

Database Listing:	CERS TANK, CUPA LA COUNTY, DELISTED TNK, EMISSIONS, FINDS/FRS, HAZ GEN, HAZNET, HIST MANIFEST, HMS LA, RCRA NON GEN, UST, UST SWEEPS
Substance Involved:	One, 4,000-gallon diesel UST One, 10,000-gallon diesel UST Generated waste includes alkaline solution without metals (pH > 12.5); Corrosive waste; Waste oil and mixed oil; Unspecified oil-containing waste; Liquids with halogenated organic compounds > 1000 mg/l; Benzene; Tetrachloroethylene; Aqueous solution with <10% total organic residues; Tank bottom waste; Aqueous solution with <10% total organic residues; Unspecified oil-containing waste; Other organic solids; Liquids with pH < 2; Asbestos-containing waste; Unspecified solvent mixture; Oil/water separation sludge; Off-specification, aged, or surplus organics; Photo chemicals / photo processing waste
Years of Operation:	1986 (one, 4,000-gallon diesel UST and one, 10,000-gallon diesel UST installed) to Unknown 1988-2022 (hazardous and non-hazardous waste generation)
Status:	Unknown

Discussion: According to the CERS TANK listing, Union Bank is listed under Site ID Number 404823 on the CalEPA Regulated Site Portal and was issued a permit to operate USTs and store chemicals. Various violations were reported between 2014 and 2022, which were returned to compliance shortly after evaluations.

The CUPA LA COUNTY listing indicates that Union Bank is listed under Facility ID Number FA0024092 and CERS ID Number 10263178 as an inactive CUPA program facility that is out of business and/or no longer regulated by the HHMD of the LACoFD.

According to the EMISSIONS listing, Union Bank (Volk Center) is listed under Facility ID Number 51882 and SIC Code 6021 (National Commercial Banks) on a list of criteria and toxic pollutant emissions data for facilities in California made available by the CalEPA - Air Resources Board (ARB). Recorded years for Criteria Data and Toxic Data ranged from 1990 to 1995; however, further details regarding types of quantities of pollutants emitted were not readily available.

The two FINDS/FRS listings indicate that Daniel Rosales/Union Bank is listed as a facility subject to environmental regulations under Registry ID Numbers 110070805844 and 110066549079, NAICS Codes 237130 (Power and Communication Line and Related Structures Construction) and 522110 (Commercial Banking), and the interest types of "unspecified universe, other hazardous waste activities, and state master."

According to the HMS LA listing. Union Bank Operations Center is listed under Site Number 009094 in the LACDPW HMS Database. Union Bank Operations Center is recorded under File Number 008139 and was issued a UST Operating Permit (Permit Number 00001066T). The status of the permit is indicated as "Equipment Permitted."

	The HAZ GEN, HIST MANIFEST, and RCRA NON GEN listings, coupled with information from the California DTSC HWTS database, indicate that the south adjoining property was issued EPA Handler ID Numbers CAC000072285 (1988-2000), CAL000030909 (1990-2001), CAC002624712 (2007-2008), CAC002636790 (2008-2009), CAC002678253 (2011-2012), CAC002776206 (2014), CAC002762786 (2014), CAC002852770 (2016), CAC002877989 (2016), CAC002864894 (2016), CAC002882250 (2016-2017), CAC002930430 (2018), CAC003062333 (2020), CAC002971095 (2018), CAC003155280 (2022), and CAC003192019 (2022) to generate regulated hazardous and non-hazardous waste. Reported quantities of waste generated ranged from 0.1-ton (2016) to 13.56 tons (2014). As of January 2023, there are no Compliance Monitoring and Enforcement (violation) records associated with the south adjoining property (EPA Handler ID Numbers CAC003062333, CAC003155280, CAC003192019, and CAC002971095). According to the DELISTED TNK, UST, and UST SWEEPS listings, the south adjoining property is recorded under Facility ID Number 8139 and Facility ID Number LACoFA0024092 on a list of storage tank sites that were removed by the SWRCB and was issued permits to operate at least two USTs. Based on the inferred groundwater flow direction, status of reported violations (returned to compliance), and lack of information indicating an unauthorized release of hazardous materials these listings are not expected to represent an environmental concern for the subject property.

Adjoining Property Database Listing	
Property Name:	Union Bank; 2001 Saturn Street; 2001 Saturn, LLC
Address:	2001 Saturn Street
Direction:	Adjoining to the west
Hydrological Gradient:	Down-gradient
Database Listing:	CUPA LA COUNTY, DELISTED CTNK, RCRA NON GEN
Substance Involved:	Not reported
Years of Operation:	2022 to 2023 (non-hazardous waste generation)
Status:	Unknown
Discussion:	According to the CUPA LA COUNTY listing, Union Bank is listed under Facility ID Number FA0040835 and CERS ID Number 10267867 as an active CUPA program facility that is regulated by the HHMD of the LACoFD. The DELISTED CTNK listing indicates that 2001 Saturn Street is recorded under Site ID Number 78726 on a list of Aboveground Petroleum Storage and UST sites that were removed from in the CalEPA Regulated Site Portal. According to the two RCRA NON GEN listings, coupled with information from the California DTSC HWTS database, 2001 Saturn, LLC was issued EPA Handler ID Numbers CAC003195784 and CAC003198580 to generate regulated non-hazardous waste from

	September 2022 to December 2022 and from October 2022 to January 2023, respectively. Details regarding quantities of waste and types of waste generated were not made available on the DTSC HWTS database. As of January 2023, there are no Compliance Monitoring and Enforcement (violation) records associated with 2001 Saturn, LLC (EPA Handler ID Numbers CAC003195784 and CAC003198580). Based on the inferred groundwater flow direction, lack of violations or compliance deficiencies noted, and lack of information indicating an unauthorized release of hazardous materials these listings are not expected to represent an environmental concern for the subject property.

Based on the findings, vapor migration from the adjoining properties is not expected to represent a significant environmental concern at this time.

4.2.4 Surrounding Area Listings of Concern to Subject Property

Based on various mitigating factors including relative distance from the subject property, inferred direction of groundwater flow, media affected, and/or regulatory status, the remaining sites listed within the specified search radius of the subject property which appeared on local, State, or Federally published databases that report releases of hazardous substances, are not expected to represent an environmental concern.

Based on the findings, vapor migration from the surrounding properties is not expected to represent an environmental concern at this time.

4.2.5 Unplottable Listings

No unplottable listings are identified in the regulatory database report.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from StratCap Global Data Center Group (User of this report).

User Responsibilities		
Item	**Provided By User**	**Not Provided By User**
AAI User Questionnaire		**X**
Title Records, Environmental Liens, and AULs		**X**
Specialized Knowledge		**X**
Actual Knowledge		**X**
Valuation Reduction for Environmental Issues		**X**
Identification of Key Site Manager	**X**	
Reason for Performing Phase I ESA	**X**	
Prior Environmental Reports	**X**	
Other		**X**

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property since 2018, identified as BRE CA Saturn, LLC, was not available to be interviewed at the time of the assessment.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User. The information requested was not received prior to the issuance of this report. The lack of this information is not considered to represent a significant data gap.

5.1.3 Interview with Key Site Manager

Mr. Robert Del Hierro, key site manager, indicated that they had no information pertaining to any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

Mr. Del Hierro further stated that there are no USTs, ASTs, oil/water separators, groundwater monitoring wells, or hazardous substance use/storage/generation on the subject property to the best of their knowledge, except for the diesel AST associated with the emergency generator, discussed in Section 6.2.2.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators, and occupants were not reasonably ascertainable and thus constitute a data gap.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or reasonably ascertainable within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

The following information was provided to Partner for review during the course of this assessment:

Phase I Environmental Site Assessment Report, prepared by Northgate Environmental Management, Inc. (Northgate), dated March 31, 2022

Northgate Environmental Management, Inc. (Northgate) prepared this report on behalf of EQ Office. The assessment was reportedly performed in accordance with ASTM Standard E1527-13 and consisted of a site reconnaissance, interviews with knowledgeable personnel, review of historical information, and a review of federal, state, and local regulatory databases. Pertinent information contained in this report is summarized below:

- At the time of the 2022 assessment, the subject property was vacant and last occupied by a Bank of the West office.
- According to the Northgate report, the historical use of the subject property "consisted of primarily undeveloped land with a former oil and gas exploration well (abandoned in 1967) until 1980 when it was redeveloped into the current configuration. Historic operations at the commercial office were reported to include a commercial kitchen with a grease interceptor as well as a small print shop and photo room with an industrial waste discharge permit to the sewer. A utility building was constructed to the north of the commercial office building in 1990 that primarily housed an emergency generator system."
- Identified former tenants of the subject property in the 2022 assessment included Sanwa Bank (1994), an unknown occupant (1999), Bank of the West (2004-2014), Marriott International, Inc. (2004-2009), and SODEXHO Corp. (2009). In addition, Bank of the West was reported to have been identified under various business names due to several acquisitions including Lloyd's Bank (1980-1986), Sanwa Bank (1986-2001), United California Bank (2002), followed by Bank of the West.
- The following notable observations were made during Northgate's site reconnaissance:
    - "No chemicals or hazardous materials or wastes were observed to be generated, stored, or used in any portion of the commercial office building.
    - A smaller utility building located to the north of the commercial office building was observed to house a diesel-powered emergency backup generator. No staining or evidence of a release was observed at the generator or in this area."
- According to the Northgate report, two 10,000-gallon single-walled fiberglass tanks containing diesel fuel were installed at the subject property in 1980 and a 2,000-gallon steel double-walled fiberglass coated tank containing diesel was installed in 1991. The three USTs were reported to historically operate at the subject property to supply the emergency generator system and no dispensing operations were noted. Northgate noted the following:
    - In 2006, the original piping associated with the USTs was reportedly removed and replaced with double walled piping. At the time of piping removal, soil samples were collected that reported low concentrations of diesel at 12 and 15 milligrams per kilogram (mg/kg). In 2007, a limited subsurface investigation was conducted and analytical results indicated low

concentrations of total petroleum hydrocarbons as diesel (TPH-d) in two of five soil samples collected. TPH-d was reported in soil samples collected from the same location at depths of 14.5 to 15 feet below ground surface (bgs) at 658 mg/kg and at a depth of 17.5 to 18 feet bgs at a concentration of 238 mg/kg. Northgate noted that concentrations were shown to attenuate with depth and are below the Regional Water Quality Control Board – Los Angeles Region (RWQCB) Soil Screening Level of 1,000 mg/kg.

- An additional limited subsurface investigation conducted in 2014 by the LACDPW did not report concentrations of TPH-d or volatile organic compounds (VOCs) above the laboratory reporting limits in any of the 23 soil samples collected from four borings advanced to 40 feet bgs at the subject property.
- The tanks were removed from the subject property in 2018 with soil and water samples collected at the time of removal from within the excavation cavity and below the former piping. Samples collected at the time of tank removal did not report concentrations of TPH-d above the laboratory method reporting limits within the tank excavation cavity and only low concentration of TPH-d were reported below regulatory screening criteria in samples beneath the former piping. However, it was noted that no soil sampling was conducted beneath the concrete pads below the UST. A closure report documenting the above referenced soil sampling dated December 7, 2018, was submitted to and received by the LACDPW in January 2019.
- A no further action (NFA) letter was recommended and the LACDPW referred the subject property to the RWQCB on April 27, 2020. At the time of the 2022 assessment, the subject property was identified as an inactive Leaking Underground Storage Tank (LUST) Cleanup Site as of February 11, 2022, that was under review by the RWQCB.

Northgate reviewed previous reports for the subject property provided by EQ Office or obtained from the agency file reviews as summarized below:

- *Phase I Environmental Site Assessment,* prepared by Bureau Veritas North America, Inc. (BVNAI), dated June 18, 2007
    - At the time of the 2007 assessment, the subject property was occupied by a bank data center that included a cafeteria with a kitchen on Level C.
    - According to the BVNAI report, on August 18, 1988, the subject property was issued an industrial waste disposal permit for the operation of a 1,500-gallon grease interceptor likely associated with the former kitchen.
    - During the site reconnaissance, BVNAI noted the presence of a floor drain that was reportedly closed in 1998 by the LADPW and a trench and sump pump that were reportedly installed in 1993 at the kitchen area on Level C.
    - BVNAI indicated that, in October 1989, a survey for asbestos-containing materials (ACMs) was conducted at the subject property which consisted of the visual inspection of accessible areas, construction material sampling, and air monitoring. ACMs were reported to be detected in samples of pipe run insulation (east roof hot water heater room), floor

tile mastic (print shop), and roofing mastic. An Operations and Maintenance Program was noted to be in place for the subject property.

  - BVNAI identified the presence of three USTs (two, 10,000-gallon diesel USTs and one, 2,000-gallon diesel UST) at the subject property as a REC and recommended soil sampling in the vicinity of the USTs.

