Waste Code Details

Hazardous Waste Code: 352

Waste Code Description: Other organic solids

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Operating Industries, Inc. (OII) is an inactive Class II landfill surrounded by residential areas on the south and west borders. From 1948 to 1952, the OII site was operated as a municipal landfill by the City of Monterey Park. In January 1952, the site became a privately owned landfill under the ownership of OII. The site was permitted by the RWQCB in 1976, to receive various nonhazardous and hazardous liquid wastes, including lead compounds, chrome oxide, pigment sludge, refinery wastes, waste water from paint manufacturing, and caustic cleaning waste. It was not until 1984 that OII stopped accepting waste. The pathways of contamination are through inhalation of land fill gases and direct contact of leachate entering the ground water. Possible receptors are the residents near the facility and the potential impact of the contaminated groundwater on drinking water supplies. The Department of Toxic Substances Control took over the site when the owner and operator failed to continue with the site closure activities. In May 1986,

the landfill was listed on the NPL and EPA became the lead agency. EPA initiated a remedial investigation to define the extent of environmental problems. A hydrogeologic investigation to study the groundwater was performed in September of 1989. In May of 1989, a Partial Consent Decree was entered in the Federal Court between EPA and over 100 PRPs. The PRPs agreed to undertake the site control and monitoring, and construct a leachate treatment system, as well as conducting several site improvements. Site work pursuant to the Consent Decree began in November 1989, when daily operation, including operation and maintenance/monitoring of the existing gas and leachate control system, and erosion and drainage control were assumed by the settling PRPs'.

Date Completed: 9/28/1990
Comments: The amended Gas Migration Control ROD at the site addresses the landfill gas (LFG) migration control and landfill cover. The major component of this amendment is the addition of landfill cover to the previously selected gas migration control remedy. The major components of the Gas Migration Control ROD include: 1) landfill cover designed to reduce surface gas emissions and odors, prevent oxygen intrusion into the refuse, prevent surface water infiltration, provide erosion control, and improve site aesthetics; perimeter LFG extraction wells with placement focused on minimizing off site LFG migration; LFG extraction wells on the top deck of the landfill with placement focused on maximizing source control of LFG; shallow and deep slope wells with placement focused on reducing surface emissions and controlling intermediate to deep subsurface migration at the perimeter; integrated above-grade LFG headers and condensate sumps; LFG monitoring wells at the site boundary; upgraded thermal destruction facility for landfill gas; and pumps in appropriate gas wells with above-grade collection sumps to dewater saturated zones. The amended gas control remedial action will be integrated with the two additional operable units, Site Control and Monitoring, and Leachate Management, now being implemented.

Comments: The leachate treatment plant (included as Leachate Manage ment Operable Unit) is built on the north parcel of the site and consists of influent storage and equalization, biological reactors, chemical precipitation, sand filtration carbon absorption, effluent storage and discharge, foul air system, storm water holding system and sludge disposal system. The plant started operation on September 13, 1994 and the first discharge into the sewer system occurred on November 9, 1994.

TETRACHLOROETHYLENE (PCE)
TRICHLOROETHYLENE (TCE)
VINYL CHLORIDE

Site History:

Operating Industries, Inc. (OII) is an inactive Class II landfill surrounded by residential areas on the south and west borders. From 1948 to 1952, the OII site was operated as a municipal landfill by the City of Monterey Park. In January 1952, the site became a privately owned landfill under the ownership of OII. The site was permitted by the RWQCB in 1976, to receive various nonhazardous and hazardous liquid wastes, including lead compounds, chrome oxide, pigment sludge, refinery wastes, waste water from paint manufacturing, and caustic cleaning waste. It was not until 1984 that OII stopped accepting waste. The pathways of contamination are through inhalation of land fill gases and direct contact of leachate entering the ground water. Possible receptors are the residents near the facility and the potential impact of the contaminated groundwater on drinking water supplies. The Department took over the site when the owner and operator failed to continue with the site closure activities. In May 1986, the landfill was listed on the NPL and EPA became the lead agency. EPA initiated a remedial investigation to define the extent of environmental problems. A hydrogeologic investigation to study the groundwater was performed in September of 1989. In May of 1989, a Partial Consent Decree was entered in the Federal Court between EPA and over 100 PRPs. The PRPs agreed to undertake the site control and monitoring, and construct a leachate treatment system, as well as conducting several site improvements. Site work pursuant to the Consent Decree began in November 1989, when daily operation, including operation and maintenance/monitoring of the existing gas and leachate control system, and erosion and drainage control were assumed by the settling PRPs'.

Document Type: Remedial Action Plan
Date Completed: 9/28/1990
Comments: The amended Gas Migration Control ROD at the site addresses the landfill gas (LFG) migration control and landfill cover. The major component of this amendment is the addition of landfill cover to the previously selected gas migration control remedy. The major components of the Gas Migration Control ROD include: 1) landfill cover designed to reduce surface gas emissions and odors, prevent oxygen intrusion into the refuse, prevent surface water infiltration, provide erosion control, and improve site aesthetics; perimeter LFG extraction wells with placement focused on minimizing off site LFG migration; LFG extraction wells on the top deck of the landfill with placement focused on maximizing source control of LFG; shallow and deep slope wells with placement focused on reducing surface emissions and controlling intermediate to deep subsurface migration at the perimeter; integrated above-grade LFG headers and condensate sumps; LFG monitoring wells at the site boundary; upgraded thermal destruction facility for landfill gas; and pumps in appropriate gas wells with above-grade collection sumps to dewater saturated zones. The amended gas control remedial action will be integrated with the two additional operable units, Site Control and Monitoring, and Leachate Management, now being implemented.

TRICHLOROETHYLENE (TCE)
VINYL CHLORIDE

Site History:

Operating Industries, Inc. (OII) is an inactive Class II landfill surrounded by residential areas on the south and west borders. From 1948 to 1952, the OII site was operated as a municipal landfill by the City of Monterey Park. In January 1952, the site became a privately owned landfill under the ownership of OII. The site was permitted by the RWQCB in 1976, to receive various nonhazardous and hazardous liquid wastes, including lead compounds, chrome oxide, pigment sludge, refinery wastes, waste water from paint manufacturing, and caustic cleaning waste. It was not until 1984 that OII stopped accepting waste. The pathways of contamination are through inhalation of land fill gases and direct contact of leachate entering the ground water. Possible receptors are the residents near the facility and the potential impact of the contaminated groundwater on drinking water supplies. The Department took over the site when the owner and operator failed to continue with the site closure activities. In May 1986, the landfill was listed on the NPL and EPA became the lead agency. EPA initiated a remedial investigation to define the extent of environmental problems. A hydrogeologic investigation to study the groundwater was performed in September of 1989. In May of 1989, a Partial Consent Decree was entered in the Federal Court between EPA and over 100 PRPs. The PRPs agreed to undertake the site control and monitoring, and construct a leachate treatment system, as well as conducting several site improvements. Site work pursuant to the Consent Decree began in November 1989, when daily operation, including operation and maintenance/monitoring of the existing gas and leachate control system, and erosion and drainage control were assumed by the settling PRPs'.

Date Completed: 9/28/1990
Comments: The amended Gas Migration Control ROD at the site addresses the landfill gas (LFG) migration control and landfill cover. The major component of this amendment is the addition of landfill cover to the previously selected gas migration control remedy. The major components of the Gas Migration Control ROD include: 1) landfill cover designed to reduce surface gas emissions and odors, prevent oxygen intrusion into the refuse, prevent surface water infiltration, provide erosion control, and improve site aesthetics; perimeter LFG extraction wells with placement focused on minimizing off site LFG migration; LFG extraction wells on the top deck of the landfill with placement focused on maximizing source control of LFG; shallow and deep slope wells with placement focused on reducing surface emissions and controlling intermediate to deep subsurface migration at the perimeter; integrated above-grade LFG headers and condensate sumps; LFG monitoring wells at the site boundary; upgraded thermal destruction facility for landfill gas; and pumps in appropriate gas wells with above-grade collection sumps to dewater saturated zones. The amended gas control remedial action will be integrated with the two additional operable units, Site Control and Monitoring, and Leachate Management, now being implemented.

Potential Contamin of Concern:

METALS
METHANE
PETROLEUM
VOLATILE ORGANICS (8260B VOCS)

Site History:

The Site is approximately 488 acres located in the Montebello Hills and within the Montebello Oil Field. The Site is surrounded by Montebello Boulevard to the west and north, San Gabriel Boulevard to the east and Lincoln Ave to the south. There is residential housing to the south and a commercial development to the north. Historically the Site was used for oil production and minor cattle grazing. Oil production began at the Site in 1917, is ongoing and will continue after the center of the Site is developed. Existing Site features supporting oil exploration and production include storage tanks, chemical storage areas, active oil wells, injection wells, a produced water treatment facility, and a gas separation and compression plant have been identified across the broader site. Activities planned and underway in the center of the Montebello Oil Field include ongoing oil operations, the development of five communities of 1,200 detached residential homes, open space areas, and habitat reserve areas for the federally listed California gnatcatcher and its coastal sage scrub habitat and the abandonment of oil operations. In 2021 Toll Brothers signed a SVA with DTSC to conduct a document review, hold a meeting, with 10 components of information. review the already approved RWQCB RAP, evaluate the investigation and risk assessment, Implement the Soil vapor response. Once the agreed upon remedy is implemented the a Report shall be provided. Appropriate public outreach may be needed. A Land Use Covenant may be necessary to keep the remedy in place. to protect from the possibility of indoor air intrusion.The RWQCB RAP contains clean up objectives that should be considered by toxicologists. Technical staff have observed vapor tests and sample locations in 2022.

Unplottable Summary

Total: 0 Unplottable sites

DB	Company Name/Site Name	Address	City	Zip	ERIS ID

No unplottable records were found that may be relevant for the search criteria.

Unplottable Report

No unplottable records were found that may be relevant for the search criteria.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List: NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Nov 3, 2022

National Priority List - Proposed: PROPOSED NPL

Sites proposed by the United States Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Nov 3, 2022

Deleted NPL: DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Nov 3, 2022

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

Government Publication Date: Jan 25, 2023

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Jan 25, 2023

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jan 23, 2023

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by RCRA.

Government Publication Date: Jan 23, 2023

RCRA Generator List: RCRA LQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jan 23, 2023

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jan 23, 2023

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Jan 23, 2023

RCRA Non-Generators: RCRA NON GEN

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jan 23, 2023

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Jan 23, 2023

Federal Engineering Controls-ECs: FED ENG

This list of Engineering controls (ECs) is provided by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Dec 22, 2022

Federal Institutional Controls- ICs: FED INST

This list of Institutional controls (ICs) is provided by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Dec 22, 2022

Land Use Control Information System: LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites: NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: Nov 3, 2022

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Nov 6, 2022

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Sep 13, 2022

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Aug 30, 2022

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Jun 29, 2022

LIEN on Property: SEMS LIEN

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Jan 25, 2023

Superfund Decision Documents: SUPERFUND ROD

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: Dec 22, 2022

State

State Response Sites: RESPONSE

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Feb 6, 2023

EnviroStor Database: ENVIROSTOR

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

Government Publication Date: Feb 6, 2023

Delisted State Response Sites: DELISTED ENVS

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Feb 6, 2023

Solid Waste Information System (SWIS): SWF/LF

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

Government Publication Date: Feb 9, 2023

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels: SWRCB SWF

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

Waste Management Unit Database: WMUD

The Waste Management Unit Database System tracks and inventories waste management units. CCR Title 27 contains criteria stating that Waste Management Units are classified according to their ability to contain wastes. Containment shall be determined by geology, hydrology, topography, climatology, and other factors relating to the ability of the Unit to protect water quality. Water Code Section 13273.1 requires that operators submit a water quality solid waste assessment test (SWAT) report to address leak status. The WMUDS was last updated by the State Water Resources control board in 2000.

Government Publication Date: Jan 1, 2000

EnviroStor Hazardous Waste Facilities: HWP

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

Government Publication Date: Feb 6, 2023

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report: SWAT

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Construction and Demolition Debris Recyclers: C&D DEBRIS RECY

This listing of Construction and Demolition Debris Recyclers is maintained by the California Intergrated Waste Management Board-common C&D materials include lumber, drywall, metals, masonry (brick, concrete, etc.), carpet, plastic, pipe, rocks, dirt, paper, cardboard, or green waste related to land development.

Government Publication Date: Jun 20, 2018

Recycling Centers: RECYCLING

This list of Certified Recycling Centers that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Jan 12, 2023

Listing of Certified Processors: PROCESSORS

This list of Certified Processors that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Jan 12, 2023

Listing of Certified Dropoff, Collection, and Community Service Programs: CONTAINER RECY

This list of Certified Dropoff, Collection, and Community Service Programs (non-buyback) operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Jan 13, 2023

Land Disposal Sites: LDS

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

Government Publication Date: Nov 16, 2022

Leaking Underground Fuel Tank Reports: LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

Government Publication Date: Nov 16, 2022

Delisted Leaking Storage Tanks: DELISTED LST

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

Government Publication Date: Nov 16, 2022

Permitted Underground Storage Tank (UST) in GeoTracker: UST

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

Government Publication Date: Jan 17, 2023

Proposed Closure of Underground Storage Tank Cases: UST CLOSURE

List of UST cases that are being considered for closure by either the California Environmental Protection Agency, State Water Resources Control Board or the Executive Director that have been posted for a 60-day public comment period.

Government Publication Date: May 5, 2021

Historical Hazardous Substance Storage Information Database: HHSS

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Statewide Environmental Evaluation and Planning System: UST SWEEPS

The Statewide Environmental Evaluation and Planning System (SWEEPS) is a historical listing of active and inactive underground storage tanks made available by the California State Water Resources Control Board (SWRCB).

Government Publication Date: Oct 1, 1994

Aboveground Storage Tanks: AST

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

SWRCB Historical Aboveground Storage Tanks: AST SWRCB

A list of aboveground storage tanks made available by the California State Water Resources Control Board (SWRCB). Effective January 1, 2008, the Certified Unified Program Agencies (CUPAs) are vested with the responsibility and authority to implement the Aboveground Petroleum Storage Act (APSA).

Government Publication Date: Dec 1, 2007

Oil and Gas Facility Tanks: TANK OIL GAS

Locations of oil and gas tanks that fall under the jurisdiction of the Geologic Energy Management Division of the California Department of Conservation (CalGEM) (CCR 1760). CalGEM was formerly the Division of Oil, Gas, and Geothermal Resources (DOGGR).

Government Publication Date: Jan 9, 2023

Delisted Storage Tanks: DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Jan 17, 2023

California Environmental Reporting System (CERS) Tanks: CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Jan 10, 2023

Delisted California Environmental Reporting System (CERS) Tanks: DELISTED CTNK

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: Jan 10, 2023

Historical Hazardous Substance Storage Container Information - Facility Summary: HIST TANK

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in th 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions: LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Feb 6, 2023

CALSITES Database: CALSITES

This historical database was maintained by the Department of Toxic Substance Control (DTSC) for more than a decade. CALSITES contains information on Brownfield properties with confirmed or potential hazardous contamination. In 2006, DTSC introduced EnviroStor as the latest Brownfields site database.

Government Publication Date: May 1, 2004

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions: HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Feb 18, 2021

Deed Restrictions and Land Use Restrictions: DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Nov 16, 2022

Voluntary Cleanup Program: VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Feb 6, 2023

GeoTracker Cleanup Program Sites: CLEANUP SITES

A list of Cleanup Program sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Nov 16, 2022

Delisted Cleanup Program Sites: DELISTED CLEANUP

A list of Cleanup Program sites which were once included - and have since been removed from - the list of Cleanup Program Sites in GeoTracker. GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

Government Publication Date: Nov 16, 2022

Delisted County Records: DELISTED COUNTY

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Feb 28, 2023

Tribal

Leaking Underground Storage Tanks on Tribal/Indian Lands: INDIAN LUST

This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 9, which includes California, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 23, 2022

Underground Storage Tanks on Tribal/Indian Lands: INDIAN UST

This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 9, which includes California, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 23, 2022

Delisted Tribal Leaking Storage Tanks: DELISTED INDIAN LST

Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 23, 2022

Delisted Tribal Underground Storage Tanks: DELISTED INDIAN UST

Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 23, 2022

County

Los Angeles County - Site Mitigation List: SML LA

A Site Mitigation List in the County of Los Angeles. The list is made available by Los Angeles County Fire Department. Site mitigation is handled by the Site Mitigation Unit (SMU) which facilitates completion of site clean-up projects of contaminated sites in an expeditious manner in all cities of the Los Angeles County except El Segundo, Glendale, Long Beach, Santa Fe Springs, and Vernon.

Government Publication Date: May 26, 2021

Los Angeles County - Solid Waste Sites: SWF LA COUNTY

List of permitted solid waste facilities, closed landfills, historical dumpsites and other solid waste sites in Los Angeles County, made available by the Department of Public Works in Los Angeles County.

Government Publication Date: Feb 14, 2023

Los Angeles County - CUPA Program Records: CUPA LA COUNTY

A list of inspection and enforcement records for active and inactive CUPA Program facilities, made available by the Health Hazardous Materials Division (HHMD) of the County of Los Angeles Fire Department. Includes Hazardous Materials Business Plan (HMBP), California Accidental Release Prevention Plan (CalARP), Hazardous Waste Generator (HWG), and the Aboveground Petroleum Storage Act Programs (APSA). Inactive programs include facilities that are out of business or no longer regulated by the HHMD.

Government Publication Date: Mar 25, 2020

Los Angeles County - HMS List: HMS LA

List of sites in the Los Angeles County Department of Public Works Hazardous Materials System (HMS) Database which have or have had permits for Industrial Waste, Underground Storage Tanks, or Stormwater in the county of Los Angeles.

Government Publication Date: Mar 1, 2023

Los Angeles County - Santa Fe Springs Underground Storage Tank: UST SANTAFESP

A list of registered active Underground Storage Tanks (USTs) in the City of Santa Fe Springs. This list is made available by Santa Fe Springs Department of Fire-Rescue.

Government Publication Date: Feb 11, 2022

Los Angeles County - Long Beach UST List: UST LONGB

List of registered Underground Storage Tanks (USTs) in the City of Long Beach, Los Angeles County, made available by the Long Beach Certified Unified Program Agency (CUPA). The Long Beach CUPA operates under oversight shared by the Long Beach Fire Department and Health Department.

Government Publication Date: Jul 9, 2018

Los Angeles County - Burbank City CUPA List: CUPA BURBANK

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the City of Burbank. This list is made available by the City of Burbank Fire Department.

Government Publication Date: Aug 21, 2019

Los Angeles County - El Segundo City Underground Storage Tanks List: UST ELSEGUNDO

List of registered Underground Storage Tanks (USTs) in the City of El Segundo of Los Angeles County, made available by El Segundo City Fire Department.

Government Publication Date: Jan 17, 2017

Los Angeles County - Santa Monica City Underground Storage Tank List: UST SANTA MONICA

A list of registered active Underground Storage Tanks (USTs) in the City of Santa Monica made available by Santa Monica Fire Prevention Division.

Government Publication Date: Dec 3, 2020

Los Angeles County - Santa Monica City Aboveground Storage Tank List: AST SANTAMON

List of registered Aboveground Storage Tanks (ASTs) made available by the Santa Monica Fire Department in the City of Santa Monica of Los Angeles County, California.

Government Publication Date: Jan 20, 2023

Los Angeles County - Santa Monica City CUPA Facilities List: CUPA SANTAMON

The Santa Monica Fire Department's office maintains a list of CUPA Facilities located in Santa Monica city.

Government Publication Date: Jan 14, 2022

Los Angeles County - Torrance City Underground Storage Tanks: UST TORRANCE

A list of registered Underground Storage Tank (UST) sites in Torrance City of Los Angeles County. This list is made available by Torrance City Office of Clerk.

Government Publication Date: Apr 20, 2022

Los Angeles County - Vernon City UST List: UST VERNON

A list of Underground Storage Tanks (UST) in Vernon City provided by the Vernon City Fire Department.

Government Publication Date: Aug 25, 2022

Los Angeles County - Vernon City CUPA List: CUPA VERNON

The Vernon City Fire Department's office maintains a list of CUPA Facilities located in Vernon city.

Government Publication Date: Aug 25, 2022

Los Angeles County - City of Los Angeles UST List: UST LA CITY

A list of active and inactive underground storage tank facilities made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Nov 1, 2022

Los Angeles County - City of Los Angeles AST List: AST LA CITY

A list of active and inactive above ground petroleum storage tanks made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jun 1, 2019

Los Angeles County - City of Los Angeles Hazardous Materials Facilities: HAZMAT LA CITY

A list of active and inactive hazardous materials facilities made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jun 1, 2019

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Aug 18, 2022

Toxics Release Inventory (TRI) Program: TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U. S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Aug 24, 2021

PFOA/PFOS Contaminated Sites: PFAS NPL

List of National Priorities List (NPL) and related Superfund Alternative Agreement (SAA) sites where PFOA or PFOS contaminants have been found in water and/or soil. The site listing is provided by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Oct 4, 2022

Federal Agency Locations with Known or Suspected PFAS Detections: PFAS FED SITES

List of Federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS), made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data. EPA outlines that these data are gathered from several federal entities, such as the Federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration, Department of Transportation, and Department of Energy. Sites on this list do not necessarily reflect the source/s of contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

Government Publication Date: Jun 30, 2022

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Disclaimer: The source conveys this database undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Limited location details are available with this data. Access the following for the most current informations https://pfasproject.com/pfas-contamination-site-tr acker/

Government Publication Date: Dec 12, 2019

National Response Center PFAS Spills: ERNS PFAS

National Response Center (NRC) calls from 1990 to the most recent complete calendar year where there is indication of Aqueous Film Forming Foam (AFFF) usage. NRC calls may reference AFFF usage in the "Material Involved" or "Incident Description" fields. Data made available by the US Environmental Protection Agency (EPA). Disclaimer: dataset may include initial or misidentified incident data not yet validated or investigated by a federal/state response agency.

Government Publication Date: Feb 23, 2022

PFAS NPDES Discharge Monitoring: PFAS NPDES

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Government Publication Date: Feb 19, 2023

Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Aug 24, 2021

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

PFAS TSCA Manufacture and Import Facilities: PFAS TSCA

The US Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) requiring facilities that manufacture or import chemical substances to report to EPA. This list is specific to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl substances (PFAS). Data file made available by the EPA and includes CDR/Inventory Update Reporting data from 1998 up to 2020. EPA makes notes the following about these data: this data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

Government Publication Date: Jun 20, 2022

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Aug 30, 2022

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).

Government Publication Date: Jan 25, 2023

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The U.S. Environmental Protection Agency's Enforcement and Compliance History Online system incorporates data from the Integrated Compliance Information System - National Pollutant Discharge Elimination System (ICIS-NPDES). ICIS-NPDES is an information management system maintained by the Office of Compliance to track permit compliance and enforcement status of facilities regulated by the NPDES under the Clean Water Act. This data includes permit, inspection, violation and enforcement action information for applicable ICIS records.

Government Publication Date: Oct 15, 2022

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Jun 25, 2022

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Jun 25, 2022

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset.

Government Publication Date: Jul 12, 2022

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Mar 31, 2021

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) is provided by the United State Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: Aug 3, 2022

Surface Mining Control and Reclamation Act Sites: SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Government Publication Date: Aug 18, 2022

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites: LM SITES

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Tile II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Dec 1, 2022

Alternative Fueling Stations: ALT FUELS

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG) fuel type locations.

Government Publication Date: Jan 3, 2023

Superfunds Consent Decrees: CONSENT DECREES

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS) since 2010. CMS may not reflect the latest developments in a case nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Jan 11, 2023

Air Facility System: AFS

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments: SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 30, 2022

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Nov 3, 2022

State

Dry Cleaning Facilities: DRYCLEANERS

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Dec 20, 2021

Delisted Drycleaners: DELISTED DRYCLEANERS

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Jan 31, 2022

Non-Toxic Dry Cleaning Incentive Program: DRYC GRANT

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Jan 31, 2022

Per- and Polyfluoroalkyl Substances (PFAS): PFAS

List of FAA Part 139 Airports, Selected Landfills, and Chrome Plating Facilities from California Water Boards PFAS Investigations, as well as sites from the State Water Resources Control Board (SWRCB)'s GeoTracker at which one or more of the potential contaminants of concern are in the PFAS Master List of PFAS Substances made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Feb 15, 2022

PFOA/PFOS Groundwater: PFAS GW

A list of water wells from the Groundwater Ambient Monitoring and Assessment Program (GAMA) Groundwater Information System with the groundwater chemical perfluorooctanoic acid (PFOA) (NL = 0.014 UG/L) or perfluorooctanoic sulfonate (PFOS) (NL = 0.013 UG/L). The GAMA Groundwater Information System search is made available by California Water Boards.

Government Publication Date: Feb 4, 2023

Hazardous Waste and Substances Site List - Site Cleanup: HWSS CLEANUP

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: Nov 2, 2022

Toxic Pit Cleanup Act Sites: TOXIC PITS

The Toxic Pits Cleanup Act (TPCA) list identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. This list was maintained by the State Water Resources Control Board (SWRCB), is not longer maintained, and updates are not planned.

Government Publication Date: Jul 1, 1995

List of Hazardous Waste Facilities Subject to Corrective Action: DTSC HWF

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement: INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked by the California Department of Toxic Substance Control's (DTSC) EnviroStor data management system.

Government Publication Date: Oct 24, 2022

School Property Evaluation Program Sites: SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Feb 6, 2023

California Hazardous Material Incident Report System (CHMIRS): CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Aug 15, 2022

Historical California Hazardous Material Incident Report System (CHMIRS): HIST CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Handlers from Hazardous Waste Manifest Data: HAZNET

A list of handlers not otherwise classified as Treatment, Storage, Disposal facilities (TSDF) or generators from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Oct 24, 2016

Generators from Hazardous Waste Manifest Data: HAZ GEN

List of handlers listed as having generated waste from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Dec 31, 2017

TSDF from Hazardous Waste Manifest Data: HAZ TSD

List of Treatment, Storage, and Disposal Facilities (TSDFs) from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Dec 31, 2017

Historical Hazardous Waste Manifest Data: HIST MANIFEST

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

DTSC Registered Hazardous Waste Transporters: HW TRANSPORT

The California Department of Toxic Substances Control (DTSC) maintains this list of Registered Hazardous Waste Transporters.

Government Publication Date: Dec 9, 2022

Registered Waste Tire Haulers: WASTE TIRE

This list of registered waste tire haulers is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Oct 11, 2022

California Medical Waste Management Program Facility List: MEDICAL WASTE

This list of Medical Waste Management Program Facilities is maintained by the California Department of Public Health. The Medical Waste Management Program (MWMP) regulates the generation, handling, storage, treatment, and disposal of medical waste by providing oversight for the implementation of the Medical Waste Management Act (MWMA). The MWMP permits and inspects all medical waste off-site treatment facilities, medical waste transporters, and medical waste transfer stations. This list contains transporters, treatment, and transfer facilities.

Government Publication Date: Oct 31, 2022

Historical Cortese List: HIST CORTESE

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders: CDO/CAO

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Dec 6, 2021

California Environmental Reporting System (CERS) Hazardous Waste Sites: CERS HAZ

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Feb 8, 2023

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites: DELISTED HAZ

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Sites in GeoTracker: GEOTRACKER

GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. This is a list of sites in GeoTracker that aren't otherwise categorized as LUST, Land Disposal Sites (LDS), Cleanup Sites, or sites having Waste Discharge Requirements (WDR). This listing includes program types such as Underground Injection Control (UIC), Confined Animal Facilities (CAF), Irrigated Lands Regulatory Program, plans, and non-case information.

Government Publication Date: Nov 16, 2022

Mines Listing: MINE

This list includes mine site locations extracted from the Mines Online database, maintained by the California Department of Conservation. Mines Online (MOL) is an interactive web map designed with GIS features that provide information such as the mine name, mine status, commodity sold, location, and other mine specific data. Please note: Mine location information is provided to assist experts in determining the location of mine operators in accordance with California Civil Code section 1103.4 and reflects information reported by mine operators in annual reports provided under Public Resources Code section 2207. While the Division of Mine Reclamation (DMR) attempts to populate MOL with accurate location information, the DMR cannot guarantee the accuracy of operator reported location information.

Government Publication Date: Dec 19, 2022

Recorded Environmental Cleanup Liens: LIEN

The California Department of Toxic Substance Control (DTSC) maintains this list of liens placed upon real properties. A lien is utilized by the DTSC to obtain reimbursement from responsible parties for costs associated with the remediation of contaminated properties.

Government Publication Date: Aug 3, 2022

Waste Discharge Requirements: WASTE DISCHG

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Nov 16, 2022

Toxic Pollutant Emissions Facilities: EMISSIONS

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2020

Clandestine Drug Lab Sites: CDL

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/clandestine drug laboratories.

Government Publication Date: Jan 19, 2021

Tribal

No Tribal additional environmental record sources available for this State.

County

Los Angeles County - Santa Monica City Hazardous Materials Facilities: HAZMAT SANTAMON

A list of Hazardous Materials Facilities in the City of Santa Monica, Los Angeles county. This list is made available by Santa Monica Fire Prevention Division which has been designated as the CUPA for the City.

Government Publication Date: Dec 17, 2021

Los Angeles County - Santa Monica City Hazardous Waste Facilities: HAZ WST SANTAMON

A list of Hazardous Waste Facilities in Los Angeles County, City of Santa Monica. This list is made available by Santa Monica Fire Prevention Division.

Government Publication Date: Jan 20, 2023

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit Q

Unit Name:	Quaternary alluvium and marine deposits
Unit Age:	Pliocene to Holocene
Primary Rock Type:	alluvium
Secondary Rock Type:	terrace
Unit Description:	Alluvium, lake, playa, and terrace deposits; unconsolidated and semi-consolidated. Mostly nonmarine, but includes marine deposits near the coast.

Geologic Unit P

Unit Name:	Pliocene marine rocks
Unit Age:	Miocene to Pleistocene
Primary Rock Type:	sandstone
Secondary Rock Type:	mudstone
Unit Description:	Sandstone, siltstone, shale, and conglomerate; in part Pleistocene and Miocene.

Geologic Unit water

Unit Name:	water
Unit Age:	Holocene
Primary Rock Type:	water
Secondary Rock Type:	
Unit Description:	water

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *LOS ANGELES* County: **2**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L
Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L
Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *LOS ANGELES* County

No Measures/Homes:	69
Geometric Mean:	0.4
Arithmetic Mean:	0.7
Median:	0.5
Standard Deviation:	1
Maximum:	5.6
% >4 pCi/L:	1
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Screening indoor radon data from the EPA/State Residential Radon Survey of California conducted during 1989-90. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data — **US WETLAND**

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

Wells from NWIS — **FED USGS**

The U.S. Geological Survey's National Water Information System (NWIS) is the nation's principal repository of water resources data. The NWIS includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIW dataset contains select Site Types from the overall NWIS Sites data, limited to the following Group Site Types only: Groundwater Group Site Types: Well, Collector or Ranney type well, Hyporheic-zone well,

Interconnected Wells, Multiple wells; Spring Group Site Type: Spring; and Other Group Site Types: Aggregate groundwater use, Cistern.

State Sources

Oil and Gas Wells **OGW**

A list of Oil and Gas well locations. This is provided by California's Department of Conservation Division of Oil, Gas and Geothermal Resources.

Periodic Groundwater Level Measurement Locations **MONITOR WELLS**

Locations of groundwater level monitoring wells in the Department of Water Resources (DWR)'s Periodic Groundwater Levels dataset. The DWR Periodic Groundwater Levels dataset contains seasonal and long-term groundwater level measurements collected by the Department of Water Resources and cooperating agencies.

Well Completion Reports **WATER WELLS**

List of wells from the Well Completion Reports data made available by the California Department of Water Resources' (DWR) Online System for Well Completion Reports (OSWCR). Please note that the majority of well completion reports have been spatially registered to the center of the 1x1 mile Public Land Survey System section that the well is located in.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS Information Inc. disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

APPENDIX D: QUALIFICATIONS

PARTNER

Destiny Johnson
Staff Scientist

Education

Bachelor of Science in Environmental Science, Concentration in Atmospheric and Oceanic Sciences, University of California, Los Angeles

Master of Science in Environmental Studies, Concentration in Geosphere Environmental Systems, The University of Tokyo

Highlights

- Phase I Environmental Site Assessments
- Transaction Screen Assessments
- Limited Environmental Site Assessments
- Environmental Desktop Reports

Experience Summary

Ms. Johnson currently holds the role of a Staff Scientist for the Environmental Due Diligence practice at Partner Engineering and Science, Inc. (Partner) and is responsible for carrying out Phase I Environmental Site Assessments for various property types including agricultural properties, residential buildings, commercial office buildings, shopping centers, manufacturing facilities, industrial warehouses, dry cleaning operations, and gasoline service stations. Ms. Johnson is also responsible for writing technical reports in compliance with the American Society of Testing and Materials (ASTM) standard, the US Environmental Protection Agency's All Appropriate Inquiries (AAI) Rule, and customized client formats.

Prior to joining Partner, Ms. Johnson was a MEXT Graduate Research Assistant in the Geosphere Environmental Systems Laboratory at The University of Tokyo. Studying under the supervision of Professor Tomochika Tokunaga, Ms. Johnson performed research and gave conference presentations on the freshwater-saltwater dynamics leading to the brackish spring discharge above sea level occurring at the Shiokawa River in Okinawa, Japan.

Graduate Coursework:

- Remote Sensing, Geographical Information Systems and Analysis: Theory and Application
- Advanced Hydrology
- Sediment Transport in the Hydrosphere
- Fundamentals of Water Pollution Control
- Urban Water Systems
- From SDGs to Climate Change: Implementation Strategies for Adaptation and Mitigation

Contact

djohnson@partneresi.com

PARTNER

Victor Tvedten, Associate AIA, LEED-AP
Senior Project Manager

Education
Lawrence Technological University – Bachelor of Science in Architecture
University of Michigan – Masters in Architecture

Registrations
Associate AIA
LEED Accredited Professional, USGBC
Home Energy Rating System (HERS) Rater
Licensed Asbestos Inspector in State of Michigan
Licensed Radon Measurement Specialist

Training
HUD Multifamily Accelerated Processing (MAP) Project Capital Needs Assessment (PCNA) training
Fannie Mae Property Condition Assessment (PCA) training
ASTM Property Condition Assessment (PCA) training

Highlights
20 years in the Architecture & Engineering Industry with 10 years experience in design and new construction
10 years of experience performing architectural due diligence for a wide range of property types including:
Property Condition Assessments (commercial, office, retail, hospitality, medical, institutional, and industrial)
Capital Needs Assessments (multifamily residential for agencies such as HUD, Fannie Mae, and Freddie Mac)
Experienced in sustainable architecture and green building techniques such as LEED building certification

Experience Summary
Mr. Tvedten is a Senior Project Manager at Partner Engineering and Science, Inc. (Partner) and is responsible for the management of client relationships and project staff during all aspects of the due diligence process.

Mr. Tvedten has extensive experience with an array of architectural due diligence and evaluation services including hundreds of projects encompassing Debt and Equity PCAs, HUD CNAs, HUD Rental Assistance Demonstration (RAD) PCA, Fannie Mae and Freddie Mac PCAs, USDA-RD CNAs, various State Agency CNAs.

Mr. Tvedten has tangential experience with environmental due diligence services including projects such as Phase I Environmental Site Assessments (ESA), asbestos sampling, and radon testing.

Project Experience
Prior to joining Partner, Mr. Tvedten served as a Department Manager of Architectural Consulting Services where he was responsible for maintaining client relations, account management, project team organization, senior report review, accounting, and departmental oversight.

Notable projects Mr. Tvedten has completed include equity PCAs for three iconic skyscrapers in Detroit: One Detroit; One Woodward; and Renaissance Center Towers 500 and 600. Other notable projects include: PCAs of skyscrapers in Chicago including the historic Burnham Center; the historic Fisher Building in Detroit;

the Tampa City Center in Florida; and the Marineland Dolphin Adventure Park in Florida; as well as an energy audit of the Yosemite National Park facilities.

Affiliations

Secretary, U.S. Green Building Council (USGBC) West Michigan Chapter Board of Directors (2011-2014)
Advocacy, U.S. Green Building Council (USGBC) West Michigan Chapter Board of Directors (2010-2011)
U.S. Green Building Council (USGBC) Member

Speaking

Mr. Tvedten gave a keynote on 'Assessing Accessibility' to the Environmental Bankers Association (EBA).

Expert Testimony

Mr. Tvedten has provided expert legal testimony on cases related to architectural risk management.

Contact

vtvedten@partneresi.com

PARTNER

Robert L. Knight, AIA LEED AP
Regional Manager

Education
B.S., Architectural Engineering Technology, University of Cincinnati

Registrations
Registered Architect, Ohio
LEED Accredited Professional, USGBC

Highlights
28 years in the Architectural & Engineering Industry
12 years of experience with equity Property Condition Reports and Assessments
8 years of experience with Freddie Mac and Fannie Mae related projects
Experienced in Construction Risk Management, Construction Phase Services, Master Panning, Owner's Representative Services, Architecture and MEP Design and Consulting, Energy Efficiency Consulting, Sustainable Building Consulting and Research, and Policy Writing.

Experience Summary
Mr. Knight has over 28 years of experience with architectural and engineering solutions for the built environment. His background includes facility assessments, programming, master planning, design, and project/program management. He has provided services and led design and engineering teams for public and private sector clients.

Mr. Knight helps clients refine and achieve their vision by connecting innovative ideas, exceptional talents, and progressive vision grounded in professional solutions. He applies experience and best practices for the Client's specific situation, connecting the talents of over 450 Partner staff throughout the U.S., Canada, and Mexico.

Mr. Knight has delivered successful projects for Commercial Real Estate, Higher Education, Governmental/Institutional and Healthcare clients throughout the U.S. He has a passion for sustainable practices and environmentally friendly processes to deliver projects that exceed the client's expectations.

Project Experience
Prior to joining Partner, Mr. Knight served as Client Relationship Manager and Principal of projects for residential, industrial, institutional, and commercial clients in the private and public sectors. Markets include office/administration, health care, and research, with clients such as Fifth Third Bank, Dow Chemical Company, Eli Lilly, the US Department of Defense, the US Department of Veteran's Affairs, and NASA, among many others.

Mr. Knight has extensive experience performing Facility Condition Assessments and Master Planning. Services include preliminary programming and design services, including budgeting and scope development, asset evaluation and prioritization, growth projects, user surveys and presentations, and existing conditions evaluation.

Mr. Knight has also delivered Construction Risk Management services throughout his 28 years in the industry. Services during construction include site inspections, cost estimating, constructability reviews, bidding administration, addressing contractor questions during construction, processing applications for payment, and project close-out.

Mr. Knight has experience with residential projects ranging from single family buildings, to low-income apartment buildings, to mixed-use facilities. Services included property condition assessments conforming to ASTM's E2018 Standard Guide for PCAs and customized client formats, A/E design and oversight, and Construction Risk Management.

Mr. Knight's experience includes independent oversight of design services performed by others as the Owner's Representative. Oversight includes policy creation, review and comment of design and construction documentation, construction phase services including observation. Forensic services as Owner's Representative also included include evaluation of structural and non-structural pre-failure conditions, Sick Building Syndrome (SBS) consultation, and oversight of sampling for hazardous materials.

For seven years, Mr. Knight was lead architect and Principal-in-Charge of facility assessments for 53 school buildings at twelve school districts totaling over 3,300,000 square feet while contracted to the Ohio School Facilities Commission (OSFC) under the Classroom Facility Assistance Program (CFAP) and Expedited Local Partnership Program (ELPP). In addition for ten years, Mr. Knight has lead master planning/facilitation workshops, teaming sessions, and meetings with the superintendent, design firms, construction manager, union representatives, and OSFC representatives.

Building Technologies Research

2015 – Project Director leading the Development of Cincinnati's first permitted and installed Rainwater Harvesting system.

2013 – Greater Cincinnati Foundation Funded Research Program: Cost Benefit Analysis and Practical Applications for Rainwater Harvesting in the Midwest. Program includes first pilot project using Ohio's draft code language (to be adopted in 2016) and data analytics.

2010 – Greater Cincinnati Foundation Funded Research Program: Harvesting Rainwater for Non-potable Use Inside Buildings. Research determined city, county, and state legal obstacles for applying this sustainable practice. Results included leading the crafting and adoption of City and County language for use of this Technology.

2007 - AIA National Funded Architectural Research Program: Schematic Energy Design Primer. Performed in conjunction with Miami University, Oxford, Ohio, this program characterized the shape and location of openings to determine air motion around and through the building.

Speaking

"Applying Rainwater Harvesting to Lower Your Facility's Water Usage." PEDCO High Performance Buildings Seminar, presenter, October, 2014

"Innovative Technologies, Rainwater Harvesting." USEPA Regional Workshop on Innovative Technologies, presenter, April, 2013

"Saving Water." Cincinnati 3E Summit, presenter, September, 2011

"Greening Cincinnati Public Schools." Panel Presentation to President Obama's principal environmental adviser, Nancy Sutly, September, 2010

"Greening Cincinnati for Economic Development." WCET Television Business Courier's Community Beat Program guest, July, 2009

"LEED Standards for Green and Healthy Schools." Presenter at National School Building Conference, Pittsburgh, June, 2009

"At the Top in Cincinnati: National Leadership in Sustainability." Public Program, March 2009

"LEED for Schools, success in Cincinnati." Presentation at USGBC National convention, Greenbuild, Boston, November, 2008

"The Greening of Cincinnati Public Schools." Presenter at USEPA Regional Conference, Cincinnati, April, 2008

Honors and Awards

Cincinnati Public School Teacher's Union
2008, Ohio's largest teacher's union honored Mr. Knight with the Contractor Diversity Award.

Clermont County Park District, Chilo Lock #34 Park and Visitor's Center Museum.
2006, Preservation Award, Cincinnati Preservation Association
2005, Honorable Mention, Facilities Development, Ohio Parks and Recreation Association Awards of Excellence Competition
2005, Built Environment Heritage Award/Historic Preservation, Ohio's Hill Country Heritage Area
2005, Community Project Award, Clermont 20/20
2005, Best Public Improvement Project, Heritage Ohio

Otto Armleder Memorial Aquatics Complex at Hanna Park
2004, American Institute of Architects, Merit Award for Built Work: Client: Cincinnati Recreation Commission, Mr. Knight was the Principal in Charge of the Design for this adaptive reuse project.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Executive Summary

Property Information:

Project Property:		*1977 Saturn* *1977 Saturn Street MONTEREY PARK CA 91755*
Project No:		*24-444561.1*
Coordinates:		
	Latitude:	*34.0403934*
	Longitude:	*-118.1140805*
	UTM Northing:	*3,767,202.30*
	UTM Easting:	*397,155.99*
	UTM Zone:	*UTM Zone 11S*
Elevation:		*382 FT*

Order Information:

Order No:	*24040400593*
Date Requested:	*April 4, 2024*
Requested by:	*Partner Engineering and Science, Inc.*
Report Type:	*Database Report*

Historicals/Products:

ERIS Xplorer	*ERIS Xplorer*
Excel Add-On	*Excel Add-On*
Physical Setting Report (PSR)	*Physical Setting Report (PSR)*
Vapor Screening Tool	*Vapor Screening Tool*

Violation Description:

Failure to comply with one or more of the following overfill prevention equipment requirements:
Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or
Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or
Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or
Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018.

For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter.

For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter.

Inspected within 30 days after a repair to the overfill prevention equipment.

Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer.

Inspected by a certified UST service technician.

Maintain records of overfill prevention equipment inspection for 36 months.

Violations

Violation Date:	04/07/2016	**Violation Source:**	CERS
Violation Program:	CA	**Violation Division:**	Los Angeles County Fire Department
Citation:	22 CCR 45 67450.13(a)(2) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.13(a)(2)		
Violation Notes:			

Returned to compliance on 12/06/2017. OBSERVATION: A written estimate of closure costs for the fixed treatment unit(s) has not been submitted to the CERS. A owner/operator shall prepare a written estimate of the cost of closing each unit. CORRECTIVE ACTION: Submit the written estimate of closure costs for financial assurance for each unit to the CERS. Provide financial assurance documents if closure cost is more than $10,000.

Violation Description:

Failure to adjust Closure Costs for inflation / deflation by March 1st.

Violations

Violation Date:	06/06/2019	**Violation Source:**	CERS
Violation Program:	HW	**Violation Division:**	Los Angeles County Fire Department
Citation:	40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173		
Violation Notes:			

Returned to compliance on 06/06/2019. OBSERVATION: 1 x 250 gallon of waste filter cake located in the hazardous waste storage room was observed open. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the container listed above has been properly closed. Observed operator

provided cover to the waste filter cake container at time of inspection.

Violation Description:

Failure to meet the following container management requirements:
(a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste.
(b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violations

Violation Date: 06/06/2019 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Los Angeles County Fire Department
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Notes:

Returned to compliance on 07/18/2019. OBSERVATION: The used spray booth filters located in the spray booth room was observed being accumulated in waste container and a proper waste determination has not been made. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the used spray booth filter has been properly characterized to determine if it is a hazardous waste. If determined to be hazardous submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage it in the future.

Violation Description:

Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violations

Violation Date: 06/06/2019 ***Violation Source:*** CERS
Violation Program: CA ***Violation Division:*** Los Angeles County Fire Department
Citation: 22 CCR 45 67450.13(a)(2) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.13(a)(2)
Violation Notes:

Returned to compliance on 07/18/2019. OBSERVATION: An adjustment for the closure cost estimate was not completed by March 1 of each year. The Owner/Operator or Generator shall adjust the closure cost estimate for inflation by March 1 of each year. Observed closure cost estimate with annual inflation adjustment was reflected up to 2016. CORRECTIVE ACTION: Ensure that the closure cost estimate is adjusted for inflation by March 1 of each year. Provide closure cost estimate with annual inflation adjustment updated to 2019.

Violation Description:

Failure to adjust Closure Costs for inflation/deflation by March 1st.

Violations

Violation Date: 04/07/2016 ***Violation Source:*** CERS
Violation Program: HWLQG ***Violation Division:*** Los Angeles County Fire Department
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 04/07/2016. OBSERVATION: Observed no hazardous waste label posted on filter cake containers and used oil containers. All hazardous waste containers shall be marked with the following information: 1) the words "Hazardous Waste"; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. Observed plant manager provided hazardous waste label to both filter cake containers and used oil containers at the end of inspection.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Notes:

Observed no training plan and training record for reviewing on site at time of inspection. Provide training plan with procedures and job specific title and training records on site.

Violation Description:

Failure to provide employees within the first six months after the date of their employment, or assignment to the facility, or to work unsupervised, or to a new position at a facility with hazardous waste training to ensure employees are competent in the following areas: hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed, emergency response and emergency equipment, and procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment. In addition, the owner/operator shall ensure facility personnel take part in an annual review of the initial training and training records training records on current personnel shall be kept until closure of the facility. Training records on former employees shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

Violations

Violation Date: 04/07/2016 ***Violation Source:*** CERS
Violation Program: HWLQG ***Violation Division:*** Los Angeles County Fire Department
Citation: 22 CCR 15 66262.41 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66262.41
Violation Notes:

OBSERVATION: The 2016 Biennial report was not prepared and submitted to DTSC. A generator who ships any hazardous waste offsite to a TSDF within the United States shall prepare and submit a Biennial Report, U.S. EPA Form 8700, to the DTSC by March 1 of each even-numbered year, and shall cover generator activities during the previous calendar year. CORRECTIVE ACTION: Immediately prepare a report for the 2016 calendar year and

submit it to the DTSC. Ensure that this report is done in a timely manner.

Violation Description:

Failure of a large quantity RCRA generator to complete the Biennial report (Form 8700) by March 1st on even numbered years and maintain it onsite for three years.

Violations

Violation Date: 06/07/2022 ***Violation Source:*** CERS
Violation Program: CA ***Violation Division:*** Los Angeles County Fire Department
Citation: 22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)
Violation Notes:

OBSERVATION: Owner/Operator failed to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer prior to placing the tank system in service, and/or the tank assessment is not complete. CORRECTIVE ACTION: Complete written tank assessment on tank system prior to placing the tank system into service, or complete now if system is already in service. Assessment must be reviewed and certified by an independent, qualified, professional engineer.

Violation Description:

Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer prior to placing the tank system in service. The written assessment shall state that, the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed to meet the regulation. The tank assessment shall be valid for five (5) years.

Violations

Violation Date: 06/07/2022 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Los Angeles County Fire Department
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Notes:

OBSERVATION: The waste water from plating processes located in the wastewater treatment area was observed being treated and a proper waste determination has not been made. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the waste water has been properly characterized to determine if it is a hazardous waste. If determined to be hazardous submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage it in the future.

Violation Description:

Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violations

Violation Date: 04/07/2016 ***Violation Source:*** CERS
Violation Program: CA ***Violation Division:*** Los Angeles County Fire Department
Citation: HSC 6.5 25200.14(b)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25200.14(b)(1)
Violation Notes:

Returned to compliance on 12/06/2017. OBSERVATION: A copy of the HW contingency plan was not maintained at the facility and/or submitted to the required agencies listed in this section. CORRECTIVE ACTION: Immediately maintain a HW contingency plan at the facility and/or submit a copy to California Environmental Reporting System (CERS).

Violation Description:

Failure to submit a Phase I Checklist.

Violations

Violation Date: 04/07/2016 ***Violation Source:*** CERS
Violation Program: CA ***Violation Division:*** Los Angeles County Fire Department
Citation: HSC 6.5 25200.14(b)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25200.14(b)(1)

Violation Notes:

Returned to compliance on 12/06/2017. OBSERVATION: A Tiered Permitting Phase I Environmental Assessment Checklist (DTSC Form 1151) has not been submitted to the CUPA. An Owner/Operator/Generator is required to complete and file a phase I environmental assessment with the CUPA one year from the date that the facility or generator becomes authorized to operate. CORRECTIVE ACTION: Immediately submit the required Tiered Permitting Phase I Environmental Assessment Checklist to the CUPA.

Violation Description:

Failure to submit a Phase I Checklist.

Waste Code Details

Hazardous Waste Code: 131
Waste Code Description: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

Hazardous Waste Code: 151
Waste Code Description: Asbestos-containing waste

Hazardous Waste Code:	181
Waste Code Description:	Other inorganic solid waste
Hazardous Waste Code:	211
Waste Code Description:	Halogenated solvents (chloroform, methyl chloride, perchloroethylene, etc.)
Hazardous Waste Code:	213
Waste Code Description:	Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)
Hazardous Waste Code:	214
Waste Code Description:	Unspecified solvent mixture
Hazardous Waste Code:	221
Waste Code Description:	Waste oil and mixed oil
Hazardous Waste Code:	223
Waste Code Description:	Unspecified oil-containing waste
Hazardous Waste Code:	261
Waste Code Description:	Polychlorinated biphenyls and material containing PCB's
Hazardous Waste Code:	272
Waste Code Description:	Polymeric resin waste
Hazardous Waste Code:	291
Waste Code Description:	Latex waste
Hazardous Waste Code:	331
Waste Code Description:	Off-specification, aged, or surplus organics
Hazardous Waste Code:	343
Waste Code Description:	Unspecified organic liquid mixture
Hazardous Waste Code:	352
Waste Code Description:	Other organic solids
Hazardous Waste Code:	461
Waste Code Description:	Degreasing sludge
Hazardous Waste Code:	512
Waste Code Description:	Other empty containers 30 gallons or more
Hazardous Waste Code:	513
Waste Code Description:	Empty containers less than 30 gallons
Hazardous Waste Code:	541
Waste Code Description:	Photochemicals / photo processing waste
Hazardous Waste Code:	551
Waste Code Description:	Laboratory waste chemicals
Hazardous Waste Code:	731
Waste Code Description:	Liquids with polychlorinated biphenyls > 50 mg/l
Hazardous Waste Code:	D001
Waste Code Description:	IGNITABLE WASTE

Waste Code Description: Halogenated solvents (chloroform, methyl chloride, perchloroethylene, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: 272
Waste Code Description: Polymeric resin waste

Hazardous Waste Code: 291
Waste Code Description: Latex waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 512
Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: 541
Waste Code Description: Photochemicals / photo processing waste

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 731
Waste Code Description: Liquids with polychlorinated biphenyls > 50 mg/l

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violations

Violation Date: 10/20/2014
Violation Program: APSA
Violation Source: CERS
Violation Division: Los Angeles County Fire Department
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 06/08/2015. Integrity testing methodology not identified within the SPCC and documented as performed for the 250 gallon waste oil tank. However, hazardous waste tank assesment was performed for this tank in 2014 and passed certifiation.. Industrial standard used to certify 250 gallon waste oil tank not documented in the SPCC. (fill hoses outside secondary containment but may not be required, active measures maybe be sufficient- informational only)

Violation Description:

Failure to test or inspect aboveground tanks for integrity by a person qualified in accordance with industry standards.

Violations

Violation Date: 10/20/2014
Violation Program: HW
Violation Source: CERS
Violation Division: Los Angeles County Fire Department
Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Notes:

Returned to compliance on 01/28/2015. OBSERVATION: The Owner/Operator failed to properly train personnel who handle hazardous waste. All employees shall be trained within six months of assignment and take part in an annual review of the initial training received. At a minimum, the training

program shall be designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems, including where applicable: 1) procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment; 2) key parameters for automatic waste feed cut-off systems; 3) communications or alarm systems; 4) response to fires or explosions; 5) response to ground-water contamination incidents; and 6) shutdown of operations. The owner or operator shall maintain the following documents and records at the facility: 1) the job title for each position at the facility related to hazardous waste management, and [Truncated]

Violation Description:

Failure to provide employees within the first six months after the date of their employment, or assignment to the facility, or to work unsupervised, or to a new position at a facility with hazardous waste training to ensure employees are competent in the following areas: hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed, emergency response and emergency equipment, and procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment. In addition, the owner/operator shall ensure facility personnel take part in an annual review of the initial training and training records training records on current personnel shall be kept until closure of the facility. Training records on former employees shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

RAT Def: Response action that requires expeditious attention to reduce imminent and substantial dangers to human health, welfare, or the environment or an emergency response required within hours or days to address acute situations involving actual or potential threat to human health, the environment, or real or personal property due to the release of a hazardous substance. Characterization of a removal action as removal, not immediate removal or planned removal, started at the beginning of FY 1987. This code now takes the place of immediate removal (IR) and planned removal (PR).

Site History:

Operating Industries, Inc. (OII) is an inactive Class II landfill surrounded by residential areas on the south and west borders. From 1948 to 1952, the OII site was operated as a municipal landfill by the City of Monterey Park. In January 1952, the site became a privately owned landfill under the ownership of OII. The site was permitted by the RWQCB in 1976, to receive various nonhazardous and hazardous liquid wastes, including lead compounds, chrome oxide, pigment sludge, refinery wastes, waste water from paint manufacturing, and caustic cleaning waste. It was not until 1984 that OII stopped accepting waste. The pathways of contamination are through inhalation of land fill gases and direct contact of leachate entering the ground water. Possible receptors are the residents near the facility and the potential impact of the contaminated groundwater on drinking water supplies. The Department of Toxic Substances Control took over the site when the owner and operator failed to continue with the site closure activities. In May 1986, the landfill was listed on the NPL and EPA became the lead agency. EPA initiated a remedial investigation to define the extent of environmental problems. A hydrogeologic investigation to study the groundwater was performed in September of 1989. In May of 1989, a Partial Consent Decree was entered in the Federal Court between EPA and over 100 PRPs. The PRPs agreed to undertake the site control and monitoring, and construct a leachate treatment system, as well as conducting several site improvements. Site work pursuant to the Consent Decree began in November 1989, when daily operation, including operation and maintenance/monitoring of the existing gas and leachate control system, and erosion and drainage control were assumed by the settling PRPs'.

Site History:

Operating Industries, Inc. (OII) is an inactive Class II landfill surrounded by residential areas on the south and west borders. From 1948 to 1952, the OII site was operated as a municipal landfill by the City of Monterey Park. In January 1952, the site became a privately owned landfill under the ownership of OII. The site was permitted by the RWQCB in 1976, to receive various nonhazardous and hazardous liquid wastes, including lead compounds, chrome oxide, pigment sludge, refinery wastes, waste water from paint manufacturing, and caustic cleaning waste. It was not until 1984 that OII stopped accepting waste. The pathways of contamination are through inhalation of land fill gases and direct contact of leachate entering the ground water. Possible receptors are the residents near the facility and the potential impact of the contaminated groundwater on drinking water supplies. The Department of Toxic Substances Control took over the site when the owner and operator failed to continue with the site closure activities. In May 1986, the landfill was listed on the NPL and EPA became the lead agency. EPA initiated a remedial investigation to define the extent of environmental problems. A hydrogeologic investigation to study the groundwater was performed in September of 1989. In May of 1989, a Partial Consent Decree was entered in the Federal Court between EPA and over 100 PRPs. The PRPs agreed to undertake the site control and monitoring, and construct a leachate treatment system, as well as conducting several site improvements. Site work pursuant to the Consent Decree began in November 1989, when daily operation, including operation and maintenance/monitoring of the existing gas and leachate control system, and erosion and drainage control were assumed by the settling PRPs'.

Potential Contaminants of Concern:

Status: UNDERGOING CLOSURE
Program Type: HAZ WASTE
CalEnviroScreen Score: 60-65%

Press Contact:
Potential Contaminants Of Conc:

1,1,1-TRICHLOROETHANE (TCA)
TETRACHLOROETHYLENE (PCE)
TRICHLOROETHYLENE (TCE)
VINYL CHLORIDE

Site History:

Operating Industries, Inc. (OII) is an inactive Class II landfill surrounded by residential areas on the south and west borders. From 1948 to 1952, the OII site was operated as a municipal landfill by the City of Monterey Park. In January 1952, the site became a privately owned landfill under the ownership of OII. The site was permitted by the RWQCB in 1976, to receive various nonhazardous and hazardous liquid wastes, including lead compounds, chrome oxide, pigment sludge, refinery wastes, waste water from paint manufacturing, and caustic cleaning waste. It was not until 1984 that OII stopped accepting waste. The pathways of contamination are through inhalation of land fill gases and direct contact of leachate entering the ground water. Possible receptors are the residents near the facility and the potential impact of the contaminated groundwater on drinking water supplies. The Department took over the site when the owner and operator failed to continue with the site closure activities. In May 1986, the landfill was listed on the NPL and EPA became the lead agency. EPA initiated a remedial investigation to define the extent of environmental problems. A hydrogeologic investigation to study the groundwater was performed in September of 1989. In May of 1989, a Partial Consent Decree was entered in the Federal Court between EPA and over 100 PRPs. The PRPs agreed to undertake the site control and monitoring, and construct a leachate treatment system, as well as conducting several site improvements. Site work pursuant to the Consent Decree began in November 1989, when daily operation, including operation and maintenance/monitoring of the existing gas and leachate control system, and erosion and drainage control were assumed by the settling PRPs'.

Comments: The amended Gas Migration Control ROD at the site addresses the landfill gas (LFG) migration control and landfill cover. The major component of this amendment is the addition of landfill cover to the previously selected gas migration control remedy. The major components of the Gas Migration Control ROD include: 1) landfill cover designed to reduce surface gas emissions and odors, prevent oxygen intrusion into the refuse, prevent surface water infiltration, provide erosion control, and improve site aesthetics; perimeter LFG extraction wells with placement focused on minimizing off site LFG migration; LFG extraction wells on the top deck of the landfill with placement focused on maximizing source control of LFG; shallow and deep slope wells with placement focused on reducing surface emissions and controlling intermediate to deep subsurface migration at the perimeter; integrated above-grade LFG headers and condensate sumps; LFG monitoring wells at the site boundary; upgraded thermal destruction facility for landfill gas; and pumps in appropriate gas wells with above-grade collection sumps to dewater saturated zones. The amended gas control remedial action will be integrated with the two additional operable units, Site Control and Monitoring, and Leachate Management, now being implemented.

Potential Contamin of Concern:

1,1,1-TRICHLOROETHANE (TCA)
TETRACHLOROETHYLENE (PCE)
TRICHLOROETHYLENE (TCE)
VINYL CHLORIDE

Site History:

Operating Industries, Inc. (OII) is an inactive Class II landfill surrounded by residential areas on the south and west borders. From 1948 to 1952, the OII site was operated as a municipal landfill by the City of Monterey Park. In January 1952, the site became a privately owned landfill under the ownership of OII. The site was permitted by the RWQCB in 1976, to receive various nonhazardous and hazardous liquid wastes, including lead compounds, chrome oxide, pigment sludge, refinery wastes, waste water from paint manufacturing, and caustic cleaning waste. It was not until 1984 that OII stopped accepting waste. The pathways of contamination are through inhalation of land fill gases and direct contact of leachate entering the ground water. Possible receptors are the residents near the facility and the potential impact of the contaminated groundwater on drinking water supplies. The Department took over the site when the owner and operator failed to continue with the site closure activities. In May 1986, the landfill was listed on the NPL and EPA became the lead agency. EPA initiated a remedial investigation to define the extent of environmental problems. A hydrogeologic investigation to study the groundwater was performed in September of 1989. In May of 1989, a Partial Consent Decree was entered in the Federal Court between EPA and over 100 PRPs. The PRPs agreed to undertake the site control and monitoring, and construct a leachate treatment system, as well as conducting several site improvements. Site work pursuant to the Consent Decree began in November 1989, when daily operation, including operation and maintenance/monitoring of the existing gas and leachate control system, and erosion and drainage control were assumed by the settling PRPs'.

Status: CERTIFIED / OPERATION & MAINTENANCE - LAND USE RESTRICTIONS
Program Type: FEDERAL SUPERFUND - LISTED

Date Completed: 11/18/1994
Comments: The leachate treatment plant (included as Leachate Manage ment Operable Unit) is built on the north parcel of the site and consists of influent storage and equalization, biological reactors, chemical precipitation, sand filtration carbon absorption, effluent storage and discharge, foul air system, storm water holding system and sludge disposal system. The plant started operation on September 13, 1994 and the first discharge into the sewer system occurred on November 9, 1994.

Title: Remedial Action Plan
Title Link:

Sub Area Link:
Document Type: Remedial Action Plan
Date Completed: 9/28/1990
Comments: The amended Gas Migration Control ROD at the site addresses the landfill gas (LFG) migration control and landfill cover. The major component of this amendment is the addition of landfill cover to the previously selected gas migration control remedy. The major components of the Gas Migration Control ROD include: 1) landfill cover designed to reduce surface gas emissions and odors, prevent oxygen intrusion into the refuse, prevent surface water infiltration, provide erosion control, and improve site aesthetics; perimeter LFG extraction wells with placement focused on minimizing off site LFG migration; LFG extraction wells on the top deck of the landfill with placement focused on maximizing source control of LFG; shallow and deep slope wells with placement focused on reducing surface emissions and controlling intermediate to deep subsurface migration at the perimeter; integrated above-grade LFG headers and condensate sumps; LFG monitoring wells at the site boundary; upgraded thermal destruction facility for landfill gas; and pumps in appropriate gas wells with above-grade collection sumps to dewater saturated zones. The amended gas control remedial action will be integrated with the two additional operable units, Site Control and Monitoring, and Leachate Management, now being implemented.

Past Use that Caused Contam: LANDFILL - CONSTRUCTION, LANDFILL - DOMESTIC, LANDFILL - HAZARDOUS WASTE
Potential Media Affected: INDOOR AIR, OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL, SOIL VAPOR

Site History:

Operating Industries, Inc. (OII) is an inactive Class II landfill surrounded by residential areas on the south and west borders. From 1948 to 1952, the OII site was operated as a municipal landfill by the City of Monterey Park. In January 1952, the site became a privately owned landfill under the ownership of OII. The site was permitted by the RWQCB in 1976, to receive various nonhazardous and hazardous liquid wastes, including lead compounds, chrome oxide, pigment sludge, refinery wastes, waste water from paint manufacturing, and caustic cleaning waste. It was not until 1984 that OII stopped accepting waste. The pathways of contamination are through inhalation of land fill gases and direct contact of leachate entering the ground water. Possible receptors are the residents near the facility and the potential impact of the contaminated groundwater on drinking water supplies. The Department took over the site when the owner and operator failed to continue with the site closure activities. In May 1986, the landfill was listed on the NPL and EPA became the lead agency. EPA initiated a remedial investigation to define the extent of environmental problems. A hydrogeologic investigation to study the groundwater was performed in September of 1989. In May of 1989, a Partial Consent Decree was entered in the Federal Court between EPA and over 100 PRPs. The PRPs agreed to undertake the site control and monitoring, and construct a leachate treatment system, as well as conducting several site improvements. Site work pursuant to the Consent Decree began in November 1989, when daily operation, including operation and maintenance/monitoring of the existing gas and leachate control system, and erosion and drainage control were assumed by the settling PRPs'.

Potential Contamin of Concern:

1,1,1-TRICHLOROETHANE (TCA)
TETRACHLOROETHYLENE (PCE)
TRICHLOROETHYLENE (TCE)
VINYL CHLORIDE

Comments: The amended Gas Migration Control ROD at the site addresses the landfill gas (LFG) migration control and landfill cover. The major component of this amendment is the addition of landfill cover to the previously selected gas migration control remedy. The major components of the Gas Migration Control ROD include: 1) landfill cover designed to reduce surface gas emissions and odors, prevent oxygen intrusion into the refuse, prevent surface water infiltration, provide erosion control, and improve site aesthetics; perimeter LFG extraction wells with placement focused on minimizing off site LFG migration; LFG extraction wells on the top deck of the landfill with placement focused on maximizing source control of LFG; shallow and deep slope wells with placement focused on reducing surface emissions and controlling intermediate to deep subsurface migration at the perimeter; integrated above-grade LFG headers and condensate sumps; LFG monitoring wells at the site boundary; upgraded thermal destruction facility for landfill gas; and pumps in appropriate gas wells with above-grade collection sumps to dewater saturated zones. The amended gas control remedial action will be integrated with the two additional operable units, Site Control and Monitoring, and Leachate Management, now being implemented.

Document Type: Design/Implementation Workplan
Date Completed: 3/9/1998
Comments: This design plan approves the capping of the landfill with an additional four feet of monocover using the existing cap as a two foot foundation layer. The cap design also includes the establishment of native vegetation for monocover performance as well as aesthetics.

Comments:

This is the date the site was first listed pursuant to section 25356. Second 90-day Compliance Testing period begins. DTSC received $181,012.27 from the Operating Industries Inc. Closure Trust Account. This money will be used to cover future response costs for DTSC at the OII site. The Fifth Partial Consent Degree (CD5) is negotiatied by EPA and the State with a group of potentially responsible parties (PRPs), composed of prior nonsettlers and recently noticed major parties. Third Consent Decree Final Workplan(with sampling and analysis plan) and the Revised QA/QC Plan. USEPA approves workplan outline as part of the early action activity per Eighth Partial Consent Decree. This design plan approves the capping of the landfill with an additional four feet of monocover using the existing cap as a two foot foundation layer. The cap design also includes the establishment of native vegetation for monocover performance as well as aesthetics. Second 90-day Compliance Testing period completed. DTSC receives Trial Burn Report which contains the results from the performance test for the LFGTS conducted in September 2000. Results indicate that the LFGTS achieved the 99.99% DRE. The Department enters into the third Partial Consent Decree which covers Gas Control, Landfill Cover and Surface Water Management. FS prepared by US EPA. Compliance Testing Report approved by USEPA. Final cover for the entire South Parcel is completed. The first Partial Consent Decree which addresses the Site Control and Monitoring and Leachate Management Systems is signed. Eighth Partial Consent Decree for OII entered by the United States District Court. 5 Year review prepared by US EPA. The sixth partial Consent Decree requires GSF Energy (Air Products) to pay cleanup costs. DTSC can request reimbursement of unpaid past costs and future response costs. Predesign Workplan. 30% Design - Final Cover -- The final cap will consist of a four foot thick monocover with a native vegetative cover. The existing cap will act as a foundation for the monocover. Inactive Class II Landfill. Contaminants include Pb compounds, chrome oxide, pigment sludge, refinery slop oil, emulsion solids, leaded tank bottom, wastewater from paint manufacturing, and caustic cleaning wastes. Predesign Report outline. Former TSD facility. Performance Test Plan for the LFGTS approved. A second Calstar Code was added #300284 for the Gas Migration Control activities. Oversight of these activities are the responsibility of a different group of RPs. The second Partial Consent Decree which added parties and funds to the first Partial Consent Decree is signed. Approval of the Final Design for the Landfill Gas Treatment System (LFGTS). LFGTS test completed this past week. Preliminary results indicate that the LFGTS will achieve the 99.99% Destruction and Removal Efficiency (DRE). The amended Gas Migration Control ROD at the site addresses the landfill gas (LFG) migration control and landfill cover. The major component of this amendment is the addition of landfill cover to the previously selected gas migration control remedy. The major components of the Gas Migration Control ROD include: 1) landfill cover designed to reduce surface gas emissions and odors, prevent oxygen intrusion into the refuse, prevent surface water infiltration, provide erosion control, and improve site aesthetics; perimeter LFG extraction wells with placement focused on minimizing off site LFG migration; LFG extraction wells on the top deck of the landfill with placement focused on maximizing source control of LFG; shallow and deep slope wells with placement focused on reducing surface emissions and controlling intermediate to deep subsurface migration at the perimeter; integrated above-grade LFG headers and condensate sumps; LFG monitoring wells at the site boundary; upgraded thermal destruction facility for landfill gas; and pumps in appropriate gas wells with above-grade collection sumps to dewater saturated zones. The amended gas control remedial action will be integrated with the two additional operable units, Site Control and Monitoring, and Leachate Management, now being implemented. Landfill Gas Treatment system began operations replacing the flares. The LFGTS is capable of 99.99% Destruction & Removal Efficiency (DRE). First of two consecutive 90-day Compliance Testing periods for the former landfill begins. Final Remedial Action Inspection conducted for the South Parcel. The inspection is conducted jointly between US EPA, DTSC and Army Corps of Engineers. 30% Design for Southwest Early Action Plan (SWEAP). DTSC sends letter to US EPA recommending they accept the project as complete. EPA concurs with DTSC. RI prepared by US EPA. Seismic Predesign Prefinal Workplan. The U.S. EPA and the Department of Toxic Substances Control enters into the Fourth Partial Consent Decree in an effort to expedite the cleanup of the Site and avoid prolonged and complicated litigation between the "parties". The selected Remedial Alternative includes: Perimeter liquids control, onsite treatment of collected liquids, natural attenuation of offsite groundwater which includes monitoring and evaluation, and continued operation and maintenance of provisions in the three previous ROD's (site control and monitoring, leachate management, gas migration control and landfill cover). The leachate treatment plant (included as Leachate Manage ment Operable Unit) is built on the north parcel of the site and consists of influent storage and equalization, biological reactors, chemical precipitation, sand filtration carbon absorption, effluent storage and discharge, foul air system, storm water holding system and sludge disposal system. The plant started operation on September 13, 1994 and the first discharge into the sewer system occurred on November 9, 1994. Top deck cover for the South Parcel is 75% complete. Cover over remaining South Parcel is completed. Construction completed on Landfill Gas Treatment System (LFGTS), currently undergoing performance testing before being brought on-line and replacing the existing flare station.

Background:

Operating Industries, Inc. (OII) is an inactive Class II landfill surrounded by residential areas on the south and west borders. From 1948 to 1952, the OII site was operated as a municipal landfill by the City of Monterey Park. In January 1952, the site became a privately owned landfill under the ownership of OII. The site was permitted by the RWQCB in 1976, to receive various nonhazardous and hazardous liquid wastes, including lead compounds, chrome oxide, pigment sludge, refinery wastes, waste water from paint manufacturing, and caustic cleaning waste. It was not until 1984 that OII stopped accepting waste. The pathways of contamination are through inhalation of land fill gases and direct contact of leachate entering the ground water. Possible receptors are the residents near the facility and the potential impact of the contaminated groundwater on drinking water supplies. The Department took over the site when the owner and operator failed to continue with the site closure activities. In May 1986, the landfill was listed on the NPL and EPA became the lead agency. EPA initiated a remedial investigation to define the extent of environmental problems. A hydrogeologic investigation to study the groundwater was performed in September of 1989. In May of 1989, a Partial Consent Decree was entered in the Federal Court between EPA and over 100 PRPs. The PRPs agreed to undertake the site control and monitoring, and construct a leachate treatment system, as well as

conducting several site improvements. Site work pursuant to the Consent Decree began in November 1989, when daily operation, including operation and maintenance/monitoring of the existing gas and leachate control system, and erosion and drainage control were assumed by the settling PRPs'.

Unplottable Summary

Total: 0 Unplottable sites

DB	Company Name/Site Name	Address	City	Zip	ERIS ID

No unplottable records were found that may be relevant for the search criteria.

Unplottable Report

No unplottable records were found that may be relevant for the search criteria.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Oct 26, 2023

National Priority List - Proposed: PROPOSED NPL

Sites proposed by the United States Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Oct 26, 2023

Deleted NPL: DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Oct 26, 2023

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

Government Publication Date: Jan 26, 2024

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Jan 26, 2024

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jan 1, 2024

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites that have indicated engagement in the treatment, storage, or disposal of hazardous waste which requires a RCRA hazardous waste permit.

Government Publication Date: Jan 1, 2024

RCRA Generator List: RCRA LQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jan 1, 2024

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jan 1, 2024

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Jan 1, 2024

RCRA Non-Generators: RCRA NON GEN

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jan 1, 2024

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Jan 1, 2024

Federal Engineering Controls-ECs: FED ENG

List of Engineering controls (ECs) made availabe by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Feb 29, 2024

Federal Institutional Controls- ICs: FED INST

List of Institutional controls (ICs) made available by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Feb 29, 2024

Land Use Control Information System: LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites: NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: Oct 26, 2023

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Feb 20, 2024

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Feb 7, 2024

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

This listing contains facilities that have submitted Facility Response Plans (FRPs) to the U.S. Environmental Protection Agency (EPA). Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit FRPs. Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments. This listing includes FRP facilities from an applicable EPA FOIA file and Homeland Infrastructure Foundation-Level Data (HIFLD) data file.

Government Publication Date: May 2, 2023

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: May 2, 2023

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Sep 20, 2023

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

A list of petroleum product and crude oil rail terminals from the U.S. Energy Information Administration (EIA), as well as petroleum terminals sourced from the Federal Communications Commission Data hosted by the Homeland Infrastructure Foundation-Level Database. Data includes operable bulk petroleum product terminals with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil with activity between 2017 and 2018. EIA petroleum product terminal data comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings.

Government Publication Date: Sep 22, 2023

LIEN on Property: SEMS LIEN

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Jan 26, 2024

Superfund Decision Documents: SUPERFUND ROD

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: Dec 26, 2023

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

State

State Response Sites: RESPONSE

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Feb 15, 2024

EnviroStor Database: ENVIROSTOR

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

Government Publication Date: Feb 15, 2024

Delisted State Response Sites: DELISTED ENVS

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Feb 15, 2024

Solid Waste Information System (SWIS): SWF/LF

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

Government Publication Date: Feb 15, 2024

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels: SWRCB SWF

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

Waste Management Unit Database: WMUD

The Waste Management Unit Database System tracks and inventories waste management units. CCR Title 27 contains criteria stating that Waste Management Units are classified according to their ability to contain wastes. Containment shall be determined by geology, hydrology, topography, climatology, and other factors relating to the ability of the Unit to protect water quality. Water Code Section 13273.1 requires that operators submit a water quality solid waste assessment test (SWAT) report to address leak status. The WMUDS was last updated by the State Water Resources control board in 2000.

Government Publication Date: Jan 1, 2000

EnviroStor Hazardous Waste Facilities: HWP

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

Government Publication Date: Feb 15, 2024

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report: SWAT

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Construction and Demolition Debris Recyclers: C&D DEBRIS RECY

This listing of Construction and Demolition Debris Recyclers is maintained by the California Intergrated Waste Management Board-common C&D materials include lumber, drywall, metals, masonry (brick, concrete, etc.), carpet, plastic, pipe, rocks, dirt, paper, cardboard, or green waste related to land development.

Government Publication Date: Jun 20, 2018

Recycling Centers: RECYCLING

This list of Certified Recycling Centers that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Jan 17, 2024

Listing of Certified Processors: PROCESSORS

This list of Certified Processors that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Jan 17, 2024

Listing of Certified Dropoff, Collection, and Community Service Programs: CONTAINER RECY

This list of Certified Dropoff, Collection, and Community Service Programs (non-buyback) operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Jan 22, 2024

Land Disposal Sites: LDS

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

Government Publication Date: Nov 30, 2023

Leaking Underground Fuel Tank Reports: LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

Government Publication Date: Nov 30, 2023

Delisted Leaking Storage Tanks: DELISTED LST

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

Government Publication Date: Nov 30, 2023

Permitted Underground Storage Tank (UST) in GeoTracker: UST

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

Government Publication Date: Feb 15, 2024

Proposed Closure of Underground Storage Tank Cases: UST CLOSURE

This listing includes Proposed Closure of Underground Storage Tank (UST) Cases which are being considered for closure by either the State Water Resources Control Board at a Future Board Meeting or the Executive Director that have been posted for a 60-day public comment period, and Closure of UST Cases with Closure Denials and Approved Orders. The lists are provided by the California Water Boards.

Government Publication Date: Dec 22, 2023

Historical Hazardous Substance Storage Information Database: HHSS

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Statewide Environmental Evaluation and Planning System: UST SWEEPS

The Statewide Environmental Evaluation and Planning System (SWEEPS) is a historical listing of active and inactive underground storage tanks made available by the California State Water Resources Control Board (SWRCB).

Government Publication Date: Oct 1, 1994

Aboveground Storage Tanks: AST

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

SWRCB Historical Aboveground Storage Tanks: AST SWRCB

A list of aboveground storage tanks made available by the California State Water Resources Control Board (SWRCB). Effective January 1, 2008, the Certified Unified Program Agencies (CUPAs) are vested with the responsibility and authority to implement the Aboveground Petroleum Storage Act (APSA).

Government Publication Date: Dec 1, 2007

Oil and Gas Facility Tanks: TANK OIL GAS

Locations of oil and gas tanks that fall under the jurisdiction of the Geologic Energy Management Division of the California Department of Conservation (CalGEM) (CCR 1760). CalGEM was formerly the Division of Oil, Gas, and Geothermal Resources (DOGGR).

Government Publication Date: Jan 24, 2024

Delisted Storage Tanks: DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Mar 26, 2024

California Environmental Reporting System (CERS) Tanks: CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Jan 17, 2024

Delisted California Environmental Reporting System (CERS) Tanks: DELISTED CTNK

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: Jan 17, 2024

Historical Hazardous Substance Storage Container Information - Facility Summary: HIST TANK

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in th 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions: LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Feb 15, 2024

CALSITES Database: CALSITES

This historical database was maintained by the Department of Toxic Substance Control (DTSC) for more than a decade. CALSITES contains information on Brownfield properties with confirmed or potential hazardous contamination. In 2006, DTSC introduced EnviroStor as the latest Brownfields site database.

Government Publication Date: May 1, 2004

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions: HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Feb 18, 2021

Deed Restrictions and Land Use Restrictions: DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Nov 30, 2023

Voluntary Cleanup Program: VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Feb 15, 2024

GeoTracker Cleanup Program Sites: CLEANUP SITES

A list of Cleanup Program sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Nov 30, 2023

Delisted Cleanup Program Sites: DELISTED CLEANUP

A list of Cleanup Program sites which were once included - and have since been removed from - the list of Cleanup Program Sites in GeoTracker. GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.
Government Publication Date: Nov 30, 2023

Delisted County Records: DELISTED COUNTY
Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.
Government Publication Date: Mar 20, 2024

Tribal

Leaking Underground Storage Tanks on Tribal/Indian Lands: INDIAN LUST
This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 9, which includes California, is made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Oct 25, 2023

Underground Storage Tanks on Tribal/Indian Lands: INDIAN UST
This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 9, which includes California, is made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Oct 25, 2023

Delisted Tribal Leaking Storage Tanks: DELISTED INDIAN LST
Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Oct 25, 2023

Delisted Tribal Underground Storage Tanks: DELISTED INDIAN UST
Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).
Government Publication Date: Oct 25, 2023

County

Los Angeles County - Site Mitigation List: SML LA
A Site Mitigation List in the County of Los Angeles. The list is made available by Los Angeles County Fire Department. Site mitigation is handled by the Site Mitigation Unit (SMU) which facilitates completion of site clean-up projects of contaminated sites in an expeditious manner in all cities of the Los Angeles County except El Segundo, Glendale, Long Beach, Santa Fe Springs, and Vernon.
Government Publication Date: Jul 11, 2023

Los Angeles County - Solid Waste Sites: SWF LA COUNTY
List of permitted solid waste facilities, closed landfills, historical dumpsites and other solid waste sites in Los Angeles County, made available by the Department of Public Works in Los Angeles County.
Government Publication Date: Mar 8, 2024

Los Angeles County - CUPA Program Records: CUPA LA COUNTY
A list of inspection and enforcement records for active and inactive CUPA Program facilities, made available by the Health Hazardous Materials Division (HHMD) of the County of Los Angeles Fire Department. Includes Hazardous Materials Business Plan (HMBP), California Accidental Release Prevention Plan (CalARP), Hazardous Waste Generator (HWG), and the Aboveground Petroleum Storage Act Programs (APSA). Inactive programs include facilities that are out of business or no longer regulated by the HHMD.
Government Publication Date: Mar 25, 2020

Los Angeles County - HMS List: HMS LA
List of sites in the Los Angeles County Department of Public Works Hazardous Materials System (HMS) Database which have or have had permits for Industrial Waste, Underground Storage Tanks, or Stormwater in the county of Los Angeles.
Government Publication Date: Jan 16, 2024

Los Angeles County - San Gabriel Valley Areas of Concern: AOCONCERN

The San Gabriel Valley Superfund sites include multiple areas of contaminated groundwater in the 170-square-mile San Gabriel Valley. The contaminated areas underlie significant portions of the cities of Alhambra, Arcadia, Azusa, Baldwin Park, Industry, Irwindale, El Monte, La Puente, Monrovia, Rosemead, South El Monte, and West Covina. The groundwater contamination was first detected in 1979. Following this discovery, the California Department of Health Services (CDHS) initiated a well sampling program to assess the extent of contamination. By 1984, when EPA added four areas of contamination to the National Priorities List (NPL), 59 wells were known to be contaminated with high levels of volatile organic compounds (VOCs). These data, made available by the Region 9 Environmental Protection Agency (EPA) office, include operable units for the 4 NPL sites, as well as deep and shallow plumes.