- *Limited Subsurface Investigation Report for Two 10,000-Gallon Diesel USTs at 1977 Saturn Street, Monterey Park, California,* prepared by BVNAI), dated June 26, 2007
  - The purpose of the Limited Subsurface Investigation was to assess potential subsurface impacts in the area of two of three identified USTs outlined in the 2007 BVNAI Phase I ESA.
  - Subsurface investigation activities included a geophysical survey, advancement of five soil borings to 18 feet bgs, and soil sample collection. Due to refusal encountered at 8 feet bgs at one location, only four borings were advanced at the corners of the UST area. A map was not provided to indicate the location of the borings relative to the USTs or the subject property.
  - Diesel staining was observed at a depth of approximately 14 feet bgs in one boring (BVSB-1). In addition, according to the Chief Engineer of the subject property at the time of the investigation, Mr. Joe Robelo, in 1991, approximately five gallons of diesel were released in the area of boring BVSB-1 during a piping re-modification project. Mr. Robelo indicated that the contractor cleaned up the release and no further information was available.
  - Soil samples were collected from each of the four borings at approximately 17.5 to 18 feet bgs and an additional sample was collected at a depth of 14.5 to 15 feet bgs from boring BVSB-1. Concentrations of TPH-d were reported in the two samples collected at depths of 14.5 to 15 feet bgs and 17.5 to 18 feet bgs in boring BVSB-1 at concentrations of 658 and 238 mg/kg, respectively.
- *Phase I Environmental Site Assessment Report,* prepared by Leighton Consulting, Inc. (LCI), dated December 10, 2014
  - At the time of the 2014 assessment, the subject property was occupied by a banking operations and office center.
  - The following notable observations were made during LCI's site reconnaissance:
    - A utility building on the northern portion of the subject property, constructed in 1991, housed a generator room with three 55-gallon aboveground storage tanks and a 2,000-gallon diesel UST.
    - LCI observed 55-gallon drum-sized containers for the storage of compressed oil, oil pit sludge and water, waste diesel/water mix, and chemicals for roof-level cooling equipment located in the generator room, Level A storage room, and on the roof.
  - According to the LCI report, in 2014, a subsurface environmental assessment was conducted on the subject property by the LACDPW to assess potential releases associated

with the on-site USTs. The assessment reportedly did not identify any significant soil staining and no evidence suggesting a fuel release from the USTs was reported. As such, the LACDPW concluded that the subject property was not impacted in the areas assessed and no further assessment was recommended.

- LIC identified one plugged and abandoned oil well (API 03720192) to potentially be located on the subject property or possibly off-site to the south as the precise location could not be determined. The well was reportedly drilled to a total depth of 7,920 feet bgs and was abandoned shortly after in 1967.
    - Further research conducted by Northgate as part of the 2022 Phase I ESA indicated that the feature is a plugged and abandoned dry hole that did not produce oil or gas located on the subject property.
- LIC did not identify any RECs associated with the subject property; however, their report identified the following environmental conditions of potential concern and provided the associated recommendations:
    - The potential presence of one plugged and abandoned oil well located on the southwestern portion of the subject property was identified as a part of the assessment. LCI recommended direct field investigation to assess the location of the former oil well prior to new construction in this portion of the subject property. If an oil well is identified, LCI noted that the Division of Oil, Gas, and Geothermal Resources (presently identified as CalGEM) should be contacted to evaluate requirements for investigation and possible re-abandonment to current regulatory standards before any improvements commence at the Site.
    - The presence of three diesel USTs at the subject property for the operation of a backup generator system were identified as a part of the assessment. LCI recommended that if the USTs are not going to be used for proposed future operations that they be properly removed according to applicable regulatory guidelines with observation for evidence of releases beneath the tanks and piping.
    - A small on-site print shop and photo room with an industrial waste permit to discharge waste to the sewer were identified as a part of the assessment. No inappropriate discharge or leaks were identified; however, LCI recommended that observations for evidence of releases beneath the sewer lines be conducted if the building and associated utilities are demolished.
    - ACMs, (lead-based paint) LBP, and universal waste were reported to be located within the on-site structures. The locations, estimated quantities, and recommendations for their handling if disturbed during renovation or demolition activities are noted to be reported under a separate cover that was not made available to Northgate.

- *Observation of Limited Subsurface Investigation Activities,* prepared by URS, dated December 11, 2014

- URS prepared a letter summary of their observations of a limited subsurface investigation conducted by the LACDPW, which appears to be the investigation referenced in the LCI Phase I ESA above, dated December 11, 2014.
- On October 4 and 5, 2014, three borings were advanced to 40 feet bgs. Four borings were originally proposed to a total depth of 50 feet bgs; however, pea gravel was encountered in one boring (B-3). As such, the LACDPW decided to not advance boring B-3 to avoid impacting the integrity of the overlying surface parking lot. The total depth of the borings was not extended to the originally proposed 50 feet bgs as no field evidence of impacts were observed through 40 feet bgs.
- URS collected six split samples concurrent with the LACDPW investigation. Soil samples were collected at depths of 15 and 25 feet bgs from two borings (B-1 and B-2) and at depths of 10 and 20 feet bgs from the third boring (B-4). The soil samples were selected based on the judgement of an associated field geologist and were generally determined to be below the depths of the tank bottoms. URS noted that the LACDPW collected eight soil samples from borings B-1 and B-4 and seven soil samples from boring B-2.
- Soil samples were analyzed for TPH-d and VOCs and no VOCs or TPH-d were reported above their laboratory method reporting limits in any of the six soil samples collected for analysis by URS.
- Northgate noted that a copy of the laboratory analytical report for collected samples was provided as an appendix to the summary letter. A review of the analytical report indicated that no VOCs or TPH-d were reported above the laboratory method reporting limits in any of the 23 soil samples collected for analysis by LACDPW.

- *Soil Sampling Results Related to UST System Removals,* prepared by ALTA EM, Inc. (ALTA), dated December 7, 2018
  - ALTA prepared this report summarizing the results of tank system removals and associated soil sampling activities conducted at the subject property in 2018.
  - Details of the removed USTs were reported to be two, 10,000-gallon diesel fuel USTs (Tank 1 and 2) adjoining to one another and one, 2,500-gallon diesel fuel UST (Tank 3) located approximately 140 feet east of the larger tanks. All three tanks were used to supply emergency generators and were reported to be buried 3 to 4 feet bgs.
  - On November 8, 2018, soil samples (PS1 To PS13) were collected along the fuel product lines at depths ranging from 3.5 to 5 feet bgs and at least 2 feet below the removed lines. The tank pit containing Tanks 1 and 2 contained groundwater at approximately 11.5 feet bgs and a larger concrete pad beneath the tanks at approximately 13.5 feet bgs. As a result, soil sampling could not be performed and representative samples (TPGW1 and TPGW2) were collected from the groundwater at this location.
    - The tank pit for Tank 3 also contained a concrete pad at the bottom of the tank pit at approximately 11.5 feet bgs, but no groundwater was present. As soil samples could not be collected due to the presence of the concrete pad, sidewall samples

were collected just above the concrete pad. With the exception of one sampling location beneath the former piping at a depth of approximately 4 feet bgs where a slight hydrocarbon odor was observed, there were no other field indications of a release including odor or discoloration of the soil.

  - The soil and groundwater samples were analyzed for TPH-d, benzene, toluene, ethylbenzene, and xylenes (BTEX), and fuel oxygenates in accordance with modified EPA method no. 8015 (for TPH-d) and EPA method no. 5035/8260B (for BTEX and fuel oxygenates).
  - Two detections of TPH-d were reported in a sample collected at 4 feet bgs below the piping system (15.2 mg/kg) and at 10 feet bgs in the sidewall of the Tank 3 tank pit (10.5 mg/kg). BTEX, and fuel oxygenates were not detected above their respective laboratory method reporting limits in any of the soil or groundwater samples and TPH-d was not detected above the laboratory method reporting limit in either of the groundwater samples.
  - Based on the field observations and laboratory data, ALTA opined that there was no evidence indicating a significant release of diesel fuel from the removed UST systems. As such, ALTA concluded that no further action is recommended and requested a no further action letter for the subject property on behalf of the responsible party.

- *Hazardous Substances Underground Storage Closure/Site Assessment Report, Closure Application No 905166,* prepared LACDPW, dated April 27, 2020
  - On April 27, 2020, the LADCPW issued a letter to the RWQCB that indicated their review of the 2018 Soil Sampling Report and referral the matter to the RWQCB for further action. At the time of Northgate's 2022 assessment, the case was pending the RWQCB's review and response.

Northgate identified the three historical USTs as a REC and, in the absence of a closure/no further action (NFA) letter from the RWQCB at the time of the assessment, Northgate recommended contacting the RWQCB if redevelopment work was planned in the areas of the USTs to ensure that the work is in compliance with their requirements. Based on Northgate's review of data provided in previous reports, Northgate opined that there was a reasonable expectation that the RWQCB will grant a non-case determination for the subject property. As such, no further investigation was recommended at the time of the 2022 assessment.

Partner notes that NFA status was granted by the RWQCB in June 2022.

Copies of pertinent pages reviewed are included in Appendix B of this report.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was overcast. Refer to Section 1.5 for limitations encountered during the site reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Destiny Johnson of Partner
Site Assessment Conducted On:	March 22, 2023

The table below provides the subject property personnel interviewed during the site reconnaissance:

Site Visit Personnel for the Subject Property			
Name	**Title/Role**	**Contact Number**	**Site Walk* (Yes/No)**
Mr. Robert Del Hierro	Building Engineer	(323) 430-7081	Yes

** Accompanied Partner during the site reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property*

No potential environmental concerns were identified during the on-site reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial dumpsters and trash cans located on the northern exterior of the subject property building. An independent solid waste disposal contractor, Athens Services, removes solid waste from the subject property. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of Monterey Park Public Works Department services the subject property vicinity. No wastewater treatment facilities were observed or reported on the subject property. No septic systems were observed or reported on the subject property.

6.1.3 Stormwater and Surface Water Drainage

Stormwater is removed from the subject property primarily by sheet flow action across the paved surfaces towards stormwater drains located throughout the subject property parking lot and in the public right-of-way as well as ground infiltration. On-site storm water drains discharge to municipal owned and maintained storm sewer system. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity and natural gas provided by Southern California Edison (SCE) and Southern California Gas (SoCalGas), respectively. The

mechanical system is comprised of three cooling towers as well as air handling units located on the roof. Hot water is provided by central natural gas water heaters.

6.1.5 Wells and Cisterns

Partner observed numerous abandoned monitoring wells at the parking lot on the northern exterior of the subject property building. The identified monitoring wells were associated with three former USTs on the subject property (removed in 2018) and the subject property's Non-Case Information status that was formerly recorded as a LUST Cleanup Site (SWRCB Case Number T10000018576). For further discussion of assessment and remedial procedures and respective environmental concerns associated with the case, refer to Section 5.2.6.

In addition, although not observed during the site reconnaissance, the subject property is improved with a dry hole on the southwestern portion. As of 1967, the dry hole has been plugged and abandoned. For further discussion of the feature, refer to Sections 4.1.6 and 5.2.6.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. No industrial processes are currently performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

Partner identified hazardous substances or petroleum products used, stored, and/or generated on the subject property as noted in the following table:

Hazardous Substances and/or Petroleum Products Noted On-site					
Substance	**Container Type and Quantity/Size**	**Location**	**Nature of Use**	**Secondary Containment**	**Environmental Concern**
Cleaning compounds and janitorial and maintenance supplies	Various sized containers, ranging from aerosol cans to one-gallon pails	Janitorial supply closets	Subject property cleaning and maintenance	No	No
Hydraulic Oil	One, 10-gallon tin can	Elevator Maintenance Room	Hydraulic elevator operations	No	No

The materials were found to be properly labeled and store at the time of the assessment with no signs of leaks, stains, or spills. Secondary containment is not provided. Based on the nature of the use and observed conditions, the storage and use of the observed substances do not appear to pose a significant threat to the environmental integrity of the subject property at this time.

Although not observed during Partner's site reconnaissance, according to knowledgeable subject property personnel as well as a previous 2022 Phase I ESA performed by Northgate, the subject property is improved with three cooling towers located on the roof of the commercial building that use water treatment chemicals. At the time of the 2022 assessment, the following hazardous substances were observed:

- Chem Aqua Formula 42171 (5-gallons)
- Chem Aqua Formula 40215 (10-gallons)
- Chem Aqua Formula 51999 (10-gallons)
- Chem Aqua Formula 31155 (10-gallons)

The observed substances were found to be stored in secondary containment and no staining or evidence of a release was noted. The presence of cooling tower treatment chemicals is not expected to represent a significant environmental concern.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

Partner observed an area of patched asphalt on the northern exterior of the subject property building indicating the location of two of three former USTs (removed in 2018). In addition, Partner was shown the general area of the third former UST (removed in 2018) located on the eastern exterior of the northern utility building. For further discussion of the features, refer to Sections 4.1.9 and 5.2.6.