Government Publication Date: Aug 26, 2015

Los Angeles County - Santa Fe Springs Underground Storage Tank: UST SANTAFESP

A list of registered active Underground Storage Tanks (USTs) in the City of Santa Fe Springs. This list is made available by Santa Fe Springs Department of Fire-Rescue.

Government Publication Date: Feb 11, 2022

Los Angeles County - Long Beach UST List: UST LONGB

List of registered Underground Storage Tanks (USTs) in the City of Long Beach, Los Angeles County, made available by the Long Beach Certified Unified Program Agency (CUPA). The Long Beach CUPA operates under oversight shared by the Long Beach Fire Department and Health Department.

Government Publication Date: Jul 9, 2018

Los Angeles County - Burbank City CUPA List: CUPA BURBANK

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the City of Burbank. This list is made available by the City of Burbank Fire Department.

Government Publication Date: Aug 21, 2019

Los Angeles County - El Segundo City Underground Storage Tanks List: UST ELSEGUNDO

List of registered Underground Storage Tanks (USTs) in the City of El Segundo of Los Angeles County, made available by El Segundo City Fire Department.

Government Publication Date: Jan 17, 2017

Los Angeles County - Santa Monica City Underground Storage Tank List: UST SANTA MONICA

A list of registered active Underground Storage Tanks (USTs) in the City of Santa Monica made available by Santa Monica Fire Prevention Division.

Government Publication Date: Dec 3, 2020

Los Angeles County - Santa Monica City Aboveground Storage Tank List: AST SANTAMON

List of registered Aboveground Storage Tanks (ASTs) made available by the Santa Monica Fire Department in the City of Santa Monica of Los Angeles County, California.

Government Publication Date: Jan 20, 2023

Los Angeles County - Santa Monica City CUPA Facilities List: CUPA SANTAMON

The Santa Monica Fire Department's office maintains a list of CUPA Facilities located in Santa Monica city.

Government Publication Date: Jan 14, 2022

Los Angeles County - Torrance City Underground Storage Tanks: UST TORRANCE

A list of registered Underground Storage Tank (UST) sites in Torrance City of Los Angeles County. This list is made available by Torrance City Office of Clerk.

Government Publication Date: Apr 20, 2022

Los Angeles County - Vernon City UST List: UST VERNON

A list of Underground Storage Tanks (UST) in Vernon City provided by the Vernon City Fire Department.

Government Publication Date: Aug 25, 2022

Los Angeles County - Vernon City CUPA List: CUPA VERNON

The Vernon City Fire Department's office maintains a list of CUPA Facilities located in Vernon city.

Government Publication Date: Aug 25, 2022

Los Angeles County - City of Los Angeles UST List: UST LA CITY

A list of active and inactive underground storage tank facilities made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jan 2, 2024

Los Angeles County - City of Los Angeles AST List: AST LA CITY

A list of active and inactive above ground petroleum storage tanks made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jun 1, 2019

Los Angeles County - City of Los Angeles Hazardous Materials Facilities: HAZMAT LA CITY

A list of active and inactive hazardous materials facilities made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jun 1, 2019

Additional Environmental Record Sources

Federal

PFAS Greenhouse Gas Emissions Data: PFAS GHG

The U.S. Environmental Protection Agency's Greenhouse Gas Reporting Program (GHGRP) collects Greenhouse Gas (GHG) data from large emitting facilities (25,000 metric tons of carbon dioxide equivalent (CO2e) per year), and suppliers of fossil fuels and industrial gases that results in GHG emissions when used. Includes GHG emissions data for facilities that emit or have emitted since 2010 chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures by DSSTox. PFAS emissions data has been identified for facilities engaged in the following industrial processes: Aluminum Production (GHGRP Subpart F), HCFC-22 Production and HFC-23 Destruction (Subpart O), Electronics Manufacturing (Subpart I), Fluorinated Gas Production (Subpart L), Magnesium Production (Subpart T), Electrical Transmission and Distribution Equipment Use (Subpart DD), and Manufacture of Electric Transmission and Distribution Equipment (Subpart SS). Over time, other industrial processes with required GHGRP reporting may include PFAS emissions data and the list of reportable gases may change over time.

Government Publication Date: Nov 15, 2023

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Feb 9, 2024

Toxics Release Inventory (TRI) Program: TRIS

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment. This database includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

PFOA/PFOS Contaminated Sites: PFAS NPL

This list of Superfund Sites with Per- and Polyfluoroalkyl Substances (PFAS) detections is made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data, previously the list was obtained by EPA FOIA requests. EPA's Office of Land and Emergency Management and EPA Regional Offices maintain what is known about site investigations, contamination, and remedial actions under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) where PFAS is present in the environment. Limitations: Detections of PFAS at National Priorities List (NPL) sites do not mean that people are at risk from PFAS, are exposed to PFAS, or that the site is the source of the PFAS. The information in the Superfund NPL and Superfund Alternative Agreement (SAA) PFAS detection site list is years old and may not be accurate today. Site information such as site name, site ID, and location has been confirmed for accuracy; however, PFAS-related information such as media sampled, drinking water being above the health advisory, or mitigation efforts has not been verified. For Federal Facilities data, the other Federal agencies (OFA) are the lead agency for their data and provided them to EPA.

Government Publication Date: Mar 19, 2024

Federal Agency Locations with Known or Suspected PFAS Detections: PFAS FED SITES

List of Federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS), made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data. EPA outlines that these data are gathered from several federal entities, such as the Federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration, Department of Transportation, and Department of Energy. The dates this data was extracted for the PFAS Analytic Tools range from March 2022 to September 2023. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

Government Publication Date: Sep 5, 2023

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map, credited to the Northeastern University's PFAS Project Lab, Silent Spring Institute, and the PFAS-REACH team. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: https://pfasproject.com/pfas-sites-and-community-resources/

Government Publication Date: May 19, 2023

National Response Center PFAS Spills: ERNS PFAS

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, is the designated federal point of contact for reporting all oil, chemical, and other discharges into the environment, for the United States and its territories. This dataset contains NRC spill information from 1990 to the present that is restricted to records associated with PFAS and PFAS-containing materials. Incidents are filtered to include only records with a "Material Involved" or "Incident Description" related to Aqueous Film Forming Foam (AFFF). The keywords used to filter the data included "AFFF," "Fire Fighting Foam," "Aqueous Film Forming Foam," "Fire Suppressant Foam, "PFAS," "PERFL," "PFOA," "PFOS," and "Genx." Limitations: The data from the NRC website contains initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

Government Publication Date: Jan 24, 2024

PFAS NPDES Discharge Monitoring: PFAS NPDES

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Government Publication Date: Feb 19, 2024

Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a per- or polyfluoroalkyl (PFAS) substance included in the U.S. Environmental Protection Agency's (EPA) consolidated PFAS Master List of PFAS Substances. Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment. This listing includes TRI Reporting Data for calendar years 1987 through 2021 and Preliminary Data for 2022.

Government Publication Date: Sep 20, 2023

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

PFAS TSCA Manufacture and Import Facilities: PFAS TSCA

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

Government Publication Date: Jan 5, 2023

PFAS Waste Transfers from RCRA e-Manifest : PFAS E-MANIFEST

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

Government Publication Date: Feb 25, 2024

PFAS Industry Sectors: PFAS IND

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The EPA developed the dataset from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Government Publication Date: Dec 4, 2023

Hazardous Materials Information Reporting System: HMIRS

The Hazardous Materials Incident Reporting System (HMIRS) database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration.

Government Publication Date: Nov 26, 2023

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Jul 26, 2023

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.
Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN
An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP
An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP
Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).
Government Publication Date: Jan 26, 2024

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER
The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.
Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS
The Integrated Compliance Information System (ICIS) database contains integrated enforcement and compliance information across most of U.S. Environmental Protection Agency's (EPA) programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained by the EPA Headquarters and at the Regional offices. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
Government Publication Date: Aug 26, 2023

Drycleaner Facilities: FED DRYCLEANERS
A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. The EPA tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.
Government Publication Date: Jan 20, 2024

Delisted Drycleaner Facilities: DELISTED FED DRY
List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).
Government Publication Date: Jan 20, 2024

Formerly Used Defense Sites: FUDS
Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset which applies to the Fiscal Year 2021 FUDS Inventory.

Government Publication Date: May 15, 2023

FUDS Munitions Response Sites: FUDS MRS

Boundaries of Munitions Response Sites (MRS), published with the Formerly Used Defense Sites (FUDS) Annual Report to Congress (ARC) by the U.S. Army Corps of Engineers (USACE). An MRS is a discrete location within a Munitions response area (MRA) that is known to require a munitions response. An MRA means any area on a defense site that is known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). This data is compiled from the USACE's Geospatial MRS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) MRS dataset.

Government Publication Date: May 15, 2023

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

This list of flagged pipeline incidents is made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types. Accidents reported on hazardous liquid gravity lines (§195.13) and reporting-regulated-only hazardous liquid gathering lines (§195.15) and incidents reported on Type R gas gathering (§192.8(c)) are not included in the flagged incident file data.

Government Publication Date: Nov 6, 2023

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) is provided by the United States Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: May 1, 2023

Surface Mining Control and Reclamation Act Sites: SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). This inventory contains information on the type and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The data is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed. Disclaimer: Per the OSMRE, States and tribes who enter their data into eAMLIS (AML Inventory System) may truncate their latitude and longitude so the precise location of usually dangerous AMLs is not revealed in an effort to protect the public from searching for these AMLs, most of which are on private property. If more precise location information is needed, please contact the applicable state/tribe of interest.

Government Publication Date: Jun 13, 2023

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites: LM SITES

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Tile II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Dec 12, 2023

Alternative Fueling Stations: ALT FUELS

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG), and Renewable Diesel (R20 and above) fuel type locations.

Government Publication Date: Nov 27, 2023

Superfunds Consent Decrees: CONSENT DECREES

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS) since 2010. CMS may not reflect the latest developments in a case nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Apr 19, 2023

Air Facility System: AFS

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments: SSTS

This national list of active EPA-registered foreign and domestic pesticide and/or device-producing establishments is based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that each producing establishment must place its EPA establishment number on the label or immediate container of each pesticide, active ingredient or device produced. An EPA establishment number on a pesticide product label identifies the EPA registered location where the product was produced. The list of establishments is made available by the U.S. Environmental Protection Agency (EPA).

Government Publication Date: Mar 1, 2023

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Oct 30, 2023

State

PFAS Sampling Locations: PFAS SAMPLING

This data is sourced from the State Water Board's GeoTracker Per- and Polyfluoroalkyl Substances (PFAS) Map tool which contains individual sampling points (i.e., soil boring, groundwater monitoring well, drinking water well for municipal drinking water systems, etc.) or a site location with PFAS analytical data. Includes analytical results that are finalized and submitted electronically by the Responsible Parties via GeoTracker's Electronic Submittal of Information Portal, and after it's accepted by a Regional Water Quality Control Board.

Government Publication Date: Jan 2, 2024

Dry Cleaning Facilities: DRYCLEANERS

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Dec 20, 2021

Delisted Drycleaners: DELISTED DRYCLEANERS

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Jan 31, 2022

Non-Toxic Dry Cleaning Incentive Program: DRYC GRANT

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Jan 31, 2022

PFAS GeoTracker Cleanup Sites: PFAS GT CLEANUPS

A list of applicable cleanup sites from the State Water Resources Control Board's (SWRCB) GeoTracker data management system where one or more of the potential contaminants of concern are identified in the PFAS Master List of PFAS Substances made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Nov 30, 2023

PFOA/PFOS Groundwater: PFAS GW

A list of water wells from the Groundwater Ambient Monitoring and Assessment Program (GAMA) Groundwater Information System with the groundwater chemical perfluorooctanoic acid (PFOA) (NL = 0.014 UG/L) or perfluorooctanoic sulfonate (PFOS) (NL = 0.013 UG/L). The GAMA Groundwater Information System search is made available by California Water Boards.

Government Publication Date: Jan 7, 2024

PFAS Investigations: PFAS INVEST

This list of potential Per- and Polyfluoroalkyl Substance (PFAS) sites is compiled from the California State Water Resources Control Board's (SWRCB) PFAS Investigations Map tool. The SWRCB issued investigative orders, per California Water Code (CWC) Section 13267 and/or 13383, to these sites. This does not mean that PFAS has been produced, used, or discharged at these sites. Orders were also issued to the public water systems to sample wells in the vicinity of these locations. The data includes locations for airports, landfills, suspected chrome plating facilities, publicly owned treatment works (aka wastewater treatment plants), bulk fuel terminals, refineries, and military facilities that have potential sources of PFAS.

Government Publication Date: Nov 28, 2022

Hazardous Waste and Substances Site List - Site Cleanup: HWSS CLEANUP

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: Mar 15, 2023

Toxic Pit Cleanup Act Sites: TOXIC PITS

The Toxic Pits Cleanup Act (TPCA) list identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. This list was maintained by the State Water Resources Control Board (SWRCB), is not longer maintained, and updates are not planned.

Government Publication Date: Jul 1, 1995

List of Hazardous Waste Facilities Subject to Corrective Action: DTSC HWF

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement: INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked by the California Department of Toxic Substance Control's (DTSC) EnviroStor data management system.

Government Publication Date: Nov 23, 2023

School Property Evaluation Program Sites: SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Feb 15, 2024

California Hazardous Material Incident Report System (CHMIRS): CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Oct 16, 2023

Historical California Hazardous Material Incident Report System (CHMIRS): HIST CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Handlers from Hazardous Waste Manifest Data: HAZNET

A list of handlers not otherwise classified as Treatment, Storage, Disposal facilities (TSDF) or generators from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Oct 24, 2016

Generators from Hazardous Waste Manifest Data: HAZ GEN

List of handlers listed as having generated waste from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Dec 31, 2017

TSDF from Hazardous Waste Manifest Data: HAZ TSD

List of Treatment, Storage, and Disposal Facilities (TSDFs) from the facilities and manifests data made available by the California Department of Toxic Substances Control (DTSC) in their Hazardous Waste Tracking System (HWTS).

Government Publication Date: Dec 31, 2017

Historical Hazardous Waste Manifest Data: HIST MANIFEST

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

DTSC Registered Hazardous Waste Transporters: HW TRANSPORT

The California Department of Toxic Substances Control (DTSC) maintains this list of Registered Hazardous Waste Transporters.

Government Publication Date: Jan 2, 2024

Registered Waste Tire Haulers: WASTE TIRE

This list of registered waste tire haulers is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Mar 25, 2024

California Medical Waste Management Program Facility List: MEDICAL WASTE

This list of Medical Waste Management Program Facilities is maintained by the California Department of Public Health. The Medical Waste Management Program (MWMP) regulates the generation, handling, storage, treatment, and disposal of medical waste by providing oversight for the implementation of the Medical Waste Management Act (MWMA). The MWMP permits and inspects all medical waste off-site treatment facilities, medical waste transporters, and medical waste transfer stations. This list contains transporters, treatment, and transfer facilities.

Government Publication Date: Jan 8, 2024

Historical Cortese List: HIST CORTESE

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders: CDO/CAO

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Dec 6, 2021

California Environmental Reporting System (CERS) Hazardous Waste Sites: CERS HAZ

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Jan 17, 2024

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites: DELISTED HAZ

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Sites in GeoTracker: GEOTRACKER

GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. This is a list of sites in GeoTracker that aren't otherwise categorized as LUST, Land Disposal Sites (LDS), Cleanup Sites, or sites having Waste Discharge Requirements (WDR). This listing includes program types such as Underground Injection Control (UIC), Confined Animal Facilities (CAF), Irrigated Lands Regulatory Program, plans, and non-case information.

Government Publication Date: Nov 30, 2023

Mines Listing: MINE

This list includes mine site locations extracted from the Mines Online database, maintained by the California Department of Conservation. Mines Online (MOL) is an interactive web map designed with GIS features that provide information such as the mine name, mine status, commodity sold, location, and other mine specific data. Please note: Mine location information is provided to assist experts in determining the location of mine operators in accordance with California Civil Code section 1103.4 and reflects information reported by mine operators in annual reports provided under Public Resources Code section 2207. While the Division of Mine Reclamation (DMR) attempts to populate MOL with accurate location information, the DMR cannot guarantee the accuracy of operator reported location information.

Government Publication Date: Jun 16, 2023

Recorded Environmental Cleanup Liens: LIEN

The California Department of Toxic Substance Control (DTSC) maintains this list of liens placed upon real properties. A lien is utilized by the DTSC to obtain reimbursement from responsible parties for costs associated with the remediation of contaminated properties.

Government Publication Date: Dec 18, 2023

Waste Discharge Requirements: WASTE DISCHG

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Nov 30, 2023

Toxic Pollutant Emissions Facilities: EMISSIONS

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2020

Clandestine Drug Lab Sites: CDL

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/clandestine drug laboratories.

Government Publication Date: Jan 19, 2021

Tribal

No Tribal additional environmental record sources available for this State.

County

Los Angeles County - Santa Monica City Hazardous Materials Facilities: HAZMAT SANTAMON

A list of Hazardous Materials Facilities in the City of Santa Monica, Los Angeles county. This list is made available by Santa Monica Fire Prevention Division which has been designated as the CUPA for the City.

Government Publication Date: Dec 17, 2021

Los Angeles County - Santa Monica City Hazardous Waste Facilities: HAZ WST SANTAMON

A list of Hazardous Waste Facilities in Los Angeles County, City of Santa Monica. This list is made available by Santa Monica Fire Prevention Division.

Government Publication Date: Jan 20, 2023

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

FEMA Flood Zone Definitions

Special Flood Hazard Areas – High Risk

Special Flood Hazard Areas represent the area subject to inundation by 1-percent-annual chance flood. Structures located within the SFHA have a 26-percent chance of flooding during the life of a standard 30-year mortgage. Federal floodplain management regulations and mandatory flood insurance purchase requirements apply in these zones.

ZONE	DESCRIPTION
A	Areas subject to inundation by the 1-percent-annual-chance flood event. Because detailed hydraulic analyses have not been performed, no Base Flood Elevations (BFEs) or flood depths are shown.
AE, A1-A30	Areas subject to inundation by the 1-percent-annual-chance flood event determined by detailed methods. BFEs are shown within these zones. (Zone AE is used on new and revised maps in place of Zones A1–A30.)
AH	Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually areas of ponding) where average depths are 1–3 feet. BFEs derived from detailed hydraulic analyses are shown in this zone.
AO	Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually sheet flow on sloping terrain) where average depths are 1–3 feet. Average flood depths derived from detailed hydraulic analyses are shown within this zone.
AR	Areas that result from the decertification of a previously accredited flood protection system that is determined to be in the process of being restored to provide base flood protection.
A99	Areas subject to inundation by the 1-percent-annual-chance flood event, but which will ultimately be protected upon completion of an under-construction Federal flood protection system. These are areas of special flood hazard where enough progress has been made on the construction of a protection system, such as dikes, dams, and levees, to consider it complete for insurance rating purposes. Zone A99 may be used only when the flood protection system has reached specified statutory progress toward completion. No BFEs or flood depths are shown.

Coastal High Hazard Areas – High Risk

Coastal High Hazard Areas (CHHA) represent the area subject to inundation by 1-percent-annual chance flood, extending from offshore to the inland limit of a primary front al dune along an open coast and any other area subject to high velocity wave action from storms or seismic sources. Structures located within the CHHA have a 26-percent chance of flooding during the life of a standard 30-year mortgage. Federal floodplain management regulations and mandatory purchase requirements apply in these zones.

ZONE	DESCRIPTION
V	Areas along coasts subject to inundation by the 1-percent-annual-chance flood event with additional hazards associated with storm-induced waves. Because detailed coastal analyses have not been performed, no BFEs or flood depths are shown.
VE, V1-V30	Areas along coasts subject to inundation by the 1-percent-annual-chance flood event with additional hazards due to storm-induced velocity wave action. BFEs derived from detailed hydraulic coastal analyses are shown within these zones. (Zone VE is used on new and revised maps in place of Zones V1–V30.)

Hydrologic Information

Moderate and Minimal Risk Areas

Areas of moderate or minimal hazard are studied based upon the principal source of flood in the area. However, buildings in these zones could be flooded by severe, concentrated rainfall coupled with inadequate local drainage systems. Local stormwater drainage systems are not normally considered in a community's flood insurance study. The failure of a local drainage system can create areas of high flood risk within these zones. Flood insurance is available in participating communities, but is not required by regulation in these zones. Nearly 25-percent of all flood claims filed are for structures located within these zones.

ZONE	DESCRIPTION
B, X (shaded)	Moderate risk areas within the 0.2-percent-annual-chance floodplain, areas of 1-percent-annual-chance flooding where average depths are less than 1 foot, areas of 1-percent-annual-chance flooding where the contributing drainage area is less than 1 square mile, and areas protected from the 1-percent-annual-chance flood by a levee. No BFEs or base flood depths are shown within these zones. (Zone X (shaded) is used on new and revised maps in place of Zone B.)
C, X (unshaded)	Minimal risk areas outside the 1-percent and .2-percent-annual-chance floodplains. No BFEs or base flood depths are shown within these zones. (Zone X (unshaded) is used on new and revised maps in place of Zone C.)

Undetermined Risk Areas

ZONE	DESCRIPTION
D	Unstudied areas where flood hazards are undetermined, but flooding is possible. No mandatory flood insurance purchase requirements apply, but coverage is available in participating communities.

Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

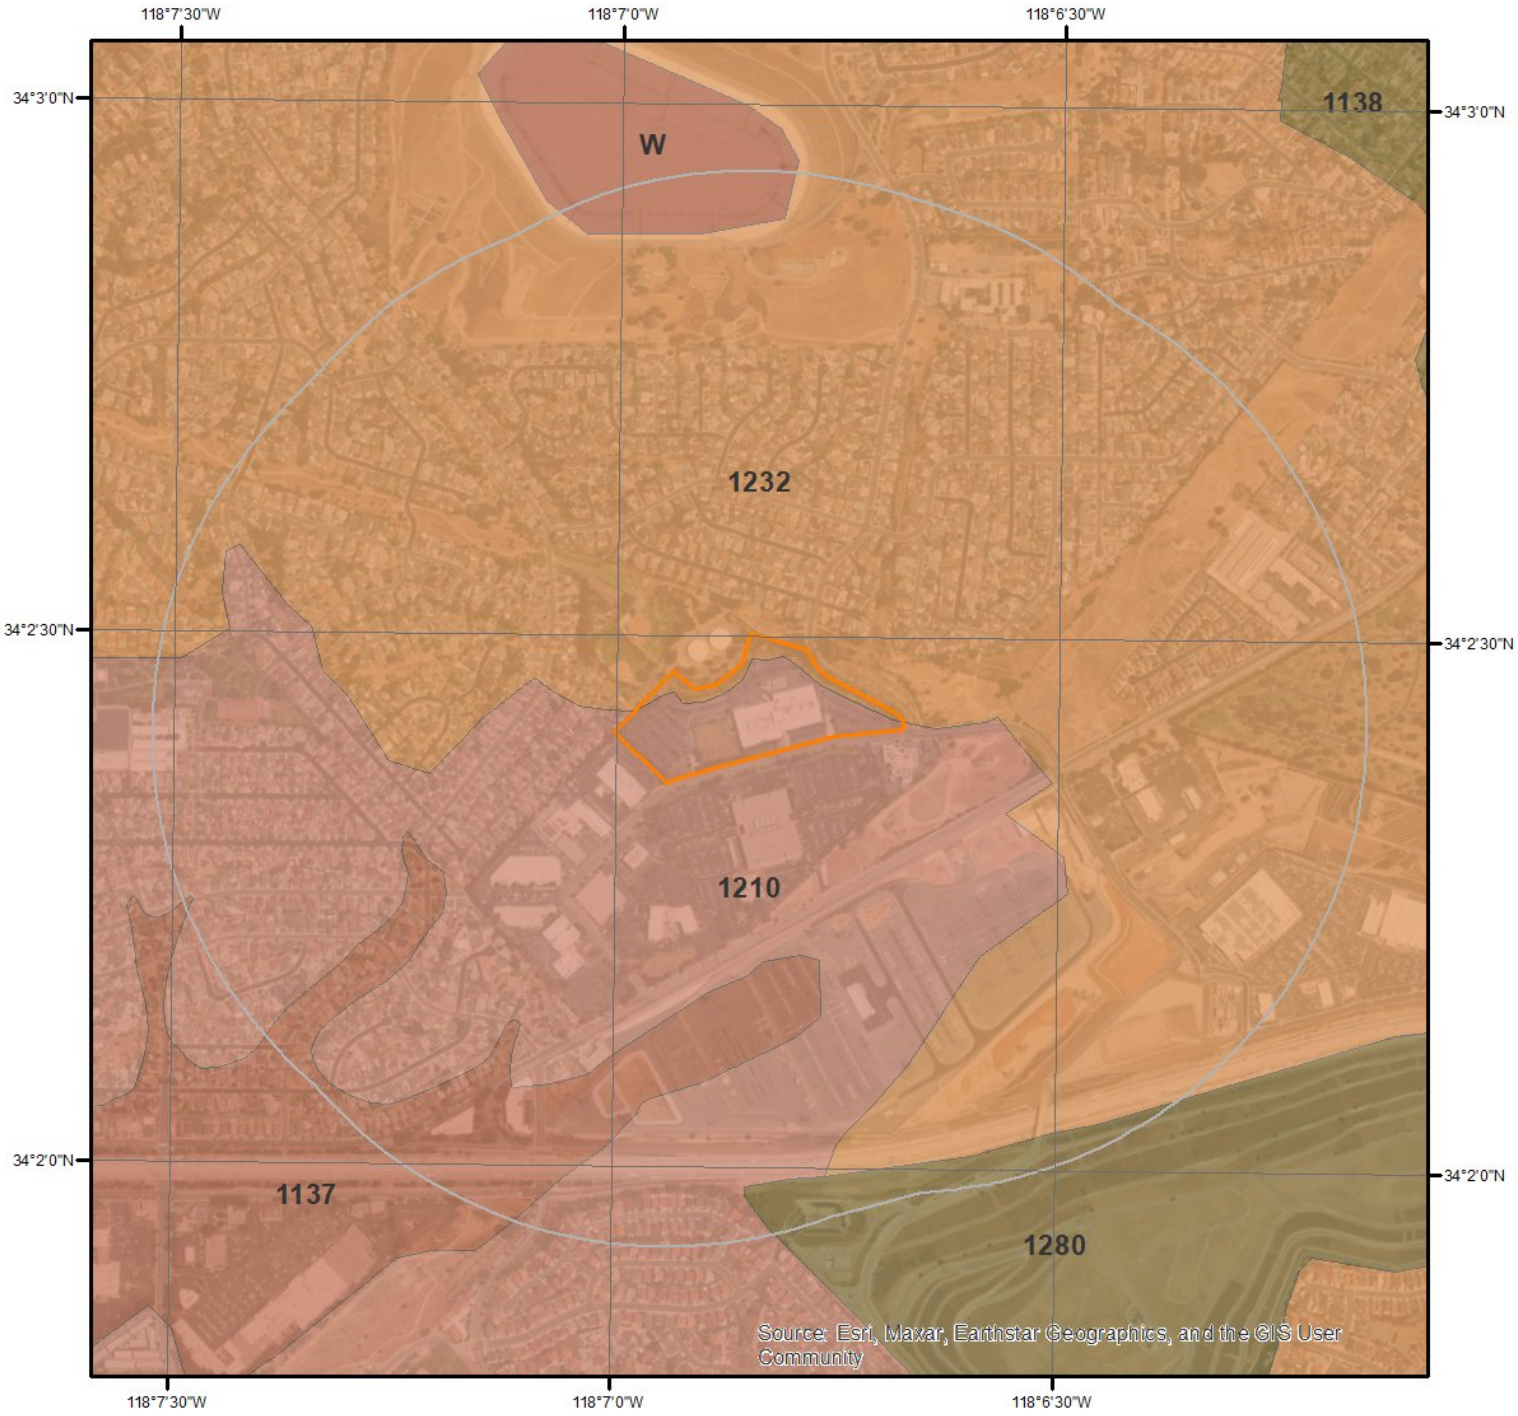
ERIS

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit Q

Unit Name:	Quaternary alluvium and marine deposits
Unit Age:	Pliocene to Holocene
Primary Rock Type:	alluvium
Secondary Rock Type:	terrace
Unit Description:	Alluvium, lake, playa, and terrace deposits; unconsolidated and semi-consolidated. Mostly nonmarine, but includes marine deposits near the coast.



Geologic Unit P

Unit Name:	Pliocene marine rocks
Unit Age:	Miocene to Pleistocene
Primary Rock Type:	sandstone
Secondary Rock Type:	mudstone
Unit Description:	Sandstone, siltstone, shale, and conglomerate; in part Pleistocene and Miocene.

Geologic Unit water

Unit Name:	water
Unit Age:	Holocene
Primary Rock Type:	water
Secondary Rock Type:	
Unit Description:	water

ERIS

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit 1137 (39.7%)

Map Unit Name:	Urban land-Ballona-Typic Xerorthents, fine substratum complex, 0 to 5 percent slopes
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Typic Xerorthents(20%)	
horizon ^Au(0cm to 32cm)	Loam
horizon ^Cu(32cm to 120cm)	Clay loam
horizon 2C1(120cm to 145cm)	Clay
horizon 2C2(145cm to 200cm)	Clay loam
Ballona(20%)	
horizon ^A(0cm to 15cm)	Loam
horizon ^A2(15cm to 45cm)	Loam
horizon 2A3(45cm to 80cm)	Clay loam
horizon 2Bk1(80cm to 120cm)	Clay
horizon 2Bk2(120cm to 200cm)	Clay

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 1137 - Urban land-Ballona-Typic Xerorthents, fine substratum complex, 0 to 5 percent slopes

Component: Urban land (45%)
Generated brief soil descriptions are created for major soil components. The Urban land is a miscellaneous area.

Component: Typic Xerorthents (20%)
The Typic Xerorthents, fine substratum component makes up 20 percent of the map unit. Slopes are 0 to 5 percent. This component is on cut and fills, alluvial plains, alluvial fans. The parent material consists of human-transported material over young alluvium derived from sedimentary rock. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 4 percent. Nonirrigated land capability classification is 3s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 1 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Ballona (20%)
The Ballona component makes up 20 percent of the map unit. Slopes are 0 to 5 percent. This component is on alluvial fans, alluvial plains. The parent material consists of discontinuous human-transported material over young alluvium derived from sedimentary rock. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 3s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Arbolado (5%)
Generated brief soil descriptions are created for major soil components. The Arbolado soil is a minor component.

Component: Cropley (5%)
Generated brief soil descriptions are created for major soil components. The Cropley soil is a minor component.

Soil Information

Component: Azuvina (3%)
Generated brief soil descriptions are created for major soil components. The Azuvina soil is a minor component.

Component: San Emigdio (2%)
Generated brief soil descriptions are created for major soil components. The San Emigdio soil is a minor component.

Map Unit 1210 (24.0%)

Map Unit Name:	Urban land-Montebello-Xerorthents complex, 0 to 15 percent slopes, terraced
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Montebello(25%)	
horizon ^C1(0cm to 105cm)	Sandy clay loam
horizon ^C1(105cm to 140cm)	Sandy loam
horizon ^C2(140cm to 200cm)	Sandy clay loam
Xerorthents(20%)	
horizon ^A(0cm to 17cm)	Loam
horizon ^C1(17cm to 32cm)	Sandy clay loam
horizon ^C2(32cm to 60cm)	Sandy loam
horizon ^C3(60cm to 85cm)	Sandy loam
horizon ^C4(85cm to 103cm)	Sandy loam
horizon ^C5(103cm to 138cm)	Sandy clay loam
horizon 2Bt(138cm to 200cm)	Sandy clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 1210 - Urban land-Montebello-Xerorthents complex, 0 to 15 percent slopes, terraced

Component: Urban land (40%)
Generated brief soil descriptions are created for major soil components. The Urban land is a miscellaneous area.

Component: Montebello (25%)
The Montebello component makes up 25 percent of the map unit. Slopes are 0 to 15 percent. This component is on hillslope terraces, fan remnants, alluvial plains. The parent material consists of human-transported material consisting mostly of alluvium derived from granite. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 3 within 30 inches of the soil surface.

Component: Xerorthents (20%)
The Xerorthents, coarse fill component makes up 20 percent of the map unit. Slopes are 0 to 15 percent. This component is on hillslope terraces, fan remnants, alluvial plains. The parent material consists of human-transported material over alluvium derived from granite. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface.

Component: Azuvina (10%)
Generated brief soil descriptions are created for major soil components. The Azuvina soil is a minor component.

Component: Palmview (5%)

Soil Information

Generated brief soil descriptions are created for major soil components. The Palmview soil is a minor component.

Map Unit 1232 (33.42%)

Map Unit Name:	Counterfeit-Urban land complex, 10 to 35 percent slopes, terraced
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Somewhat poorly drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Counterfeit(45%)

horizon ^Au(0cm to 13cm)	Clay loam
horizon ^Cu1(13cm to 46cm)	Clay
horizon ^Cu2(46cm to 95cm)	Clay
horizon ^Cu3(95cm to 145cm)	Clay loam
horizon ^C(145cm to 200cm)	Sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 1232 - Counterfeit-Urban land complex, 10 to 35 percent slopes, terraced

Component: Counterfeit (45%)
The Counterfeit component makes up 45 percent of the map unit. Slopes are 10 to 35 percent. This component is on hills, hillslope terraces, hillslopes. The parent material consists of human-transported material consisting mostly of colluvium and/or residuum weathered from sedimentary rock. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 5 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Urban land (40%)
Generated brief soil descriptions are created for major soil components. The Urban land is a miscellaneous area.

Component: Zaca (6%)
Generated brief soil descriptions are created for major soil components. The Zaca soil is a minor component.

Component: Apollo (6%)
Generated brief soil descriptions are created for major soil components. The Apollo soil is a minor component.

Component: Balcom (3%)
Generated brief soil descriptions are created for major soil components. The Balcom soil is a minor component.

Map Unit 1280 (2.38%)

Map Unit Name:	Dumps

No more attributes available for this map unit

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 1280 - Dumps

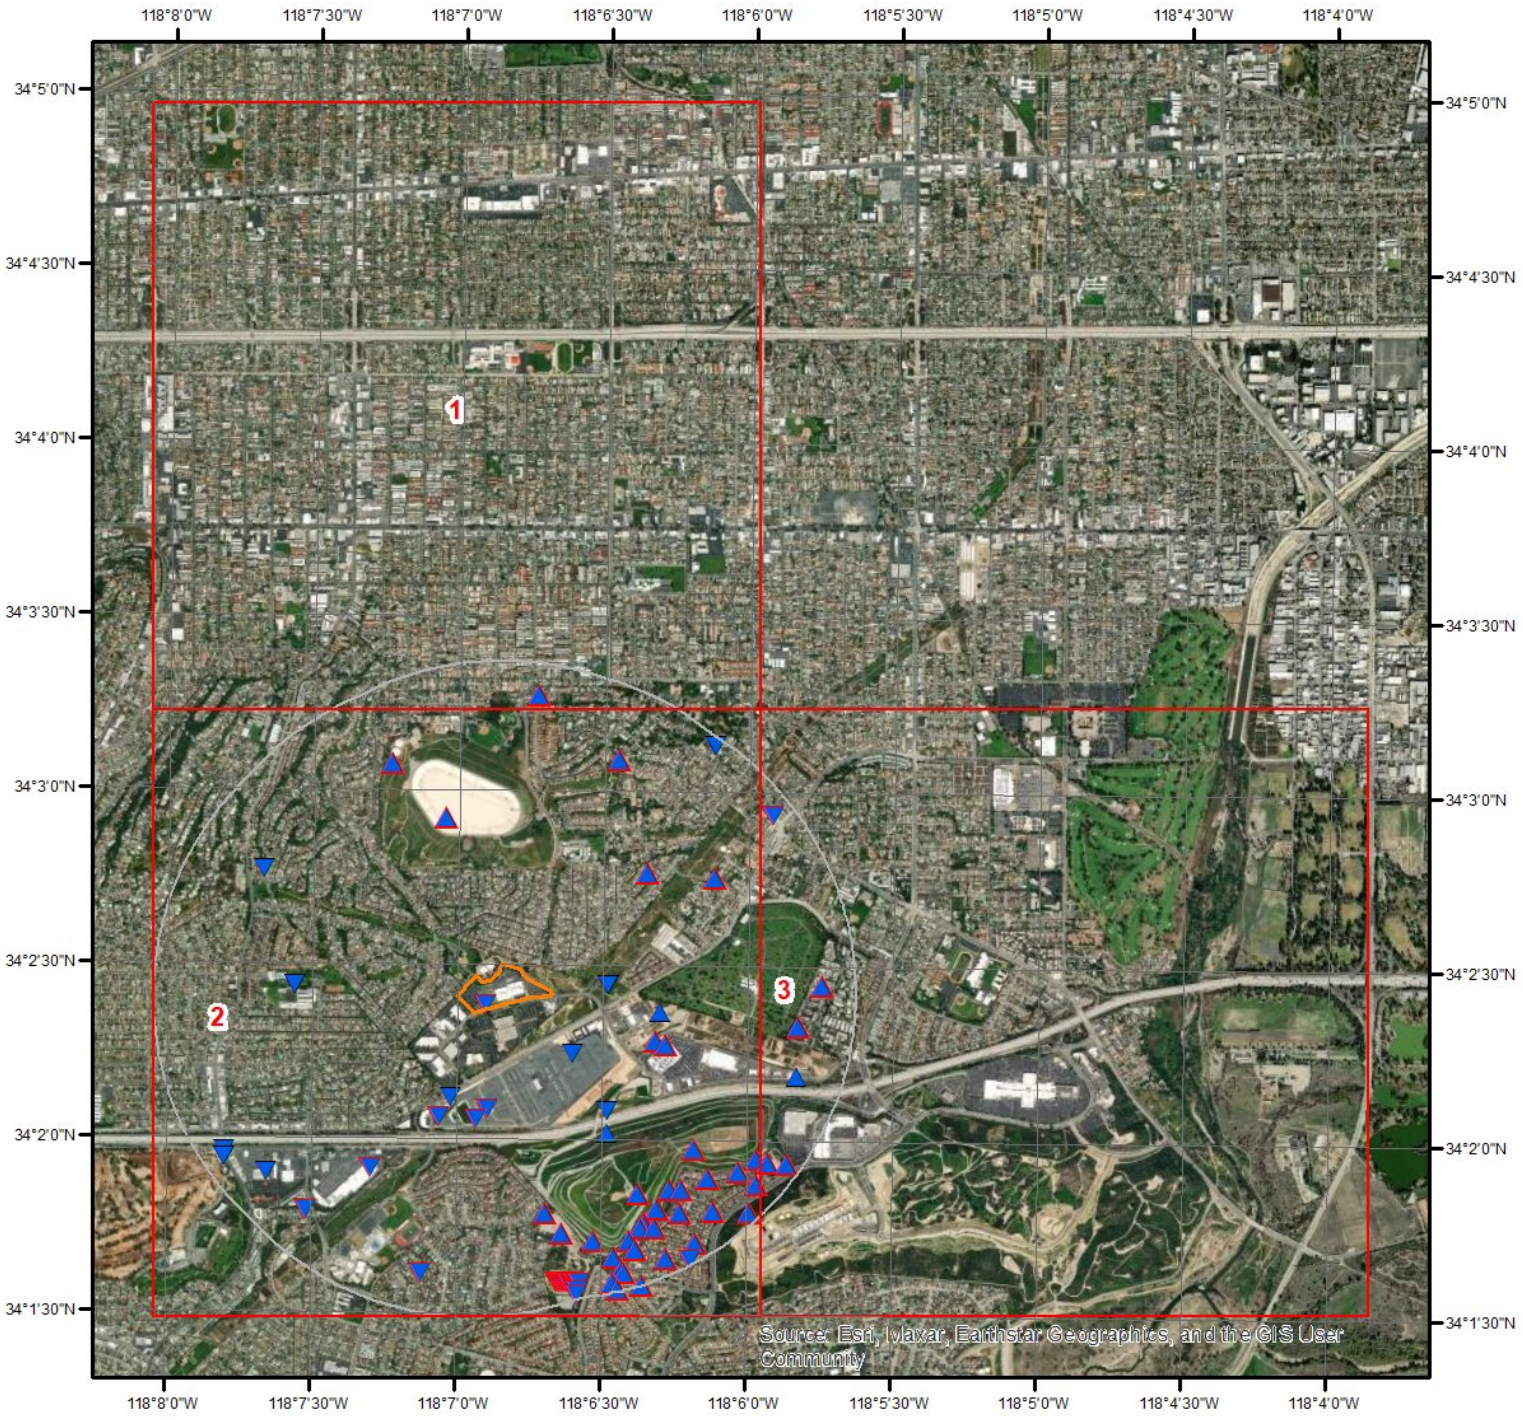
Component: Dumps (100%)
Generated brief soil descriptions are created for major soil components. The Dumps is a miscellaneous area.

Soil Information

Map Unit W (0.5%)

Map Unit Name: Water

No more attributes available for this map unit



Component Description:

Minor map unit components are excluded from this report.

Map Unit: W - Water

Component: Water (100%)
Generated brief soil descriptions are created for major soil components. The Water is a miscellaneous area.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *LOS ANGELES* County: **2**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L
Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L
Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *LOS ANGELES* County

No Measures/Homes:	69
Geometric Mean:	0.4
Arithmetic Mean:	0.7
Median:	0.5
Standard Deviation:	1
Maximum:	5.6
% >4 pCi/L:	1
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Screening indoor radon data from the EPA/State Residential Radon Survey of California conducted during 1989-90. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

This national download of Safe Drinking Water Act (SDWA) data is sourced from the U.S Environmental Protection Agency's (EPA) Enforcement and Compliance History Online (ECHO) system that incorporates Public Water Systems data from EPA's Safe Drinking Water Information System (SDWIS) database. SDWIS contains information on public water systems from the Public Water System Supervision (PWSS) Program related to requirements established by the Safe Drinking Water Act (SDWA). Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data — **US WETLAND**

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey's (USGS) National Water Information System (NWIS) is the nation's principal repository of water resources data. The data includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIS database information is obtained through the Water Quality Data Portal (WQP). The WQP is a cooperative service sponsored by the USGS, the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC).

Appendix

State Sources

Oil and Gas Wells **OGW**

The California Department of Conservation, Geologic Energy Management Division (CalGEM) provides this oil and gas wells dataset. CalGEM makes no warranties, whether expressed or implied, and the data is for informational purposes.

Periodic Groundwater Level Measurement Locations **MONITOR WELLS**

Locations of groundwater level monitoring wells in the Department of Water Resources (DWR)'s Periodic Groundwater Levels dataset. The DWR Periodic Groundwater Levels dataset contains seasonal and long-term groundwater level measurements collected by the Department of Water Resources and cooperating agencies.

Well Completion Reports **WATER WELLS**

List of wells from the Well Completion Reports data made available by the California Department of Water Resources' (DWR) Online System for Well Completion Reports (OSWCR). Please note that the majority of well completion reports have been spatially registered to the center of the 1x1 mile Public Land Survey System section that the well is located in.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS Information Inc. disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Registration

AHERA-Certified Asbestos Building Inspector DOSH #: CA-015-05 (#ABII0522230001N35192)

Highlights

Phase I Environmental Site Assessments
Transaction Screen Assessments
Environmental Desktop Reports
Lead in Water Sampling
Physical Condition Assessments

Experience Summary

Mr. Gutierrez serves as a Project Assessor for Partner Engineering and Science, Inc. (Partner), to perform Phase I Environmental Site Assessments in accordance with EPA's All Appropriate Inquiry (AAI) and the American Society of Testing and Materials (ASTM). His responsibilities include conducting Freedom of Information Act (FOIA) agency file reviews, detailed site-inspections, in-depth historical reviews, and preparation and submittal of reports.

Project Experience

Mr. Gutierrez has experience performing due diligence assessments for a variety of property types. For each assessment he reviews the condition of the building structure and systems and develops a thorough report.

Gas Station, Lomita, CA. Mr. Gutierrez performed a Phase I Environmental Site Assessment for a 0.53-acre gas station with two generations of underground storage tanks in open remediation during the time of the assessment.

Auto Dealership, Los Angeles, CA. Mr. Gutierrez performed a Phase I Environmental Site Assessment for a 1.45-acre auto dealership with onsite auto repair, aboveground storage tanks, hazardous materials, car wash services, and remedial action associated with its former development as a large steel manufacturing facility.

Multi-Family Housing, Santa Monica, CA. Mr. Gutierrez performed a Phase I Environmental Site Assessment for two five-story noncontiguous multi-family buildings each with subterranean levels and collected lead in water samples.

Large Shopping Center, Van Nuys, CA. Mr. Gutierrez performed a Phase I Environmental Site Assessment for a large shopping center consisting of 28 tenants on a 19.56-acre lot that served historically as an automobile manufacturing facility which resulted in extensive remedial action.

Food Processing Plant, Vernon, CA. Mr. Gutierrez performed a limited scope Environmental Site Assessment for a 56,670 square foot food processing plant equipped with six aboveground storage tanks, two 100,000-pound silos, three steam boilers, and a large hydraulic motor to power assembly operations.

Gas Station, Long Beach, CA. Mr. Gutierrez performed a Phase I Environmental Site Assessment for a 0.28-acre gas station with three generations of underground storage tanks, former oil derricks, and active remedial action.

Large Shopping Center, Yorba Linda, CA. Mr. Gutierrez performed a Phase I Environmental Site Assessment for a large shopping center on an 8.83-acre lot with 22 tenants including an active drycleaner operating for approximately 46 years which resulted in extensive remedial action.

Hotel, La Paz, Baja California Sur, MX. Mr. Gutierrez performed a Phase I Environmental Site Assessment for a 286-unit hotel under construction and a completed condominium development consisting of five total buildings, totaling approximately 315,598 square feet, elevators, subterranean levels, and hotel amenities.

Dry Cleaner, Compton, CA. Mr. Gutierrez performed a Phase I Environmental Site Assessment for 9,896 square foot shopping center with an on-site drycleaner.

Industrial Park, Paramount, CA. Mr. Gutierrez performed a Phase I Environmental Site Assessment for two industrial buildings totaling approximately 63,214 square feet and two radio towers.

Ranch, Yucaipa, CA. Mr. Gutierrez performed a Phase I Environmental Site Assessment for a 38-acre ranch equipped with residential housing, livestock, aboveground storage tanks, and groundwater wells.

Multi-Tenant Rebar Fabrication, San Bernardino, CA. Mr. Gutierrez performed a Phase I Environmental Site Assessment for a 4.43-acre multi-tenant rebar fabrication facility with an onsite crane, hydraulic presses and cutters, hazardous materials, and commercial vehicle servicing.

High-Rise Office Building, Los Angeles, CA. Mr. Gutierrez performed a Phase I Environmental Site Assessment for a 163,608 square foot high-rise office building with a sealed in-place underground storage tank and an emergency generator.

Multi-Tenant Industrial Park, Vernon, CA. Mr. Gutierrez performed a Phase I Environmental Site Assessment for a 1.80-acre multi-tenant industrial park with onsite manufacturing, storage of hazardous materials, and active remediation for historical refueling for commercial vehicles.

Subterranean Parking Garage, Los Angeles, CA. Mr. Gutierrez performed a Phase I Environmental Site Assessment for a 72,471 square foot subterranean parking garage consisting of four levels and emergency diesel generator.

Senior Living, Garden Grove, CA. Mr. Gutierrez assisted in performing a Physical Condition Assessment for a three-story multi-family building with 178 residential rooms.

High-Rise Multi-Family Building, Los Angeles, CA. Mr. Gutierrez performed a Phase I Environmental Site Assessment for a 218,680 square foot high-rise residential building with an emergency diesel generator and a former underground storage tank.

Student Housing, Santa Barbara, CA. Mr. Gutierrez performed a Phase I Environmental Site Assessment for 40 noncontiguous student housing buildings totaling approximately 120,424 square feet.

PARTNER

Chris Randall
Senior Environmental Assessor

Education
B.S. Environmental Science, University of Tennessee at Chattanooga, Chattanooga, TN

Registrations
AHERA Certified Asbestos Inspector

Training
AHERA 24-hour Building Inspector Course

Highlights
Qualified Environmental Professional (EP)
15 years of experience performing environmental due diligence for the commercial real estate and insurance industries.

Performed or reviewed thousands of Phase I Environmental Site Assessments (ESAs), Phase II Subsurface Investigations, Transaction Screen Assessments (TSAs), and Environmental Desktop Reports
Performed environmental compliance for a major retail corporation.

Clients served have included residential and commercial developers, mortgage brokers, individual property owners and purchasers, local governmental entities, real estate investment trusts (REITs), private equity groups, and financial institutions such as Commercial Mortgage-Backed Securities (CMBS), Small Business Administration (SBA), Fannie Mae, and Freddie Mac lenders, insurance companies, and investment and regional banks.

Experience Summary
Mr. Randall has over 15 years of professional experience managing environmental due diligence projects in accordance with ASTM E1527 standards and EPA's All Appropriate Inquiry (AAI) requirements, Fannie Mae Delegated Underwriting Standards, Freddie Mac guidelines and other client-specific scopes of work. She is a qualified Environmental Professional under American Society for Testing and Materials (ASTM) E 1527-13 and has experience with a wide range of asset types including multifamily properties, office properties, retail shopping centers, gas stations, dry cleaners, hotels, auto dealership and service facilities, and various manufacturing operations in all 50 States, District of Columbia, and Canada.

Mr. Randall has conducted and managed thousands of assessments for a wide range of local and national clients, including real estate owners, investors, and lending institutions in accordance with the applicable ASTM Standards and Guidelines, United States Environmental Protection Agency (EPA) All Appropriate Inquiry rules, Fannie Mae Delegated Underwriting Standards, Freddie Mac guidelines, Housing and Urban Development (HUD) Multifamily Accelerated Processing (MAP) guidelines and other client-specific scopes of work.

Mr. Randall's environmental background provides him with thorough knowledge of State and Federal programs/regulations with a detailed understanding of the risks associated with, but not limited to, hazardous and regulated materials storage, use generation and disposal, aboveground and underground

storage tanks, polychlorinated biphenyls (PCBs), asbestos-containing materials (ACM), lead-based paint (LBP), mold, and radon.

Project Experience

Peachtree Center, Atlanta, Georgia. Completed/managed a Phase I Environmental Site Assessment of several Peachtree Center office, retail and parking garage buildings.

AmericasMart, Atlanta, Georgia. Completed/managed a Phase I Environmental Site Assessment of the 7,000,000-square foot AmericasMart trade exhibition center in Downtown Atlanta.

Buckhead Village District, Atlanta, Georgia. Completed/managed a Phase I Environmental Site Assessment of the six-block retail and dining center in Buckhead, Atlanta.

Briggs & Stratton Plants, Statesboro, Georgia and Auburn, Alabama. Completed/managed Phase I Environmental Site Assessments and Compliance Audits of small engine manufacturing plants.

The Club at Hokuli'a, Big Island, Hawaii. Completed/managed a Phase I Environmental Site Assessment of the Hokuli'a golf course and luxury Club facility.

SpeeDee Oil Change Portfolio, throughout the southeastern United States. Completed/managed Phase I Environmental Site Assessments of various oil change and auto service center facilities throughout the southeastern United States.

Student Housing Portfolio, throughout the United States. Reviewed Phase I Environmental Site Assessment reports for a multi-site portfolio of student housing properties located throughout the United States.

PARTNER

Michael Eng, M.S.
Principal / Environmental Professional

Education

M.S., Environmental Science, Loyola Marymount University, Los Angeles, CA
B.S., Biological Science, Loyola Marymount University, Los Angeles, CA

Training / Certifications

Asbestos Building Inspector DOSH #: CA-015-05 (ABII0129190007N20838)
Advanced Institute of Pest Technology (AIPT) Branch III Technical Training – Pest Identification, Safety, and Construction Techniques
MBA – Fannie Mae and Freddie Mac Multifamily Property Inspection
Inspection Training Associates (ITA) Commercial Buildings Training

Highlights

15+ years in the environmental industry
13 years conducting environmental site assessments
10 years conducting building assessments

Experience Summary

Mr. Eng has more than 15 years of experience in the engineering and environmental consulting industry. He has a broad range of experience in various environmental disciplines that includes environmental due diligence assessments, natural resource management, wetlands delineation, and wastewater treatment.

Mr. Eng has project experience in Phase I Environmental Site Assessments (ESAs), Environmental Transaction Screens (ETS), radon screening, Property Condition / Needs Assessments (PCA/N), property condition evaluations, and seismic risk evaluations. Mr. Eng is familiar with all aspects of due diligence property assessments and the needs and requirements of a varied number of reporting standards, including: ASTM E2018, ASTM E1527-05 and -13, EPA's All Appropriate Inquiry (AAI), Fannie Mae DUS, Freddie Mac, HUD, and customized client formats or scope.

Mr. Eng has experience as a senior project manager in the due diligence environmental and building sciences/construction field and is currently a principal consultant within the same field. His background in the environmental sciences and property assessments allows him to provide complete and thorough assessments and evaluations to serve a client's specific needs. In addition to providing consulting services, Mr. Eng provides project oversight and quality assurance. His responsibilities include Phase I ESA project scope and design, implementation and execution, Quality Assurance/Quality Control (QA/QC) and technical reviews for Phase I ESAs throughout the United States and working with clients to discuss any project specific requirements as well as report findings and recommendations.

Project Experience

Mr. Eng has conducted several hundred Due Diligence Environmental Site Assessments (ESAs) and Property Condition Assessments for a variety of different property types including: multi-family residential dwellings, hotels/motels/resorts, commercial office buildings, shopping centers, multi-tenant commercial complexes, industrial warehouses, manufacturing facilities, dry cleaning plants, gasoline service stations, fuel distribution facilities, automotive repair and body shop, medical facilities, and food processing facilities.

The scope of his involvement on these projects include:

- Advising clients on existing environmental conditions associated to a site.
- Discussing various options for additional investigation.
- Performing lead-in-water sampling and radon screening for various multi-family residential dwellings.
- Evaluating the condition of all major building systems.
- Formulating cost analysis for building owners and perspective purchasers.

Phase I ESAs, Nationwide. Performed and managed numerous Phase I ESAs for a national property management firm overseeing foreclosed residential construction projects throughout the United States. Phase I ESAs were performed and completed in accordance with FDIC guidelines, an in an expedited timeframe.

Phase I ESAs, Texas and Florida. Performed and managed Phase I ESAs on a large portfolio of foreclosed dry-cleaning operations throughout the states of Texas and Florida. Phase I ESAs were performed to meet client and lender specific guidelines and regulations, and many included ASTM non-scope considerations. Project tasks included performing Phase I ESAs, managing the completion of Phase I ESAs including report editing and review, and client interaction.

Phase I ESAs, Arizona and New Mexico. Performed and managed Phase I ESAs that were conducted on a popular chain of equipment rental facilities equipped with storage tanks for fueling. Phase I ESAs were performed to meet client and lender specific guidelines and regulations, for the anticipated sale of over 10 locations. Several of the facilities required additional subsurface investigations.

Phase I ESAs, Port of Long Beach, California. Performed and managed Phase I ESAs that were conducted on several crude oil/fuel oil distribution facilities at the Port of Long Beach. Each of the facilities maintained at least 5+ above ground storage tanks (200+ foot diameter floating roof storage tanks) for transfer to semi-trucks and marine barge/ships.

17 years of experience with equity Property Condition Reports and Assessments
9 years of experience with Freddie Mac and Fannie Mae related projects
Experienced in Construction Risk Management, Construction Phase Services, Master Panning, Owner's Representative Services, Architecture and MEP Design and Consulting, Energy Efficiency Consulting, Sustainable Building Consulting and Research, and Policy Writing.

Experience Summary
Mr. Knight has over 33 years of experience with architectural and engineering solutions for the built environment. His background includes facility assessments, programming, master planning, design, and project/program management. He has provided services and led design and engineering teams for public and private sector clients.

Mr. Knight helps clients refine and achieve their vision by connecting innovative ideas, exceptional talents, and progressive vision grounded in professional solutions. He applies experience and best practices for the Client's specific situation, connecting the talents of over 450 Partner staff throughout the U.S., Canada, and Mexico.

Mr. Knight has delivered successful projects for Commercial Real Estate, Higher Education, Governmental/Institutional and Healthcare clients throughout the U.S. He has a passion for sustainable practices and environmentally friendly processes to deliver projects that exceed the client's expectations.

Project Experience
Prior to joining Partner, Mr. Knight served as Client Relationship Manager and Principal of projects for residential, industrial, institutional, and commercial clients in the private and public sectors. Markets include office/administration, health care, and research, with clients such as Fifth Third Bank, Dow Chemical Company, Eli Lilly, the US Department of Defense, the US Department of Veteran's Affairs, and NASA, among many others.

Mr. Knight has extensive experience performing Facility Condition Assessments and Master Planning. Services include preliminary programming and design services, including budgeting and scope development, asset evaluation and prioritization, growth projects, user surveys and presentations, and existing conditions evaluation.

Mr. Knight has also delivered Construction Risk Management services throughout his 33 years in the industry. Services provided during construction include site inspections, cost estimating, constructability

reviews, bidding administration, addressing contractor questions during construction, processing applications for payment, and project close-out.

Mr. Knight has experience with residential projects ranging from single family buildings to low-income apartment buildings to mixed-use facilities. Services included property condition assessments conforming to ASTM's E2018 Standard Guide for PCAs and customized client formats, A/E design and oversight, and Construction Risk Management.

Mr. Knight's experience includes independent oversight of design services performed by others as the Owner's Representative. Oversight includes policy creation, review and comment of design and construction documentation, construction phase services including observation. Forensic services as Owner's Representative also included include evaluation of structural and non-structural pre-failure conditions, Sick Building Syndrome (SBS) consultation, and oversight of sampling for hazardous materials.

For seven years, Mr. Knight was lead architect and Principal-in-Charge of facility assessments for 53 school buildings at 12 school districts totaling over 3,300,000 square feet while contracted to the Ohio School Facilities Commission (OSFC) under the Classroom Facility Assistance Program (CFAP) and Expedited Local Partnership Program (ELPP). For over a decade, Mr. Knight has lead master planning/facilitation workshops, teaming sessions, and meetings with the superintendent, design firms, construction manager, union representatives, and OSFC representatives.

Building Technologies Research
2015 – Project Director leading the Development of Cincinnati's first permitted and installed Rainwater Harvesting system.

2013 – Greater Cincinnati Foundation Funded Research Program - Cost Benefit Analysis and Practical Applications for Rainwater Harvesting in the Midwest. Program includes first pilot project using Ohio's draft code language (to be adopted in 2016) and data analytics.

2010 – Greater Cincinnati Foundation Funded Research Program - Harvesting Rainwater for Non-potable Use Inside Buildings. Research determined city, county, and state legal obstacles for applying this sustainable practice. Results included leading the crafting and adoption of City and County language for use of this Technology.

2007 - AIA National Funded Architectural Research Program - Schematic Energy Design Primer. Performed in conjunction with Miami University, Oxford, Ohio, this program characterized the shape and location of openings to determine air motion around and through the building.

Speaking

"Applying Rainwater Harvesting to Lower Your Facility's Water Usage." PEDCO High Performance Buildings Seminar, Presenter, October 2014.

"Innovative Technologies, Rainwater Harvesting." USEPA Regional Workshop on Innovative Technologies, Presenter, April 2013.

"Saving Water." Cincinnati 3E Summit, Presenter, September 2011.

"Greening Cincinnati Public Schools." Panel Presentation to President Obama's principal environmental adviser, Nancy Sutly, September 2010.

"Greening Cincinnati for Economic Development." WCET Television Business Courier's Community Beat Program Guest, July 2009.

"LEED Standards for Green and Healthy Schools." Presenter at National School Building Conference, Pittsburgh, June 2009.

"At the Top in Cincinnati: National Leadership in Sustainability." Public Program, March 2009.

"LEED for Schools, success in Cincinnati." Presentation at USGBC National convention, Greenbuild, Boston, November 2008.

"The Greening of Cincinnati Public Schools." Presenter at USEPA Regional Conference, Cincinnati, April 2008.

Honors and Awards

Cincinnati Public School Teacher's Union
2008, Ohio's largest teacher's union honored Mr. Knight with the Contractor Diversity Award.

Clermont County Park District, Chilo Lock #34 Park and Visitor's Center Museum.
2006, Preservation Award, Cincinnati Preservation Association
2005, Honorable Mention, Facilities Development, Ohio Parks and Recreation Association Awards of Excellence Competition
2005, Built Environment Heritage Award/Historic Preservation, Ohio's Hill Country Heritage Area
2005, Community Project Award, Clermont 20/20
2005, Best Public Improvement Project, Heritage Ohio

Otto Armleder Memorial Aquatics Complex at Hanna Park
2004, American Institute of Architects, Merit Award for Built Work: Client: Cincinnati Recreation Commission, Mr. Knight was the Principal in Charge of the Design for this adaptive reuse project.

1. INTRODUCTION

1.1. PROJECT DESCRIPTION

The Monterey Park Data Center Project (Project) is proposed to be developed with an approximately 218,400 square foot building footprint on an approximately 15.83-acre site (Project Site). The Project is located at the intersection of Saturn Street and Orange Avenue in the "Saturn Park" commercial district in the City of Monterey Park within the County of Los Angeles. The Project Site is comprised of the Assessor Parcel Number (APN) as summarized below:

Table 1 Project Description

APNs	PARCEL	ADDRESSES	LOT AREA (AC)
5265-026-054	Parcel 1 & 2	1977 Saturn St, Monterey Park, CA 91755	15.83

The Project site is currently occupied by a split-level building with surface parking, along with a utility building The Project will entail the demolition and removal of the existing buildings and surface parking area. The proposed development is described in the following paragraph.

The proposed development consists of an approximately 218,400± square foot building fronting Saturn Street, with an adjacent equipment yard directly north of the building. Western and eastern entryways connecting the development to Saturn Street are proposed, with a fire lane wrapping around the building and equipment yard. Parking stalls are planned to be located north, east and west of the building and equipment yard. An electrical substation is also proposed, with the current location just north and east of the equipment yard. The proposed data center land usage is technology will be used to both house computer systems, and also for IT and associated staff to work on the systems. The Project is expected to provide 68 parking spaces.

1.2. SCOPE OF WORK

This report will address the existing and proposed surface water hydrology, surface water quality, and groundwater at the Project Site and immediate surrounding areas, as well as an analysis of the Project's potential impacts on each of these water resources.

2. REGULATORY FRAMEWORK

2.1. SURFACE WATER HYDROLOGY

County of Los Angeles Hydrology Manual

As one of the cities within Los Angeles County, the City of Monterey Park uses the Los Angeles County (County) Department of Public Works Hydrology Manual as the basis of design for storm drainage facilities within the City. The Hydrology Manual requires that a storm drain conveyance system be designed for a 25-year storm event and that the combined capacity of a storm drain, and street flow system accommodate flow from a 50-year storm event.[1] Areas with sump conditions are required to have a storm drain conveyance system capable of conveying storm flows associated with a 50-year storm event. The County also limits the allowable discharges into existing storm drain facilities based on the Municipal Separate Storm Sewer System (MS4) Permit which is enforced on all new developments that discharge directly into the County's storm drain system. Any proposed drainage improvements of County-owned storm drain facilities such as catch basins and storm drain lines require the review/approval from the County Flood Control District department. The Project does not propose a direct County connection.

The proposed Project is required to utilize the Hydrology Manual and accompanying hydrologic tools including HydroCalc Calculator to calculate existing and proposed discharges and volumes from the Project. The proposed Project analyzes the 2-year, 10-year, 25-year, and 50-year storm events.

National Flood Insurance Program

The National Flood Insurance Act of 1968 and the Flood Disaster Protection Act of 1973 mandate the Federal Emergency Management Agency (FEMA) to evaluate flood hazards. FEMA provides flood insurance rates maps (FIRMS) for local and regional planners to promote sound land use and development practices by identifying potential flood areas based on the current conditions. To delineate a FIRM, FEMA conducts engineering studies, and FEMA engineers and cartographers delineate special flood hazard areas (SFHA) on FIRMs.

2.2. SURFACE WATER QUALITY

Clean Water Act

Controlling pollution of the nation's receiving water bodies has been a major environmental concern for more than three decades. Growing public awareness of the impacts of water pollution in the United States culminated in the establishment of the federal Clean Water Act[2] (CWA) in 1972, which provided the regulatory framework for surface water quality protection.

The United States Congress amended the CWA in 1987 to specifically regulate discharges to waters of the United States from public storm drain systems and storm water flows from industrial facilities, including construction sites, and require such discharges be regulated

[1] Los Angeles County Department of Public Works Hydrology Manual, January 2006. Found here: https://dpw.lacounty.gov/wrd/publication/engineering/2006_Hydrology_Manual.pdf .

[2] Also referred to as the Federal Water Pollution Control Act of 1972.

through permits under the National Pollutant Discharge Elimination System (NPDES).[3] Rather than setting numeric effluent limitations for storm water and urban runoff, the CWA regulation calls for the implementation of Best Management Practices (BMPs) to reduce or prevent the discharge of pollutants from these activities to the Maximum Extent Practicable (MEP) for urban runoff and meeting the Best Available Technology Economically achievable (BAT) and Best Conventional Pollutant Control Technology (BCT) standards for construction storm water. Regulations and permits have been implemented at the federal, State, and local level to form a comprehensive regulatory framework to serve and protect the quality of the nation's surface water resources.

In addition to reducing pollution with the regulations described above, the CWA also seeks to maintain the integrity of clean waters of the United States – in other words, to keep clean waters clean and to prevent undue degradation of others. As part of the CWA, the Federal Anti-Degradation Policy [40 Code of Federal Regulations (CFR) Section 131.12] States that each State "shall develop and adopt a Statewide anti-degradation policy and identify the methods for implementing such policy…" [40 CFR Section 131.12(a)]. Three levels of protection are defined by the federal regulations:

1. Existing uses must be protected in all of the Nation's receiving waters, prohibiting any degradation that would compromise those existing uses;
2. Where existing uses are better than those needed to support propagation of aquatic wildlife and water recreation, those uses shall be maintained, unless the State finds that degradation is "…necessary to accommodate important economic or social development" [40 CFR Section 131.12(a)(2)]. Degradation, however, is not allowed to fall below the existing use of the receiving water; and
3. States must prohibit the degradation of Outstanding National Resource Waters, such as waters of national and State parks, wildlife refuges, and waters of exceptional recreation or ecological significance.

Federal Anti-Degradation Policy

The Federal Anti-Degradation Policy (40 CFR 131.12) requires States to develop Statewide anti-degradation policies and identify methods for implementing them. Pursuant to the CFR, State anti-degradation policies and implementation methods shall, at a minimum, protect and maintain (1) existing in-stream water uses; (2) existing water quality, where the quality of the waters exceeds levels necessary to support existing beneficial uses, unless the State finds that allowing lower water quality is necessary to accommodate economic and social development in the area; and (3) water quality in waters considered an outstanding national resource.

Porter-Cologne Water Quality Act

In the State of California, the State Water Resources Control Board (SWRCB) and local Regional Water Quality Control Boards (RWQCBs) have assumed the responsibility of implementing the United States Environmental Protection Agency's (USEPA) NPDES Program and other programs under the CWA such as the Impaired Waters Program and the Anti-Degradation Policy. The primary quality control law in California is the Porter-Cologne Water Quality Act (Water Code Sections 13000 et seq.). Under Porter-Cologne, the SWRCB issues joint federal NPDES Storm Water permits and State Waste Discharge Requirements (WDRs) to operators of municipal separate storm sewer systems (MS4s), industrial facilities, and construction sites to obtain coverage for the storm water discharges from these operations.

[3] CWA Section 402(p).

California Anti-Degradation Policy

The California Anti-Degradation Policy, otherwise known as the Statement of Policy with Respect to Maintaining High Quality Water in California was adopted by the SWRCB (State Board Resolution No. 68-16) in 1968. Unlike the Federal Anti-degradation, Policy, the California Anti-Degradation Policy applies to all waters of the State, not just surface waters. The policy States that whenever the existing quality of a water body is better than the quality established in individual Basin Plans, such high quality shall be maintained and discharges to that water body shall not unreasonably affect present or anticipated beneficial use of such water resource.

California Toxic Rule

In 2000, the EPA promulgated the California Toxic Rule, which establishes water quality criteria for certain toxic substances to be applied to waters in the State. The USEPA promulgated this rule based on the EPA's determination that the numeric criteria are necessary in the State to protect human health and the environment. The California Toxic Rule establishes acute (i.e., short-term) and chronic (i.e., long-term) standards for bodies of water such as inland surface waters and enclosed bays and estuaries that are designated by the Los Angeles Regional Water Quality Control Board (LARWQCB) as having beneficial uses protective of aquatic life or human health.

Board Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties

As required by the California Water Code, the LARWQCB has adopted a plan entitled “Water Quality Control Plan, Los Angeles Region: Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties” (Basin Plan). Specifically, the Basin Plan designates beneficial uses for surface and groundwaters, sets narrative and numerical objectives that must be attained or maintained to protect the designated beneficial uses and conform to the State's anti-degradation policy, and describes implementation programs to protect all waters in the Los Angeles Region. In addition, the Basin Plan incorporates (by reference) all applicable State and Regional Board plans and policies and other pertinent water quality policies and regulations. Those of other agencies are referenced in appropriate sections throughout the Basin Plan.

NPDES Permit Program

The NPDES permit program was first established under authority of the CWA to control the discharge of pollutants from any point source into the waters of the United States. As indicated above, in California, the NPDES stormwater permitting program is administered by the SWRCB through its nine RWQCBs.

The General Permit for Construction Activities

SWRCB Order No. 2022-0057-DWQ known as “General Permit” was adopted on September 8, 2022, and became effective on September 1, 2023. This NPDES permit establishes a risk-based approach to stormwater control requirements for construction Projects by identifying three Project risk levels. The main objectives of the General Permit are to:

1. Reduce erosion
2. Minimize or eliminate sediment in stormwater discharges
3. Prevent materials used at a construction site from contacting stormwater
4. Implement a sampling and analysis program

5. Eliminate unauthorized non-stormwater discharges from construction sites
6. Implement appropriate measures to reduce potential impacts on waterways both during and after construction of Projects
7. Establish maintenance commitments on post-construction pollution control measures
8. Incorporates applicable Total Maximum Daily Loads (TMDL's) and modifies inspection oversight responsibilities

California mandates requirements for all construction activities disturbing more than one acre of land to develop and implement Stormwater Pollution Prevention Plans (SWPPP). The SWPPP documents the selection and implementation of BMPs for a specific construction Project, charging Owners with stormwater quality management responsibilities. A construction site subject to the General Permit must prepare and implement a SWPPP that meets the requirements of the General Permit.

As part of the Project, preparation, and implementation of a SWPPP will be required. In addition, the Project will be required to obtain a Waste Discharger Identification Number (WDID) through the State's Storm Water Multiple Application and Report Tracking System (S.M.A.R.T.S.).

Los Angeles County Municipal Storm Water System (MS4) Permit

As described previously, USEPA regulations require that MS4 permittees implement a program to monitor and control pollutants being discharged to the municipal system from both industrial and commercial Projects that contribute a substantial pollutant load to the MS4.

On December 13, 2001, the California Regional Water Quality Control Board, Los Angeles Region (LARWQCB) adopted Order No. 01-182 under the CWA and the Porter-Cologne Act. This Order is the NPDES Permit or MS4 permit for municipal stormwater and urban runoff discharges within Los Angeles County. The requirements of this Order (the "Permit") cover 84 cities and most of the unincorporated areas of Los Angeles County. Under the Permit, the Los Angeles County Flood Control District (LACFCD) is designated as the Principal Permittee. The Permittees are the 84 Los Angeles County cities (including the City of Monterey Park) and unincorporated areas within Los Angeles County. Collectively, these are the "Co-Permittees". The Principal Permittee helps to facilitate activities necessary to comply with the requirements outlined in the Permit but is not responsible for ensuring compliance of any of the Permittees.

Since adoption of Order No. 01-182, the California Regional Water Quality Control Board, Los Angeles Region (LARWQCB) has adopted Order No. R4-2021-0105, as amended by State Water Board Order WQ 2020-0038 NPDES Permit No. CAS004004 on July 23, 2021. This current permit will expire on September 11, 2026.

The City of Monterey Park is a Permittee of the LARWQCB, and is therefore subject to the requirements set forth in Order No. R4-2021-0105, as amended by State Water Board Order WQ 2020-0038, NPDES Permit No. CAS004004.

City of Monterey Park Stormwater Program

The City of Monterey Park supports the policies of the General Permit for Construction Activities and the Los Angeles County NPDES permit through the Low Impact Development Standards Manual which was adopted in February 2014. The Manual provides guidance for developers in complying with the requirements of the NPDES MS4 Permit for stormwater and

non-stormwater discharges from the MS4 within the coastal watersheds of Los Angeles County (CAS004001, Order No. R4-2012-0175). The handbook and ordinances also have specific minimum BMP requirements for all construction activities and require dischargers whose construction Projects disturb one acre or more of soil to prepare a SWPPP and file a Notice of Intent (NOI) with SWRCB. The NOI informs the SWRCB of a particular Project and results in the issuance if a Waste Discharger Identification (WDID) number, which is needed to demonstrate compliance with the General Permit.

The City of Monterey Park implements the requirement to incorporate stormwater BMPs through the City's plan review and approval process. During the review process Projects are reviewed for compliance with the City's General Plan, zoning ordinances, and other applicable local ordinances and codes, including storm water requirements. Plans and specifications are reviewed to ensure that the appropriate BMPs are incorporated to address storm water pollution prevention goals.

Low Impact Development (LID)

LID is a stormwater strategy that is used to mitigate the impacts of runoff and stormwater pollution as close to its source as possible. Urban runoff discharged from municipal storm drain systems is one of the principal causes of water quality impacts in most urban areas. The stormwater may contain pollutants such as trash and debris, bacteria and viruses, oil and grease, sediments, nutrients, metals, and toxic chemicals that can negatively affect the ocean, rivers, plant and animal life, and public health.

LID encompasses a set of site design approaches and BMPs that are designed to address runoff and pollution at the source. These LID practices can effectively remove nutrients, bacteria, and metals, while reducing the volume and intensity of stormwater flows.

Section 6.30 of the City of Monterey Park's Municipal Code includes requirements for stormwater and urban runoff pollution prevention controls. The code states that persons owning or operating facilities subject to best management practices; standard urban stormwater mitigation plans (SUSMP); or low impact development (LID) plan requirements must comply with such requirements including obtaining all necessary permits.

Section 6.30 of the City's code further states that all structural BMPs must be properly operated and maintained in accordance with product specifications and site characteristics to maintain effectiveness in reducing the discharge of pollutants. Documentation of proper structural BMP operation and maintenance activities must be retained on-site at all times, and made available upon request by an authorized enforcement officer.

The Project is subject to compliance with Order No. R4-2021-0105, which became effective on July 23, 2021. The main purpose of this law is to ensure that redevelopment projects mitigate runoff in a manner that captures or treats rainwater at its source, while utilizing natural resources where possible.

In accordance with Order No. R4-2021-0105, stormwater runoff shall be infiltrated, evapotranspired, captured and used, or treated through high removal efficiency BMPs, onsite, through stormwater management techniques that comply with provisions of the LA County LID standards Manual (February 2014). County of Los Angeles guidelines recommend that the corrected infiltration rate be equal to or greater than 0.3 inches per hour.

2.3. GROUNDWATER

California Groundwater Sustainability Act

On Sept. 16, 2014, California Governor Jerry Brown signed into law a three-bill legislative package, known as the Sustainable Groundwater Management Act of 2014 (SGMA). The SGMA provides a framework for sustainable management of groundwater supplies by local authorities, with a limited role for State intervention only if necessary to protect the resource.

The SGMA requires the formation of local groundwater sustainability agencies (GSAs) that must assess conditions in their local water basins and adopt locally-based management plans. The act provides substantial time – 20 years – for GSAs to implement plans and achieve long-term groundwater sustainability. It protects existing surface water and groundwater rights and does not impact current drought response measures.

The California Water Commission (CWC) requires a Statewide prioritization of California's groundwater basins using the following eight criteria:

1. Overlying population;
2. Projected growth of overlying population;
3. Public supply wells;
4. Total wells;
5. Overlying irrigated acreage;
6. Reliance on groundwater as the primary source of water;
7. Impacts on the groundwater; including overdraft, subsidence, saline intrusion, and other water quality degradation; and
8. Any other information determined to be relevant by the Department.

The Project Site is located within the Coastal Plain of Los Angeles - Central Basin Subbasin. GSAs responsible for high-and medium-priority basins must adopt groundwater sustainability plans within five to seven years, depending on whether the basin is in critical overdraft. Agencies may adopt a single plan covering an entire basin or combine a number of plans created by multiple agencies. Preparation of groundwater sustainability plans is exempt from CEQA. Plans must include a physical description of the basin, including groundwater levels, groundwater quality, subsidence, information on groundwater-surface water interaction, data on historical and projected water demands and supplies, monitoring and management provisions, and a description of how the plan will affect other plans, including City and County general plans. Plans will be evaluated every five years.

Board Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties

As required by the California Water Code, the LARWQCB has adopted the Basin Plan. Specifically, the Basin Plan designates beneficial uses for surface and groundwaters, sets narrative and numerical objectives that must be attained or maintained to protect the designated beneficial uses and conform to the State's anti-degradation policy, and describes implementation programs to protect all waters in the Los Angeles Region. In addition, the Basin Plan incorporates (by reference) all applicable State and regional board plans and policies and other pertinent water quality policies and regulations. Those of other agencies are referenced in appropriate sections throughout the Basin Plan.

The Basin Plan is a resource for the LARWQCB and others who use water and/or discharge wastewater in the Los Angeles Region. Other agencies and organizations involved in environmental permitting and resource management activities also use the Basin Plan.

Finally, the Basin Plan provides valuable information to the public about local water quality issues.

Safe Drinking Water Act (SDWA)

The federal Safe Drinking Water Act (SDWA), established in 1974, sets drinking water standards throughout the country and is administered by the USEPA. The drinking water standards established in the SDWA, as set forth in the CFR, are referred to as the National Primary Drinking Water Regulations (Primary Standards, Title 40, CFR Part 141) and the National Secondary Drinking Water Regulations (Second Standards, 40 CFR Part 143). California passed its own SDWA in 1986 that authorizes the State's Department of Health Services (DHS) to protect the public from contaminants in drinking water by establishing maximum contaminants levels, as set forth in the California Code of Regulations (CCR), Title 22, Division 4, Chapter 15, that are at least as stringent as those developed by the USEPA, as required by the federal SDWA.

3. ENVIRONMENTAL SETTING

3.1. SURFACE WATER HYDROLOGY

3.1.1. Regional

The Project is located within the Los Angeles River Watershed in the County of Los Angeles which covers approximately 533,860 acres. Major tributaries to the river in the San Fernando Valley are the Pacoima Wash, Tujunga Wash (both drain portions of the Angeles National Forest in the San Gabriel Mountains), Burbank Western Channel and Verdugo Wash (both drain the Verdugo Mountains). The Los Angeles River flows 55 miles from Canoga Park through the San Fernando Valley, Downtown Los Angeles, and the Gateway Cities to its mouth in Long Beach, where it flows into San Pedro Bay.

All runoff from the Project drains to the Los Angeles River through City and LACFCD storm drain lines.

3.1.2. Local

Stormwater from the Project site generally drains via surface flow, toward the adjacent roadways. The property is not bound by any natural bodies of water and is not subject to flooding. Drainage routes to Saturn Street and conveys via curb and gutter southwesterly to existing City owned public catch basins directly in front of the existing commercial building (storm drain as-built missing from City records) and public catch basins near the site's southerly drive entry.

Please refer to **Appendix A** for the existing condition and proposed condition hydrology maps.

3.1.3. On Site

The existing condition hydrology for the Project Site has been delineated into one Drainage Area (see **Appendix A** for exhibits). Existing drainage patterns for the Project is described as below:

The onsite drainage area flows southerly to Saturn Street. There is an existing 24" City owned storm drain in Orange Avenue flowing south to Saturn Street. At Saturn Street, the 24" storm drain routes southwest along the property frontage for about 700 feet to the midpoint of the commercial building until it upsizes to 39". The 39" storm drain then continues southwesterly to the property's southerly drive entry and upsizes again to 42". The 42" storm drain then continues southwesterly in Saturn Street to Atlas Avenue before routing due east through a nearby office park in an easement to Riggin Street.

Under the existing conditions, the entire Project Site area is fully built-out with high impervious conditions (approximately 66%) and the predominant land use being surface parking lot, portions of hillside, and commercial buildings. The topography of the site is relatively flat, draining via primarily surface flow toward the adjacent roadway. See **Appendix A** for the depiction of the drainage area and discharge points for existing and proposed conditions. There are no known drainage issues associated with the Project Site.

Table 2 below provides 10-year, 25-year, and 50-year storm frequency analysis for the Project Site's existing conditions. These storm frequencies are required by Los Angeles County Public Works (10-year), Hydrology Manual for Urban Flood level of protection (25-year), and the State CEQA Guidelines requirements (50-year). Output calculations are provided in **Appendix B**.

Table 2 Existing Condition 10-year, 25-year, and 50-year Storm Event Hydrology

Existing Conditions 10-year Storm Frequency				
Drainage Sub-Area	Acreage	Time of Concentration (min)	% Imperviousness	Q_{10} (cfs)
A	16.0	12.0	66%	23.2
Existing Conditions 25-year Storm Frequency				
Drainage Sub-Area	Acreage	Time of Concentration (min)	% Imperviousness	Q_{25} (cfs)
A	16.0	10.0	66%	31.5
Existing Conditions 50-year Storm Frequency				
Drainage Sub-Area	Acreage	Time of Concentration (min)	% Imperviousness	Q_{50} (cfs)
A	16.0	10.0	66%	36.1
Notes: See **Appendix A** for the existing hydrology exhibit and **Appendix B** for existing hydrology calculations.				