Partner also observed one diesel AST within the Generator Room of a utility building located on the northern portion of subject property. According to knowledgeable subject property personnel, the Generator Room formerly housed two additional emergency generators with ASTs associated with previous occupants. No staining, leaks, or spills were noted within in the vicinity of the current or former ASTs, and no releases have been reported to the California State Water Resources Control Board (SWRCB). Based on the observed conditions and lack of reported releases, the presence of the current and former ASTs is not expected to represent a significant environmental concern.

6.2.3 Evidence of Releases

No spills, stains, or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – "Non-PCB;" 2) 50 ppm-500 ppm – "PCB-Contaminated;" and, 3) Greater than 500 ppm – "PCB-Containing." The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after July 2, 1979.

Transformers and Hydraulic Equipment				
Type of Equipment	**Location**	**Number**	**PCB-Containing**	**Concern**
Dock Levelers	Loading dock located on the northeastern portion of the subject property building	Two	Unlikely	No
Hydraulic Elevator	Elevator Maintenance Room	One	Unlikely	No
Pad-Mounted Transformers	Throughout commercial building interior; Interior of northern and southern utility buildings	Numerous	Unlikely	No
Trash Compactor	Loading dock located on the northwestern portion of the subject property building	One	Unlikely	No

Partner observed two dock levelers at the loading dock located on the northeastern portion of the subject property building. No visual evidence of spills or releases of hydraulic oil were noted near the equipment. Based on the observed good conditions of the equipment, their presence is not expected to represent a significant environmental concern.

One hydraulic elevator services the subject property building. Equipment with respect to the elevator is located in the Elevator Maintenance Room located on Level A of the commercial building. According to Mr. Robert Del Hierro, the Building Engineer of the subject property, the elevator equipment is serviced by Otis Elevator Company. The Elevator Maintenance Room was noted to have a 10-gallon hydraulic oil tin can for elevator service purposes. No visual evidence of spills or releases of hydraulic oil were noted near the equipment. Based on the observed good condition and regular maintenance of the elevator equipment, their presence is not expected to represent a significant environmental concern.

Partner also observed numerous pad-mounted transformers throughout the subject property. No staining or leakage was observed in the vicinity of the transformers. In addition, Partner identified a high-voltage transformer room at the utility building located on the southern portion of the subject property. The transformer room was inaccessible during the site reconnaissance as Mr. Del Hierro indicated that the transformer is accessed by SCE personnel for service. Based on the observed good conditions of the equipment and reported maintenance, the transformers are not expected to represent a significant environmental concern.

Lastly, Partner observed a trash compacter at a loading dock located on the northwestern portion of the subject property building. The trash compactor was reported to not be in use due to the vacant status of the subject property. No visual evidence of spills or releases of hydraulic oil were noted near the equipment. Based on the good conditions observed and nature of the use, the presence of the trash compactor is not expected to represent an environmental concern.

Additionally, no other potential PCB-containing equipment (oil-filled switches, hoists, lifts, , balers, etc.) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

Partner observed the following drains, sumps, and/or clarifiers located on the subject property:

Drains, Sumps, and Clarifiers Observed On-site			
	Floor Drains	**Sump(s)**	**Clarifier**
Number Observed:	Numerous	None	One
Location:	Throughout subject property parking lot; Throughout C Level of the subject property building	N/A	Southern exterior of the subject property building
Point of Discharge:	Municipal	N/A	Municipal
Sealed/Bermed:	Sealed	N/A	Sealed

Partner observed stormwater drains throughout the subject property parking lot. The features are solely associated with stormwater drainage within the subject property and no significant stains or evidence of improper discharge of hazardous materials or petroleum products were observed within the vicinity of the features. As such, the presence of these features is not expected to represent a significant environmental concern.

Partner also observed floor drains throughout Level C of the commercial building. According to Mr. Del Hierro, the drains were associated with former kitchen operations conducted by a historical tenant of the subject property. The observed drains were reported to be connected to a subsurface three-stage clarifier, also referred to as a grease interceptor, located on the southern exterior of the subject property building. The clarifier was used to treat wastewater streams generated from the former kitchen operations. Based on the food grade nature of the clarifier, the presence of this feature is not expected to represent a significant environmental concern.

Furthermore, Partner observed a floor drain within the Generator Room of a utility building located on the northern portion of subject property. No significant stains or evidence of improper discharge of hazardous materials or petroleum products were observed within the vicinity of the feature. As such, the presence of the floor drain is not expected to represent a significant environmental concern.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds, or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building that have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property building was constructed in 1979. Partner has conducted a limited, visual evaluation of accessible areas for the presence of suspect ACM at the subject property. The objective of this visual survey was to note the presence and condition of suspect ACM observed. Please refer to the table below for identified suspect ACM:

Suspect ACMs			
Suspect ACM	**Location**	**Friable (Yes/No)**	**Physical Condition**
Drywall Systems	Throughout Building Interior	No	Good
Ceiling Tiles	Throughout Building Interior	No	Fair to Good
Flooring Materials/Mastic	Throughout Building Interior	No	Fair to Good
Roofing Materials	Building Roof	No	Not Assessed

Based on this building's date of construction, prior to disturbance, Partner recommends a comprehensive asbestos survey of the property be completed to determine the presence, condition, friability and likely future condition of suspect or confirmed ACM. All suspect materials must be handled as ACM according to local, state and federal regulations until the results of sampling and analysis indicate the material is a non-ACM.

Partner was provided building plans or specifications for review, which may have been useful in determining areas likely to have used ACM.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm2 (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X," to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

It is unlikely that LBP is present in buildings constructed after 1977. Therefore, due to the age of the subject property buildings, it is unlikely that LBP is present. Actual material samples would need to be collected in order to determine if LBP is present.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	**Average Predicted Radon Levels**	**Potential**
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 2. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the City of Monterey Park Public Works Water Department serves the subject property vicinity. The sources of public water for the City of Monterey Park are production wells located in the Main San Gabriel Groundwater Basin (Main Basin) and water purchased from the San Gabriel Water Company, which also pumps groundwater from the Main Basin. According to the City of Monterey Park Public Works Water Department 2021 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner observed accessible, interior areas for the subject property building for significant evidence of mold growth with the exceptions detailed in Section 1.5 of this report; however, this ESA should not be used as a mold survey or inspection. Additionally, this limited assessment was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

No obvious indications of water damage or mold growth were observed during Partner's visual assessment.

6.3.6 Wetlands

The subject property does not appear to be a designated wetland area based on information obtained from the United States Fish and Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

6.4 Adjoining Property Reconnaissance

The adjoining property reconnaissance consisted of observing the adjoining properties from the subject property premises. No items of environmental concern were identified on the adjoining properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or other potential environmental hazards.

7.0 FINDINGS AND CONCLUSIONS

Findings and Opinions

Recognized Environmental Condition

A recognized environmental condition (REC) refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.

- Partner did not identify evidence of RECs during the course of this assessment.

Controlled Recognized Environmental Condition

A controlled recognized environmental condition (CREC) refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- The subject property, identified as BRE CA Saturn, LLC at 1977 Saturn Street, is listed as a Non-Case Information site under the regulatory oversight of the Los Angeles Regional Water Quality Control Board (RWQCB) (Case Number T10000018576). According to information made available on the State Water Resources Control Board (SWRCB) GeoTracker database, along with review of regulatory database listings and previous environmental reports, Case Number T10000018576 was previously recorded as a Leaking Underground Storage Tanks (LUST) Cleanup site in association with removal and assessment activities, conducted under the oversight of the Los Angeles County Department of Public Works (LACDPW), for three historical underground storage tanks (USTs) installed on the subject property. According to available regulatory records, building records, and previous reports two 10,000-gallon, single-walled, fiberglass, diesel fuel (USTs) (Tanks 1 and 2) were installed on the northern exterior of the subject property building in 1980 and one, 2,500-gallon steel double-walled, fiberglass coated, diesel fuel UST (Tank 3) was installed on the western exterior of the utility building located on the northern portion of the subject property in 1991. The three USTs operated to supply an on-site emergency generator system associated with former tenants of the subject property.

  As further discussed in Section 5.2.6, according to a *Soil Sampling Results Related to UST System Removals* report prepared by AEM and dated December 7, 2018, upon removal of the USTs in 2018, soil samples and groundwater samples were collected and analyzed for total petroleum hydrocarbons as diesel (TPH-d), benzene, toluene, ethylbenzene, and xylenes (BTEX), and fuel oxygenates in accordance with modified Environmental Protection Agency (EPA) method no. 8015 (for TPH-d) and EPA method no. 5035/8260B (for BTEX and fuel oxygenates). Two detections of TPH-d were reported in a sample collected from beneath the piping system (15.2 milligrams per kilogram [mg/kg]) and at 10 feet bgs in the sidewall of the Tank 3 tank pit (10.5 mg/kg). BTEX and fuel oxygenates were not detected above their respective laboratory method reporting limits in any of the soil or groundwater samples and TPH-d was not detected above the laboratory method reporting limit in either of the groundwater samples.

On April 27, 2020, the LADCPW issued a letter to the RWQCB that indicated their review of the 2018 *Soil Sampling Results Related to UST System Removals* report and referral of the matter to the RWQCB for further action.

According to a letter prepared by the Los Angeles RWQCB and dated June 28, 2022, based on their review of the documentation, the Los Angeles RWQCB determined that "residual concentrations of fuel constituents [in the areas of the three historic USTs] pose low threat to human health and the environment." Therefore, no further action was required. Furthermore, the Los Angeles RWQCB indicated that subject property "data indicated that there may be residual concentrations of pollutants in soil at the subject property that could pose an unacceptable risk as a result of future construction/redevelopment activities, and/or change to a more sensitive land use from commercial use. Responsible parties, landowners, and contractors performing subsurface activities at the site should be prepared to manage properly to avoid threats to human health or the environment."

Based on the regulatory closure, reported removal of the identified USTs, completion of assessment and remedial activities, and indicated analytical results meeting the applicable regulatory standards for commercial use, the historical USTs and closed LUST case are considered a CREC, and no further investigation appears warranted at this time.

Historical Recognized Environmental Condition

A historical recognized environmental condition (HREC) refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- Partner did not identify evidence of HRECs during the course of this assessment.

Business Environmental Risk

A *Business Environmental Risks (BER)* is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. The following was identified during the course of this assessment:

- Due to the age of the subject property building, there is a potential that asbestos-containing materials (ACMs) are present. Readily visible suspect ACMs were observed in fair to good condition. Should these materials be disturbed, the identified suspect ACMs would need to be sampled to confirm the presence or absence of asbestos prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants.

No significant data gaps affecting the ability of the Environmental Professional to identify a REC were encountered during this assessment.

Conclusions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM E1527-13 of 1977 Saturn Street in Monterey Park, Los Angeles County, California (the

"subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of RECs or HRECs in connection with the subject property; however, a CREC and BER were identified. Based on the conclusions of this assessment, Partner recommends no further investigation of the subject property at this time.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 1977 Saturn Street in Monterey Park, Los Angeles County, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

RE: CITY DIRECTORY RESEARCH
1977 Saturn Street
MONTEREY PARK,CA 91755

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:
all of Clover Dr
1970-2075 of Fulton Ave
all of Iris Way
1900-2010 of S Orange Ave
all of Saturn St
Search Notes:

PARTNER

We want you to know that water quality continues to be a main priority with the City of Monterey Park (City). This report provides important information about your water quality, and we encourage you to read it and to contact us with any questions you may have.

The state and federal government require that this annual water quality report be made available to every customer to ensure you are kept informed regarding the quality of your water. The City continues to meet, and in many cases exceed, all drinking water requirements. In 2021, we conducted thousands of water quality tests to ensure that your water is clean and safe to drink.

In 2021, the City tested for additional contaminants that have known health risks but are not yet regulated in drinking water by U.S. Environmental Protection Agency (USEPA) or the State Water Resources Control Board, Division of Drinking Water (DDW). Unregulated contaminant monitoring helps USEPA and DDW determine where certain contaminants occur and whether new regulations need to be established for those contaminants. Also, the Main San Gabriel Basin Watermaster tests the City's wells annually as an early warning system for several industrial contaminants that have already contaminated other parts of the Main San Gabriel Basin. The City will continue to maintain a high quality, reliable water supply; we would appreciate your support in using this valuable and precious resource wisely.

For more information or questions about this report, please contact the Water Utility Manager at 626-307-1295.