3.1.4. FEMA

The Project is within Map Number 06037C1665F, dated September 26, 2008, on Federal Emergency Management Agency's (FEMA's) Flood Insurance Rate Map (FIRM). Based on the FIRM, the Project is within Zone X, which depicts areas determined to be outside of the 0.2% (500-year) annual chance floodplain and no coordination or permitting with FEMA is required.

3.2. SURFACE WATER QUALITY

3.2.1. Watershed Setting

As described previously, the Project is located within the Los Angeles River Watershed. Approximately 324 square miles of the watershed are covered by forest or open space land including the area near the headwaters which originate in the Santa Monica, Santa Susana, and San Gabriel Mountains. The rest of the watershed is highly developed.

The Los Angeles River and other selected water bodies in its watershed, including the Tujunga Wash, Burbank Western Channel, Verdugo Wash, and Rio Hondo are impaired by pollutants (i.e., trash, metals, bacteria, nutrients) mainly because of the watershed's large, dense population and the amount of impervious ground surface that prevents large quantities of runoff from infiltrating into the soils.

3.2.1.1. Beneficial Uses in Los Angeles River Watersheds

The Los Angeles River Watershed consists of inland surface water uses from the Los Angeles River Estuary, Reach 1, Reach 2, Reach 3, Reach 4, Reach 5, and Reach 6. The existing and potential beneficial uses for the waters within the Los Angeles River Watershed where inland

surface water flows from the southeast portion of the Project and ultimately discharge to the San Pedro Bay are described below.

Table 3 Beneficial Uses of Inland Surface Waters in the Los Angeles River Watershed

MUN* - Municipal and Domestic Supply	**WARM*** - Warm Freshwater Habitat
COMM - Commercial and Sport Fishing	**MAR** - Marine Habitat
SPWN - Spawning, Reproduction, and/or Early Development	**RARE** - Rare, Threatened, or Endangered Species
MIGR - Migration or Aquatic Organisms	**WILD** - Wildlife Habitat
SPWN - Spawning, Reproduction, and/or Early Development	**LREC-1** - Limited Water Contact Recreation
WET – Wetland Habitat	**REC1** - Water Contact Recreation
SHELL - Shellfish Harvesting	**REC2** - Non-contact Water Recreation
IND - Industrial Service Supply	**PROC** - Industrial Process Supply
GWR – Groundwater Recharge

In addition to the beneficial uses of inland surface waters the Los Angeles River Watershed also includes beneficial coastal features within the Los Angeles River Estuary. Described below are the beneficial uses of these coastal waterbodies that receive storm drain discharges.

Table 4 Beneficial Uses of Coastal Features in the Los Angeles River Watershed

NAV - Navigation	**COMM** - Commercial and Sport Fishing
EST - Estuarine Habitat	**MAR** - Marine Habitat
WILD - Wildlife Habitat	**MIGR** - Migration or Aquatic Organisms

3.2.1.2. Impairments and TMDL's in the Los Angeles River Watershed

CWA 303(d) List of Water Quality Limited Segments

Under Section 303(d) of the CWA, States are required to identify water bodies that do not meet their water quality standards. Biennially, the LARWQCB prepares a list of impaired waterbodies in the region, referred to as the 303(d) list. The 303(d) list outlines the impaired waterbody and the specific pollutant(s) for which it is impaired. All waterbodies on the 303(d) list are subject to the development of a TMDL.

Storm water runoff from the Project discharges to Rio Hondo, Los Angeles River Reach 2, Los Angeles River Reach 1, Los Angeles River Estuary, and then eventually to the San Pedro Bay. According to the 2018 303(d) list of Limited Water Quality Segments published by the SWRCB, the Rio Hondo, Los Angeles River Reach 2, Los Angeles River Reach 1, Los Angeles River Estuary, and San Pedro Bay are listed as impaired by the constituents in **Table 5** below.

Table 5 List of 303(d) Impairments

Water Body	Listed Pollutants with TMDL 303(d) Impairment
Rio Hondo Reach 2	Coliform Bacteria , Cyanide
Rio Hondo Reach 1	pH , Toxicity , Lead , Trash , Copper , Zinc , Indicator Bacteria
Los Angeles River Reach 2	Trash , Nutrients (Algae) , Ammonia , Indicator Bacteria , Oil , Copper , Lead
Los Angeles River Reach 1	Copper, Dissolved , Cadmium , Ammonia , Zinc, Dissolved , pH , Cyanide , Nutrients (Algae) , Indicator Bacteria , Trash , Lead
Los Angeles River Estuary	Chlordane, PCBs (Polychlorinated biphenyls) (sediment), Trash, DDT (sediment), Toxicity
San Pedro Bay	Total DDT (sum of 4,4'- and 2,4'- isomers of DDT, DDE, and DDD), PCBs (Polychlorinated biphenyls), Toxicity, Chlordane
Source: 2018 Integrated Report (Clean Water Act Section 303(d) List / 305(b) Report) – Statewide, found here: https://gispublic.waterboards.ca.gov/portal/apps/webappviewer/index.html?id=e2def63ccef54eedbee4ad726ab1552c	

Total Maximum Daily Loads (TMDLs)

Los Angeles River Watershed

Once a water body has been listed as impaired on the 303(d) list, a TMDL for the constituent of concern (pollutant) must be developed for that water body. A TMDL is an estimate of the daily load of pollutants that a water body may receive from point sources, non-point sources, and natural background conditions (including an appropriate margin of safety), without exceeding its water quality standard. Those facilities and activities that are discharging into the water body, collectively, must not exceed the TMDL. In general terms, municipal, small MS4, and other dischargers within each watershed are collectively responsible for meeting the required reductions and other TMDL requirements by the assigned deadline.

The LARWQCB has adopted wet-weather TMDLs in the Los Angeles River. These TMDL pollutants include cadmium, copper, lead, and zinc.

3.2.2. On Site

There are no existing water quality BMPs associated with the existing conditions. There are no drainage issues associated with the Project site. Anticipated pollutants consistent with parking lots, building areas and landscaping include total suspended solids (TSS), oil/grease, heavy metals, nutrients, pesticides, and trash. See **Appendix A** for existing drainage areas and discharge points.

3.3. GROUNDWATER

3.3.1. Regional

The City of Monterey Park overlies the Los Angeles Coastal Plain Groundwater Basin (Basin), which is identified by SGMA as a very low priority basin. The Basin consists of four major subbasins: Hollywood, Santa Monica, Central and West Coast. Replenishment of the Basins occurs primarily through imported water from the Colorado River, Sacramento-San Joaquin River Delta, and the Eastern Sierras, spreading basins, recycled water, and local runoff. Injection wells are also used to pump fresh water along specific seawater barriers to prevent the intrusion of salt water. Groundwater within the Basin generally flows in a south and southwesterly direction.

3.3.2. Local

The Project resides specifically within the Central Basin, which is located in the eastern part of the Los Angeles Coastal Plain Groundwater Basin.

Central Basin

The Central Basin (CB) covers approximately 270 square miles and is bounded on the north by the Hollywood Basin and the Elysian, Repetto, Merced, and Puente hills, to the east by the Los Angeles County/Orange County line, and to the south and west by the Newport-Inglewood Uplift (NIU). The California Department of Water Resources (1961) divided the Central Basin into three sections: the Los Angeles Forebay, the Montebello Forebay, and the Whittier Area. The two forebays represent areas of unconfined aquifers (water table aquifers) that allow percolation of surface water down into the deeper aquifers to replenish the basins. The Whittier Area is a confined aquifer system that receives relatively minimal recharge from surface water. It is replenished from the up-gradient forebays and from adjacent groundwater basins.

3.3.3. On Site

Leighton Consulting, INC has prepared a planning-level preliminary geotechnical investigation (March 27, 2024) for the Project Site. The information below is in regard to the document.

Field exploration was performed on December 5, 2023, and consisted of drilling, sampling, and logging of five (5) hollow-stem auger borings (designated LB-1 through LB-5). Borings were excavated to depths ranging from approximately 10 feet to 36.5 feet below existing ground surface (bgs) within the footprint of the proposed building as well as the preferred substation location.

Prior to its current development, the site was previously rough-graded under the geotechnical observation and testing of Leighton and Associates, Inc. (1978). The fill material is locally derived from canyon alluvium and weathered bedrock of the Fernando Formation. These materials are characterized as Silty Sand (SM) with traces of gravel, to Sandy Clayey Silt (CL-ML) to Sandy Clay (CL) with fine to coarse sand to poorly graded Sand with Clay and gravels (SP-CL). Maximum density (Leighton, 1978) and optimum moisture for the fill placed during 1978 indicate optimum moisture content ranging from 8 to 10% and maximum dry density ranging from 125 to 129 pounds per cubic feet (pcf).

Groundwater was not encountered during the current exploration drilled to exploration depths of 36.5 feet bgs. Groundwater is not expected to pose a constraint to construction for the Project as currently planned.

In-situ percolation testing was not performed at the site. However due to shallow bedrock and clayey low permeability engineered fill below the site, infiltration is not considered geotechnically feasible and is therefore not recommended.

Review of both the Earthquake Zones of Required Investigation El Monte Quadrangle, California Geological Survey Zone Map (CGS, 2014) indicate the site is not within an area potentially susceptible to liquefaction (Figure 5, Seismic Hazard Map). With groundwater at a depth greater than 50 feet below grade and relatively medium dense to dense engineered fill overlying hard bedrock below the site, the potential for liquefaction and related lateral spreading effects on the site is considered very low.

4. SIGNIFICANCE THRESHOLD

4.1. SURFACE WATER HYDROLOGY

With respect to the surface water hydrology, the CEQA Guidelines inquire whether the Project would:

- Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:
  - Result in substantial erosion or siltation on- or off-site;
  - Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;
  - Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or
  - Impede or redirect flood flows
  - In instances of flood hazard, tsunami, or seiche zones, risk release of pollutants due to Project inundation

4.2. SURFACE WATER QUALITY

With respect to surface water quality, the CEQA Guidelines (Appendix G) inquire whether the Project would:

- Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?
- In instances of flood hazard, tsunami, or seiche zones, risk release of pollutants due to Project inundation?
- Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

The CEQA Guidelines include the following relevant definitions:

"Pollution" means an alteration of the quality of the waters of the State to a degree which unreasonably affects either of the following: 1) the waters for beneficial uses or 2) facilities which serve these beneficial uses. "Pollution" may include "Contamination".

"Contamination" means an impairment of the quality of the waters of the State by waste to a degree, which creates a hazard to the public health through poisoning or though the spread of disease. "Contamination" includes any equivalent effect resulting from the disposal of waste, whether or not waters of the State are affected.

"Nuisance" means anything which meets all of the following requirements: 1) is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property; 2) affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal; and 3) occurs during, or as a result of, the treatment or disposal of wastes.

4.3. GROUNDWATER

With respect to groundwater quality, the CEQA Guidelines (Appendix G) inquire whether the Project would:

- Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?
- Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin
- Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

5. METHODOLOGY

5.1. SURFACE WATER HYDROLOGY

The Project site is located within Los Angeles County Flood Control District (LACFD) jurisdiction therefore, the City of Monterey Park has adopted the County Department of Public Works (LACDPW) Hydrology Manual as its basis of design for storm drainage facilities. The LACDPW Hydrology Manual requires Projects to have drainage facilities that meet the Urban Flood level of protection. The Urban Flood is runoff from a 25-year frequency design storm falling on a saturated watershed. A 25-year frequency design storm has a probability of 1/25, or 4-percent, of being equaled or exceeded in any year. To provide a more conservative analysis, this report analyzed a larger storm event threshold, i.e., the 50-year frequency design storm event. However, the City of Monterey Park's CEQA Threshold Guide, establishes the 50-year frequency hydrology as a result of development. This is in part because the City of Monterey Park uses the 50-year storm event to plan the existing and planned storm water drainage systems. Consequently, the use of the 50-year frequency design storm event in this analysis is in-line with the CEQA threshold to determine if the Project exceeds the capacity of existing or planned storm water drainage systems or provides additional sources of polluted runoff.

The Modified Rational Method was used to calculate storm water runoff. The "peak" (maximum value) runoff for a drainage area is calculated using the formula, **Q=CIA**
Where,

Q = Volumetric flow rate (cfs)
C = Runoff coefficient (dimensionless)
I = Rainfall Intensity at a given point in time (in/hr)
A = Basin area (acres)

The Modified Rational Method assumes that a steady, uniform rainfall rate will produce maximum runoff when all parts of the basin area are contributing to outflow. This occurs when the storm event lasts longer than the time of concentration. The time of concentration (Tc) is the time it takes for rain in the most hydrologically remote part of the basin area to reach the outlet. The method assumes that the runoff coefficient (C) remains constant during a storm. The runoff coefficient is a function of both the soil characteristics and the percentage of impervious surfaces in the drainage area.

Calculations were performed utilizing the hydrologic calculator (HydroCalc) developed by the Los Angeles County Department of Public Works. HydroCalc completes the full Modified Rational Method (MODRAT) calculation process and produces the peak stormwater runoff flow rates and volumes for single subareas. The existing and proposed hydrology exhibits are provided in **Appendix A**. Detailed calculations for the existing and proposed conditions, based on the HydroCalc tool, are provided in **Appendix B**.

5.2. SURFACE WATER QUALITY

5.2.1. Construction

Prior to the issuance of grading permits, the applicant is required by The City to provide of a Notice of Intent (NOI) and WDID Number issued from the SWRCB in accordance with the requirements of the General Permit to ensure the potential for soil erosion and construction impacts are minimized. In accordance with the updated General Permit (Order No 2022-0057-

DWQ), the following Permit Registration Documents (PRD's) are required to be submitted to the SWRCB prior to commencement of construction activities:

- Notice of Intent (NOI);
- Risk Assessment (Standard or Site-Specific);
- Particle Size Analysis (if site-specific risk assessment is performed);
- Site Map;
- SWPPP;
- Annual Fee & Certification.

The updated General Permit uses a risk-based approach for controlling erosion and sediment discharges from construction sites, since the rates of erosion and sedimentation can vary from site to site depending on factors such as duration of construction activities, climate, topography, soil condition, and proximity to receiving water bodies. The updated General Permit identifies three levels of risk with differing requirements, designated as Risk Levels 1, 2, and 3, with Risk Level 1 having the fewest permit requirements and Risk Level 3 having the most-stringent requirements.

The Risk Assessment incorporates two risk factors for a Project site: sediment risk (general amount of sediment potentially discharged from the site) and receiving water risk (the risk sediment discharges can pose to receiving waters). Based on the Risk Level a Project falls under, different sets of regulatory requirements are applied to the site. The main difference between Risk Levels 1, 2, and 3 are the numeric effluent standards. In Risk Level 1, there are no numeric effluent standard requirements, as it is considered a Low sediment risk and Low receiving water risk. Instead, narrative effluent limits are prescribed. In Risk Level 2, Numeric Action Levels (NALs) of pH between 6.5-8.5 and turbidity below 250 NTU are prescribed in addition to the narrative effluent limitations found in Risk Level 1 requirements. Should the NAL be exceeded during a storm event, the discharger is required to immediately determine the source associated with the exceedance and to implement corrective actions if necessary to mitigate the exceedance. Risk Level 3 dischargers must comply with Risk Level 2 requirements for NALs in addition to more rigorous monitoring requirements such as receiving water monitoring and, in some cases, bioassessment, should NALs be exceeded.

5.2.2. Operation

The Project must comply with the requirements of the City of Monterey Park. The LID requirements, approved by the LARWQCB, call for the treatment of the peak mitigation flow rate or volume of runoff produced either by a 0.75" 24-hr rainfall event or the 85th percentile rainfall event, whichever is greater. Under section 3.2.2 of the LID Manual, this post construction stormwater runoff from the new development shall be infiltrated, evapotranspired, captured and used, and/or treated through high efficiency BMPs onsite. The rainfall depth of the 85th percentile rainfall for the Project Site's location is 0.9 inches; therefore, the 85th percentile rainfall event governs.

The LID Manual establishes an order of priority, as specified below. Each type of BMP shall be implemented to the maximum extent feasible when determining the appropriate BMPs for a Project.

1. Infiltration Systems
2. Stormwater Capture and Use
3. High Efficiency Biofiltration/Bioretention Systems
4. Combination of Any of the Above

Feasibility screening as described in the LID Manual is to be applied to determine which BMP is best suited for a proposed development Project.

5.3. GROUNDWATER

This report discusses the impact of the Project as it relates to the underlying groundwater conditions of the Central Basin of the Los Angeles Coastal Groundwater Basin. The significance of the Project as it relates to the condition of the underlying groundwater table included a review of the following existing considerations:

- Identification of the Central Basin of the Los Angeles Coastal Groundwater Basin as the underlying groundwater basin, and description of the level, quality, direction of flow, and existing uses for the groundwater
- Description of the location, existing uses, production capacity, quality, and other pertinent data for spreading grounds and potable water wells in the vicinity (typically within a one-mile radius) and

The analysis of the proposed Project impacts on groundwater conditions includes a review of the following proposed considerations:

- Description of the rate, duration, location and quantity of extraction, dewatering, spreading, injection or other activities;
- The Projected reduction in groundwater resources and any existing wells in the vicinity (typically within one-mile radius); and
- The projected change in local or regional groundwater flow patterns

Project construction and operation would comply with local, State, and federal regulations, including the LARWQCB, Construction General Permit, Basin Plan, and the Section 6.30 of the City's Municipal Code. Commonly practiced BMPs, as required by these regulations, would be implemented to control construction site runoff and reduce the discharge of pollutants to storm drain systems from stormwater and other nonpoint-source runoff. As part of compliance with permit requirements during ground-disturbing or construction activities, implementation of water quality control measures and BMPs would ensure that water quality standards would be achieved, including the water quality objectives that protect designated beneficial uses of surface and groundwater, as shall be defined in the Water Quality Control Plan for the Project.

Construction runoff would also have to comply with the appropriate water quality objectives for the region. The permits listed above require stormwater discharges not to contain pollutants that cause or contribute to an exceedance of any applicable water quality objectives or water quality standards, including designated beneficial uses. Therefore, the Project would not obstruct implementation of a water quality control plan.

In addition, short-term groundwater quality impacts could potentially occur during construction of the Project as a result of soil or shallow groundwater being exposed to construction activities, materials, wastes, and spilled materials. These potential impacts are qualitatively assessed.

Thus, for the reasons specified above, construction and operation of the Project would not conflict with or obstruct implementation of a CEQA environmental checklist implementation of a water quality control plan or sustainable groundwater management plan. Therefore, this impact would be less than significant.

6. PROJECT IMPACT ANALYSIS

6.1. CONSTRUCTION

6.1.1. Surface Water Hydrology and Quality

Implementation of the Project would result in construction activities that includes demolition of the existing parking lots and buildings on-site and excavation of existing soils.

Construction activities have the potential to temporarily alter the existing drainage patterns of the Project site and also increase the permeability of a site based on increased pervious surface coverage during construction. Exposed pervious surfaces also have the potential for erosion, scour and increased sediment and associated pollutants discharging from the site during construction activities. The main pollutant of concern during construction is typically sediment and soil particles that discharge off-site due to wind, rain, and construction patterns.

Construction Best Management Practices (BMPs)

In accordance with the existing and updated General Permit, a construction SWPPP must be prepared and implemented for the Project site, and revised as necessary, as administrative or physical conditions change. The SWPPP must be made available for review upon request, shall describe construction BMPs that address pollutant source reduction, and provide measures/controls necessary to mitigate potential pollutant sources. These measures/controls include, but are not limited to: erosion controls, sediment controls, tracking controls, non-storm water management, materials & waste management, and good housekeeping practices including the following:

- Erosion control BMPs, such as hydraulic mulch, soil binders, and geotextiles and mats, protect the soil surface by covering and/or binding the soil particles. Temporary earth dikes or drainage swales may also be employed to divert runoff away from exposed areas and into more suitable locations. When implemented correctly, erosion controls will effectively reduce the sediment loads entrained in storm water runoff from construction sites.
- Sediment controls are designed to intercept and filter out soil particles that have been detached and transported by the force of water. All storm drain inlets on the Project site or within the Project vicinity (i.e., along streets immediately adjacent to the Project boundary) should be adequately protected with an impoundment (i.e., gravel bags) around the inlet and equipped with a sediment filter (i.e., fiber roll). Bags should also be placed around areas of soil disturbing activities, such as grading or clearing.
- Stabilize all construction entrance/exit points to reduce the tracking of sediments onto adjacent streets. Wind erosion controls should be employed in conjunction with tracking controls.
- Non-storm water management BMPs prohibit the discharge of materials other than storm water, as well as reduce the potential for pollutants from discharging at their source. Examples include avoiding paving and grinding operations during the rainy season (i.e., October 1 through April 30 each year) where feasible, and performing any vehicle equipment cleaning, fueling and maintenance in designated areas that are adequately protected and contained.

- Waste management consists of implementing procedural and structural BMPs for collecting, handling, storing, and disposing of wastes generated by a construction Project to prevent the release of waste materials into storm water discharges.

Prior to commencement of construction activities, the General Permit requires the Project SWPPP to be prepared in accordance with the site-specific sediment risk analyses based on the grading plans, with erosion and sediment controls proposed for each phase of construction for the Project. The phases of construction will define the maximum amount of soil disturbed, the appropriately sized sediment basins and other control measures to accommodate all active soil disturbance areas and the appropriate monitoring and sampling plans. Major phases of the construction for the Project are described below.

Mass & Rough Grading

During mass and/or rough grading, a substantial amount of soil disturbing activities or earthwork will occur. As a consequence, soil loss potential will be at its highest risk level to exceed NALs/NELs specified in the General Permit. Therefore, an effective combination of erosion and sediment controls will be implemented during this phase of construction.

This region requires the use of sediment basins or sediment traps to control the amount of sediment discharged off-site during the rainy season. Sediment basins or sediment traps generally act as primary sediment control facilities at downstream locations that provide final polish of runoff prior to discharging off-site. Therefore, they are a major element in a Project's erosion and sediment control design.

Utility and Road Installation

In addition to the erosion and sediment control BMP requirements for the grading phase, the utility and road installation phase will introduce materials to the Project site that may cause or contribute to exceedances of NALs specified in the General Permit. Materials include, but are not limited to hydrated lime, concrete, mortar, Portland cement treated base, and fly ash. For this reason, pH levels shall be controlled at this stage through non-storm water management and waste and materials management BMPs.

Vertical Construction

Once utilities and roads are in place, sediment controls (such as sediment/desilting basins) found in the rough grade phase may no longer be applicable as previously designed, due to the installment of curb and gutter, catch basins, and storm drain infrastructure to convey runoff off-site per the post-construction condition. BMPs at this stage will thus be more focused on on-site sediment control BMPs and at discharge points (i.e., catch basin inlet protection). During vertical construction, a substantial amount of construction materials will be delivered to the site, and wastes generated from the site have the potential to negatively impact pH levels. Therefore, non-storm water management and waste and materials management BMPs shall be employed regularly.

Final Stabilization and Landscaping

During final stabilization and landscaping, minimal construction will be taking place and the majority of the Project site will be stabilized. The majority of activities will involve planting and

landscaping lots and common areas. Sediment control at discharge locations and stockpile management will be of primary concern. Good housekeeping practices will continue in this phase of construction.

Through compliance with the General Permit including the preparation of a SWPPP, implementation of BMPs, and compliance with applicable City grading regulations, construction of the Project would not cause flooding, substantially increase or decrease the amount of surface water in a water body, or result in a permanent, adverse change to flow direction. The Project would also not result in discharges that would cause: (1) pollution that would impact the quality of waters of the State to a degree which negatively impacts beneficial uses of the waters; (2) contamination of the quality of the waters of the State by waste to a degree which creates a hazard to the public health through poisoning or through the spread of diseases; or (3) nuisance that would be injurious to health, affect an entire community or neighborhood or any considerable number of persons, and occurs during or as a result of the treatment or disposal of wastes.

At this stage in the proposed Project, a detailed, site-specific Risk Assessment cannot be performed. However, based on the Project's location and known site conditions, a preliminary erosion calculation can be performed. The Project is located in a low-risk watershed and at this stage of the Project the construction schedule is not identified. See **Table 6** below highlighting the various requirements for Risk Levels 1-3 due to the unknown Risk Factor of the Project at this stage.

Table 6 Risk Level Requirements

	Visual Inspection					Sample Collection	
Risk Level	Quarterly Non-Storm Water Discharge	Baseline	REAP	Daily Storm BMP	Post Storm	Storm Water Discharge	Receiving Water
1	X	X		X	X		
2	X	X	X	X	X	X	
3	X	X	X	X	X	X	X [1]

Notes
[1] When numeric effluent level (NEL) exceeded.
REAP (Rain Event Action Plan)

Through compliance with applicable regulatory requirements, including compliance with an approved SWPPP and conformance with the Project's assessed Risk Level, construction of the Project would not result in discharges that would cause surface water hydrology or water quality regulatory impacts within the Los Angeles River Watershed. Therefore, impacts to surface water hydrology and water quality during construction would be less than significant.

6.1.2. Groundwater Hydrology

Construction of the Project is not anticipated to impact any water supply wells. No water supply wells are located at or within one thousand feet of the Project and the Project will not include the construction of any water supply wells. In addition, recharge of groundwater will not be impacted. Water for construction would come from the City's Water Department and would not affect the groundwater hydrology. Dewatering is not anticipated for this Project.

6.1.3. Groundwater Quality

If dewatering were to occur, to protect groundwater quality, the General NPDES Permit No CAC004004 (Order No. R4-2021-0105) covers discharges to surface waters of groundwater from dewatering operations. 40 CFR section 122.48 of the Permit requires that all NPDES permits specify requirements for recording and reporting water quality monitoring results. The Monitoring and Reporting Program establishes monitoring and reporting requirements to implement federal and State requirements. The LARWQCB evaluates the test results to determine if the water can be discharged under an NPDES dewatering permit, and if so, any treatment required to remove pollutants prior to discharge. As mentioned, the Project will acquire a dewatering permit from the LARWQCB and discharges will either go to the sewer (with separate authorization from Los Angeles City Sanitation) or to the storm drain system after water quality testing of the groundwater to ensure the quality of the water is sufficient to discharge to the adjacent storm drain system. All monitoring requirements and other provisions of the Permit will be followed.

During on-site grading and building activities, hazardous materials such as fuels, paints, solvents, and concrete additives could be used and require proper management and containment during construction activities. The presence of such materials provides an opportunity for hazardous materials to be released into groundwater. To protect groundwater resources, the Project will comply with all applicable federal, State and local requirements related to the handling, storage, application and disposal of hazardous waste which will reduce the potential for construction activities of the Project to release contaminants into groundwater that could affect existing contamination, mobilize or increase the level of groundwater contamination, or cause a violation of regulatory water quality standards at an existing production well. Therefore, the Project would not result in a significant increase in groundwater contamination though hazardous materials releases and impacts on groundwater quality during Project construction would be less than significant.

6.2. OPERATION

6.2.1. Surface Water Hydrology

Development of the Project would result in the addition of landscaped areas and building areas throughout the Project Site and would decrease the amount of impervious surfaces from 66 percent to 62 percent. **Table 7** below provides an analysis of the 10-year, 25-year, and 50-year frequency design storm events following construction of the Project. Hydrology exhibits are provided in **Appendix A**. Output calculations are provided in **Appendix B**.

Table 7 Proposed Condition 10-year, 25-year, and 50-year Storm Event Hydrology

10-year Storm Event			
Area	Acreage	% Imperviousness	Q_{10} (cfs)
Total Site	16.0	62%	21.4
25-year Storm Event			
Area	Acreage	% Imperviousness	Q_{25} (cfs)
Total Site	16.0	62%	28.8
50-year Storm Event			
Area	Acreage	% Imperviousness	Q_{50} (cfs)
Total Site	16.0	62%	34.4
Notes: Calculations included in **Appendix B**.			

Table 8 provides a comparison of the existing and proposed peak flows for the 10-year, 25-year, and 50-year storm events.

Table 8 Existing versus Proposed Condition for the 10-year, 25-year, and 50-year Storm Event Hydrology

10-year Storm Event		
Condition	% Imperviousness	Q_{10} (cfs)
Existing Total Site	66%	23.2
Proposed Total Site	62%	21.4
25-year Storm Event		
Condition	% Imperviousness	Q_{25} (cfs)
Existing Total Site	66%	31.5
Proposed Total Site	62%	28.8
50-year Storm Event		
Condition	% Imperviousness	Q_{50} (cfs)
Existing Total Site	66%	36.1
Proposed Total Site	62%	34.4
Notes: Calculations included in **Appendix B**.		

Based on the above, implementation of the Project would decrease the peak flow discharge for the 10-year, 25-year, and 50-year events as compared to the existing condition.

Accordingly, based on the hydrology analysis, the Project would not result in on-site or off-site flooding, impact the capacity of the existing storm drain system or street conveyance system, or worsen an existing condition flood condition. In addition, the Project would not substantially reduce or increase the amount of surface water in the local water body or result in a permanent adverse change in the drainage pattern that would result in an incremental effect on the capacity of the storm existing storm drain system. Therefore, operation of the Project would result in less than significant impact on surface water hydrology.

All storm drain infrastructure onsite connects to the existing City public 24" or 39" storm drain lines in Saturn Street.

6.2.2. Surface Water Quality

Stormwater runoff from the Project has the potential to discharge pollutants into the City and County storm drain systems. Anticipated pollutants and typical source areas include the following:

Table 9 Potential Stormwater Pollutants and Sources

Pollutant	Source
Sediment (coarse and fine)	Parking lots, driveways, building rooftops, landscape areas, roads
Nutrients (dissolved and particulates)	Landscape areas, lawns
Pesticides	Landscape areas, lawns
Pathogens	Landscape areas, lawns, building rooftops, food serving areas
Trash/debris	Parking lots, driveways, roadways, parks
Oil/grease	Parking lots, driveways, roadways, food serving areas
Metals (dissolved and particulate)	Parking lots, driveways, roadways

To meet the local MS4 Permit and LID requirements consistent with the County's LID Ordinance and the LID Development BMP Handbook (February 2014), stormwater management strategies will be implemented throughout the Project Site. As discussed above, a feasibility analysis of BMP strategies has been conducted for the Project Site.

Per the Geotechnical Investigation by Leighton Consulting, Inc. on March 27, 2024, "due to shallow bedrock and clayey low permeability engineered fill below the site, infiltration is not considered geotechnically feasible and is therefore not recommended."

The next BMP strategy on the County list, Capture and Use, would next be evaluated if infiltration were deemed infeasible. Capture and use, commonly referred to as rainwater harvesting, collects and stores stormwater for later use, thereby offsetting potable water demand and reducing pollutant loading to the storm drain system. Therefore, sufficient landscaped area with appropriate water demand is needed for the captured runoff to be directed to. In the County of Los Angeles, the use of collected stormwater is primarily limited to irrigation of landscaped surfaces. Similar to infiltration BMPs, there are several restrictions and site constraints that can limit the use of harvesting and reuse of stormwater, including if

the contemplated use of harvested stormwater would violate existing codes or ordinances, such as for those that overlap with use of reclaimed water or xeriscaping, if the demands of the Project are not supported by the reuse system, and if it conflicts with any other downstream water rights or poses a significant risk to human health or environmental degradation.

The next BMP strategy studied would be the use of a high removal efficiency biofiltration/bioretention BMP. Biofiltration BMPs are landscaped facilities that capture and treat stormwater runoff through a variety of physical and biological treatment processes. These facilities, also called Bioretention Planter Boxes, provide multiple benefits, including pollutant control, peak flow control, and low amounts of volume reduction through infiltration and evapotranspiration.

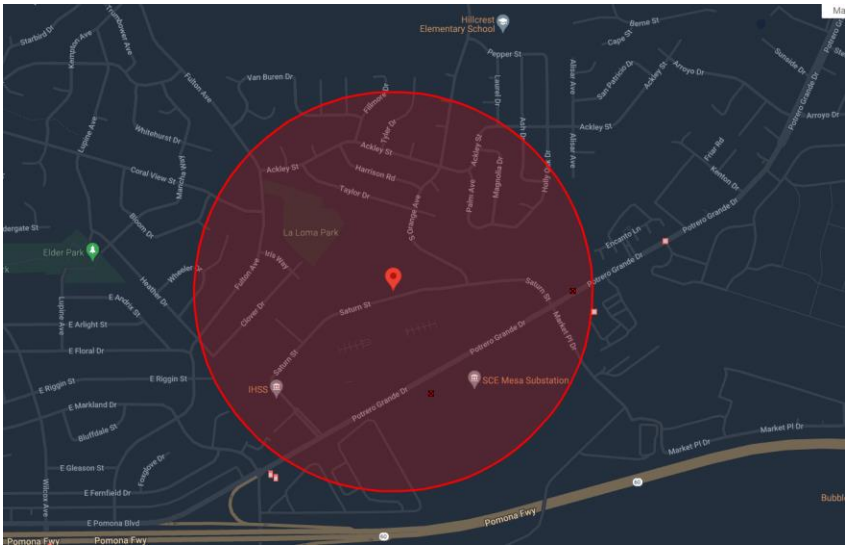
Due to the Project's unsuitable infiltration conditions, harvest and reuse will need to be analyzed for feasibility. The condition for reuse is likely not practical due to the low water demand of the proposed land use, thus not being able to meet drawdown requirements. As a result, stormwater treatment via biofiltration will be studied.

Refer to **Appendix C** for calculations and plan on biofiltration sizing and location. See **Table 10** below for the BMP sizing summary.

Table 10 Biofiltration LID Summary

Drainage Area ID	Tributary Area (ft^2)	Tributary Area (ac)	Percent Impervious	SWQDQ Required (cfs)	BMP
A	696,960	16.0	62%	1.92 x 1.5 = 2.88	Six (6) 8x20 Filterras

As noted in the existing conditions description, the existing site does not have any structural or LID BMPs onsite. Therefore, implementation of the LID features proposed as part of the Project would result in a significant improvement in surface water quality runoff as compared to existing conditions. Water quality (LID) hydrologic calculations are included in **Appendix C**.



Based on the required compliance with applicable LID requirements, operation of the Project would not result in discharges that would cause: (1) an incremental increase in pollution which would alter the quality of the waters of the State (Los Angeles River Watershed) to a degree which unreasonably affects beneficial uses of the waters; (2) an incremental increase of contamination of the quality of the waters of the State by waste to a degree which creates a hazard to the public health through poisoning or through the spread of diseases; or (3) an incremental increase in the nuisance that would injurious to health; affect an entire community or neighborhood, or any considerable numbers of persons; and occurs during or as a result of the treatment or disposal of wastes. Lastly, operation of the Project would not result in discharges that would cause regulatory standards to be violated in the Los Angeles River Watershed. Thus, operational impacts on surface water quality would be less than significant.

6.2.3. Groundwater Hydrology

Under the proposed conditions, region and local potable water levels and adjacent wells or well fields will not be impacted by the Project. The post-developed Project does not include any groundwater pumping and relies on the local water purveyor for water. In addition, the Project is not anticipated to adversely change the rate of direction of flow of groundwater. Accordingly, potential groundwater hydrology impacts during Project operation would be less than significant.

6.2.4. Groundwater Quality

The Geotracker website (State Water Resources Control Board) indicates there are no significant sources of soil or groundwater pollution within the Project area. There are two Leaking Underground Storage Tank (LUST) sites within a 2000 ft radius of the Project area. All LUST sites have been cleaned and removed. The main contaminants from the site includes diesel and gasoline. Accordingly, potential groundwater quality impacts during Project operation would be less than significant. See screenshot below from Geotracker.

6.3. CUMULATIVE IMPACTS

6.3.1. Surface Water Hydrology

The regional geographic context for the cumulative impact analysis on surface water hydrology is the Los Angeles River Watershed. The Project will reduce flows to this watershed due to increased perviousness as compared to the existing conditions. BMPs will be implemented during the construction phase of the Project to ensure against erosion or negative impacts to surface water hydrology. In accordance with City and County requirements, related Projects and other future development Projects would be required to implement BMPs to manage stormwater in accordance with applicable LID guidelines. Local and regional infrastructure is available to accommodate stormwater runoff. Therefore, potential cumulative impacts associated with the Project on surface water hydrology would be less than significant.

6.3.2. Surface Water Quality

No significant impacts are anticipated regarding surface water quality during the construction or operational phases of the Project. Construction of the Project will not result in discharges that would cause regulatory water quality impacts within the Los Angeles River Watershed. In accordance with City and County requirements, related Projects and other future development Projects would be required to implement LID strategies and BMPs to address site runoff and prevent contaminants from entering Los Angeles River Estuary, Reach 1, Reach 2, Reach 3, Reach 4, Reach 5, and Reach 6. Therefore, potential cumulative impacts associated with the Project on surface water quality would be less than significant.

6.3.3. Groundwater Hydrology

Groundwater hydrology at the Project Site is not anticipated to be impacted. In accordance with City and County requirements, related Projects and other future development Projects would be required to assess existing groundwater hydrology conditions and implement measures to avoid potential groundwater impacts. Therefore, potential cumulative impacts associated with the Project on groundwater hydrology would be less than significant.

6.3.4. Groundwater Quality

Groundwater quality at the Project Site is not anticipated to be impacted. The Geotracker website (State Water Resources Control Board) indicates there are no significant sources of soil or groundwater pollution within the Project area and local vicinity. In accordance with City and County requirements, related Projects and other future development Projects would be required to assess existing groundwater quality conditions and implement measures to avoid potential impacts. Therefore, potential cumulative impacts associated with the Project on groundwater quality would be less than significant.

7. LEVEL OF SIGNIFICANCE

Based on the analysis contained in this report no significant impacts have been identified for surface water hydrology, surface water quality, or groundwater for this Project.