Richard Gonzales
Water Utility Manager

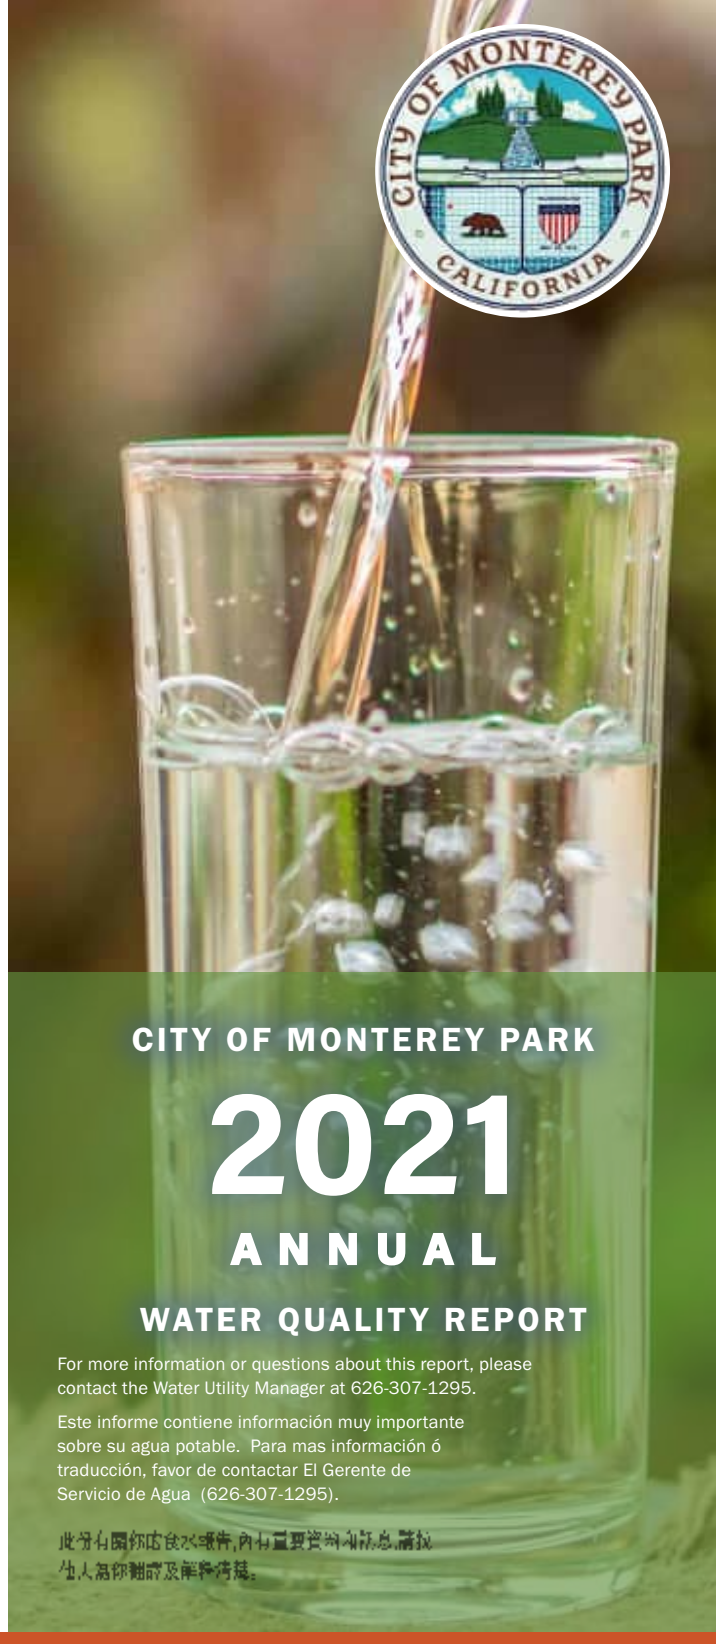
WHAT ARE WATER QUALITY STANDARDS?

In order to ensure that tap water is safe to drink, USEPA and the DDW prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration regulations and California law also establish limits for contaminants in bottled water that provide the same protection for public health. Drinking water standards established by USEPA and DDW set limits for substances that may affect consumer health or aesthetic qualities of drinking water. The chart in this report shows the following types of water quality standards:

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs as is economically and technologically feasible.

Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial pathogens.



Primary Drinking Water Standard: MCLs for contaminants that affect health along with their monitoring and reporting requirements and water treatment requirements.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Notification Level (NL): An advisory level which, if exceeded, requires the drinking water system to notify the governing body of the local agency in which users of the drinking water reside (i.e. city council, county board of supervisors).

2021 ANNUAL WATER QUALITY REPORT

For more information or questions about this report, please contact the Water Utility Manager at 626-307-1295.

Este informe contiene información muy importante sobre su agua potable. Para mas información ó traducción, favor de contactar El Gerente de Servicio de Agua (626-307-1295).

此分析報告包含飲水訊息,內容重要資訊如有疑問請找
他人為你翻譯及解釋清楚。

Where Does My Drinking Water Come From?

The City's water supply comes from production wells located in the Main San Gabriel Groundwater Basin (Main Basin). In addition, the City purchased water from San Gabriel Valley Water Company, which also pumps groundwater from the Main Basin. As a result of historical industrial discharge, groundwater in some areas of the Main Basin is contaminated. The City has worked with San Gabriel Basin Water Quality Authority to clean up groundwater contamination. Several water treatment facilities, which include an air stripper and three separate granular activated carbon units were constructed by the City to remove contaminants in the groundwater.

Are There Any Precautions the Public Should Consider?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

If present, elevated levels of lead can cause serious problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The City is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at https://www.epa.gov/lead.

Drinking Water Source Assessment

In accordance with the federal Safe Drinking Water Act, an assessment of the drinking water sources for the City was completed in December 2002. The assessment concluded that the City's sources are considered vulnerable to the following activities or facilities associated with contaminants detected in the water supply: fleet/truck/bus terminals, utility stations maintenance areas, gasoline stations, dry cleaners, known contaminant plumes, metal plating/ finishing/fabricating, plastics/ synthetics producers, chemical/petroleum processing/storage. The sources are also considered most vulnerable to the following activities or facilities not associated with contaminants detected in the water supply: leaking underground storage tanks and transportation corridors. A copy of the complete assessment is available at the City of Monterey Park Water Department at 320 West Newmark Avenue, Monterey Park, California 91754. You may request a summary of the assessment by contacting the Water Utility Manager at 626-307-1295.

San Gabriel Valley Water Company completed its groundwater source assessments in 2002 and new assessments were completed in 2005 and 2008 for new sources added to the system. Groundwater sources are considered vulnerable to discharge from industry, factories, landfills, dry cleaners, automobile repair shops, gasoline stations, high density housing, fleet truck and bus terminals, underground storage tanks, and sewer collection systems. A copy of the complete assessment is available at the City of Monterey Park Water Department at 320 West Newmark Avenue, Monterey Park, California 91754. You may request a summary of the assessment by contacting the Water Utility Manager at 626-307-1295.

What is in My Drinking Water?

Your drinking water is tested by certified professional water system operators and certified laboratories to ensure its safety. The City of Monterey Park Public Works Department routinely tests drinking water from its wells, treatment facilities, and distribution system pipes for bacterial and chemical contaminants. The chart in this report shows the average and range of concentrations of the constituents tested in your drinking water during year 2021 or from the most recent tests. The State allows the City to monitor for some contaminants less than once per year because the concentrations of these contaminants in groundwater do not change frequently. Some of our data, although representative, are more than one year old. The chart lists all the contaminants detected in your drinking water that have federal and state drinking water standards. Detected unregulated contaminants of interest are also included. We are proud to report that during 2021, the drinking water provided by the City to your home met or surpassed all federal and state drinking water standards. We remain dedicated to providing you with a reliable supply of high quality drinking water.

- NITRATE: Although nitrate in your drinking water never exceeds the MCL of 10 milligrams per liter (mg/l), nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. Nitrate in drinking water at levels above 10 mg/l is a health risk for infants of less than six months of age. Such nitrate levels in drinking water can interfere with the capacity of the infant's blood to carry oxygen, resulting in a serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate levels above 10 mg/l may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant women and those with certain specific enzyme deficiencies. If you are caring for an infant, or you are pregnant, you should ask for advice from your health care provider.

- ARSENIC: The following advisory is issued because in 2021 we recorded an arsenic measurement in the drinking water supply between 5 and 10 micrograms per liter (µg/l). While your drinking water meets the 10 µg/l MCL for arsenic, it does contain low levels of arsenic. The arsenic standard balances the current understanding of arsenic's possible health effects against the cost of removing arsenic from drinking water. The USEPA continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and in linked to other health effects such as skin damage and circulatory problems.

- COLIFORM BACTERIA: This Consumer Confidence Report reflects changes in drinking water regulatory requirements during 2021. These revisions add the requirements of the federal Revised Total Coliform Rule, effective since April 1, 2016, to the existing state Total Coliform Rule. The revised rule maintains the purpose to protect public health by ensuring the integrity of the drinking water distribution system and monitoring for the presence of microbials (i.e., total coliform and E. coli bacteria). The USEPA anticipates greater public health protection as the rule requires water systems that are vulnerable to microbial contamination to identify and fix problems. Water systems that exceed a specified frequency of total coliform occurrences are required to conduct an assessment to determine if any sanitary defects exist. If found, these must be corrected by the water system. The state Revised Total Coliform Rule became effective July 1, 2021. because in 2021 we recorded an arsenic measurement in the drinking water supply between 5

- 1,4-DIOXANE: 1,4-Dioxane is a chemical primarily used as an industrial stabilizer to enhance performance of solvents in many manufacturing processes. It is found in food (shrimp, chicken, tomatoes, etc.), food additives, and ordinary household products (cosmetics, deodorants, and shampoos). The USEPA has classified 1,4-dioxane as a probable human carcinogen. There is no federal or state MCL for 1,4-dioxane in drinking water; however, DDW established a Notification Level (NL) and a reporting limit in 1998 of 3 µg/l. A Notification Level is a health-based advisory level established by DDW for chemicals in drinking water that lack MCLs. The City has been required to test several of its wells and treated water for 1,4-Dioxane since 2004 and has never exceeded the initial NL of 3 µg/l. In 2010, DDW revised the 1,4-dioxane NL and reporting limit lower to 1 µg/l resulting in detections in some City wells that exceeded the new 1 µg/l NL. In 2021, 1,4-dioxane levels in City wells ranged from non-detect to 1.2 µg/l. We believe the 1,4-dioxane found in these wells originated from discharge from industrial sources. The City's 1,4-dioxane level are below the DDW's response level, the level at which removal of the source from service, is now 35 µg/l.

How Can You Participate In Water Decisions?

Regularly scheduled meetings of the City Council are held on the first and third Wednesday of each month at 7:00 PM at 320 West Newmark Avenue, Monterey Park. These meetings provide an opportunity for public participation in decisions that may affect the quality of your water.

NOTES

(a) Water quality data provided by San Gabriel Valley Water Company (SGVWC).

(b) The results reported in the table are average concentrations of the constituents detected in your drinking water during 2019 or from the most recent tests, except for TTHMs, HAA5, Chlorine Residual, Lead, and Copper which are described below.

(c) Samples were collected in the distribution system. The result is the highest percentage of positive samples collected in a month during 2019. During February 2019 and May 2019, 75 total samples and 78 total samples, respectively, were collected each month for total coliform analysis:

(i) In February 2019, one sample tested positive for total coliform, which was 1.3% of the total samples collected during the month; however, all follow-up confirmation samples were negative for Total Coliforms and Fecal/E. coli bacteria.

(ii) In May 2019, two samples (one routine and one confirmation) tested positive for total coliform, which was 2.6% of the total samples collected during the month. One of three initial follow-up confirmation samples was positive for Total Coliforms but were negaive for Fecal/E. coli bacteria in all three confirmation samples. All subsequent follow-up confirmation samples were negative for Total Coliforms and Fecal/E. coli bacteria.

(d) Samples were collected in the distribution system. The running annual average is reported as "Results" while the maximum and minimum of the individual results are reported as "Range."

(e) The City of Monterey Park tests the Delta Plant drinking water weekly to comply with the State Water Resources Control Board, Division of Drinking Water approved blending plan for Arsenic.

(f) Concentrations are measured at the tap. The 90th percentile concentration is reported in the table. Out of 37 distribution system locations sampled, copper was detected in 27 samples, none of which exceeded the AL for copper; out of 37 distribution system locations sampled, lead was not detected in any sample. The samples were collected in 2018. During 2019, three schools submitted a request to be sampled for lead.

(g) The City of Monterey Park tests nitrate weekly at all three treatment plants.

(h) The City of Monterey Park tests sulfate weekly at the Well 5 Treatment Plant and the Wells 9, 12, and 15 Treatment Plant.

(i) Manganese was included as part of the unregulated chemicals requiring monitoring.