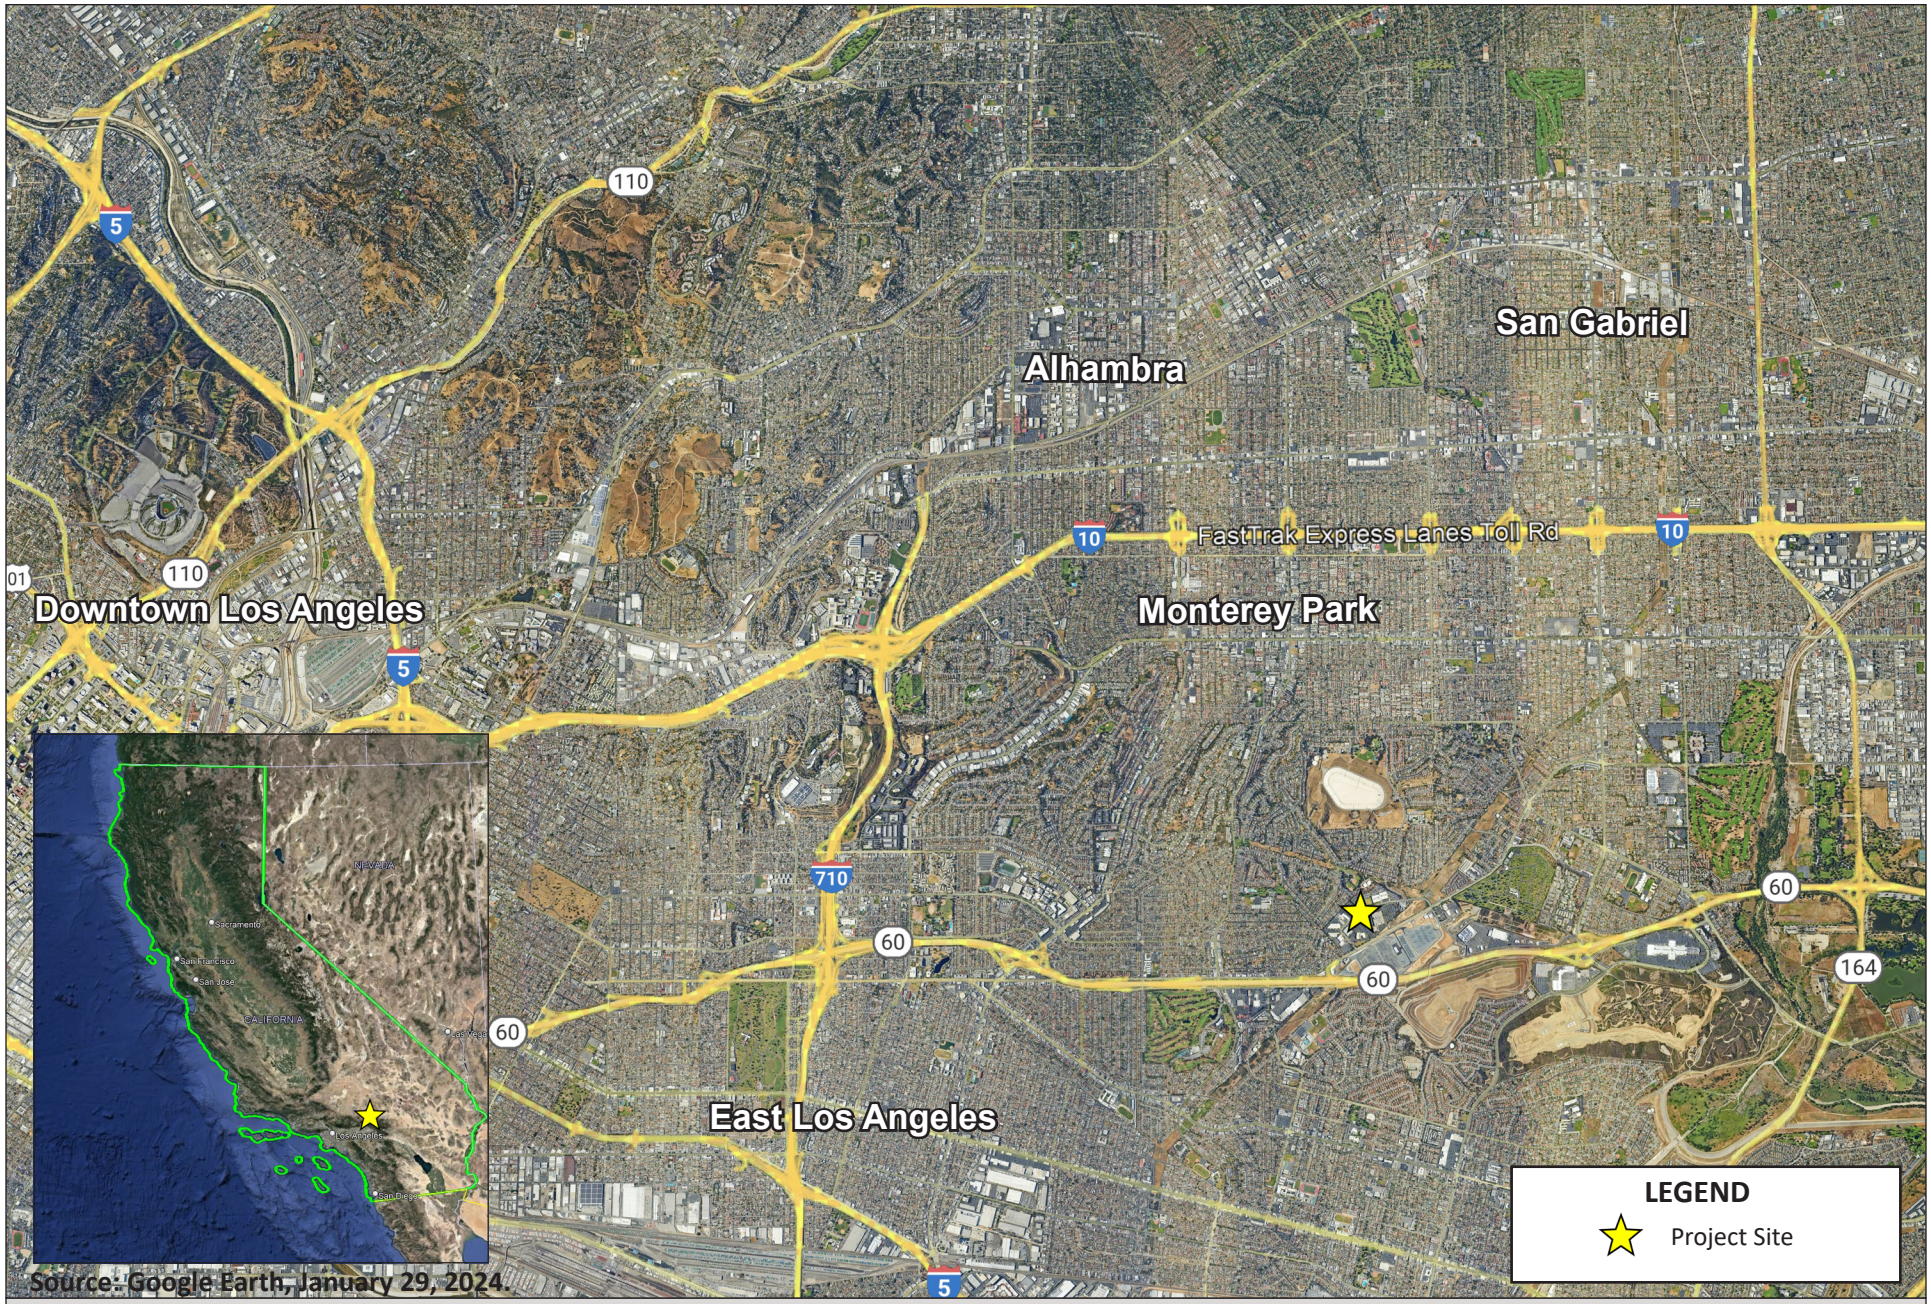
Noise and Vibration Analysis Memorandum

Kimley»Horn

TECHNICAL MEMORANDUM

To:	Bryan Marsh, CEO, SDCF Monterey Park, LLC
From:	Noemi Wyss AICP, Kimley-Horn and Associates, Inc. Tanay Pradhan, Kimley-Horn and Associates, Inc.
Date:	September 3, 2024
Subject:	1977 Saturn Data Center Project – Noise and Vibration Analysis

1.0 Purpose



The purpose of this memorandum is to assess potential impacts due to noise and vibration associated with construction and operation of the 1977 Saturn Data Center Project (Project), proposed to be located in the City of Monterey Park (City), California.

2.0 Project Location and Description

The Project would be located on an approximately 15.8-acre site (Project Site) at 1977 Saturn Street; see **Figure 1: Regional Vicinity Map**. The Project Site is bound by residences, a park, a commercial nursery, and water towers to the north, open space to the east, office uses to the south, and office uses and single-family residences to the west; see **Figure 2: Local Vicinity Map**. The Project Site is currently improved with a two-story commercial office building that is currently vacant, and an ancillary one-story building.

The Project would demolish and remove the existing improvements and construct a state of the art data center including approximately 218,400 square feet that would include approximately 109,970 square feet of data hall space and approximately 91,889 square feet of support space, which would consist of offices and meeting rooms, employee amenities (such as restrooms, break room, etc.), truck loading and unloading areas, storage areas, mechanical/electrical/fiber entry rooms, and other ancillary uses. See **Figure 3: Conceptual Site Plan.**

A total of sixty-eight (68) parking spaces would be provided adjacent to the eastern side of the proposed data center buildings, including three handicapped accessible spaces and three spaces for electrical vehicles (EV). The Project would also include two loading dock areas to accommodate deliveries and loading activities for the proposed data center. Vehicular access to the Project Site would be provided via two new gated driveways located along Saturn Street: one along the western perimeter of the Project Site and the other along the eastern perimeter of the Project Site.

NOT TO SCALE

Kimley»Horn

Project construction is anticipated to occur as two phases, lasting approximately two years, beginning as early as September 2025 and ending as early as August 2027. For purposes of this environmental analysis, opening year is assumed to be 2027. Grading for the proposed improvements would require cut and fill to create building pads. Project construction is estimated to require the export of approximately 65,000 cubic yards (cy) of soil material.

3.0 Noise Background

Sound is technically described in terms of amplitude (loudness) and frequency (pitch). The standard unit of sound amplitude measurement is the decibel (dB). The decibel scale is a logarithmic scale that describes the physical intensity of the pressure vibrations that make up any sound. The pitch of the sound is related to the frequency of the pressure vibration. Since the human ear is not equally sensitive to a given sound level at all frequencies, a special frequency-dependent rating scale has been devised to relate noise to human sensitivity. The A-weighted decibel scale (dBA) provides this compensation by discriminating against frequencies in a manner approximating the sensitivity of the human ear. Noise, on the other hand, is typically defined as unwanted sound. A typical noise environment consists of a base of steady ambient noise that is the sum of various distant and indistinguishable noise sources. Superimposed on this background noise is the sound from individual local sources. These can vary from an occasional aircraft or train passing by to virtually continuous noise from traffic on a major highway.

Several rating scales have been developed to analyze the adverse effect of community noise on people. Since environmental noise fluctuates over time, these scales consider that the effect of noise on people is largely dependent on the total acoustical energy content of the noise as well as the time of day when the noise occurs. For example, the equivalent continuous sound level (L_{eq}) is the total acoustic energy content of noise for a stated period of time; thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. The Day-Night Sound Level (L_{dn}) is a 24-hour average L_{eq} with a 10 dBA "weighting" added to noise during the hours of 10:00 P.M. to 7:00 A.M. to account for noise sensitivity in the nighttime. The Community Noise Equivalent Level (CNEL) is a 24-hour average L_{eq} with a 10 dBA weighting added to noise during the hours of 10:00 P.M. to 7:00 A.M. and an additional 5 dBA weighting during the hours of 7:00 P.M. to 10:00 P.M. to account for noise sensitivity in the evening and nighttime.

4.0 Regulatory Setting

Federal Noise and Vibration Standards

There are no federal noise standards that directly regulate environmental noise related to the construction or operation of the Project. Under the Occupational Safety and Health Act of 1970 (29 United States Code [U.S.C.] Section 1919 et seq.), the Occupational Safety and Health Administration

(OSHA) has adopted regulations designed to protect workers against the effects of occupational noise exposure. These regulations list permissible noise level exposure as a function of the amount of time during which the worker is exposed. The regulations further specify a hearing conservation program that involves monitoring the noise to which workers are exposed, ensuring that workers are made aware of overexposure to noise, and periodically testing the workers' hearing to detect any degradation.

State of California Noise Standards

The State of California does not have standards for environmental noise, but the Governor's Office of Planning and Research (OPR) has established general plan guidelines for evaluating the compatibility of various land uses as a function of community noise exposure.[1] The purpose of these guidelines is to maintain acceptable noise levels in a community setting for different land use types. Noise compatibility by different land use types is categorized into four general levels: "normally acceptable," "conditionally acceptable," "normally unacceptable," and "clearly unacceptable."

For instance, a noise environment ranging from 50 dBA CNEL to 60 dBA CNEL is considered to be "normally acceptable" for single-family residential uses, while a noise environment of 75 dBA CNEL or above for single-family residential uses is considered to be "clearly unacceptable. In addition, California Government Code Section 65302(f) requires each county and city in the State to prepare and adopt a comprehensive long-range general plan for its physical development, with California Government Code Section 65302(f) requiring a noise element to be included in the general plan. The noise element must: (1) identify and appraise noise problems in the community; (2) recognize Office of Noise Control guidelines; and (3) analyze and quantify current and projected noise levels.

Groundborne Vibration

The California Department of Transportation' (Caltrans') *Transportation and Construction Vibration Manual* provides thresholds of vibration for building damage and human annoyance. Based on the Caltrans criteria, construction vibration impacts would be significant if vibration levels exceed 0.5 inches per second (in/sec) peak particle velocity (PPV) at older residential structures, which is the limit for potential building damage at these structures.[2] For human annoyance, construction vibration impacts would be significant if vibration levels exceed 0.25 in/sec PPV at the nearest structure.[3]

[3] Ibid.

City of Monterey Park General Plan

The City of Monterey Park Noise Standards are developed from those of several federal and State agencies including the Federal Highway Administration (FHWA), the United States Environmental Protection Agency (U.S. EPA), the Department of Housing and Urban Development (HUD), the American National Standards Institute (ANSI), and the State of California Department of Health Services. These standards set limits on the noise exposure level for various land uses. As with the California Noise Standards described above, these General Plan standards are related to the siting of land uses and are not typically used as thresholds of significance for determining noise impacts associated with construction and operation of the Project. However, the standards do provide a means for judging whether an existing noise environment would be compatible with development of a new noise-sensitive land use or whether a new use would create an incompatible noise environment for existing noise-sensitive uses. The General Plan does not have a Noise Element; however, the Safety Element provides specific objectives to ensure that City residents will be protected from excessive noise. The other elements of the 2022 General Plan do not have policies related to noise or vibration. The following policies from the Safety Element are applicable to the Project:

Safety Element

Goal 12: Minimize the impact of point-source noises and ambient noise levels throughout the community.

Policy 12.1: Continue to enforce the noise regulations within the Monterey Park Municipal Code (MPMC) to control point-source noise.

Policy 12.2: Incorporate noise impact considerations into the development review process**,** particularly the relationship of parking and ingress/egress, loading, and refuse collection areas to surrounding residential and other noise-sensitive land uses.

Policy 12.4: Enforce and revise as necessary City regulations regulating hours for construction activity.

City of Monterey Park Municipal Code

MPMC Title 21, Chapter 14.150 requires that mechanical equipment located on the roof and outside of the exterior walls of the any building zoned in an office-professional zone shall be installed with permanent sound-proofing measures and shall comply with the noise standards set forth in Chapter

4.50 Regulation of Noise and Other Disturbances.[4] MPMC Chapter 4.50 has established noise standards for residential, commercial, and industrial uses. Section 4.50.080 states that ambient noise levels must not exceed the measured median ambient noise levels or the following presumed ambient noise levels identified in Table 1: Established Sound Level Limits below, whichever is greater:

Table 1: Established Sound Level Limits

Land Use	Time Period	Level
Residential	Nighttime	50 dBA
	Daytime	55 dBA
Neighborhood Commercial	Anytime	60 dBA
Other Commercial	Anytime	65 dBA
Industrial	Anytime	70 dBA

Source: City of Monterey Park Municipal Code Chapter 4.50 Regulation of Noise and other Disturbances.

MPMC Title 4, Chapter 4.50, Regulation of Noise and Other Disturbances provides specific noise restrictions and exceptions for noise sources within the City. MPMC Section 4.50.100 states that construction activities between 7:00 A.M. and 7:00 P.M. Monday through Friday, and between 9:00 A.M. and 6:00 P.M. on Saturdays, Sundays, and Holidays are not subject to the noise level limits established in the MPMC.

5.0 Existing Environmental Setting

Mobile noise sources, especially cars, trucks, motorcycles, and aircraft, are the City's most common and substantial noise sources. The existing mobile noise sources in the Project area are the motor vehicles traveling on Saturn Street, South Orange Avenue, and Potrero Grande Drive. The primary stationary noise sources in the Project vicinity are those associated with the surrounding industrial, commercial, and residential uses. Such stationary noise sources include mechanical equipment (e.g., heating, ventilation, and air conditioning [HVAC] equipment and substation equipment), parking lot noise, moving vehicles, music playing, dogs barking, and people talking. The noise associated with these sources may represent a single-event noise occurrence or short-term noise.

Noise Measurements

The Project Site is currently improved with an existing two-story commercial office building and associated surface parking lot. To quantify existing ambient noise levels in the Project area, Veneklasen Associates conducted three short-term noise measurements and two long-term measurements on January 31, 2024 (see Attachment B). The noise measurement sites were representative of typical existing noise exposure within and immediately adjacent to the Project

[4] MPMC Title 21, Chapter 14.150 requires equipment to comply with standards set in MPMC Chapter 9.53. However, MPMC Chapter 9.53 was repealed, and Chapter 4.50 was added to regulate noise in the City during the Monterey Park City Council Meeting held on March 3, 2021.

Site. The measurements are summarized in Table 2: Existing Noise Measurements, below. The sources of noise measured at each location are shown on Exhibit 1: Noise Measurement Locations.

Table 2: Existing Noise Measurements

Site	Location	Average Level (dBA)	Daytime Level (dBA)	Nighttime Level (dBA)
ST-1	Southwest corner of the existing building on-site	64	-	-
ST-2	Northwest corner of the existing Project Site	64	-	-
ST-3	Southeast corner of the Project Site	65	-	-
LT-1	West edge of the Project Site by the residences along Iris Way	55	56	54
LT-2	Northeast corner of the Project Site by Orange Avenue	60	61	56

Source: Noise measurements taken by Veneklasen Associates, January 31, 2024.

Receptor Locations

Noise exposure standards and guidelines for various types of land uses reflect varying noise sensitivities associated with uses. As stated in the General Plan Safety Element, land uses considered sensitive receptors include residences, hospitals, schools, childcare facilities, and places of assembly.[5] As shown in Table 3: Sensitive Receptor Locations, sensitive land uses surrounding the Project consist of mostly residential communities to the north, east, west of the Project Site. To quantify noise exposure levels near the Project Site, the long-term noise measurement locations (see **Figure 4: Noise Measurement Locations**) were chosen for noise measurements surrounding the Project Site closest to sensitive receptors including:

Table 3: Sensitive Receptor Locations

Sensitive Receptor	Distance and Direction[1]
Single-Family Residences	65 feet west
Single-Family Residences	165 feet northeast

1. Distances are from edge of the Project Site to the sensitive receptor property line.

6.0 Impact Analysis

Threshold (a) Would the project generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Construction Noise

Construction noise typically occurs intermittently and varies depending on the nature or phase of construction. Noise generated by construction equipment can reach high levels. During construction, exterior noise levels could affect the noise-sensitive receptors near the construction site. Construction activities would include demolition, site preparation, grading, building construction, paving, and architectural coating. Such activities may require excavators, dozers, and concrete saws during demolition; tractors and dozers during site preparation; cranes, forklifts, generator sets, tractors, and welders during building construction; pavers, paving equipment, and rollers during paving; and forklifts, generator sets, welders, and air compressors during interior building construction. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 to 4 minutes at lower power settings. Other primary sources of acoustical disturbance would be random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts). Noise generated by construction equipment, including dozers, excavators, loaders, forklifts, and air compressors, can reach high levels. L_{max} is the maximum level of a noise source environment and is often used as a threshold value for typical noise levels of construction activities. Typical noise levels associated with individual construction equipment are listed in Table 4: Typical Construction Noise Levels.

Table 4: Typical Construction Noise Levels

Equipment	Typical Noise Level (dBA L_{max}) at 50 feet from Source
Air Compressor	80
Backhoe	80
Compactor	82
Concrete Mixer	85
Concrete Pump	82
Concrete Vibrator	76
Crane, Mobile	83
Dozer	85

1. Calculated using the inverse square law formula for sound attenuation: $dBA_2 = dBA_1+20Log(d_1/d_2)$ 2. Where: dBA_2 = estimated noise level at receptor; dBA_1 = reference noise level; d_1 = reference distance; d_2 = receptor location distance.	
Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018.	

Daytime construction noise is not typically a concern for human health and is a common occurrence within the urban environment. Construction activity between the hours of 7:00 A.M. and 7:00 P.M. Monday through Friday, and between 9:00 A.M. and 6:00 P.M. on Saturdays, Sundays, and Holidays are exempt from the MPMC noise standards. Although construction is not expected to occur outside of these times, a construction noise impact analysis, estimating the potential temporary increase in ambient noise, is performed in accordance with the Federal Transit Administration (FTA) thresholds.

The Project's existing surroundings include both residential and commercial uses. Following the FTA methodology for quantitative construction noise assessments, FHWA's Roadway Construction Noise Model (RCNM) was used to predict construction noise. All construction equipment is assumed to operate at the main construction area of the Project Site.[6] During construction, equipment would be operating throughout the Project Site and not all equipment would be operating at the point closest to the sensitive receptors. The main construction activity area for the Project would occur mainly around the center of the Project Site due to the building location and orientation. Therefore, the distance used in the model was approximately 530 feet from the center of the Project Site to the nearest sensitive receptor (adjacent to the Project Site to the west) and 380 feet to the nearest commercial receptor to the south; refer to Attachment A for construction noise modeling results.

[6] For the purposes of this analysis, the main construction activity areas are defined as the anticipated building construction area. Although some construction activities may occur at distances closer than 380 feet from the nearest properties, construction equipment would be dispersed throughout the Project Site during various construction activities. Therefore, main construction activity areas represent the most appropriate distance based on the sporadic nature of construction activities.

The MPMC does not establish quantitative construction noise standards, and Section 4.50.100(a) of the MPMC provides that construction activities are not subject to the noise level limits established in the MPMC. Nonetheless, for informational purposes only, this analysis uses the FTA's criteria of 80 dBA L_{eq} for residential uses and 85 dBA L_{eq} for commercial uses to evaluate construction noise impacts.[7]

Table 5: Construction Noise Level shows the maximum noise levels for each individual construction phase, assuming simultaneous use of equipment assumed for each phase. The highest exterior noise level at the residential use located to the west of the Project Site is estimated to be 67.1 dBA L_{eq}, which would not exceed the FTA's criteria of 80 dBA L_{eq} for residential uses. At the nearest commercial use approximately 380 feet south, the highest noise level would be 70.0 dBA L_{eq}, which would not exceed the FTA's criteria of 85 dBA L_{eq} for commercial uses.

Table 5: Construction Noise Levels

Construction Phase	Receptor Location			Modeled Exterior Noise Level (dBA L_{eq}) [2,3]	Noise Threshold (dBA L_{eq}) [4]	Exceeded?
	Land Use	Direction	Distance (feet) [1]			
Phase 1 Demolition	Commercial	South	380	68.8	85	No
Phase 1 Demolition	SFR	West	530	65.9	80	No
Phase 1 Demolition	SFR	Northeast	680	63.8	80	No
Phase 1 Site Prep	Commercial	South	380	70.0	85	No
Phase 1 Site Prep	SFR	West	530	67.1	80	No
Phase 1 Site Prep	SFR	Northeast	680	65.0	80	No
Phase 1 Grading	Commercial	South	380	69.7	85	No
Phase 1 Grading	SFR	West	530	66.8	80	No
Phase 1 Grading	SFR	Northeast	680	64.6	80	No
Phase 1 BC	Commercial	South	380	68.5	85	No
Phase 1 BC	SFR	West	530	65.6	80	No
Phase 1 BC	SFR	Northeast	680	63.4	80	No
Phase 1 Paving	Commercial	South	380	68.9	85	No
Phase 1 Paving	SFR	West	530	66.0	80	No
Phase 1 Paving	SFR	Northeast	680	63.9	80	No

[7] Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, Table 7-3, page 179, September 2018.

Table 5: Construction Noise Levels

Construction Phase	Receptor Location			Modeled Exterior Noise Level (dBA L_{eq}) [2,3]	Noise Threshold (dBA L_{eq}) [4]	Exceeded?
	Land Use	Direction	Distance (feet) [1]			
Phase 2 IC	Commercial	South	380	62.7	85	No
Phase 2 IC	SFR	West	530	59.9	80	No
Phase 2 IC	SFR	Northeast	680	57.7	80	No
Phase 2 Arch. Coating	Commercial	South	380	56.1	85	No
Phase 2 Arch. Coating	SFR	West	530	53.2	80	No
Phase 2 Arch. Coating	SFR	Northeast	680	51.1	80	No

1. Distance is from the nearest receptor to the main construction activity area on the Project Site. Not all equipment would operate at the closest distance to the receptor.
2. Modeled noise levels conservatively assume the simultaneous operation of all pieces of equipment.
3. The FTA Noise and Vibration Manual establishes construction noise standards of 80 dBA $L_{eq(8\text{-}hour)}$ for residential uses.

Abbreviations: SFR – Single-Family Residence, BC – Building Construction, IC – Interior Construction

Source: Federal Highway Administration, *Roadway Construction Noise Model,* 2006. Refer to Attachment A for noise modeling results.

Although the noise generated by Project construction would be higher than ambient noise levels, construction would be temporary and cease once Project construction is completed. Construction activities would comply with General Plan Policy 12.4 and MPMC Section 4.50.100 and limit construction between the hours of 7:00 A.M. and 7:00 P.M. Monday through Friday, and between 9:00 A.M. and 6:00 P.M. on Saturdays, Sundays, and Holidays are exempt from the MPMC noise standards. While construction may cause short-term annoyance to adjacent uses, it would be temporary and restricted to the hours permitted by the City's noise ordinance. In any case, the MPMC exempts noise from construction activities from the noise level limits established in the MPMC. Therefore, construction noise impacts would be less than significant.

Operational Noise

Project implementation would introduce new noise sources in the Project vicinity. The Project's primary noise sources that could potentially impact nearby noise-sensitive land uses include, mechanical equipment (e.g., cooling equipment, generators, etc.), parking lot (daily arrival and departure of cars), and loading dock/truck noise. The Project's mechanical equipment noise modeling was analyzed in the *Exterior Noise and Exterior Façade Acoustical Analysis* (2024) provided by Veneklasen Associates.

As indicated above, the MPMC Title 21 Chapter 14.150 limits noise levels generated by mechanical equipment to the measured median ambient noise level or the presumed ambient noise levels listed in Table 1, whichever is greater, per Chapter 4.50 of the MPMC.[8] As shown in Table 2, the ambient noise level at the nearest residences would be above the presumed ambient noise levels and therefore should be used as the ambient noise requirement for the site. The ambient noise requirement would be 56 dBA L_{eq} during the daytime and 54 dBA L_{eq} during the nighttime for the single-family residences to the west, and 61 dBA L_{eq} during the daytime and 56 dBA L_{eq} during the nighttime for the single-family residences to the northeast. At the nearest commercial receptor, the presumed median ambient noise requirement would be 65 dBA L_{eq}.

Mechanical Equipment

Potential stationary noise sources related to long-term Project operations include mechanical equipment (e.g., chillers and generators). The modeling utilized the 2023 SoftNoise Predictor computer program to calculate noise due to the chillers and generators at the nearest receptors. Chiller units would be surrounded by a 16-foot absorptive barrier on the rooftop on the proposed Project building. The chiller units were conservatively modeled to operate for 24-hours at 100 percent capacity. The generators would be located outside along the north face of the building surrounded by a 20-foot precast screen wall. Generator noise would occur during generator testing (a monthly process by which each generator is started and run for short durations, typically 15-30 minutes, with only one generator being tested at a time; monthly testing would occur during daytime hours only) or during emergency situations (typically defined as the interruption of grid provided power during which up to 12 of the generators, depending on the demand of the data center, would provide electricity until grid power is restored). Section 4.50.050 of the MPMC states that generators used during an emergency situation are exempt from the noise standards. Therefore, the noise levels generated for generators running during emergency situations were not evaluated.

As indicated in Table 6: Mechanical Equipment Noise Levels, noise levels from the different mechanical equipment operating scenarios would be below the ambient noise levels and would not exceed the City's standards. Therefore, the Project would result in less than significant impacts concerning mechanical equipment noise levels.

[8] As described above, Chapter 9.53 was repealed, and Chapter 4.50 was added during a Monterey Park City Council Meeting on May 3rd, 2021.

Table 6. Mechanical Equipment Noise Levels						
Receptor	**Project Operational Noise Level - Daytime (dBA L_{eq})[1]**	**Ambient Noise Level - Daytime (dBA L_{eq})[2]**	**Exceed?**	**Project Operational Noise Level - Nighttime (dBA L_{eq})**	**Ambient Noise Level - Nighttime (dBA L_{eq})[2]**	**Exceed?**

Commercial Use (Northeast)	55	65	No	55	65	No

1. Ambient daytime noise levels include the operations of the two generators closest to sensitive receptors for generator testing.
2. Per MPMC Section 4.50.080, the generated noise levels must not exceed the median ambient noise level at the receptors or the measured ambient noise level, whichever is greater.

Source: Veneklasen Associates, *Exterior Noise and Exterior Façade Acoustical Analysis*, 2024.

Loading Dock and Trash/Recycling Truck Pickups

During loading activities and trash and recycling pickups, noise would be generated by the trucks' diesel engines, exhaust systems, and brakes during low gear shifting' braking activities; opening and closing of the trash/recycling bins. The Project would have two loading docks and trash enclosures located in the northwest and northeast corner of the proposed Project building. The typical loading dock/trash pick-up noise level is approximately 64 dBA L_{eq} at 50 feet. Truck loading and trash pickup would be infrequent during the day and would only generate noise for a short period of time. Therefore, on-site loading dock noise and trash/recycling pickup noise would not materially contribute to increases in daytime ambient noise. When weighted over a 12-hour period, truck loading/trash pickup noise would be 54 dBA L_{eq} at 50 feet. At the nearest sensitive receptor to the west and northeast, the noise level would be approximately 42 dBA L_{eq} and 38 dBA L_{eq} respectively without accounting for any surrounding attenuation features. The hours of deliveries and trash/recycling pickup activity would be dependent on the MPMC and the service provider. Therefore, the Project's truck loading/trash pickup noise level would not significantly impact the Project's contribution to the daytime ambient noise levels at the surrounding receptors and would result in less than significant impacts.

Mobile Traffic Noise

The Project is anticipated to generate 52 daily trips, with up to 36 trips during the day and up to 16 trips during the night.[9] In general, a 3-dBA increase in traffic noise is barely perceptible to people while a 5-dBA increase is readily noticeable. Traffic volumes on Project area roadways would have to approximately double for the resulting traffic noise levels to generate a barely perceptible 3-dBA increase.[10] Saturn Street is classified in the City General Plan Circulation Element as a Minor Arterial that supports up to 40,000 vehicles per day. According to Replica Traffic Data, Saturn Street currently carries 889 vehicles per day.[11] As noted above, the Project would result in approximately 52 daily trips, which would not result in a doubling of existing traffic volumes on Saturn Street, or nearby through streets. The Project would not generate enough traffic to result in a noticeable 3-dBA increase in ambient noise levels. Therefore, the Project would result in a less than significant impact from Project-related traffic noise.

Parking

Parking stalls would be located along the east of the proposed Project building. As explained above, the Project would not generate a substantial amount of trips and parking activities would be minimal on-site. Parking activities would anticipate a maximum of 18 vehicles during the day and 8 vehicles during the night.[12] Therefore, noise levels generated by Project parking would be at a 1-hour maximum of 39 dBA L_{eq} at 50 feet during the day and 35 dBA L_{eq} during the night. Due to the variability in parking throughout the day and night, when weighted over the daytime and nighttime periods, noise generated by parking would be even lower. Thus, vehicle access would not significantly impact the Project's contribution to ambient noise levels at the nearby receptors and parking noise impacts would be less than significant.

Composite Noise

Exterior noise levels associated with mechanical equipment, truck loading/trash pickup, and the parking lot would contribute to Project's impact on the surrounding ambient noise levels. However, as described above, noise generated from truck loading/trash pickup and parking lot noise would not reach high levels when weighted over the daytime and nighttime periods. When combined with the Project's mechanical equipment contribution remains unchanged from those shown in Table 6. Therefore, the composite noise levels from the Project (HVAC, rooftop chillers, truck loading,

[9] Kimley-Horn and Associates, *Transportation Analysis and Vehicle Miles Traveled Screening*, 2024.

[10] According to the Caltrans, Technical Noise Supplement to Traffic Noise Analysis Protocol (September 2013), it takes a doubling of traffic to create a noticeable (i.e., 3 dBA) noise increase.

[11] Replica, *Annual Average Daily Traffic*, 2022.

[12] The Project anticipates a total of 26 employees with 18 employees available during the day and 8 employees during the night. Thus, the greatest amount of parking activity during the day or night would be 18 vehicles.

parking lot, and mobile noise) would be below the thresholds and the Project would comply with Chapter 4.50 of the MPMC. Thus, composite noise impacts associated with the operations of the Project would be less than significant.

Threshold (b) Would the project generate excessive groundborne vibration or groundborne noise levels?

Construction Vibration

Increases in groundborne vibration levels attributable to the Project would be primarily associated with short-term construction-related activities. Project construction could result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved. Construction activities could occur as close as 65 feet from the nearest residential buildings. Table 7: Typical Construction Equipment Vibration Levels identifies vibration velocity levels at 25 feet and 65 feet for various types of equipment likely to operate at the Project Site during construction.

Table 7: Typical Construction Equipment Vibration Levels

Equipment	Peak Particle Velocity at 25 feet (in/sec)	Peak Particle Velocity at 65 feet (in/sec)
Vibratory compactor/roller	0.210	0.050
Large Bulldozer	0.089	0.021
Loaded Trucks	0.076	0.018
Small Bulldozer	0.003	0.001

Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018.

The City has not adopted specific standards for vibration impacts during construction. Therefore, the Caltrans *Transportation and Construction Vibration Guidance* Manual (2020) is used to evaluate construction vibration impacts related to potential building damage. Based on the Caltrans criteria, construction vibration impacts would be significant if vibration levels exceed 0.25 in/sec PPV at the nearby structures, which is the distinctly perceptible threshold for humans and is below the limit for potential building damage at older structures. As shown in Table 7, the vibration velocities at 65 feet from construction equipment could be up to 0.050 in/sec PPV at the nearest structure. Therefore, construction vibration would not exceed the 0.25 in/sec PPV threshold of perception and would be below the structural damage threshold for older structures. Thus, vibration impacts during Project construction would be less than significant.

Operational Vibration

The Project would not generate groundborne vibration during operations that could be felt at surrounding uses. Project operations would not involve railroads or substantial heavy truck

operations, and therefore would not result in vibration impacts at surrounding uses. As a result, impacts from vibration associated with Project operation would be less than significant.

Threshold (c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

The nearest airport to the Project Site is the San Gabriel Valley Airport located approximately 5.1 miles northeast of the Project Site. The Project is not within 2 miles of the nearest airport and would not be impacted by airport noise. Additionally, there are no private airstrips located within the Project vicinity Therefore, the Project would not expose people residing or working in the Project area to excessive airport- or airstrip-related noise levels and no mitigation is required.

7.0 Conclusion

The Project's construction and operational noise and vibration levels would not exceed applicable standards. The Project would result in less than significant construction and operational noise and vibration impacts, and no mitigation is required.

Monterey Park, California
Exterior Noise and Exterior Façade Acoustical Analysis
Veneklasen Project No. 1267-263

Dear Chris:

Veneklasen Associates, Inc. (Veneklasen) has completed the environmental noise analysis for the StratCap 1977 Saturn Street project located in Monterey Park, California. This report predicts the exterior noise level at the site using provided sound data and computer modeling. Using this information, the noise level is determined whether compliant or not with Code requirements. If not compliant, mitigation measures are introduced. This report discusses the results of this analysis.

1.0 INTRODUCTION

This study was conducted to determine the impact of HVAC equipment at the StratCap 1977 Saturn Street project on the exterior noise level of neighboring residential areas in Monterey Park, California. Veneklasen's scope of work included measuring the existing background exterior noise level, calculating the increase in the level as a result of this project's HVAC equipment, and determining the method, if any, required to reduce these exterior sound levels to meet the applicable code requirements of the City of Monterey Park.

The project consists of a single story 200,000 square foot data center with 23 rooftop chillers for the data center, 2 RTUs for admin spaces, and 14 emergency generators. The project is bounded by residential neighborhoods on the northeast and northwest property lines. The northwest residential areas are uphill of the site which will make satisfying the noise ordinance there challenging.

2.0 NOISE CRITERIA

The City of Monterey Park Noise Ordinance states that ambient noise level of residential areas will either be the measured ambient noise level or the presumed ambient levels listed in section 4.50.080, whichever is greater. Any noise that exceeds this level is a code violation.

- Section 4.50.080 lists presumed ambient levels of 50 dBA at night (between 10:00 pm and 7:00 am).
- Section 4.50.080 lists presumed ambient levels of 55 dBA during the day (7:00 am to 10:00 pm).

Additionally, when any disturbing noise has an audible tonal quality, the applicable noise limit will be reduced by 5 dB when determining whether or not a violation exists.

Lastly, section 4.50.050 states that "emergency generators or equipment used during a power outage or other emergency" are exempt from being classified as noise disturbances.

3.0 EXTERIOR NOISE ENVIRONMENT

3.1 Noise Measurements

Veneklasen visited the site on Wednesday, January 31, 2024 and placed two sound level meters at the northwest and northeast property line to capture the hourly sound levels on the site for a 24-hour period.

Veneklasen also completed three short-term noise measurements. Table 1 and Figure 1 show the location and summary of the noise measurements. Since these values are higher than the presumed ambient levels listed in Section 4.50.080 of the noise ordinance, these measured levels will be used as the ambient noise requirements for this project.

Table 1 – Measured Sound Levels

Location	Measured Level (dB)	Nighttime Level (dB)	Daytime Level (dB)
L1	55	54	56
L2	60	56	61
S1	64	---	---
S2	64	---	---
S3	65	---	---

Figure 1 – Aerial View of Project Site Showing Measurement Locations

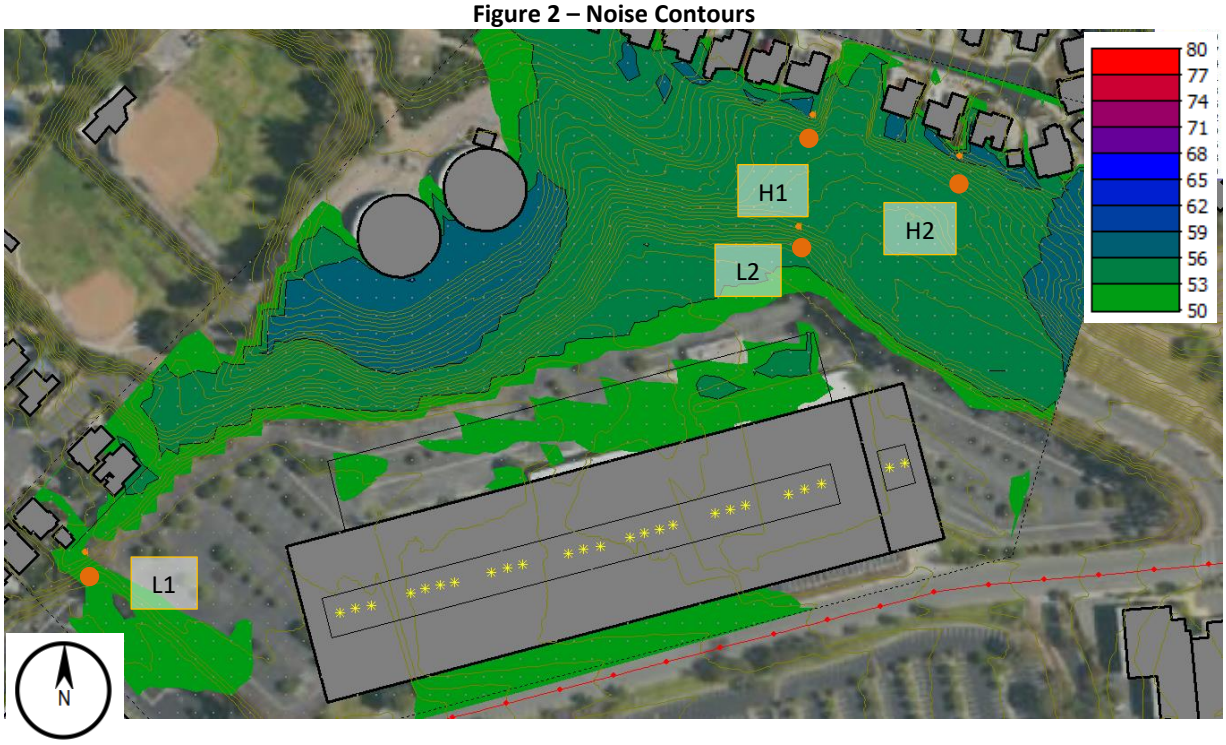
Therefore, the sound level that cannot be exceeded at nighttime from the operation of the equipment is 56 dBA at L2 and 54 dBA at L1.

4.0 COMPUTER MODELING

Veneklasen utilized the 2023 version of the SoftNoise Predictor computer modeling program to calculate the exterior noise levels due to chiller and generator noise using drawings dated April 19, 2024. The model was then used to generate color coded noise contours (noise heat maps) that show the dBA noise levels around the site at a height of 6 feet above grade.

4.1 Equipment Sound Levels

The current design consists of a 16 ft. acoustic screen with absorption around the rooftop chillers and a 20 ft. precast screen wall around the generators. Chiller sound data was provided on February 29, 2024 and RTU sound data was provided on March 21, 2024 with operational information provided April 2024.



Chiller sound data within the acoustic models shown includes equipment operating at 100% capacity, which is the worst-case scenario. With this sound data, Veneklasen calculated the noise levels associated with the operation of the chillers. This information in. Additionally, noise levels were calculated at two nearby houses (H1 and H2) northwest of the property. Since Section 4.50.050 of the noise ordinance states that emergency generators used during a power outage are exempt, Figure 2 does not include the operation of the emergency generator.

Veneklasen calculated the noise level from the operation of chillers. The chillers are designated in the center of the building with 16 ft. absorptive barrier (shown in Figure 2). The resulting calculated noise levels were calculated as follows:

- 50 dBA at L1
- 55 dBA at L2.
- 56 dBA at H1 and
- 56 dBA at H2

None of these levels exceed the ambient measured level of 56 dBA meaning that the Monterey Park Municipal Code is satsified.

Figure 2 – Noise Contours

5.0 CONCLUSIONS

The calculated noise levels with the 16 ft. absorptive barrier height and chiller locations along with their acceptability can be seen in Table 2, below. Since the chillers/RTUs do not exceed the measured ambient noise levels at both the property line and the neighboring houses, the Monterey Park noise ordinance is satsified.

Table 2 – Calculated level vs. measured ambient levels.

Location	Measured Nighttime Level (dB)	Calculated Nighttime Level with Chillers @100% Load and 16 ft. Abs Barrier (dB)	Satisfies the Monterey Park Noise Ordinance
L1	54	50	Yes
L2	56	55	Yes
H1	---	56	Yes
H2	---	56	Yes

If you have any questions or comments regarding this report, please do not hesitate to contact the undersigned.

Sincerely,
Veneklasen Associates, Inc.