AL: Action Level

DLR: Detection Limit for Purposes of Reporting

MCL: Maximum Contaminant Level

MCLG: Maximum Contaminant Level Goal

µg/l: parts per billion or micrograms per liter

mg/l: parts per million or milligrams per liter

ng/l: parts per trillion or nanograms per liter

µmho/cm: micromhos per centimeter

MRDL: Maximum Residual Disinfectant Level

MRDLG: Maximum Residual Disinfectant Level Goal

NTU: Nephelometric Turbidity Units

pCi/l: picoCuries per liter

PHG: Public Health Goal

SMCL: Secondary MCL

"<": Detected but the average is less than the indicated DLR

WHAT IS A WATER QUALITY GOAL?

In addition to mandatory water quality standards, USEPA and DDW have set voluntary water quality goals for some contaminants. Water quality goals are often set at such low levels that they are not achievable in practice and are not directly measurable. Nevertheless, these goals provide useful guideposts and direction for water management practices. The chart in this report includes three types of water quality goals:

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by USEPA.

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a disinfectant added for water treatment below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

WHAT CONTAMINANTS MAY BE PRESENT IN SOURCES OF DRINKING WATER?

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

Microbial contaminants, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

Pesticides and herbicides that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.

Radioactive contaminants that can be naturally-occurring or be the result of oil and gas production and mining activities.

Organic chemical contaminants, including synthetic and volatile organic chemicals that are byproducts of industrial processes and petroleum production, and can also come from gasoline stations, urban stormwater runoff, agricultural application and septic systems.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

WHAT IS IN MY DRINKING WATER?

Your drinking water is tested by certified professional water system operators and certified laboratories to ensure its safety. The City of Monterey Park Public Works Department routinely tests drinking water from its wells, treatment facilities, and distribution system pipes for bacterial and chemical contaminants. The chart in this report shows the average and range of concentrations of the constituents tested in your drinking water during year 2020 or from the most recent tests. The State allows the City to monitor for some contaminants less than once per year because the concentrations of these contaminants in groundwater do not change frequently. Some of our data, although representative, are more than one year old. The chart lists all the contaminants detected in your drinking water that have federal and state drinking water standards. Detected unregulated contaminants of interest are also included. We are proud to report that during 2020, the drinking water provided by the City to your home met or surpassed all federal and state drinking water standards. We remain dedicated to providing you with a reliable supply of high quality drinking water.

NITRATE

Although nitrate in your drinking water never exceeds the MCL of 10 milligrams per liter (mg/l), nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. Nitrate in drinking water at levels above 10 mg/l is a health risk for infants of less than six months of age. Such nitrate levels in drinking water can interfere with the capacity of the infant's blood to carry oxygen, resulting in a serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate levels above 10 mg/l may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant women and those with certain specific enzyme deficiencies. If you are caring for an infant, or you are pregnant, you should ask for advice from your health care provider.

COLIFORM BACTERIA

This Consumer Confidence Report reflects changes in drinking water regulatory requirements during 2016. All water systems are required to comply with the state Total Coliform Rule. Effective April 1, 2016, all water systems are also required to comply with the federal Revised Total Coliform Rule. The new federal rule maintains the purpose to protect public health by ensuring the integrity of the drinking water distribution system and monitoring for the presence of microbials (i.e., total coliform and E. coli bacteria). The USEPA anticipates greater public health protection as the new rule requires water systems that are vulnerable to microbial contamination to identify and fix problems. Water systems that exceed a specified frequency of total coliform occurrences are required to conduct an assessment to determine if any sanitary defects exist. If found, these must be corrected by the water system.

1,4-DIOXANE

1,4-Dioxane is a chemical primarily used as an industrial stabilizer to enhance performance of solvents in many manufacturing processes. It is found in food (shrimp, chicken, tomatoes, etc.), food additives, and ordinary household products (cosmetics, deodorants, and shampoos). The USEPA has classified 1,4-dioxane as a probable human carcinogen. There is no federal or state MCL for 1,4-dioxane in drinking water; however, DDW established a Notification Level (NL) and a reporting limit in 1998 of 3 µg/l. A Notification Level is a health-based advisory level established by DDW for chemicals in drinking water that lack MCLs. The City has been required to test several of its wells and treated water for 1,4-Dioxane since 2004 and has never exceeded the initial NL of 3 µg/l. In 2010, DDW revised the 1,4-dioxane NL and reporting limit lower to 1 µg/l resulting in detections in some City wells that exceeded the new 1 µg/l NL. In 2020, 1,4-dioxane levels in City wells ranged from non-detect to 1.3 µg/l. We believe the 1,4-dioxane found in these wells originated from discharge from industrial sources. The City's 1,4-dioxane level are below the DDW's response level, the level at which removal of the source from service, is now 35 µg/l.

Our water system failed to monitor as required for drinking water standards during the past year. Therefore, it violated the regulations. Even though this failure was not an emergency, as our customers, you have a right to know what and when this happened and what we did to correct this situation and ensure it will not occur. Below is a table to explain this.

The City of Monterey Park samples for perchlorate throughout our treatment system every week. Although sampling was missed in the treatment process, rest assured that The City did achieve a negative detection sample for perchlorate at our last sample point (SP-6), which is the final sample point before the finishing potable water enters our distribution system and is delivered to our customers. Perchlorate samples tested at SP-6 in all cases met water quality compliance during the weeks of March 2021, December 2021, and January 2021. These levels of perchlorate have continued to meet and exceed the health standards required for regulatory water quality compliance.

VIOLATION	EXPLANATION	DURATION	ACTIONS TAKEN TO CORRECT VIOLATION	HEALTH EFFECTS LANGUAGE
Permit Provision March 2021 December 2021 January 2022	Failed to collect from the treated water of the City's Delta GAC treatment facility sample point SP-5 for perchlorate	March 2021 30 Days December 2021 January 2022 60 Days	Staff has successfully completed a training course and an extensive review of our Chain of Custody documents to ensure that this problem does not occur again. The City has also met with its laboratory provider to ensure they are in possession of the most current COCs. Increased perchlorate sampling from monthly to weekly for redundancy.	Perchlorate's interference with iodide uptake by the thyroid gland can decrease production of thyroid hormone, which in needed for prenatal and postnatal growth and development, as well as for normal metabolism and mental function in the adult.

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Este informe contiene informacion muy importante sabre su agua potable.
Traduzcalo o hable con alguien que lo entienda bien.

MONITORING REQUIREMENTS NOT MET FOR THE CITY OF MONTEREY PARK

Our water system failed to monitor as required for drinking water standards during the past year and, therefore, was in violation of the regulations. Even though this failure was not an emergency, as our customers, you have a right to know what you should do, what happened, and what we did to correct this situation.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During the months of **March 2021, December 2021, and January 2022,** we failed to collect from the treated water of the City's Delta GAC treatment facility sample point SP-5 for perchlorate and therefore, cannot be sure of the quality of our drinking water during that time.

What should I do?

- There is nothing you need to do at this time.
- The table below lists the contaminant(s) we did not properly test for during the last year, how many samples we are required to take and how often, how many samples we took, and the date when samples should have been taken.
- If you have health issues concerning the consumption of this water, you may wish to consult your doctor.

CONTAMINANT	REQUIRED SAMPLING FREQUENCY	NUMBER OF SAMPLES TAKEN	WHEN ALL SAMPLES SHOULD HAVE BEEN TAKEN
Perchlorate	Weekly	Three of four	January 2022
	Weekly	Three of four	December 2021
	Weekly	Four of five	March 2021

The perchlorate samples were absent on the chain of custody causing the samples to be missed at (SP-5) during the 1st week of perchlorate weekly monitoring of March 2021, December 2021, and January 2022. The sample point (SP-5) is midway through our completed treatment process.

We have since corrected this issue internally and are in compliance.

A. Of the 208 perchlorate samples taken in 2021, two missed samples is an equivalent of less than one percent.

B. Of the 208 perchlorate sample scheduled to be taken in 2022, the one missed represents less than ½% of the total samples.

Each and every week the City of Monterey Park (City) samples for perchlorate immediately before entering the population served at sample point (SP-6). These levels of perchlorate have continued to meet and exceed health standards required for regulatory water quality compliance. In fact, perchlorate samples tested at SP-6 in all cases met water quality compliance during the weeks of March 2021, December 2021, and January 2022.

Staff has undergone an extensive review of its Chain of Custody (COC) documentation to ensure that this problem does not occur again. The City has also met with its laboratory provider to ensure they are in possession of the most current COCs.

For more information, please contact Richard Gonzales at 626-307-1295 or 2657 Delta Avenue, Rosemead, California, 91770.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this public notice in a public place or distributing copies by hand or mail.

United States Department of Agriculture

NRCS

Natural Resources Conservation Service

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for Los Angeles County, California, Southeastern Part

March 17, 2023

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The

delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Los Angeles County, California, Southeastern Part

1210—Urban land-Montebello-Xerorthents complex, 0 to 15 percent slopes, terraced

Map Unit Setting

National map unit symbol: 2qdsh
Elevation: 200 to 2,040 feet
Mean annual precipitation: 15 to 26 inches
Mean annual air temperature: 63 to 66 degrees F
Frost-free period: 300 to 365 days
Farmland classification: Not prime farmland

Map Unit Composition

Urban land: 40 percent
Montebello and similar soils: 25 percent
Xerorthents, coarse fill, and similar soils: 20 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Urban Land

Setting

Landform: Fan remnants

Properties and qualities

Slope: 0 to 15 percent
Depth to restrictive feature: 0 inches to manufactured layer
Runoff class: Very high

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8
Ecological site: R019XG911CA - Loamy Fan
Hydric soil rating: No

Description of Montebello

Setting

Landform: Fan remnants
Landform position (three-dimensional): Tread, riser
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Human-transported material consisting mostly of alluvium derived from granite

Typical profile

^C1 - 0 to 41 inches: sandy clay loam
^C1 - 41 to 55 inches: sandy loam
^C2 - 55 to 79 inches: sandy clay loam

Properties and qualities

Slope: 0 to 15 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Low

Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum: 5.0
Available water supply, 0 to 60 inches: Moderate (about 8.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: B
Ecological site: R019XG911CA - Loamy Fan
Hydric soil rating: No

Description of Xerorthents, Coarse Fill

Setting

Landform: Fan remnants
Landform position (three-dimensional): Riser, tread
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Human-transported material over alluvium derived from granite

Typical profile

^A - 0 to 7 inches: loam
^C1 - 7 to 13 inches: sandy clay loam
^C2 - 13 to 24 inches: sandy loam
^C3 - 24 to 33 inches: sandy loam
^C4 - 33 to 41 inches: sandy loam
^C5 - 41 to 54 inches: sandy clay loam
2Bt - 54 to 79 inches: sandy clay loam

Properties and qualities

Slope: 0 to 15 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water supply, 0 to 60 inches: Moderate (about 9.0 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: B
Ecological site: R019XG911CA - Loamy Fan
Hydric soil rating: No

Minor Components

Azuvina

Percent of map unit: 10 percent
Landform: Fan remnants
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Palmview

Percent of map unit: 5 percent
Landform: Fan remnants
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

1232—Counterfeit-Urban land complex, 10 to 35 percent slopes, terraced

Map Unit Setting

National map unit symbol: 2pt4f
Elevation: 160 to 1,330 feet
Mean annual precipitation: 14 to 19 inches
Mean annual air temperature: 64 to 66 degrees F
Frost-free period: 320 to 365 days
Farmland classification: Not prime farmland

Map Unit Composition

Counterfeit and similar soils: 45 percent
Urban land: 40 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Counterfeit

Setting

Landform: Hillslopes
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope, tread, riser
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Human-transported material consisting mostly of colluvium and/or residuum weathered from sedimentary rock

Typical profile

^Au - 0 to 5 inches: clay loam
^Cu1 - 5 to 18 inches: clay
^Cu2 - 18 to 37 inches: clay
^Cu3 - 37 to 57 inches: clay loam
^C - 57 to 79 inches: sandy loam

Properties and qualities

Slope: 10 to 35 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 12 percent
Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water supply, 0 to 60 inches: High (about 10.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: C
Ecological site: F019XG913CA - Loamy Hills <30"ppt
Hydric soil rating: No

Description of Urban Land

Setting

Landform: Hillslopes

Properties and qualities

Slope: 0 to 10 percent
Depth to restrictive feature: 0 inches to manufactured layer
Runoff class: Very high

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8
Hydric soil rating: No

Minor Components

Zaca

Percent of map unit: 6 percent
Landform: Hillslopes
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

Apollo, warm

Percent of map unit: 6 percent
Landform: Hillslopes

Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

Balcom

Percent of map unit: 3 percent
Landform: Hillslopes
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

OVERALL INSPECTION COMMENTS

Consent Given By:
Jack Caffey (Security Officer)
Observed no significant violation on site. Bank of The West has moved out from this location since 06/30/2015.

Attention: Your facility may be subject to reinspection at any time to verify compliance. Failure to comply with the violations cited may result in reinspection fees, permit revocation, and/or administrative/civil/criminal penalties. Any time granted for correction of the violation(s) does not preclude any enforcement action by this Department or other agencies.

It is improper and illegal for any County officer, employee or inspector to solicit bribes, gifts, or gratuities in connection with performing their official duties. Improper solicitations include requests for anything of value such as cash, discounts, free services, paid travel or entertainment, or tangible items such as food or beverages. Any attempt by a County employee to solicit bribes, gifts or gratuities for any reason should be reported immediately to either the County manager responsible for supervising the employee or the Fraud hotline at (800) 544-6861 or www.lacountyfraud.org. YOU MAY REMAIN ANONYMOUS.

LOG SHEET

07/01/2015, A.N. I conducted routine HM & HW inspections. Observed building is vacant and moved out from this location. Confirmed with Jack Caffey, Security Officer on site and Stan Olson, Sr. Vice President, Bank of the West that all items have been removed from building. Inactivated both HM & HW program element as of 06/30/2015.

INSPECTOR FIELD NOTES

07/01/2015

Bank of the West
1977 Saturn St., Monterey Park, CA 91755 FA0024090

I. Consent: Jack Caffey (Security Officer)

Nature of Business: Business closed.

II. Walk Through:

The front door was locked, window was closed. Met security officer, Jack Caffey at the rear of the building. He stated that the entire building is completely vacant and closed. Bank of the West has moved to 13300 Crossroad Parkway, City of Industry. Observed no hazardous waste left at the building premises. Confirmed with Stan Olson, Sr. Vice President of Bank of the West that Bank of the West all items have been moved out from this location by 06/30/2015. Inactivated both HM & HW program elements.

PUBLIC RECORDS REQUEST FORM

ATTENTION REQUESTOR: To fulfill your request for records, please fill out this form completely, and identify specifically the type of records you are requesting. Requests must reasonably describe identifiable records prepared, owned, used, or retained by the Sanitation Districts.

REQUESTOR INFORMATION

Name: Stephanie Wilmot		Date: 3/16/2023
Company: Partner Engineering and Science		
Mailing Address: 2154 Torrance Blvd		
City: Torrance	State: CA	Zip Code: 90501
Phone No: (310) 220-6281	Fax No. (optional)	
Email (recommended): swilmot@partneresi.com		

REQUESTED RECORDS

Please clearly describe each requested record or document.
Use additional copies of this form, as necessary. *

Time Period of Document Requested	From: 1/1/1940	To: 3/16/2023

Building, demolition, mechanical, electrical, and plumbing permits, as well as certificates of occupancy

NO RECORDS FOUND

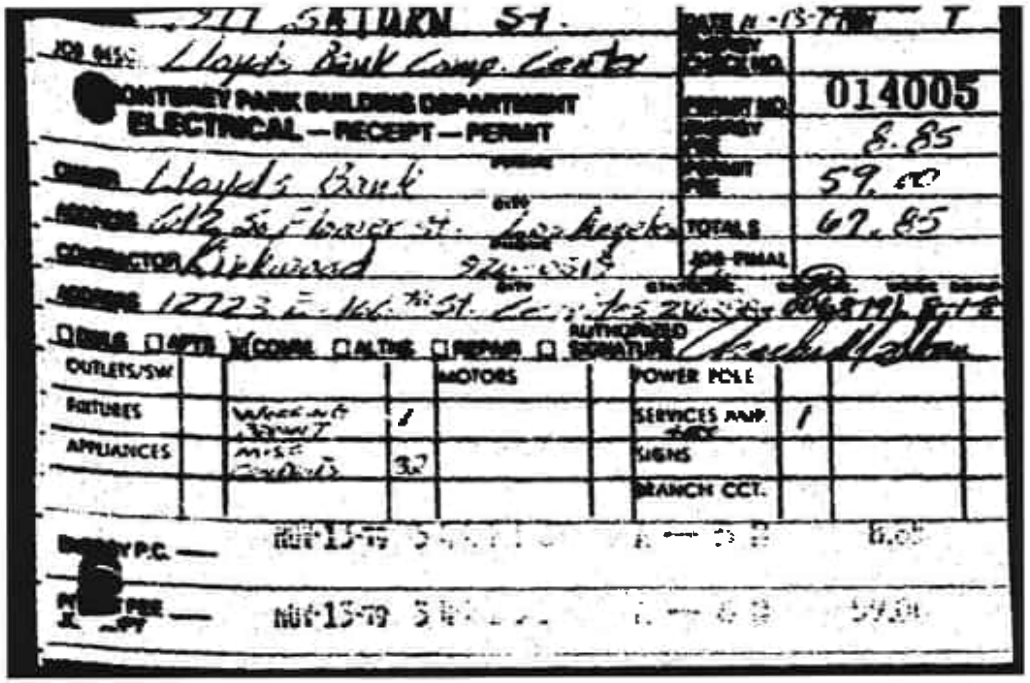
Time Period of Document Requested	From: 1/1/1940	To: 3/16/2023

Records, building permits, and public works documents pertaining to industrial waste discharge, underground storage tanks (USTs), above ground storage tanks (ASTs),and subsurface features including clarifiers, grease traps, and septic systems

Time Period of Document Requested	From: 1/1/1940	To: 3/16/2023

Records pertaining to hazardous material permits, inspections, releases, and cleanup/violation documentation

* Requests that are not specific and focused will be returned for more information. If requested, the Sanitation Districts will assist you in making focused and effective requests for identifiable records. The Sanitation Districts will not create new documents or records in response to a request.



Stephanie Wilmot

BUILDING PERMIT APPROVED

I HEREBY CERTIFY THAT I HAVE READ AND EXAMINED THIS APPLICATION AND KNOW THE SAME TO BE TRUE AND CORRECT. ALL PROVISIONS OF LAWS AND ORDINANCES GOVERNING THIS TYPE OF WORK WILL BE COMPLIED WITH WHETHER SPECIFIED HEREIN OR NOT. THE GRANTING OF A PERMIT DOES NOT PRESUME TO GIVE AUTHORITY TO VIOLATE OR CANCEL THE PROVISIONS OF ANY STATE OR LOCAL LAW REGULATING CONSTRUCTION OR THE PERFORMANCE OF CONSTRUCTION. PERMIT EXPIRES IF WORK IS NOT STARTED WITHIN 180 DAYS OF ISSUANCE OR IF WORK IS SUSPENDED OR ABANDONED FOR A PERIOD OF 180 DAYS AT ANY TIME AFTER WORK IS COMMENCED. A SEPARATE PERMIT MUST BE OBTAINED FOR EACH FUNCTION OR TRADE. ON PENALTY OF PERJURY I HEREBY CERTIFY THAT I HAVE READ AND EXAMINED THIS DOCUMENT AND KNOW THE CONTENTS THEREOF AND THAT THE SAME IS TRUE AND CORRECT TO THE BEST OF MY KNOWLEDGE. I AM LICENSED UNDER PROVISIONS OF CHAPTER 9 (COMMENCING WITH SECTION 7000) OF DIVISION 3 OF THE BUSINESS AND PROFESSIONS CODE AND MY LICENSE IS IN FULL FORCE AND EFFECT. I AM EXEMPT FROM LICENSURE PURSUANT TO SECTION 7031.5 OF THE BUSINESS AND PROFESSIONS CODE AND I HAVE AND WILL MAINTAIN WORKER'S COMPENSATION INSURANCE AS REQUIRED BY SECTION 3700 OF THE LABOR CODE FOR THE PERFORMANCE OF THE WORK FOR WHICH THIS PERMIT IS ISSUED. I HEREBY AUTHORIZE REPRESENTATIVES OF THIS CITY TO ENTER UPON THE ABOVE-MENTIONED PROPERTY FOR INSPECTION PURPOSES. (NOTE: SIGNATURE OF APPLICANT MUST BE OBTAINED ON FRONT OF APPLICATION BEFORE PERMIT MAY BE ISSUED.)

DECLARATIONS

The Declarations below are required by the State of California under Section 19825 of the Health and Safety Code. The additional cost of printing and other applicable processing caused by these requirements can only be passed on to the applicant as they are not recoverable from the city.

LICENSED CONTRACTOR'S DECLARATION

I hereby affirm that I am / am not licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

License Class C-16 License No. 182273

Exp. Date 5/31/81 Contractor VIKING FIRE PROT.

VIKING FIRE PROT. INC 682-6800
CONTRACTOR (DBA) Phone
2990 E. MIRALOMA ANAHEIM CA.
Address City Zip 92806

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031, California Business and Professions Code): Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9) (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____ B. & P. C. for this reason

Date _____ Owner _____

WORKER'S COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self-insure or a certificate of Worker's Compensation Insurance or a certified copy thereof (Sec. 3800, Lab. C.).

Policy No. WC 427-71-64 Company CROSBY & HARVEY

☐ Certified copy is hereby furnished.

☒ Certified copy is filed with the Department of Building & Safety.

Date 9-23-80 Applicant P. Smith

CERTIFICATE OF EXEMPTION FROM WORKER'S COMPENSATION INSURANCE

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Worker's Compensation Laws of California.

Date _____ Applicant _____

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Work's Comp. provisions of the Labor Code, You must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name _____

Lender's Address _____

I certify that I have read this application and state that the above information is correct. I agree to comply with all City and State laws relating to the building construction, and hereby authorize representatives of this City to enter upon the above-mentioned property for inspection purposes.

DECLARATIONS

The Declarations below are mandated by the State of California under Section 19825 of the Health and Safety Code. The additional cost of plans and permit application processing caused by these requirements can only be passed on to the applicant as they are not recoverable from the state.

LICENSED CONTRACTOR'S DECLARATION

I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7030) of Division 3 of the Business and Professions Code and my license is in full force and effect.

License Class C 38 License No. 219077
5-31-82
Date 11-20-80 Contractor Philip Perez

ADDRESS Santa Fe Springs, Ca ZIP 90670

OWNER BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9 (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00).

☐ I, as owner of the property, or my employees with wages as their sole compensation will do the work, and the structure is not intended or offered for sale (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds improvements thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds improvements thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. ____ B. & P. C. for this reason:

Date ____ Owner ____

WORKER'S COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self-insure or a certificate of Worker's Compensation Insurance or a certified copy thereof (Sec. 1860, Lab. C.).

Policy No. 275 WC 69 SPE Company Amer. Cas.
☐ Certified copy is hereby furnished.
☑ Certified copy is filed with the Department of Building & Safety.

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code): Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9) (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____ B. & P. C. for this reason:

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9 (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt thereform and the basis for the alleged exemption. Any violation of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. ____ B. & P. C. for this reason: ____

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5 California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9 (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violations of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044 B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. ..... B. & P. C. for this reason:

Date ..... Owner .....

WORKER'S COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self-insure or a certificate of Worker's Compensation Insurance or a certified copy thereof (Sec. 3800, Lab. C.).

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9 (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violations of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044 B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. ..... B. & P. C. for this reason:

ADDRESS City Zip

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9) (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violations of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044 B. & P. C.; The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of compl the owner-builder will have the burden of proving that he not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. ..... B. & P. C. for this reason:

Date ..... Signature of Owner .....

WORKER'S COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self-insure or a certificate of Worker's Compensation Insurance or a certified copy thereof (Sec. 3800, Lab. C.).

Policy No. WC1-112096 Company Mission Ins.

☐ Certified copy is hereby furnished.

☑ Certified copy is filed with the Department of Building & Safety.

Date 4/29/82 Applicant Ada L Bon

CERTIFICATE OF EXEMPTION FROM WORKER'S COMPENSATION INSURANCE

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Worker's Compensation Laws of California.

Date ..... Applicant .....

NOTICE TO APPLICANT: If, after making this Certificate of Exemption you should become subject to the Work's Comp. provisions of the Labor Code You must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097 Civ. C.).

Lender's Name None

Lender's Address .....

I certify that I have read this application and state that the above information is correct. I agree to comply with all City and State laws relating to the building construction, and hereby authorize representatives of this City to enter upon the above-mentioned property for inspection purposes.

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9) (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violations of Sec. 703.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work and the structure is not intended or offered for sale (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. B. & P. C. for this reason:

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Worker's Compensation Laws of California.

Date ..... Applicant .....

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Work's Comp. provisions of the Labor Code, You must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name N/A

Lender's Address .....

I certify that I have read this application and state that the above information is correct. I agree to comply with all City, and State laws relating to the building construction, and hereby authorize representatives of this City to enter upon the above-mentioned property for inspection purposes.

Signature of Owner or Contractor ONLY — Date 10/17/84

Owner Verified By:	City Lic. Verified By: AHK

IMPORTANT

Application is hereby made to the Director of Building and Safety for a permit subject to the conditions and restrictions set forth on the front of this application.

If work authorized by this permit is not commenced within 180 days of issuance date, or if work is suspended or abandoned for a period of 180 days, this permit shall become null and void by time limitation. A signed inspection on job card will keep permit valid for no more than 180 days.

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9 (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violations of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044 B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044 B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. ..... B. & P. C. for this reason:

Date ..... Signature of Owner .....