Ryan Edwards
Associate

APPENDIX I – GLOSSARY OF ACOUSTICAL TERMS

Term	Definition
Absorption	A property of material referring to how much sound it absorbs (as opposed to reflecting). In the context of this report, absorption refers to the total quantity of absorption within the receiving space. Absorption is measured in sabins.
A-weighting	The sound pressure level in decibels as measured in an A-weighting filter network. The A-weighting de-emphasizes the low frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
CNEL (Community Noise Equivalent Level)	The energy average of the A-weighted sound levels occurring during a 24-hour period, and which accounts for the greater sensitivity of most people to evening and nighttime noise by weighting noise levels at evening and night. Noise between 7 pm and 10 pm is weighted (penalized) by adding 5 dB, and noise between 10 pm and 7 am is weighted by adding 10 dB to consider the greater annoyance of evening and nighttime noises. For practical purposes, the CNEL and DNL are usually interchangeable.
Decibel (dB)	A unit describing the amplitude of sound equivalent to 20 times the logarithm, to the base 10, of the ratio of the pressure of the sound to the reference pressure of 20 μPa. Used to quantify sound pressure levels.
DNL (Day-Night Average Sound Level)	The energy average of the A-weighted sound levels occurring during a 24-hour period, and which accounts for the greater sensitivity of most people to nighttime noise by weighting noise levels at night. Noise between 10 pm and 7 am is weighted (penalized) by adding 10 dB to consider the greater annoyance of nighttime noises. This noise descriptor is referred to by different agencies and references as either DNL or Ldn. The two notations refer to the same noise descriptor.
Equivalent Sound Level (Leq)	Used to describe noise over a specified period of time, typically one hour, in terms of a single numerical value. The Leq is the constant sound level, which would contain the same acoustic energy as the varying sound level, during the same time period (i.e., the average noise exposure level for the given time period).
Lmax	The instantaneous maximum noise level measured during the measurement period of interest.
L*n*	The sound level that is equaled or exceeded *n* percent of a specified time period. The L50 represents the median sound level.
Sabin	A unit used to describe absorption within a space. One sabin is equal to the absorption of a one-square-foot open window.

Term	Definition
Sound Pressure Level (SPL)	The amplitude of sound when compared to the reference sound pressure level of 20 μPa. SPL is measured in dB with zero dB corresponding roughly to the threshold of human hearing, and 120 to 140 dB corresponding to the threshold of pain. Because sound pressure can vary greatly within the range of human hearing, a logarithmic loudness scale is used to keep sound intensity numbers at a convenient and manageable level.
Sound Transmission Class (STC)	A single-number metric used to describe the transmission loss performance of a material or assembly across the frequency spectrum. It is intended for use primarily when speech is the noise source.
Transmission Loss (TL)	A measure of the reduction in sound level as a sound wave passes through a material. The higher the transmission loss, the better the material's sound insulating properties.

APPENDIX II – ACOUSTICAL CALCULATION METHODS

Decibel Addition

Decibels are based on a logarithmic scale; defined as the logarithmic ratio between a measured sound pressure level and a reference sound pressure level. When decibels are added, they are not combined arithmetically, but logarithmically. Decibels are added according to the following equation.

$$SPL_{tot} = 10log\left(10^{\left(SPL_1/10\right)}\right) + 10log\left(10^{\left(SPL_2/10\right)}\right)$$

Where:
SPL_{tot} = Total Sound Pressure Level (dB or dB)
SPL_1, SPL_2 = Sound Pressure Level 1, 2 (dB or dB)

A-Weighting

A-weighting a spectrum is completed by applying standardized weighting factors to a frequency spectrum, either in octave bands or third-octave bands. These resultant A-weighted levels are summed using decibel addition to generate the overall A-weighted level, noted as dB. In a report, spectral data is typically presented un-weighted, and the overall level is presented with A-weighting.

The octave band A-weighting correction factors are shown in the table below:

	Octave Band Center Frequency (Hz)							
	63	125	250	500	1000	2000	4000	8000
A-weighting Correction Factor (dB)	-26	-16	-9	-3	0	+1	+1	-1

Acoustical Shielding

The presence of adjacent buildings or façades, changes in terrain, parapets, and other similar barriers provide acoustical shielding, reducing the sound level incident on the exterior façades. Common locations where acoustical shielding occurs include, but are not limited to, the roof, the back, and sides of the building that are not directly facing the noise source.

Acoustical shielding due to building geometry can be separated into two categories: reduction due to reduced area of exposure (side of a building), and shielding from barriers (such as a parapet or sound wall).

Reduction as a result of reduced area of exposure is calculated according to the following equation:

$$\Delta SPL = 10\log_{10}\left(\frac{\theta_{exp}}{180}\right)$$

Where:
ΔSPL = Change in Sound Pressure Level (dB)
θ_{exp} = Angle of exposure (degrees)

Acoustical Attenuation due to Distance

Sound pressure level reduction due to distance is calculated according to the following equation:

$$SPL_2 = SPL_1 + C_S \log\left(\frac{r_1}{r_2}\right)$$

Where:
SPL_1 = Sound Pressure Level at Location 1 (dB or dB)
SPL_2 = Sound Pressure Level at Location 2 (dB or dB)
C_S = Source Coefficient; 20 for point source, 10 for a line source
r_1 = Location 1 distance from source (ft.)
r_2 = Location 2 distance from source (ft.)

In some situations, the C_S value is between 10 and 20; selection of this number is an engineering judgment based on the relationship between the source and receiver as well as the type of source.

Interior Noise Calculation

The interior noise calculation takes into account the exterior noise level, the transmission loss of the glazing (including glass, frame, and seals), wall, and roof/ceiling systems, the finishes within the space, and noise exposure due to building geometry and acoustic shielding. The interior sound level is calculated using the equation:

$$SPL_I = SPL_E + 10\,log_{10}(A) - 10log_{10}(R) - TL + 6$$

Where:
SPL_I = the Interior Sound Pressure Level (dB or dB)
SPL_E = Exterior Sound Pressure Level (dB or dB)
A = Surface Area exposed to Exterior Noise (sq.ft.)
R = Room Absorption Coefficient (sabins)
TL = Sound Transmission Loss of Exterior Façade Assembly (dB)

This calculation is performed for each exposed façade individually. The total interior sound level is found by using decibel addition to sum the sound level from all exposed façades.

Transportation Analysis and Vehicle Miles Traveled Screening Memorandum

Kimley»Horn

TECHNICAL MEMORANDUM

To:	Beth Chow, AICP Interim Planning Manager 320 W. Newmark Avenue, Monterey Park, CA 91754
From:	Jessie Fan, Kimley-Horn and Associates, Inc.
Date:	April 4, 2024
Subject:	1977 Saturn Data Center Project – Transportation Analysis and Vehicle Miles Traveled Screening

INTRODUCTION

The purpose of this technical memorandum is to establish the trip generation estimated by the proposed 1977 Saturn Data Center Project (Project) and determine if a Transportation Study and vehicle miles traveled (VMT) analysis are required for Project located at 1977 Saturn Street in the City of Monterey Park (City). The findings of the analysis will help determine if a VMT assessment is required.

PROJECT LOCATION

The Project would be developed on a 15.8-acre property (Project Site) (Assessor's Parcel Number [APN] 5265-026-054), located at 1977 Saturn Street. The Project Site is located west of the intersection of Saturn Street and South Orange Avenue. The Project Site is bound by the La Loma Reservoir water storage tanks to the north, South Orange Avenue and open space to the east, Saturn Street to the south, and commercial office buildings and surface parking lots to the west.

PROJECT DESCRIPTION

The Project Site is currently developed with a two-story commercial office building, an associated one-story utility building with a diesel-powered emergency backup generator, and surface parking lot. Based on records available at the time of this report, we understand that the commercial office building has been vacant since 2016. The commercial office building is approximately 205,628 square feet, and the utility building is approximately 3,936 square feet, resulting in a total existing building square footage of approximately 209,597 square feet. The Project Site also contains an asphalt-paved surface parking lot and an existing perimeter security fence.

The Applicant, SDCF Monterey Park, LLC, proposes to demolish the existing improvements and construct a new data center with an ancillary equipment yard, substation, parking, and landscaping. The proposed data center would comprise a total of approximately 218,400 square feet that would include data hall space, administrative office, loading docks, storage, mechanical/electrical/fiber entry rooms, and other ancillary uses. The land uses are provided in **Table 1**.

Table 1: Proposed Land Use

Land Use	Square Feet
Data Hall	109,970
Electrical (Interior)	23,976
Mechanical	39,463
Network	1,750
Support	26,700
Administrative Office	*8,000*
Storage	*4,445*
Loading Dock, Restroom, Security, and Other Ancillary Uses	*14,255*
Circulation	16,542
Total	**218,401**

The Project would be operational 24-hours, 7-days a week. Based on data provided by the Applicant (see **Appendix A)**, it is anticipated that on an average day, there will be 26 employees at the building throughout the day (day and night). The Project would be required to provide 848 parking spaces per Table 21.22(c) of Monterey Park Municipal Code (MPMC) Chapter 21.22. As the projected number of employees would require far fewer parking spaces than what is prescribed in the MPMC, the Applicant is requesting a Conditional Use Permit (CUP) for demand-based parking reduction. Upon approval of the CUP, the Project would include 68 parking spaces adjacent to the northern and eastern sides of the proposed data center building, including three handicapped accessible spaces and three spaces for electric vehicles (EV). Therefore, the highest number of total daily employees (26 persons) is less than the proposed 68 parking spaces, and the proposed spaces can accommodate the anticipated parking demand.

CITY OF MONTEREY PARK TRANSPORTATION STUDY GUIDELINES

The City of Monterey Park adopted their Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment (Transportation Study Guidelines) (September 2020) to provide transportation analysis requirements for land development, roadway projects, and specific plans in the City. As stated within the Transportation Study Guidelines, a traffic study is required for new developments or for the expansion of existing developments which are forecast to generate a minimum of 50 vehicles per hour (total two-way) during the greater of the A.M. or P.M. peak hours. As shown in **Appendix A**, there will be 26 employees at the building throughout the day, with 18 employees available during the day and 8 employees available during the night. The 26 employees at the Project per day equates to a total of 52 daily vehicle trips Therefore, the Project would not exceed 50 vehicle trips in either the A.M. or P.M. peak hour, and a traffic study would not be required.

Vehicle Miles Traveled Screening

As stated within the Transportation Study Guidelines, there are three types of screening that may be applied to effectively screen projects from project-level assessment. A project may be screened out of VMT analysis if it meets one or more of the following screening steps discussed in **Table 2.** Each of

the screening criteria identified in the Transportation Study Guidelines and an evaluation of the screening criteria for the Project are discussed below in **Table 2**.

Table 2: VMT Screening Criteria and Project Evaluation

Screening Criteria	Project Evaluation	Result
Transit Priority Area (TPA) Screening: Projects located within a TPA may be presumed to have a less than significant impact absent substantial evidence to the contrary. This presumption may NOT be appropriate if the project: • Has a Floor Area Ratio (FAR) of less than 0.75; • Includes more parking for use by residents, customers, or employees of the project than required by the City; • Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Southern California Association of Governments [SCAG]); or • Replaces affordable residential units with a smaller number of moderate- or high-income residential units.	The Project is not located within a TPA.	Does Not Meet Criteria
Low VMT Area Screening: Residential and office projects located within a low VMT-generating area may be presumed to have a less than significant impact absent substantial evidence to the contrary. In addition, other employment-related and mixed-use land use projects may qualify for the use of screening if the project can reasonably be expected to generate VMT per resident, per worker, or per service population that is similar to the existing land uses in the low VMT area.	The Project is a data processing facility permitted in the O-P Zone. The Project is not considered a residential or office project. The Project is not located within a low VMT area based on the San Gabriel Valley Council of Governments (SGVCOG) VMT Evaluation Tool.	Does Not Meet Criteria

Project Type Screening: Some project types have been identified as having the presumption of a less than significant impact. The following uses can be presumed to have a less than significant impact absent substantial evidence to the contrary as their uses are local serving in nature:
• Local-serving K-12 schools
• Local parks
• Day care centers
• Local-serving retail uses less than 50,000 square feet, including:
  ○ Gas stations
  ○ Banks
  ○ Restaurants
	The Project anticipates 26 employees on-site throughout the day (day and night). Therefore, the Project is anticipated to generate less than 110 daily vehicle trips.	Meets Criteria

○ Shopping Center • Local-serving hotels (e.g., non-destination hotels) • Local-serving assembly uses (places of worship, community organizations) • Community institutions (public libraries, fire stations, local government) • Affordable, supportive, or transitional housing • Assisted living facilities • Senior housing (as defined by HUD) • Local serving community colleges that are consistent with the assumptions noted in the Regional Transportation Plan/Sustainable Communities Strategy • Student housing projects on or adjacent to a college campus • Other local-serving uses as approved by the City Traffic Engineer • Projects generating less than 110 daily vehicle trips[1,2]		

Notes:
1 Note that a redevelopment project replacing an existing uses would estimate the net increase in trips above trips what already exists.
2 This threshold ties directly to the OPR technical advisory and notes that CEQA provides a categorical exemption for existing facilities, including additions to existing structures of up to 10,000 square feet, so long as the project is in an area where public infrastructure is available to allow for maximum planned development and the project is not in an environmentally sensitive area (CEQA Guidelines Section 15301(e)(2). Typical project types for which trip generation increases relatively linearly with building footprint (i.e., general office building, single tenant office building, office park, and business park) generate or attract an additional 110-124 trips per 10,000 square feet. Therefore, absent substantial evidence otherwise, it is reasonable to conclude that the addition of 110 or fewer trips could be considered not to lead to a significant impact.

SOURCE: City of Monterey Park, Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment, September 2020.

While the Project is not located in a TPA or low-VMT area, the Project is anticipated to generate less than 110 daily vehicle trips. In addition, note that the Transportation Study Guidelines state that a redevelopment project replacing an existing use would estimate the net increase in trips above trips that already exist. Here, for purposes of this screening memorandum, no trip credits were taken for the existing use even though that methodology is allowed pursuant to the applicable guidelines. The Project itself is not an employee-intensive use and therefore does not generate a material number of daily vehicle trips or VMT. The 26 employees at the Project per day equates to a total of 52 daily vehicle trips, which is far less than the 110 daily vehicle trips threshold set forth in the Transportation Study Guidelines for project-type screening analysis. As such, the Project would meet one of the screening criteria identified in the City's Transportation Study Guidelines. Therefore, the Project is presumed to have a less-than-significant transportation impact and qualifies for being screened out from further VMT analysis.

SUMMARY AND CONCLUSION

This memorandum has been prepared to determine if a Transportation Study and VMT assessment are required. Based on **Appendix A**, the Project anticipates 26 employees on-site throughout the day,

which equates to a total of 52 daily vehicle trips. Therefore, the Project would not exceed 50 vehicle trips in either the A.M. or P.M. peak hour, and a traffic study would not be required. Similarly, based on the anticipated number of trips, the Project would be screened from further VMT analysis (see Table 2), and the Project is considered to have a less-than-significant transportation impact.

Subject: AB 52 Native American Consultation for the 1977 Saturn Data Center, Monterey Park, Los Angeles County, California.

Dear Mr. Alvarez:

The City of Monterey Park (City) is requesting your review of the 1977 Saturn Data Center (project) within the City limits, Los Angeles County, California to determine if formal consultation is appropriate pursuant to Public Resource Code Section 21080.3.2(b) and 21074(a)(1)(A)-(B) (Assembly Bill [AB] 52). The City is the lead agency for the project. The project is located generally at 1977 Saturn Street on an approximately 15.8-acre lot (the project site). The project site has been previously developed with a split level two-story existing commercial professional office building, which is currently vacant. The existing building on the project site is approximately 205,628 square feet and includes an asphalt paved surface parking lot with 847 parking spaces, two points of vehicular ingress and egress to the project site from Saturn Street; one at the west and the another at the east end of the property. There are mature trees and landscaping that surround the property site to the east, west, and north. The applicant proposes to demolish the existing site improvements and construct a new state-of-the art data processing facility on the site with ancillary equipment yard, substation, parking and landscaping generally within the existing improved areas of the site. The proposed project includes two driveways located along Saturn Street, similar to the existing building driveways. The proposed project would include 109,970 square feet of data hall space and approximately 92,000 square feet of support space, consisting of office, loading dock, storage, mechanical/electrical/fiber entry rooms, and other ancillary uses.

We are requesting that you advise the City at the earliest possible time of your interest in consulting. Under the provisions of AB 52, you have 30 days from the date of receipt of this notice, which will be on or around July 1, 2024 in which to contact the City regarding your interest in consultation. Please contact me to initiate consultation at bchow@montereyparkca.gov.

Sincerely,

Beth Chow, AICP
Planning Manager

Subject: AB 52 Native American Consultation for the 1977 Saturn Data Center, Monterey Park, Los Angeles County, California.

Dear Chairperson Goad:

The City of Monterey Park (City) is requesting your review of the 1977 Saturn Data Center (project) within the City limits, Los Angeles County, California to determine if formal consultation is appropriate pursuant to Public Resource Code Section 21080.3.2(b) and 21074(a)(1)(A)-(B) (Assembly Bill [AB] 52). The City is the lead agency for the project. The project is located generally at 1977 Saturn Street on an approximately 15.8-acre lot (the project site). The project site has been previously developed with a split level two-story existing commercial professional office building, which is currently vacant. The existing building on the project site is approximately 205,628 square feet and includes an asphalt paved surface parking lot with 847 parking spaces, two points of vehicular ingress and egress to the project site from Saturn Street; one at the west and the another at the east end of the property. There are mature trees and landscaping that surround the property site to the east, west, and north. The applicant proposes to demolish the existing site improvements and construct a new state-of-the art data processing facility on the site with ancillary equipment yard, substation, parking and landscaping generally within the existing improved areas of the site. The proposed project includes two driveways located along Saturn Street, similar to the existing building driveways. The proposed project would include 109,970 square feet of data hall space and approximately 92,000 square feet of support space, consisting of office, loading dock, storage, mechanical/electrical/fiber entry rooms, and other ancillary uses.

We are requesting that you advise the City at the earliest possible time of your interest in consulting. Under the provisions of AB 52, you have 30 days from the date of receipt of this notice, which will be on or around July 1, 2024 in which to contact the City regarding your interest in consultation. Please contact me to initiate consultation at bchow@montereyparkca.gov.

Sincerely,

Beth Chow, AICP
Planning Manager

1. INTRODUCTION

1.1 PROJECT DESCRIPTION

The proposed Monterey Park Data Center Project ("Project") will redevelop a 15.83-acre lot (5.05 acre gross and buildable area) at 1977 Saturn Street, Monterey Park, located northwest of the intersection of Saturn Street and Orange Avenue ("Project Site") in the City of Monterey Park (City), within the County of Los Angeles. The Project site is bounded by Saturn Street to the south, Orange Avenue to the east, and a Southern California Edison transmission line easement to the northwest. Additionally, there is a City of Monterey Park Water Department lot (La Loma Reservoir) due north, single family homes to the northwest, and an existing office park to the east.

The proposed development will consist of an approximately 218,400± square foot rectangular building located along the southern portion of the site, along Saturn Street, with an adjacent equipment yard directly north of the building, and a substation to the northeast. A western and eastern entryway connecting the development to Saturn Street are proposed, with a fire lane wrapping around the building and equipment yard. Parking stalls are planned to be located north, east and west of the building and equipment yard. An electrical substation is also planned, with the current location north of the equipment yard. The proposed data center land usage is technology, and will be used to both house computer systems, and also for IT and associated staff to work on the systems. The HVAC system will be air-cooled, and the water consumption for HVAC operations is expected to be negligible. The data center will provide 68 parking spaces.

Vicinity Map

1.2 SCOPE OF WORK

The purpose of this report is to analyze the potential changes in water and wastewater demand as a result of the Project, and identify any necessary changes to on- or off-site infrastructure. The current location of existing water and wastewater infrastructure and analysis of potential Project demands related to this infrastructure are discussed in this technical report.

2. REGULATORY FRAMEWORK

2.1 WATER

The Project site receives water supply from the San Gabriel Valley Municipal Water District, the primary water purveyor for the City. The San Gabriel Valley Municipal Wate District is a public agency, of which the City of Monterey Park is a member. As the primary supplier of water to the City, the San Gabriel Valley Municipal Water District must comply with all applicable regulations at the State and Federal level.

Applicable regulations affecting the San Gabriel Valley Municipal Water District as a supplier of water include efficiency requirements, such as California Code of Regulations (CCR) Title 20, Chapter 4, Article 4, Section 1605, which requires all new plumbing fixtures to adhere to efficiency requirements, and CCR Title 24, Part 11, which requires a water use reduction of 20% above baseline for all homes, commercial, and state buildings.

The regulations also include reporting requirements, such as California Urban Water Management Planning Act (1984) and Senate Bill (SB) 610. The California Urban Water Management Planning Act requires that municipalities and other water suppliers must create an updated Urban Water Management Plan (UWMP) every five years, outlining anticipated trends in supply and demand for the planning period. The City of Monterey Park's most recent UWMP update was in 2020 and identified adequate supplies to match modeled demands through 2040. SB 610 required water suppliers to submit a Water Supply Assessment (WSA) for all projects that propose over 500 residential dwelling units, 500,000 square feet of commercial floor space, or employ over 1,000 individuals or the equivalent water usage. A WSA will not be required for the Project as this will be a non-residential development, the proposed business establishment will have less than 500,000 square feet of floor space, and the new development is expected to employ fewer than 1,000 individuals, based on a proposed parking space count of 68.

2.2 WASTEWATER

The Project site falls under the local authority of the City of Monterey Park (City), along with the Los Angeles County Sanitation Districts (LACSD). The City of Monterey Park requires that for proposed connections being made to a City line, a sewer capacity analysis will be required. The City does not provide will-serve letters for new sewer connections prior to a sewer study/flow capacity analysis for projects and payment of fees. For the sewer analysis, the developers are typically required to conduct flow monitoring of sewer manholes downstream of the proposed development area to verify flow depths in the system at select locations. The selected manhole monitoring locations will be determined by the City once all fees are paid.

LACSD consists of 24 independent special districts in Los Angeles County. The Project is located within LACSD's District No. 2 jurisdictional boundary, and within the service area of the A.K. Warren Water Resource Facility. The Warren Facility, owned and operated by LACSD, currently provides primary and secondary treatment for a design capacity of 400 million gallons of wastewater per day (mgd), and serves over 4.8 million residents, businesses and industries. The Warren Facility currently provides both primary and secondary treatment for approximately 237 million gallons of wastewater per day. A will-serve letter has been received from LACSD, and is included in Attachment A.

LACSD is empowered by the California Health and Safety Code to charge a fee to connect facilities (indirectly or directly) to the Districts' Sewerage System or to increase the strength or quantity of wastewater discharged from connected facilities.

3. EXISTING CONDITION

3.1 WATER

3.1.1 DOMESTIC INFRASTRUCTURE

The City of Monterey Park Public Works Department, Engineering Division owns and maintains all water infrastructure, including on-site and off-site facilities. Regarding offsite water infrastructure, there is an existing 12" water main running south on Orange Avenue to Saturn Street per drawing D-844 and an existing 12" water main running west on Saturn Street to Atlas Avenue/Potrero Grande Drive per drawings D-844, D-673 (drawing missing from City records), and D-655. There is also an existing 8" water line running east from the intersection of Orange Avenue and Saturn Street to Potrero Grande Drive. Please see Attachment E for map showing existing water lines.

The City also owns and maintains onsite water infrastructure, within an easement. There is an existing City-owned 12" water line starting at the southerly drive entry and running north through the northerly property line per drawing D-673 (missing from City records but included in atlas map). There is also an existing City-owned 8" water line that tees off the existing 12" line and runs east through site and then southeasterly through the northerly drive entry to connect back with the 12" line in Saturn Street.

Table 1 shows the estimated existing water demand for the Project Site, with demands based on 120% of the Los Angeles County Sanitation Districts (LACSD) wastewater generation factors[1]. The LASCD sewer loading table is included in Attachment A. The water demand estimate is appropriate to account for any additional water demand for possible minor losses on-site, such as water use due to human consumption (cooking, drinking, watering indoor plants, evaporation), that would deviate from the LACSD sewage generation factors. Therefore, 120% of the standard generation factor was used for the existing condition water demand estimates. The Estimated Total Water Usage (ETWU) equation is used for landscaping which is assumed to be 30% of the site. The ETWU calculation for landscaping is included as Attachment B.

[1]Loading for each class of land use. Found here:
https://www.lacsd.org/home/showpublisheddocument/3644/637644575489800000

Table 1 – Estimated Existing Water Demand

Land Use	Units or Square Footage	**Est Avg. Daily Flow Factor (gal/1000 SF gross area)[1]**	Total **Water Generation** (gpd)
Bldg. 1 (2-story; office)	41,100	240	9,864
Bldg. 1 (2-story, utility)	164,528	30	4,936
Bldg. 2 (utility)	3.936	30	118
Landscaping	206,867 sf	ETWU Method[2]	14,151
Total Existing Water Demand to be Removed			29,069 GPD

Notes

[1] Based on 120% of the sewer generation factors from the "Loading for each class of land use" from LASD (See Footnote 1).

[2] Demand based on ETWU equation: (Eto*plant factor*landscaped area* 0.62)/irrigation efficiency. Utilizing CIMIS Reference Evapotranspiration Zones Map ET of 46.6 in/yr, and a conservative plant factor of 0.7 and irrigation efficiency of 0.81 proposed condition.

3.1.2 FIRE INFRASTRUCTURE

There are currently three (3) public onsite fire hydrants within an easement, and four (4) public offsite fire hydrants surrounding the site. All hydrants, onsite and offsite, are owned and maintained by the City of Monterey Park.

3.2 WASTEWATER

3.2.1 EXISTING INFRASTRUCTURE

The City's sanitary sewer system is a gravity-flow system connecting to seven County Sanitation District (LACSD) trunk lines. These City lines collect more than two billion gallons of raw sewage annually and convey it out of the City. These lines are monitored and evaluated to determine if repairs or additional lines are warranted as the City grows. The City's sewer system is comprised of 126 miles of main line sewers ranging in size from 8" to 15" pipe and approximately 2,498 sewer manholes. Please see Attachment E for map showing existing sewer lines.

The wastewater flows originating from the Project site discharge to a City of Monterey Park sewer line in Saturn Street. From there, the wastewater is conveyed westerly to the Districts' Garfield Trunk Sewer, located in Wilcox Avenue, just south of Pomona Boulevard. The Districts' 12" diameter trunk sewer has a capacity of 1.8 million gallons per day (mgd), and conveyed a peak flow of 0.5 mgd when last measured in 2016.

The wastewater generated by the proposed Project will be treated by the Districts' A.K Warren Water Resource Facility (formerly known as the Joint Pollution Control Plant), located in the city of Carson. This facility has a capacity of 400 mgd, and currently processes an average flow of 237 mgd.

Table 2 shows the estimated existing wastewater generation for the Project Site, based on Project Site elements, and using LACSD wastewater generation factors.

Table 2 - Estimated Existing Wastewater Generation

Land Use	Units or Square Footage	**Est Avg. Daily Sewage Flow Factor (gal/1000 SF gross area)[1]**	Total **Wastewater Generation** (gpd)
Bldg. 1 (2-story; office)	41,100	200	8,220
Bldg. 1 (2-story, utility)	164,528	25	4,113
Bldg. 2 (utility)	3,936	25	98
Total	209,564		12,432
Total Existing Wastewater Demand to be Removed			12,432 GPD

4. METHODOLOGY

4.1 WATER

This report analyzes the potential effects of the Project on the existing public water infrastructure by comparing the estimated Project water demand with the calculated available supply. Existing water demand estimates are approximately 20% higher than those for sewer demand to account for any additional water demand due to human consumption, such as watering of indoor plants, drinking, and evaporation. Additional proposed water demands as a result of proposed landscaping features were calculated using the Estimated Total Water Use Equation (ETWU) following the methodology conducted as part of the Project's Water Consumption Analysis Report.

Based on available site and occupancy information, per the Tait Assessment of Water Availability included in Attachment C, Tait evaluated the availability of adequate water supply and pressures for the proposed Project and confirmed that the system has adequate capacity to deliver water to the Project for domestic and fire suppression scenarios. A fire flow test was provided and is included in Attachment D. The fire flow requirements were calculated per the California Building Code Table B105.1(2) relating to site fire protection. The Project requires 25% of 8,000 gpm for sprinklered buildings of Type V building construction. This means the Project requires 2,000 gpm at the furthest, most elevated fire hydrants along the relocated onsite 8" water line. The Tait report hence analyzed two (2) proposed hydrants along the relocated 8" water line each flowing at 1000 gpm at a minimum of 20 psi (pounds per square inch). After running a WaterCAD analysis, Tait concluded that each fire hydrant would have a residual pressure of 65 psi; therefore, it was concluded that a relocated 8" water main onsite tied into the existing public 12" water lines in Saturn Street and onsite will have plenty of capacity to provide domestic and fire suppression services.

4.2 WASTEWATER

This report also analyzes the potential increases of the Project's wastewater on the existing public sewer infrastructure by comparing the estimated Project's sewer loading with the estimated loading on the existing facilities. LACSD sewer generation factors have been utilized to estimate existing and proposed sewer flows. A will-serve letter has been received from LACSD, confirming the net additional wastewater amount, and that capacity is available in the trunk line and treatment facility to accommodate the additional sewer loading.

5. PROJECT DEMANDS

5.1 CONSTRUCTION

5.1.1 WATER

During construction, water will be required intermittently for dust control, equipment cleaning, soil grading and preparation during the early phases of the Project. The latter phases of construction normally require less water usage. Since water usage during construction is typically less demanding than the water usage for the proposed Project, it is anticipated that existing water infrastructure would meet the limited, temporary water demand associated with construction of the Project, and that the water purveyor is able to provide water during construction.

It is anticipated that the Project may require construction of new lateral connections (services) to existing water lines and/or relocation of the existing 8" waterline within the site. Construction impacts associated with the installation of water services would primarily involve trenching in order to place the lines sufficiently below the ground surface. When considering impacts resulting from the installation of any required water infrastructure, all impacts are of a relatively short-term duration (i.e., weeks to months) and would cease to occur once the installation is complete. Installation of new or relocation of existing water infrastructure will be limited to on-site water distribution, and minor off-site work associated with connections to the public main. No upgrades to public water mains, other than onsite infrastructure, are anticipated. Prior to ground disturbance, Project contractors would coordinate with City of Monterey Park to identify the locations and depth of all lines.

5.1.2 WASTEWATER

Construction activities for the Project could result in temporary wastewater generation on-site. However, such generation would be temporary and nominal (insignificant) when compared with the wastewater generated by the Project. In addition, construction workers would typically utilize portable restrooms and hand wash areas, which would not contribute to direct wastewater flows to the City's wastewater system. Thus, wastewater generation from Project construction activities is not anticipated to cause any measurable increase in wastewater flows.

Construction impacts associated with wastewater infrastructure would primarily be confined to trenching for miscellaneous utility lines and connections to public infrastructure. Installation of wastewater infrastructure will be limited to on-site wastewater distribution and minor off-site work associated with lateral connections to the existing City sewer main. Any work that may affect services to the existing sewer lines or impacts to LACSD facilities or plant will be coordinated with the City of Monterey Park Public Works Department, Engineering Division. Furthermore, construction management and access plans would ensure safe pedestrian access as well as emergency vehicle access and safe vehicle travel, Moreover, when considering impacts resulting from the installation of any required wastewater infrastructure, all impacts are of a relatively short-term duration and would cease to occur once the installation is complete.

5.2 OPERATION

5.2.1 WATER

5.2.1.1 WATER DEMAND

Based on the Project's proposed land uses, the Project's estimated water consumption is approximately 33,031 gallons per day (gpd). Alternatively, approximately 29,069 gpd of existing water demand will be removed, resulting in a net increased water demand of approximately 3,962 gpd over existing conditions. These demand numbers were calculated using 120% of LACSD wastewater generation factors as well as the ETWU equation for proposed landscaping. The Project site is assumed to be 30% pervious, or landscaped areas (similar to the existing conditions). A breakdown of these water demand calculations is provided in Table 3.

Table 3 – Estimated Proposed Water Demand

Land Use	Area (sf)	Avg. Generation Factor (gpd/unit)[1]	Total Water Generation (gpd)
Data Hall Center[2]	109,970 sf	30 gpd/1000 SF	3,299
Office (Network)[3]	1,750 sf	240 gpd/1000 SF	420
Office (Support)[3]	26,700 sf	240 gpd/1000 SF	6,408
Office (Circulation)[3]	16,542 sf	240 gpd/1000 SF	3,970
Ancillary (Elec.)[2]	23,976 sf	30 gpd/1000 SF	719
Ancillary (Mech.)[2]	39,463 sf	30 gpd/1000 SF	1,184
Substation (service)[4]	24,000 sf	120 gpd/1000 SF	2,880
Landscaping	206,867 sf	ETWU Method[5]	14,151
Total Proposed Water Flow			**33,031**
Total Existing Water Flow to be Removed			**29,069**
Project Net Water Flow (Proposed –Existing to be Removed)			**+3,962**

Notes
[1] Based on 120% of the sewer generation factors from the "Loading for each class of land use" from Los Angeles County Sanitation Districts
[2] Assumes 'Warehouse' will be used for Data Hall Center, Mechanical Area, Electrical Areas
[3] Assumes 'Office Building' will be used for Office areas
[4] Assumes 'Service Station' will be used for Electrical Substation
[5] Demand based on Estimated Total Water Use equation: (Eto*plant factor*landscaped area* 0.62)/irrigation efficiency. Utilizing CIMIS Reference Evapotranspiration Zones Map ET of 46.6 in/yr, and a conservative plant factor of 0.7 and irrigation efficiency of 0.81 proposed condition.

City of Monterey Park 2020 Urban Water Management Plan (UWMP) projects water demands to increase from 8,671 acre-feet per year (AFY) in 2025 to 9,066 AFY in 2045 for dry years representing an increase in demand of 395 AFY and 8,421 acre-feet per year (AFY) in 2025 to 8,804 AFY in 2045 for normal years representing an increase in demand of 383 AFY. The proposed increase in demand from the Project of 3,962 gpd (4 AFY) represents approximately

1% of the total increase in demand from 2025 to 2045 in the UWMP. The UWMP also projects adequate supplies to meet all future demands.

5.2.1.2 DOMESTIC WATER DEMAND

When analyzing the Project for infrastructure capacity, the projected demands for both fire suppression and domestic water are considered. Although domestic water demand is the Project's main contributor to water consumption, fire flow demands have a much greater instantaneous impact on infrastructure, and therefore are the primary means for analyzing infrastructure capacity. Based on the analysis of site's fire demands and review of the resulting residual pressures from the *Tait Assessment of Water Availability* (included in Attachment C), it has been determined the existing water system at the Project site is more than adequate to handle the demands for fire suppression. Furthermore, the relocation of the existing 8" water line within the site is nearly negligible in terms of system pressure loss and will not adversely affect the public water system.

5.2.1.3 FIRE FLOW REQUIREMENTS

Per the fire flow test results and *Tait Assessment of Water Availability* in Attachment C, the existing water main infrastructure will have sufficient capacity to service the Project's fire demand requirements. In summary, per the California Building Code Table B105.1(2) relating to site fire protection, the Project requires 25% of 8,000 gpm for sprinklered buildings of Type V building construction. This means the Project requires 2,000 gpm at the furthest fire hydrants in the vicinity of the Project. The Tait report hence analyzed two (2) proposed hydrants along the relocated 8" public water line each flowing at 1000 gpm with an allowed minimum pressure of 20 psi. After running the WaterCAD analysis, Tait concluded that each fire hydrant would have a residual pressure of 65 psi; therefore, it was concluded that the relocated public 8" water main onsite that connects into the existing public 12" water line in Saturn Street will have plenty of capacity. Therefore, adequate fire flows can be provided to the Project by the existing and rerouted water infrastructure.

5.2.2 WASTEWATER

5.2.2.1 SEWER GENERATION AND INFRASTRUCTURE CAPACITY

The Project's estimated sewer flows are based on LACSD sewer flow factors. Consistent with the proposed uses and LASCD's generation factors, the Project's projected wastewater generation is approximately 15,734 gpd, representing a net increase in wastewater generation at the Project Site of approximately 3,302 gpd. A breakdown of these wastewater generation calculations is provided in Table 4.

Table 4 – Estimated Proposed Wastewater Generation

Land Use	Units	Avg. Generation Factor (gpd/unit)[1]	Total Wastewater Generation (gpd)
Data Hall Center[2]	109,970 sf	25 gpd/1000 SF	2,749
Office (Network)[3]	1,750 sf	200 gpd/1000 SF	350
Office (Support)[3]	26,700	200 gpd/1000 SF	5,340
Office (Circulation)[3]	16,542	200 gpd/1000 SF	3,308
Ancillary (Elec.)[2]	23,976 sf	25 gpd/1000 SF	599
Ancillary (Mech.)[2]	39,463 sf	25 gpd/1000 SF	987
Substation (service)[4]	24,000 sf	100 gpd/1000 SF	2,400
Total Proposed Wastewater Flow			**15,734**
Total Existing Wastewater Flow to be Removed			**12,432**
Project Net Wastewater Flow (Proposed –Existing to be Removed)			**+3,302**

Notes
[1] Based on 100% of the sewer generation factors from the "Loading for each class of land use" from Los Angeles County Sanitation Districts
[2] Assumes 'Warehouse' will be used for Data Hall Center, Mechanical Area, Electrical Areas
[3] Assumes 'Office Building' will be used for Office Areas
[4] Assumes 'Service Station' will be used for Substation

It is anticipated that the Project will be served by the existing 8" sewer line located in Saturn Street. The City of Monterey Park requires a sewer connection permit if connecting to a city system. The fees are utilized to cover any infrastructure improvements that would be required because of Project implementation.

Sewer flows generated within the City drain to LACSD wastewater infrastructure and are ultimately conveyed to the A.K. Warren Water Resource Facility. The A.K. Warren Water Resource Facility has a capacity of 400 mgd and currently processes an average flow of 243.1 mgd. The Project's estimated wastewater generation increase of 3,302 gpd or 0.004 mgd comprises less than 0.002 percent of the wastewater that is processed daily at the A.K. Warren Water Resource Facility.

A will-serve letter has been received from LACSD, confirming the estimated wastewater generation increase of 3,302 gpd, and is included in Attachment A.

6. CONCLUSION

6.1 WATER

The proposed Project results in a higher water demand as compared to existing conditions. However, as shown by the *Tait Assessment of Water Availability*, the fire flow requirements will be met with the existing water infrastructure and fire hydrants. The proposed Project will increase the domestic water demands for the site by 3,962 gpd (4 AFY), this represents approximately 1% of the total increase in water demand anticipated for the City of Monterey Park from 2025 to 2045, as identified in the 2020 UWMP for dry years.

Based on the above, it is anticipated that the City of Monterey Park will be able to supply the water demands associated with the Project and future growth.

6.2 WASTEWATER

The proposed Project will result in the additional generation of sewer flow of an estimated 3,302 gpd. The actual wastewater flowrate generated from the proposed project will be 15,734 gpd, which is equivalent to 11 gpm. As mentioned previously in this report, the wastewater generated from the proposed development will drain into the existing 8" sewer line in Saturn Street, which has a sewer flow capacity of approximately 225 gpm at a slope of 1% with 50% filled capacity. The flow-depth of the existing 8" sewer has been evaluated and confirmed that there is capacity in the existing adjacent sewer system to convey the wastewater flows that will be generated by the project. The calculations are included in Attachment F of this report. The results are presented in Table 5.

Table 5 – Existing 8" Sanitary Sewer in Saturn Street

	Wastewater Flows (GPD)	Wastewater Flows (GPM)	Wastewater Flows (CFS)	Sewer Flow Depth (inches)
Capacity of Existing Sewer @ 50%-Full	389,108	225	0.50	4.0
Sewer with Wastewater from Project	15,734	11	0.025	0.96

A will-serve letter has been received from LACSD, stating that their facilities have capacity to accept the wastewater flows that would be generated by the Project.

Based on these evaluations, no impacts related to the existing wastewater infrastructure are anticipated.

Fuscoe Engineering
15535 Sand Canyon, Suite 100
Irvine, CA 92618

Dear Ms. Stephens:

Will Serve Letter for 1977 Saturn Street

The Los Angeles County Sanitation Districts (Districts) received your will serve letter request for the subject project located in the City of Monterey Park on February 26, 2024. The proposed project is located within the jurisdictional boundary of District No. 2. We offer the following comments regarding sewerage service:

1. The wastewater flow originating from the proposed project will discharge to a local sewer line, which is not maintained by the Districts, for conveyance to the Districts' Garfield Avenue Trunk Sewer, located in Wilcox Avenue just south of Pomona Boulevard. The Districts' 12-inch diameter trunk sewer has a capacity of 1.8 million gallons per day (mgd) and conveyed a peak flow of 0.5 mgd when last measured in 2016.

2. The wastewater generated by the proposed project will be treated at the A.K. Warren Water Resource Facility (formerly known as the Joint Water Pollution Control Plant) located in the City of Carson, which has a capacity of 400 mgd and currently processes an average flow of 237 mgd.

3. The expected increase in average wastewater flow from the project, described in the application as a 220,000 square-foot data center building, is 3,302 gallons per day, after all structures on the project site are demolished. For a copy of the Districts' average wastewater generation factors, go to www.lacsd.org, under Services, then Wastewater Program and Permits and select Will Serve Program, and click on the Table 1, Loadings for Each Class of Land Use link.