Date 2/10/87 Applicant J. H. Bryant Jr.

CERTIFICATE OF EXEMPTION FROM WORKER'S COMPENSATION INSURANCE

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Worker's Compensation Laws of California.

Date Applicant

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Work's Comp. provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name

Lender's Address

I certify that I have read this application and state that the above information is correct. I agree to comply with all City and State laws relating to the building construction, and hereby authorize representatives of this City to enter upon the above-mentioned property for inspection purposes.

Signature of Owner or Contractor ONLY Date

Owner Verified By:	City Lic. Verified By:

— IMPORTANT —

Application is hereby made to the Director of Building and Safety for a permit subject to the conditions and restrictions set forth on the front of this application.

If work authorized by this permit is not commenced within 180 days of issuance date or if work is suspended or abandoned for a period of 180 days, this permit shall become null and void by time limitation. A signed inspection on job card will keep permit valid for no more than 180 days.

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9) (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violations of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. ..... B. & P. C. for this reason

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9) (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violations of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044 B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. N/A B. & P. C. for this reason:

OWNER BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9) (Commencing with Sec. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violations of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work and the structure is not intended or offered for sale (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. ..... B. & P. C. for this reason:

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5 California Business and Professions Code: Any City which requires a permit to construct, alter, improve, demolish or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is a licensed contractor pursuant to the provisions of the Contractor's License Law (Ch. 9) (Commencing with Sect. 7000) of Div. 3 of the B. & P. C.) or that he is exempt therefrom and the basis for the alleged exemption. Any violations of Sec. 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.00.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, B. & P. C.: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

Re: Manifest Corrections

Dear Ms. Babb.

As you have discussed with Bob Hoffman, DeMenno/Kerdoon made an identical mistake on Item #19 on the attached list of affected manifests. Management Method Code H135 specified on each of these manifests needs to be corrected to H039. Additionally, for ease of reference, an Excel file displaying each of the subject manifests, and other available relevant data, has been included on the enclosed compact disk.

As previously explained, D/K does not have the ship date for the entire list of manifests that are the subject of this manifest correction letter. The attachment and enclosed Excel file does include the shipping dates you kindly provided to us for those manifests currently entered into the Department's manifest database. We understand and appreciate that you have agreed to run a monthly report for us to identify the additional manifests that are added to your system each month, including the ship dates for those manifests. We will then, in turn, provide you with an updated spreadsheet that will include the additional ship date for your purposes in correcting the Management Method Code for those manifests. We will continue to provide these monthly updates until the entire list of affected manifests has been amended in your system.

If you have any further questions, please feel free to contact me at (310) 537-7100 or bbooth@demennokerdoon.com. Thank you for your cooperation and assistance in this matter.

Respectfully,

N. Bonnie Booth
Manager, Environmental Affairs
DeMenno/Kerdoon

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California
Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

A. General Information

Facility Name: Bank of the West Bldg. No.:

Site Address: 1977 Saturn City: Mission Viejo Zip: 92735

Facility Contact Person: Joe Rebelo Contact Phone No.: (949) 727-3636

Make/Model of Monitoring System: VR 775 350 Date of Testing/Servicing: 10/16/09

B. Inventory of Equipment Tested/Certified

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. Certification

I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report (check all that apply): ☑ System set-up ☐ Alarm history report

D. Results of Testing/Servicing

Software Version Installed: 9.0

Complete the following checklist:

☑ Yes	☐ No*	Is the audible alarm operational?
☑ Yes	☐ No*	Is the visual alarm operational?
☑ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☑ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☑ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☐ Yes	☐ No* ☑ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☐ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☐ Yes; ☐ No.
☐ Yes	☐ No* ☑ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? _____ %
☐ Yes*	☑ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☑ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☑ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☑ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments: OVERFILL BUCKETS TESTED WITH SB989 TEST ON THIS DATE.

F. In-Tank Gauging / SIR Equipment:

☐ Check this box if tank gauging is used only for inventory control.
☐ Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

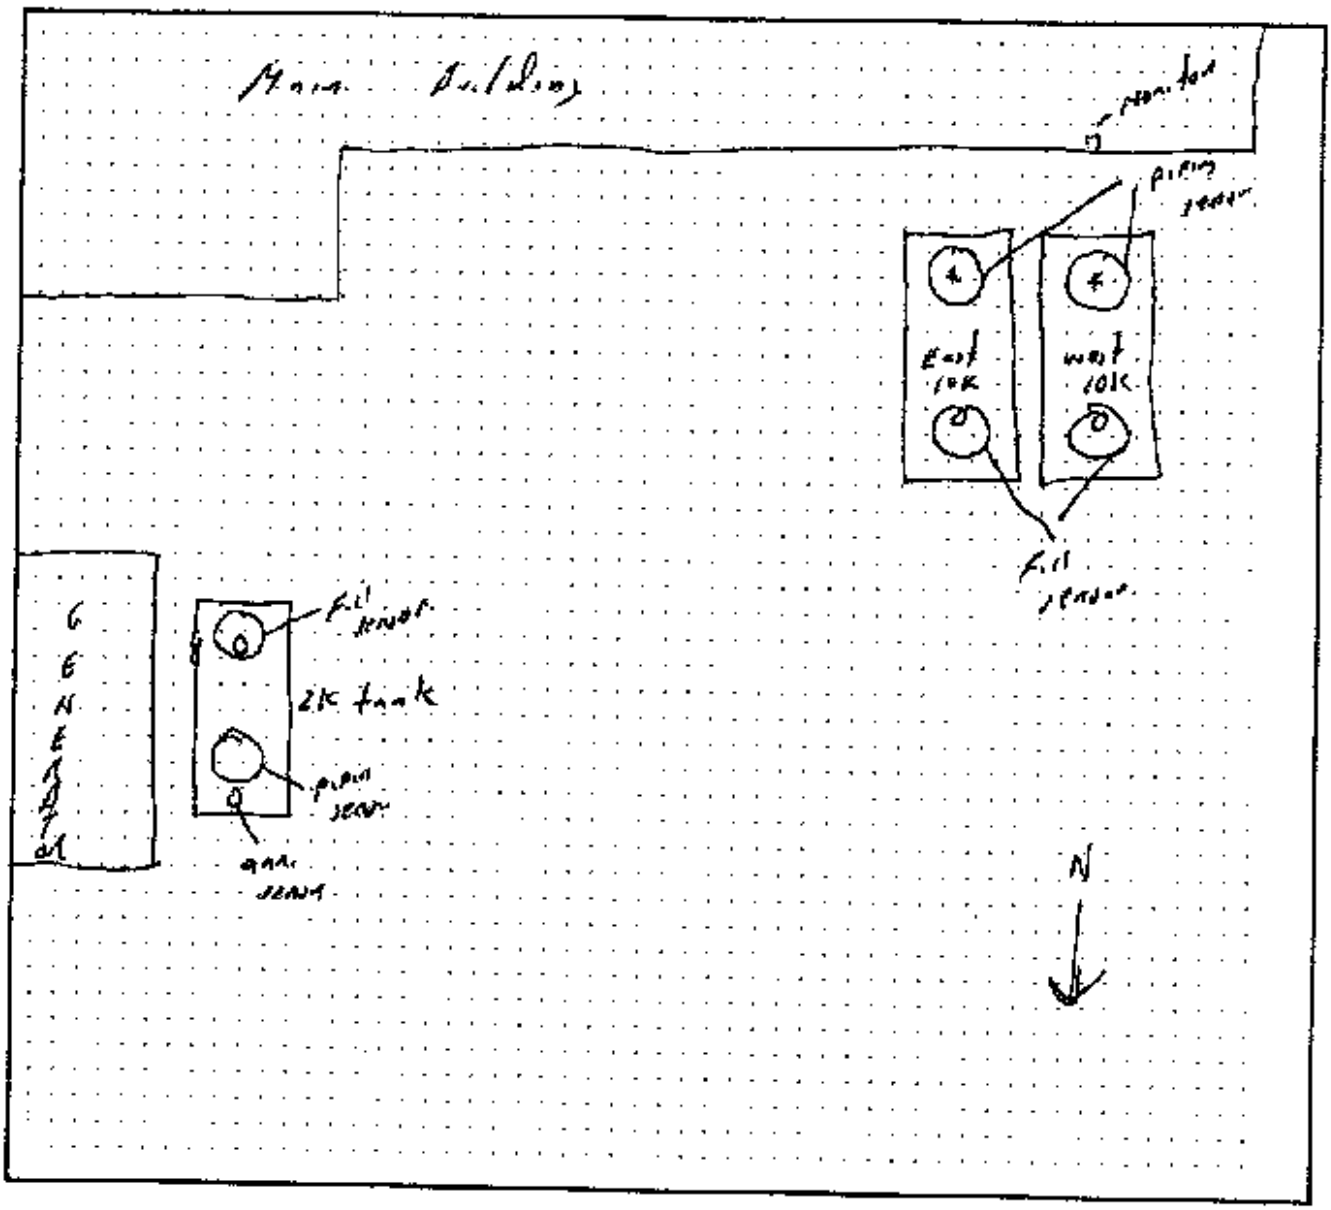
☑ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☑ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☑ Yes	☐ No*	Was accuracy of system product level readings tested?
☑ Yes	☐ No*	Was accuracy of system water level readings tested?
☑ Yes	☐ No*	Were all probes reinstalled properly?
☑ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD): ☑ Check this box if LLDs are not installed.

Complete the following checklist:

☐ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☐ 3 g.p.h.; ☐ 0.1 g.p.h.; ☐ 0.2 g.p.h.
☐ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☐ Yes	☐ No*	Was the testing apparatus properly calibrated?
☐ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?



* In the Section H, below, describe how and when these deficiencies were or will be corrected.

H. Comments:

Monitoring System Certification

UST Monitoring Site Plan

Site Address: 1977 Safeway

Date map was drawn: 12/4/07

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels, sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Attn: Sb989 Inspector

Re: SB989 Secondary Containment Testing at:
Bank Of The West
1977 Saturn Street
Monterey Park, CA 91755

Mr. Inspector

Please see the attached secondary containment testing results for the above referenced location. Los Angeles County Department of Public Works, Environmental Programs Division was notified for testing on 10/16/2009.

If you have any questions regarding the attached, or need additional information, please don't hesitate to contact me at (310) 679-9991.

Cordially,

Jorge Chavez
Petcon Technologies, Inc.

Secondary Containment Testing Report Form

This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name:	BANK OF THE WEST	Date of Testing:	10/16/2009
Facility Address:	1977 SATURN STREET, MONTEREY PARK CA 91755		
Facility Contact:	JOE	Phone:	323-727-3985
Date Local Agency Was Notified of Testing:	10/13/2009		
Name of Local Agency Inspector *(if present during testing)*:			

2. TESTING CONTRACTOR INFORMATION

Company Name:	PETCON TECHNOLOGIES, INC.		
Technician Conducting Test:	FERNANDO MARTINEZ		
Credentials:	☑ CSLB Licensed Contractor	☐ SWRCB Licensed Tank Tester	
License Type:	A, C-10, HAZMAT	License Number:	675998

Manufacturer Training

Manufacturer	Component(s)	Date Training Expires

3. SUMMARY OF TEST RESULTS

Appendix VI

(Copies of Monitoring System Certification form and UST Monitoring Plot Plan available at http://www.waterboards.ca.gov.)

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

A. General Information

Facility Name: Bank Of The West Bldg. No.

Site Address: 1977 Saturn St. City: Monterey Park Zip: 91755

Facility Contact Person: Joe Contact Phone No.: (323) -727-3636

Make/Model of Monitoring System: Veeder-Root TLS350 Date of Testing/Servicing: 10/15/2010

B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

Tank ID: WEST DIESEL 10K	Tank ID: 2K DIESEL
☑ In-Tank Gauging Probe. Model: MAG 1	☐ In-Tank Gauging Probe. Model:
☐ Annular Space or Vault Sensor. Model:	☑ Annular Space or Vault Sensor Model: 794390-357
☑ Piping Sump / Trench Sensor(s). Model: 794380-357	☑ Piping Sump / Trench Sensor(s). Mode: 794380-208
☑ Fill Sump Sensor(s). Model: 794390-208	☑ Fill Sump Sensor(s) Mode: 794390-208
☐ Mechanical Line Leak Detector Model:	☐ Mechanical Line Leak Detector. Mode
☐ Electronic Line Leak Detector. Model:	☐ Electronic Line Leak Detector. Model:
☐ Tank/Overfill / High-Level Sensor. Model:	☐ Tank/Overfill / High-Level Sensor. Model:
☐ Other (specify equipment type and model in Section E on Page 2).	☐ Other (specify equipment type and model in Section E on Page 2).
Tank ID: EAST DIESEL 10K	Tank ID:
☑ In-Tank Gauging Probe Model: MAG 1	☐ In-Tank Gauging Probe. Model:
☐ Annular Space or Vault Sensor. Model:	☐ Annular Space or Vault Sensor Mode
☑ Piping Sump / Trench Sensor(s). Model: 794390-357	☐ Piping Sump / Trench Sensor(s). Model:
☑ Fill Sump Sensor(s). Model: 794390-208	☐ Fill Sump Sensor(s). Model:
☐ Mechanical Line Leak Detector. Model:	☐ Mechanical Line Leak Detector. Model:
☐ Electronic Line Leak Detector Model:	☐ Electronic Line Leak Detector. Model:
☐ Tank/Overfill / High-Level Sensor Model:	☐ Tank/Overfill / High-Level Sensor. Model
☐ Other (specify equipment type and model in Section E on Page 2).	☐ Other (specify equipment type and model in Section E on Page 2).
Dispenser ID: DAY TANK 1-3	Dispenser ID:
☑ Dispenser Containment Sensor(s). Model:	☐ Dispenser Containment Sensor(s). Model:
☑ Shear Valve(s)	☐ Shear Valve(s).
☐ Dispenser Containment Float(s) and Chain(s)	☐ Dispenser Containment Float(s) and Chain(s).
Dispenser ID:	Dispenser ID:
☐ Dispenser Containment Sensor(s) Model:	☐ Dispenser Containment Sensor(s) Model:
☐ Shear Valve(s).	☐ Shear Valve(s).
☐ Dispenser Containment Float(s) and Chain(s)	☐ Dispenser Containment Float(s) and Chain(s).
Dispenser ID:	Dispenser ID:
☐ Dispenser Containment Sensor(s). Model:	☐ Dispenser Containment Sensor(s). Model:
☐ Shear Valve(s).	☐ Shear Valve(s)
☐ Dispenser Containment Float(s) and Chain(s)	☐ Dispenser Containment Float(s) and Chain(s).

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. **Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; (check all that apply):** ☑ System set-up ☐ Alarm history report

Technician Name (print): Rich Ruston Signature:

Certification No: A39930 License No: 517336

Testing Company Name: Orange County Tank Testing Phone No.: (714) 776-0300

Testing Company Address: 225 N. Loara Street, Anaheim, CA 92801 Date of Testing/Servicing: 10/15/2010

C672636

D. Results of Testing/Servicing

Software Version Installed: 9.0

Complete the following checklist:

✓ Yes	☐ No*	Is the audible alarm operational?
✓ Yes	☐ No*	Is the visual alarm operational?
✓ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
✓ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ✓ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☐ Yes	☐ No* ✓ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes, which sensors initiate positive shut-down? *(Check all that apply)* ☐ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shutdown due to leaks and sensor failure/disconnection? ☐ Yes* ☐ No.
☐ Yes	☐ No* ✓ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? ____ %
☐ Yes*	✓ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	✓ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
✓ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable.
✓ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments:

F. In-Tank Gauging / SIR Equipment:

☐ Check this box if tank gauging is used only for inventory control.
☐ Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

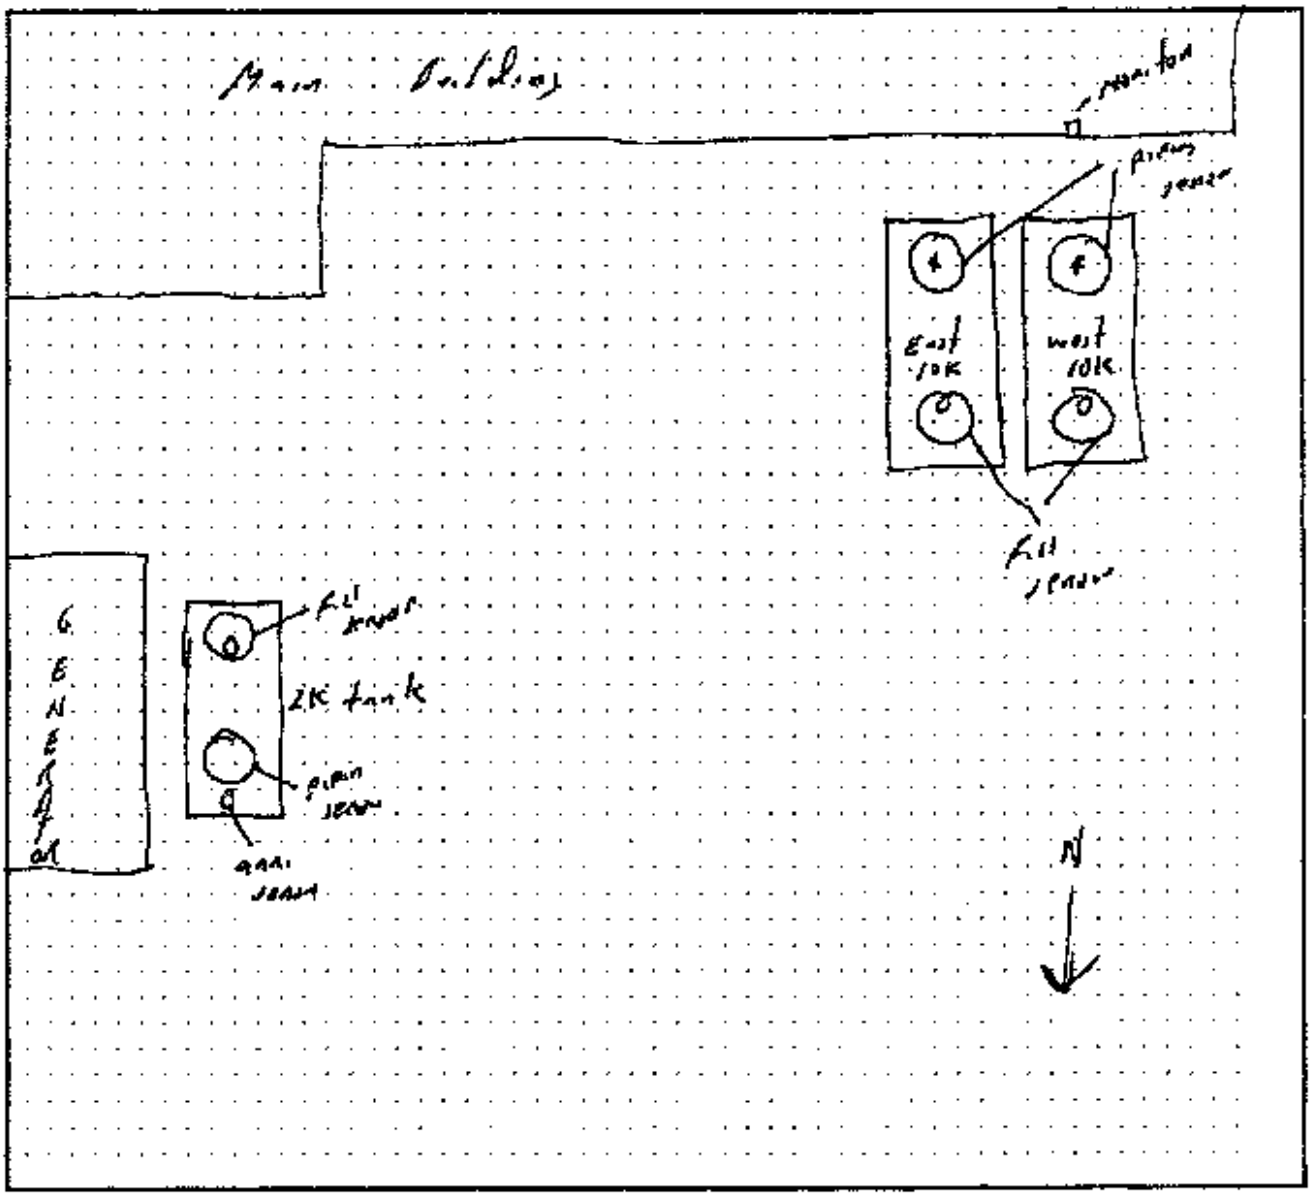
☑ Yes	☐ No*		Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☑ Yes	☐ No*		Were all tank gauging probes visually inspected for damage and residue buildup?
☑ Yes	☐ No*		Was accuracy of system product level readings tested?
☑ Yes	☐ No*		Was accuracy of system water level readings tested?
☑ Yes	☐ No*		Were all probes reinstalled properly?
☑ Yes	☐ No*		Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD): ☑ Check this box if LLDs are not installed.

Complete the following checklist:

☐ Yes	☐ No* ☐ N/A		For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: ☐ 3 g.p.h.; ☐ 0.1 g.p.h.; ☐ 0.2 g.p.h.
☐ Yes	☐ No*		Were all LLDs confirmed operational and accurate within regulatory requirements?
☐ Yes	☐ No*		Was the testing apparatus properly calibrated?
☐ Yes	☐ No* ☐ N/A		For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☐ N/A		For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☐ N/A		For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☐ N/A		For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☐ N/A		For electronic LLDs, have all accessible wiring connections been visually inspected?
☐ Yes	☐ No*		Were all items on the equipment manufacturer's maintenance checklist completed?



* In the Section H, below, describe how and when these deficiencies were or will be corrected.

H. Comments:

Double wall piping Suction System.

UST Monitoring Site Plan

Date map was drawn: 10/24/07

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name: Bank Of The West	Date of Testing: 10/15/2010
Facility Address: 1977 Saturn St.	
Facility Contact: Joe	Phone: 323-727-3836
Date Local Agency Was Notified of Testing:	
Name of Local Agency Inspector *(if present during testing)*: Ronnie Pappas	

2. TESTING CONTRACTOR INFORMATION

Company Name: ORANGE COUNTY TANK TESTING	
Technician Conducting Test: Rich Ruston	
Credentials[1]: ☐ CSLB Contractor ☑ ICC Service Tech. ☐ SWRCB Tank Tester ☐ Other *(Specify)*	
License Number(s): 517336	5246483-UT

3. SPILL BUCKET TESTING INFORMATION

Test Method Used: ☑ Hydrostatic ☐ Vacuum ☐ Other

Test Equipment Used: Visual C — Equipment Resolution:

	1	2	3	4
Identify Spill Bucket: *(By Tank Number, Stored Product, etc.)*	Diesel W.	Diesel E.	Diesel ZK	
Bucket Installation Type:	☐ Direct Bury ☑ Contained in Sump	☐ Direct Bury ☑ Contained in Sump	☐ Direct Bury ☑ Contained in Sump	☐ Direct Bury ☐ Contained in Sump
Bucket Diameter:	12"	12"	12"	
Bucket Depth:	15"	15"	15"	
Wait time between applying vacuum/water and start of test:	15 MIN.	15 MIN.	15 MIN.	15 MIN.
Test Start Time (T_i):	9:00A	9:00A	9:00A	
Initial Reading (R_i):	10"	9.5"	9¼"	
Test End Time (T_f):	10:00A	10:00A	10:00A	
Final Reading (R_f):	10"	9.5"	9¼"	
Test Duration ($T_f - T_i$):	1 HR	1 HR	1 HR	
Change in Reading ($R_f - R_i$):	-.00	-.00	-.00	
Pass/Fail Threshold or Criteria:	±.00	±.00	±.00	

Comments - *(include information on repairs made prior to testing, and recommended follow-up for failed tests)*

CERTIFICATION OF TECHNICIAN RESPONSIBLE FOR CONDUCTING THIS TESTING

I hereby certify that all the information contained in this report is true, accurate, and in full compliance with legal requirements.

Technician's Signature: _____ Date: 10/15/10

[1]State laws and regulations do not currently require testing to be performed by a qualified contractor. However, local requirement may be more stringent.

PLAN TYPE ☐ 1. MONITORING IS IDENTICAL FOR ALL USTs AT THIS FACILITY 490-2
(Check one item only) ☒ 2. THIS PLAN COVERS ONLY THE FOLLOWING UST SYSTEM(S): 2,000 UST

I. FACILITY INFORMATION

FACILITY ID # (Agency Use Only) 3

BUSINESS NAME (Same as FACILITY NAME) BANK OF THE WEST

BUSINESS SITE ADDRESS 1977 SATURN AVE 103 | CITY MONTEREY PARK 104

II. EQUIPMENT TESTING AND PREVENTIVE MAINTENANCE

Testing, preventive maintenance, and calibration of monitoring equipment (e.g., sensors, probes, line leak detectors, etc.) must be performed at the frequency specified by the equipment manufacturers' instructions, or annually, whichever is more frequent, and that such work must be performed by qualified personnel. (23 CCR §2632, 2634, 2638, 2641)

MONITORING EQUIPMENT IS SERVICED ☒ 1. ANNUALLY ☐ 99. OTHER (Specify): 490-31 490-32

III. MONITORING LOCATIONS

☐ 1. NEW SITE PLOT PLAN/MAP SUBMITTED WITH THIS PLAN. ☒ 2. SITE PLOT PLAN/MAP PREVIOUSLY SUBMITTED. (23 CCR §2632, 2634) 490-4

IV. TANK MONITORING IS PERFORMED USING THE FOLLOWING METHOD(S):