4. The Districts are empowered by the California Health and Safety Code to charge a fee to connect facilities (directly or indirectly) to the Districts' Sewerage System or to increase the strength or quantity of wastewater discharged from connected facilities. This connection fee is used by the Districts for its capital facilities. Payment of a connection fee may be required before this project is permitted to discharge to the Districts' Sewerage System. For more information and a copy of the Connection Fee Information Sheet, go to www.lacsd.org, under Services, then Wastewater (Sewage) and select Rates & Fees. In determining the impact to the Sewerage System and applicable connection fees, the Districts will determine the user category (e.g. Condominium, Single Family Home, etc.) that best represents the actual or anticipated use of the parcel(s) or facilities on the parcel(s) in the development. For more specific information regarding the connection fee application procedure and fees, please contact the Districts' Wastewater Fee Public Counter at (562) 908-4288, extension 2727.

5. In order for the Districts to conform to the requirements of the Federal Clean Air Act (CAA), the capacities of the Districts' wastewater treatment facilities are based on the regional growth forecast adopted by the Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CAA. All expansions of Districts' facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The available capacity of the Districts' treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service, but is to advise the applicant that the Districts intend to provide this service up to the levels that are legally permitted and to inform the applicant of the currently existing capacity and any proposed expansion of the Districts' facilities.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2708 or at shirlywang@lacsd.org.

Very truly yours,

Shirly Wang

Attachment B – Estimated Total Water Usage (ETWU) Calculations

Estimated Irrigation System Water Use						Historical Eto (in/yr) 46.6	
Landscape Area	Landscape Area (Acres)	Landscape Area (SF)	Plant Factor	Irrig. Efficiency	Gallons per year	Acre-Feet	gpd
Open Space	4.75	206,866.5	0.7	0.81	5,165,124	15.85	14,151.03

The comprehensive equation for calculating Estimated Total Water Use, including any SLAs, is given below.

$$ETWU = (ETo)(0.62)\left(\frac{PF\,x\,HA}{IE} + SLA\right)$$

Where:

ETWU = Estimated Total Water Use per year (gallons)
ETo = Reference Evapotranspiration (inches)
PF = Plant Factor from WUCOLS
HA = Hydrozone Area [high, medium, and low water use areas] (square feet)
SLA = Special Landscape Area (square feet)
0.62 = Conversion Factor
IE = Irrigation Efficiency (minimum 0.81 or 0.75)

1977 SATURN STREET, MONTEREY PARK, CA
ASSESSMENT OF WATER AVAILABILITY
TAIT #SP8987

November 9, 2022

INTRODUCTION

The subject site is commercial redevelopment project in the city of Monterey Park. The project includes the construction of a 253,000 square foot building of type V construction with sprinklers and the relocation of an existing water line within the property. This study will analyze the site's water system to verify sufficient water pressure and flow for site fire protection.

SITE CONDITIONS AND ANALYSIS

The existing facility has a public water line looping through the site. A 12" main pipe feeds into the property from the north, where it tees within the parking field to a 12" line that continues south to the 12" main within Saturn Street and an 8" line that goes east around the building before turning south and connecting to the 12" main within Saturn Street. There are several connections to the 8" line that serve each building as well as fire hydrants spaced throughout the site. As part of the project, the building footprint will increase in size and the 8" water line will be relocated further way from the building within the parking field.

For this analysis existing flow and pressure at the site were determined from a Fire Hydrant Flow Test conducted by the City of Monterey Park Public Works Department on 11/1/202. The findings of this flow test were then used to create a model of the water pipe network in the immediate vicinity of the site using WaterCAD v8i by Bentley Systems, Inc.

For site fire protection, Table B105.1(2) of the California Building Code states that the site fire flow protection for a 253,000 square foot building of type V construction, is 25% of 8,000 gpm for sprinklered buildings, equal to 2,000 gpm. The model for the analysis represents the greatest pressure loss the system would experience with 2 of the furthest most elevated hydrants along the 8" line flowing 1,000 gpm each.

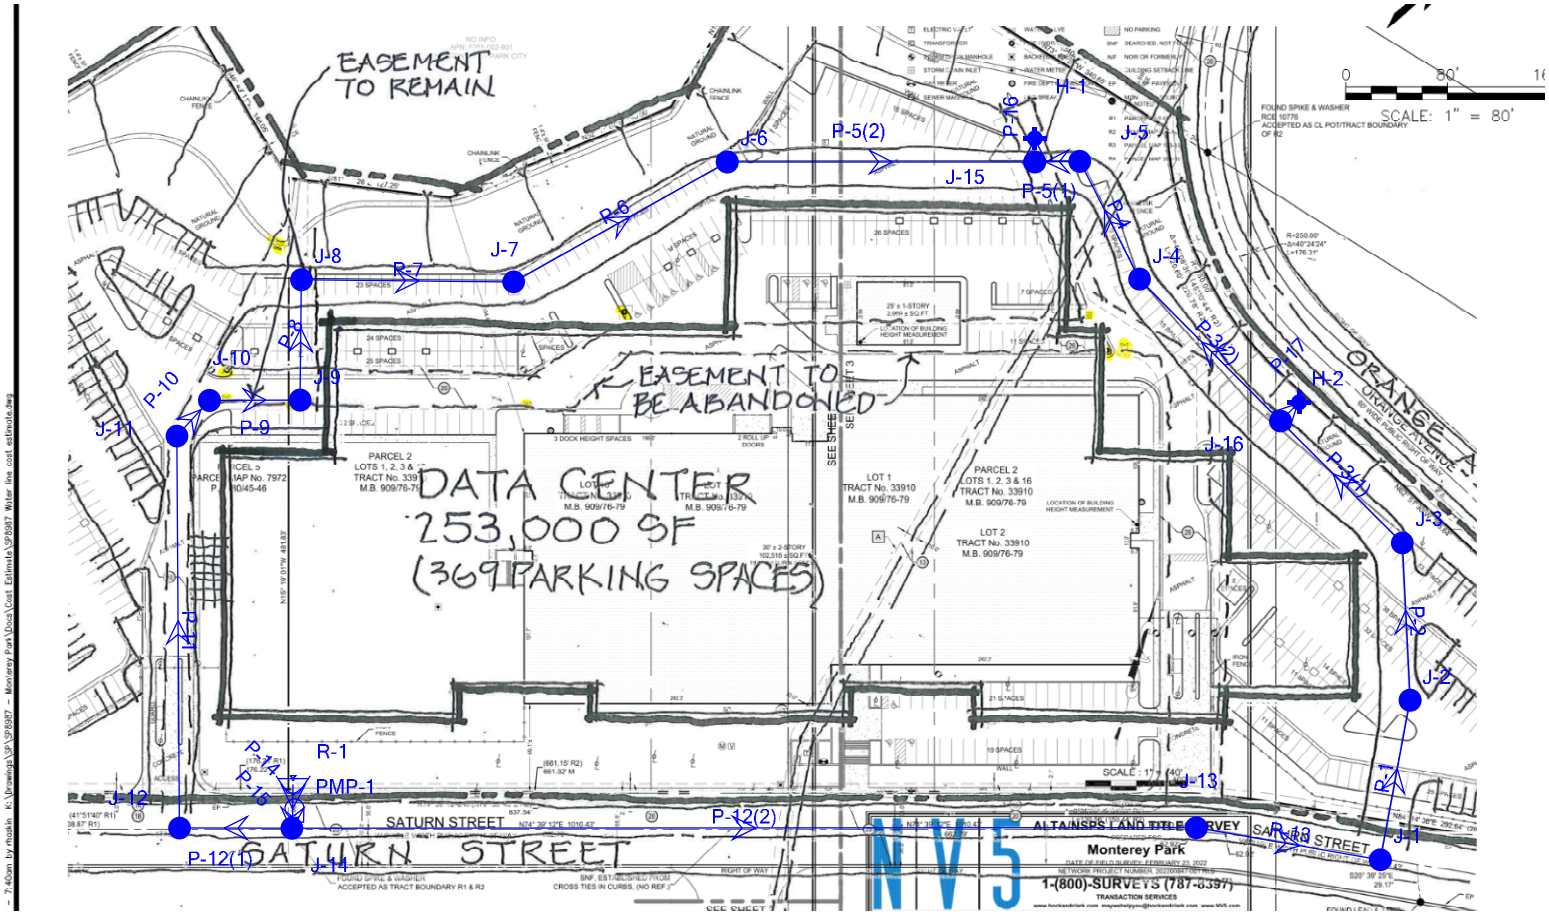
CAPACITY ASSESMENT AND CONCLUSION

Fire Flow Test Data

	Flow (gpm)	Pressure (psi)
Static Pressure	0	110
Residual Pressure	1417	95
Calculated @ 20 psi	3729	20

Worst Case Fire Hydrants – Greatest Site Protection Demand Scenario

	Service size	Demand (gpm)	Minimum Residual Pressure (psi)	Residual Pressure (psi)
H-1	6”	1000	20	65
H-2	6”	1000	20	65



Based on the analysis of site water demands and review of the resulting residual pressures, it has been determined the existing water system at the project site is more than adequate to handle the demands for fire hydrant flow site protection. Furthermore, the relocation of the existing 8” water line within the site is nearly negligible in terms of system pressure loss and will not adversely affect the downstream public water system.

Water Efficiency Memorandum

Kimley»Horn

DFWCGI

September 4, 2024

Data Center Water Use
Air-Cooled Chiller Systems

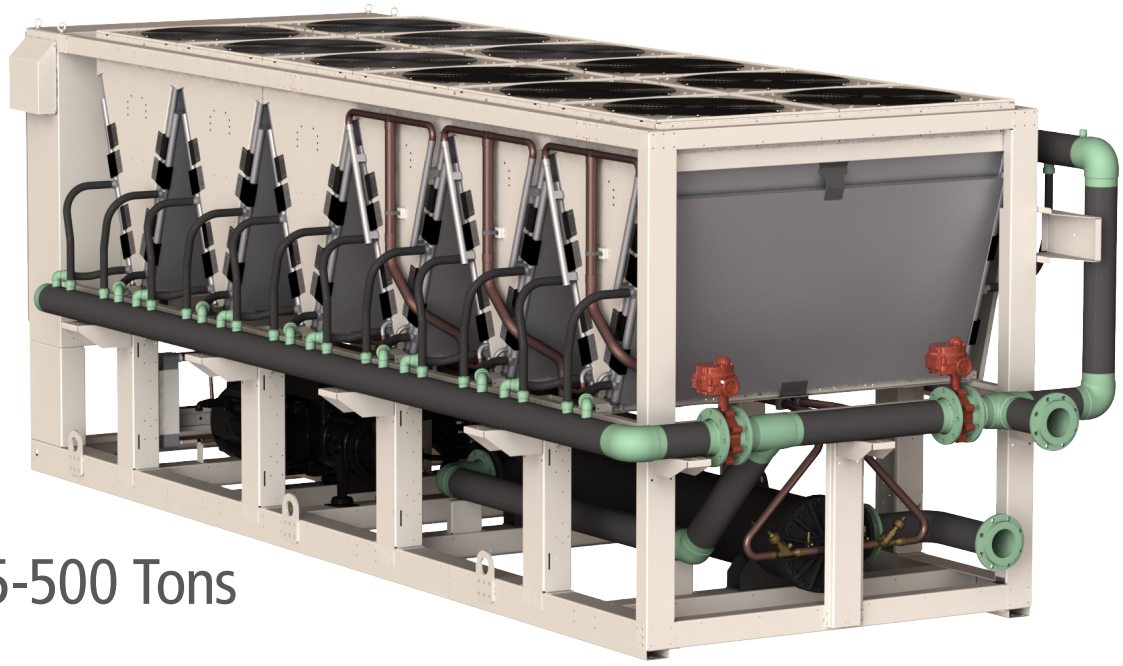
To whom it may concern,

This memorandum summarizes the water consumption associated with the proposed cooling system that would likely be used for the data center on Saturn Drive in the City of Monterey Park. While many datacenters have leveraged mechanical heat rejection systems that operate with evaporative technologies to cool the datacenter processes, that is not the approach being utilized at this site. Instead, to reduce water demand, we have proposed a system that consumes negligible water, as our focus has been a blend of energy efficiency and environmental sustainably.

We have proposed to utilize air cooled chillers with a free-cooling heat-exchanger. This approach will allow the facility to simply circulate water in a closed piping loop. The design and technology requires minimal water and is summarized as follows: Water would be required to initially fill the system before operational start up. Once filled, the only time additional water would be required for the systems would be if there was ever a pipe leak (unlikely as the piping system will be fully welded). As the system operates, the air-cooled chillers will run their compressors to cool the water when the outside air temperatures are warmer, and would use a fee cooling heat exchanger to allow them to operate without a compressor when temperatures are cooler. Overall, this type of system is well-tested and water-efficient for datacenter cooling especially in drier, more arid climates.

We have attached a manufacturer summary of the of the proposed air-cooled chillers with integrated water-side economizer for further reference, if needed.

Respectfully,

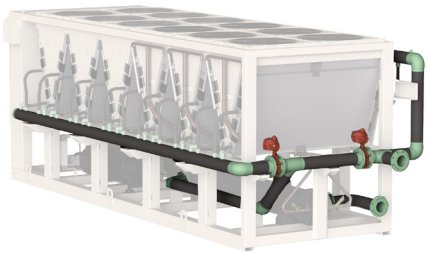


Curtis C. Spraggins
California Mechanical PE 41851

DAIKIN

Pathfinder® Air-cooled Chillers with Integrated Water-side Economizer

175-500 Tons



©2022 Daikin Applied. All Rights Reserved.

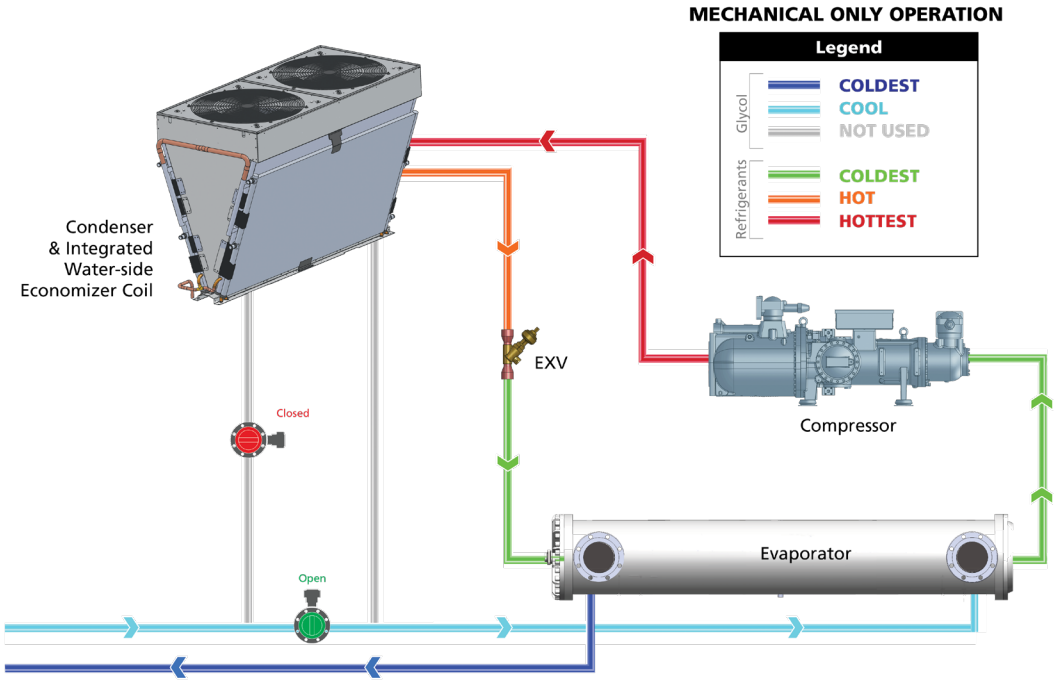
Integrated Water-side Economizer Solutions

The integrated water-side economizer (WSE) option (sometimes referred to as "Free Cooling" in the industry) adds a fluid-to-air heat exchanger coil in series with the chiller refrigerant condenser coil. The heat rejection airflow moves across both coils, allowing heat rejection and chilled fluid cooling without the need for vapor compression when outdoor air temperatures are lower than the cooling fluid temperature. **Daikin's WSE technology is the only HVAC factory packaged solution that combines the benefits of an integrated water-side economizer with VVR® (variable volume ratio) compression technology and total unit configurability, offering solutions fully tailored to the application requirement.**

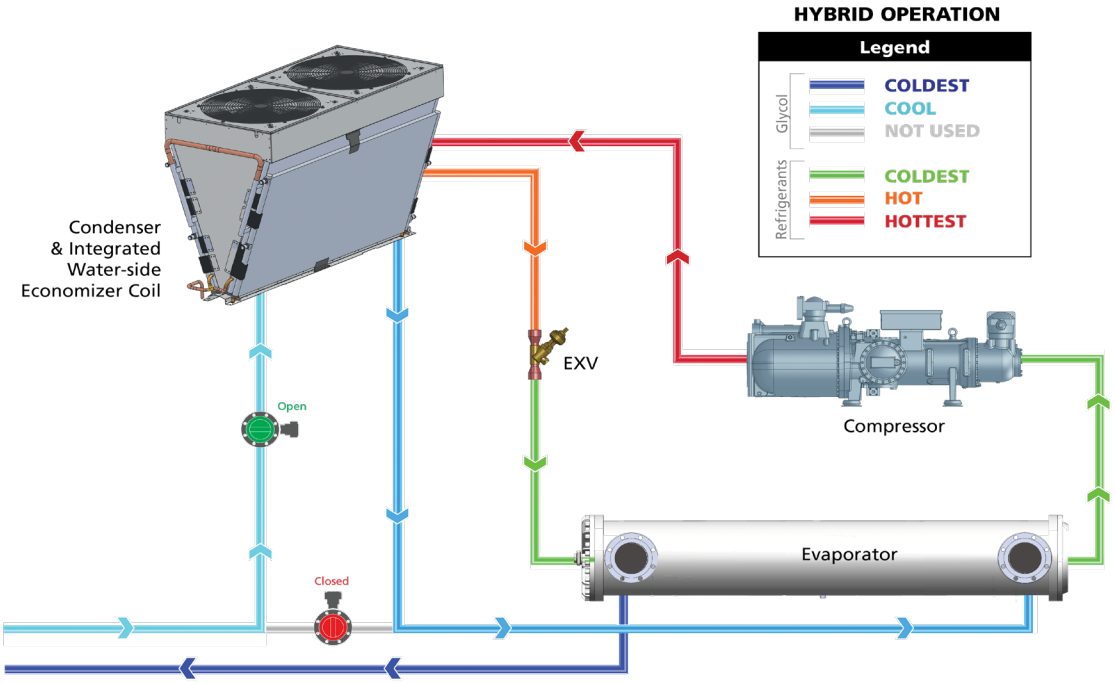
For building load profiles where there is a cooling demand and ambient temperatures are below the design chilled fluid temperature, an integrated WSE allows that demand to be met using much less power than normal vapor compression mechanical cooling. This can offer substantial cost of operation benefits to the building owner. Having the coils integrated into the chiller instead of using a separate dry cooler allows for economizing without the need for additional footprint and uses the same fans and fan motors already on the chiller, saving cost and space. It also reduces the number of electrical and piping connections needed, lowering install cost. Having the mechanical portion and controls portion bundled into one piece of equipment helps ensure plug-and-play operation, reduces the chance of field control issues, and allows the chiller to optimize efficiency and first cost.

WSE Benefits

- Low friction lowers pressure drop
- Low weight reduces roof load
- Impervious to corrosion for outstanding cleanliness
- UV protected for longevity

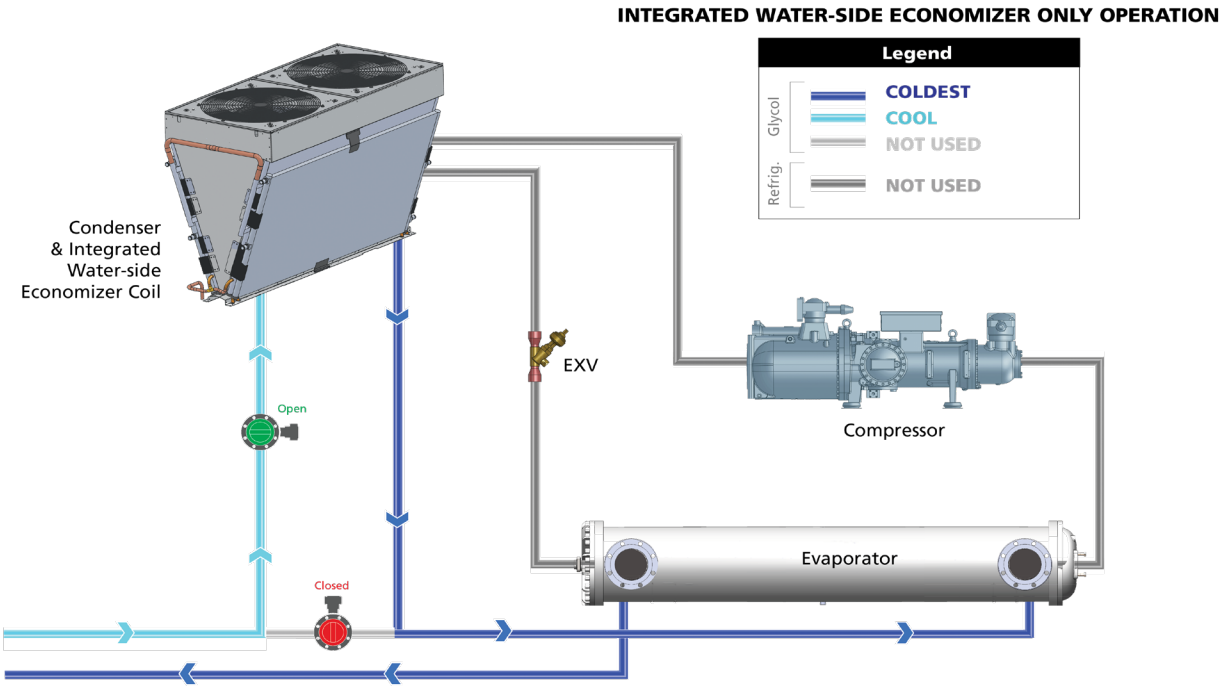


Polypropylene Header Pipe



- Maximize free cooling run hours for best performance and payback
- Easily cleanable
- Lower air pressure drop reduces fan energy use

Microchannel Fluid Coils



Operating Modes

Mechanical Cooling Only – This mode operates like a normal chiller with compressors and refrigerant used to remove the heat from the building. Mechanical cooling is used where ambient temperature is above the loop water temperature. 2-way valves bypass the water/glycol mixture around the WSE cooling coils so that they are not in the loop and do not contribute to the pressure drop of the system.

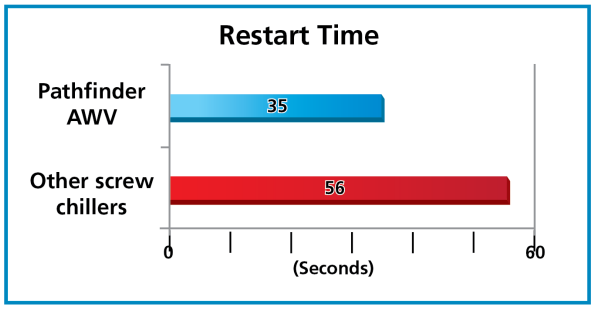
Hybrid – In this mode, both mechanical and WSE cooling are engaged. The 2-way valves direct the water/glycol mixture through the WSE coils first, allowing the cool ambient air to remove some of the heat from the loop. The water/glycol mixture then flows through the evaporator where the remaining heat load is removed. Hybrid mode allows you to get some benefit from the WSE coils even when it isn't cold enough to achieve removal of 100% of the load with the WSE coils only.

WSE Only – When ambient temperature is lower than the water/glycol temperature, the chiller will disengage the compressors and all of the load will be rejected by the WSE coils. The water/glycol mixture continues to flow through both the WSE coils and the evaporator so that if the load can no longer be met by just the WSE coils, the compressors will be enabled and switch back into hybrid mode. The colder the ambient temperature, the greater the amount of heat a given coil can reject. During WSE mode, the only power draw is from the operation of the condenser fans and water pump.

Unmatched Technologies

VVR® (Variable Volume Ratio) Technology

VVR compressor technology adjusts the chiller compression ratio and rpm using a VFD to meet partial load demands and varying outdoor ambient conditions at optimized efficiency levels.



- Ideal for applications/data centers where load and ambient temperature can vary greatly
- High leaving water temperatures (up to 70°F LWT) enable higher efficiency performance
- Uitmate system efficiency when combining VVR and WSE technologies

VVR®

RapidRestore® Technology

With compressor start and loading times that are twice as fast as standard HVAC units, Daikin air-cooled chillers with RapidRestore technology give building owners and facility managers peace of mind during a critical power loss.

- RapidRestore restarts the chiller in as little as 35 seconds after power is restored
- A Fast Loading™ option restores full load cooling capacity in less than five minutes
- Simplifies ownership by decreasing the need for additional thermal storage for critical applications

SiteLine™ Building Controls

Daikin makes building automation simpler, more effective and easier to scale than any other controls solution on the market today.

SITELINE™
DAIKIN BUILDING CONTROLS

- Easy installation with out-of-the box functionality for both new and retrofit applications
- Simple operation that brings insight to system performance and is intuitive to manage
- Low upfront costs that enable you to work with other equipment systems
- Scalable solutions for both standalone equipment and building systems
- Advanced security that protects customer data

For more information about our complete offering of HVAC systems and solutions, contact your local Daikin Applied Sales office or visit www.DaikinApplied.com to find an office near you.

This page intentionally left blank.

1.0 INTRODUCTION

These Responses to Comments and Errata have been prepared in accordance with the California Environmental Quality Act (CEQA) as amended (Public Resources Code [PRC] Section 21000 et seq.) and CEQA Guidelines (California Code of Regulations [CCR] Section 15000 et seq.). The Responses to Comments and Errata incorporate, by reference, the Public Review IS/MND (State Clearinghouse No. 2024101397) prepared by the City of Monterey Park (City) for the 1977 Saturn Data Center Project (Project).

The Responses to Comments and Errata present Section 1.0 through Section 4.0:

- Section 1.0: Introduction and CEQA process.
- Section 2.0: A list of persons, organizations, and/or public agencies commenting on the Draft IS/MND.
- Section 3.0: Written responses to each comment identified in Section 2.0.
- Section 4.0: Changes that were made to clarify, correct, or supplement information provided in the Public Review IS/MND.

1.1 CEQA Process

The Notice of Intent (NOI) to adopt an IS/MND was posted on October 31, 2024, with the County Clerk in Los Angeles. The Draft IS/MND was circulated for a 33-day public review until December 2, 2024. The Draft IS/MND was circulated to federal, State, and local agencies and interested parties requesting a copy of the Draft IS/MND. Copies of the Draft IS/MND were made available at the following locations:

- City of Monterey Park Website: http://www.montereypark.ca.gov/1535/Public-Notices
- City of Monterey Park City Hall, Planning Division: 320 West Newmark Avenue, Monterey Park, CA 91754

1.2 Notice of Determination

Pursuant to CEQA Guidelines Section 15094, the City will file a Notice of Determination (NOD) with the Office of Land Use & Climate Innovation and Los Angeles County Clerk within five working days of Project approval.

2.0 COMMENT LETTERS

The City received five comment letters during the public review period. Each comment within the comment letter that requires a response is also assigned a number. For example, the first comment within the comment letter received from Los Angeles County Sanitation District is therefore labeled Comment 1-1 and the responses to each comment are correspondingly numbered, (i.e., Response 1-1). A copy of the comment letter is below. Responses to such comments are provided in Section 3.0.

3.0 RESPONSES TO COMMENTS

Responses to individual comments are included herein.

Letter 1

Los Angeles County Sanitation Districts
1995 Workman Mill Road
Whittier, CA 90601-1400
Received on November 14, 2024

Comment 1-1

The Los Angeles County Sanitation Districts (Districts) received a Notice of Intent (NOI) to Adopt a Mitigated Negative Declaration (MND) for the subject project located in the City of Monterey Park on November 4, 2024. The proposed project is located within the jurisdictional boundaries of District No. 2. Previous comments submitted by the Districts in correspondence dated February 29, 2024 (copy enclosed), still apply to the subject project with the following comments:

Response to Comment 1-1

This comment serves as an introduction to the comment letter and references the previously submitted comments from the Los Angeles County Sanitation District (LACSD) dated February 29, 2024. The previous letter was included in Attachment A of Appendix M-1 of the Public Review Initial Study/Mitigated Negative Declaration (IS/MND). As this comment does not concern any further information addressed or contained in the Public Review IS/MND, no further response is required.

Comment 1-2

Section 4.19 Utilities and Service, page 142 stated that "Any work that may affect services to the existing sewer lines or impacts to LACSD facilities or plant will be coordinated with the City's Public Works Department, Engineering Division." Please use the Geographic Information System (GIS) application at https://www.app.lacsd.org/ugutilities/ to obtain copies of as-built drawings of the District's facilities. When project plans that incorporate our facilities have been prepared, please submit copies to the Engineering Counter at engineeringcounter@lacsd.org for our review and comment.

Response to Comment 1-2

This comment restates information provided in the Public Review IS/MND and provides a link to the LACSD GIS application. The comment is noted for the administrative record, and particularly with respect to the request for submission of Project plans (in the future) that may incorporate LACSD facilities. As this comment does not further affect the analysis and conclusions provided in the Public Review IS/MND, no further response is required.

Comment 1-3

A.K. Warren Water Resource Facility currently processes an average flow of 248.3 million gallons per day.

Response to Comment 1-3

The comment states that the A.K. Warren Water Resource Facility currently processes an average flow of 248.3 million gallons per day (mgd). It should be noted that the commenter's prior letter dated February 29, 2024 and included in Attachment A of Appendix M-1 of the Public Review IS/MND noted that the A.K. Warren Water Resource Facility currently (as of February 29, 2024) has a capacity of 400 mgd and processes an average flow of 237 mgd. The average flow of 237 mgd was utilized in the analysis completed for the Public Review IS/MND, and the Project's estimated wastewater generation of 0.004 mgd (see page 143 of the Public Review IS/MND) would be accommodated by the A.K. Warren Water Resource Facility's available capacity in any case. This comment is noted for the administrative record. As this comment does not further affect the analysis and conclusions provided in the Public Review IS/MND, no further response is required.

Comment 1-4

All other information concerning Districts' facilities and sewerage service contained in the document is current.

Response to Comment 1-4

This comment states that the information provided by the commenter in the Public Review IS/MND is current. As this comment does not provide further information that is not already included in the Public Review IS/MND, no further response is required.

Comment 1-5

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2742, or phorsley@lacsd.org.

Response to Comment 1-5

This comment serves as a conclusion to the comment letter and provides contact information should any questions arise. As this comment does not concern any information addressed or contained in the Public Review IS/MND, no further response is required.

Comment 1-6

The Los Angeles County Sanitation Districts (Districts) received your will serve letter request for the subject project located in the City of Monterey Park on February 26, 2024. The proposed project is located within the jurisdictional boundary of District No. 2. We offer the following comments regarding sewerage service:

1. The wastewater flow originating from the proposed project will discharge to a local sewer line, which is not maintained by the Districts, for conveyance to the Districts' Garfield Avenue Trunk Sewer, located in Wilcox Avenue just south of Pomona Boulevard. The Districts' 12-inch diameter trunk sewer has a capacity of 1.8 million gallons per day (mgd) and conveyed a peak flow of 0.5 mgd when last measured in 2016.

2. The wastewater generated by the proposed project will be treated at the A.K. Warren Water Resource Facility (formerly known as the Joint Water Pollution Control Plant) located in the City of Carson, which has a capacity of 400 mgd and currently processes an average flow of 237 mgd.

3. The expected increase in average wastewater flow from the project, described in the application as a 220,000 square-foot data center building, is 3,302 gallons per day, after all structures on the project site are demolished. For a copy of the Districts' average wastewater generation factors, go to www.lacsd.org, under Services, then Wastewater Program and Permits and select Will Serve Program, and click on the Table 1, Loadings for Each Class of Land Use link.

4. The Districts are empowered by the California Health and Safety Code to charge a fee to connect facilities (directly or indirectly) to the Districts' Sewerage System or to increase the strength or quantity of wastewater discharged from connected facilities. This connection fee is used by the Districts for its capital facilities. Payment of a connection fee may be required before this project is permitted to discharge to the Districts' Sewerage System. For more information and a copy of the Connection Fee Information Sheet, go to www.lacsd.org, under Services, then Wastewater (Sewage) and select Rates & Fees. In determining the impact to the Sewerage System and applicable connection fees, the Districts will determine the user category (e.g. Condominium, Single Family Home, etc.) that best represents the actual or anticipated use of the parcel(s) or facilities on the parcel(s) in the development. For more specific information regarding the connection fee application procedure and fees, please contact the Districts' Wastewater Fee Public Counter at (562) 908-4288, extension 2727.

5. In order for the Districts to conform to the requirements of the Federal Clean Air Act (CAA), the capacities of the Districts' wastewater treatment facilities are based on the regional growth forecast adopted by the Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CAA. All expansions of Districts' facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San

> Bernardino, Riverside, Ventura, and Imperial. The available capacity of the Districts' treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service, but is to advise the applicant that the Districts intend to provide this service up to the levels that are legally permitted and to inform the applicant of the currently existing capacity and any proposed expansion of the Districts' facilities.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2708 or at shirlywang@lacsd.org.

Response to Comment 1-6

This comment is an attachment of the previously submitted comment from the LACSD referenced in Comment 1-1. The previous letter was included in Attachment A of Appendix M-1 of the Public Review IS/MND. No further response is warranted.

Letter 2

Advocates for the Environment
10211 Sunland Boulevard
Shadow Hills, CA 91040
Received on December 2, 2024

Comment 2-1

Advocates for the Environment submits the comments in this letter regarding the Mitigated Negative Declaration (**MND**) for the 1977 Saturn Data Center Project (**Project**). The Project Site is located near the intersection of Saturn Street and Orange Avenue, in the City of Monterey Park (**City**). The existing uses of the 15.8-acre Project site would be demolished to construct a 218,400-square-foot data center with an equipment yard, 24,000-square-foot substation, parking, and landscaping. The Project includes diesel generators for emergency back-up.

Advocates for the Environment is a public interest law firm and advocacy organization with the mission to educate the public about the law as it pertains to the environment and provide legal services in support of environmental causes. We have reviewed the Mitigated Negative Declaration (MND) released in October 2024 and submit comments regarding the sufficiency of the MND's Greenhouse-Gas (GHG) analysis under the California Environmental Quality Act (**CEQA**).

Response to Comment 2-1

This comment serves as an introduction to the commenter and comment letter. This comment is noted.

Comment 2-2

The City Should Require the Project to be Net-Zero

Given the current regulatory context and technological advancements, a net-zero significance threshold is feasible and extensively supportable. GHG emissions from buildings, including indirect emissions from offsite generation of electricity, direct emissions produced onsite, and from construction with cement and steel, amounted to 21% of global GHG emissions in 2019. (IPCC Sixth Assessment Report, Climate Change 2022, WGIII, Mitigation of Climate Change, p. 9-4.) This is a considerable portion of global GHG emissions.

It is much more affordable to construct new building projects to be net-zero than to obtain the same level of GHG reductions by expensively retrofitting older buildings to comply with climate change regulations. Climate damages will keep increasing until we reach net zero GHG emissions, and there is a California state policy requiring the state to be net-zero by 2045. It therefore is economically unsound to construct new buildings that are not net-zero.

Environmental groups have achieved tremendous outcomes by litigation under CEQA. Two of the largest mixed-use development projects in the history of California, Newhall Ranch (now FivePoint Valencia), and Centennial (part of Tejon Ranch) decided to move forward as net-zero communities after losing CEQA lawsuits to environmental groups. The ability for these large projects to become net-zero indicates that it is achievable, even for large-scale developments. The Applicant for this Project should do the same.

We urge the City to adopt net-zero as the GHG significance threshold for this project. This threshold is well-supported by plans for the reduction of GHG emissions in California, and particularly the CARB Climate Change Scoping Plans. The CARB 2017 Scoping Plan states that "achieving no net additional increase in GHG emissions, resulting in no contribution to GHG impacts, is an appropriate overall objective for new development." (CARB 2017 Scoping Plan, p. 101.) Additionally, the CARB 2022 Scoping Plan reaffirms the necessity of a net zero target by expressing: "it is clear that California must transition away from fossil fuels to zero-emission technologies with all possible speed … in order to meet our GHG and air quality targets." (CARB 2022 Scoping Plan, p. 184.) CARB further encourages a net-zero threshold in its strategies for local actions in Appendix D to the 2022 Scoping Plan. (CARB 2022 Scoping Plan, Appendix D p. 24-26.)

Moving this Project forward as a net-zero project would not only be the right thing for the City to do, but also would help protect the City and the Applicant from CEQA GHG litigation.

Response to Comment 2-2

The commenter first claims that "a net-zero significance threshold is feasible and extensively supportable" and then references general GHG emissions from buildings as a portion of global GHG emissions. The commenter cites to the IPCC Sixth Assessment Report, Climate Change 2022, WGIII, Mitigation of Climate Change as the source of its building emissions statistic. Based on review of the IPCC Sixth Assessment Report, Climate Change 2022, WGIII, Mitigation of Climate Change, it should be noted that the document does not specifically state that a "net-zero significance threshold" is feasible. In addition, it should be noted that neither the Nation, State, nor the City has adopted a net-zero GHG threshold, or in fact any applicable quantitative GHG thresholds, for individual development projects in this region. Therefore, the commenter's inference that a net-zero significance threshold should apply to the Project is inaccurate and inapplicable.

Next, the comment claims that it is "much more affordable to construct new buildings to be net-zero than to obtain the same level of GHG reductions by expensively retrofitting older buildings to comply with climate change regulations" and "therefore it is economically unsound to construct new buildings that are not net-zero." The commenter does not provide evidence to

support this economic claim. Also, this comment does not focus on the adequacy of the IS/MND or its analysis of potentially significant impacts. Therefore, no further response is required.

The commenter also generically references California's policy to achieve net-zero GHG emissions no later than 2045 (presumably Assembly Bill [AB] 1279). This comment is not regarding the Project specifically and does not focus on the adequacy of the IS/MND. Nonetheless, it should be noted that the IS/MND identifies AB 1279 in relation to the 2022 Scoping Plan and analyzes impacts accordingly where applicable.

The commenter requests that the Applicant for the Project develop it as net-zero and notes that the Newhall Ranch and Centennial master plan projects "decided to move forward as net-zero communities after losing CEQA lawsuits to environmental groups." The comment requesting the Project be net-zero is noted. However, it is also noted that there is no legal requirement for the Project to be net-zero. The Project is an urban infill project and materially different in location and typology than the greenfield projects referenced in the comment. And, this comment does not focus on the adequacy of the IS/MND or its analysis of potentially significant impacts. Therefore, no further response is required.

Also, regarding the 2022 Scoping Plan, it should be noted that the commenter is likely referring to Section 3.2.2 Net-Zero Threshold of Significance, in Appendix D of the 2022 Scoping Plan. The first sentence of that section states "[*a]bsent consistency with an adequate, geographically specific GHG reduction plan*, as described in Section 2 or consistency with the project attributes approach identified in Table 3 for residential and mixed-use development project types, *lead agencies can* make a significance determination, consistent with Section 4 below, based on whether the project would result in net-zero GHG emissions." (*Emphasis* added). Here, the City has a CEQA-qualified specific GHG reduction plan. Accordingly, even the 2022 Scoping Plan expressly recognizes that a local Lead Agency's climate action plan can be used as an appropriate threshold of significance regardless of whether the 2022 Scoping Plan discusses, and other projects have used, net-zero thresholds in different scenarios.

Moreover, Appendix D of the 2022 CARB Scoping Plan notes that projects that have agreed to net zero GHG emissions such as "…the Newhall and Tejon Ranch projects do not necessarily represent the type of development that California most needs to simultaneously tackle the housing and climate crises…" even if they demonstrate net-zero is feasible for some projects that decide to pursue that approach. Each of those projects represent large new mixed-use communities being developed in a greenfield area. The Project, in contrast, is located on an urban infill location with prior commercial uses, which is a more favorable development site when considering where to locate new development projects.

Next, the comment urges the City to "adopt net-zero as the GHG significance threshold for this project." This comment is noted. And, to confirm for the record, the City as the Lead Agency has not adopted a net-zero significance threshold for the Project, or any other project in the City. Furthermore, the IS/MND clearly states the applicable threshold of significance that applies to the Project.

The IS/MND, in Appendix G, on page 22-23 states the following:

"Addressing GHG emissions generation impacts requires an agency to determine what constitutes a significant impact. The CEQA Guidelines allow lead agencies to determine the thresholds of significance based to the extent possible on scientific and factual data that illustrate the extent of an impact. This means that each agency may determine whether to: (1) quantify greenhouse gas emissions resulting from a project; and/or (2) rely on a qualitative analysis or performance-based standard. CEQA Guidelines Section 15064.4(a) directs that agencies are to use "careful judgment" and "make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate" the Project's GHG emissions.

Appendix G of the CEQA Guidelines sets forth two general thresholds that state whether the project would: 1. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; and 2. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

As discussed above, no applicable numeric significance threshold for GHG emissions has been adopted by the State, SCAQMD, or the City that applies to the proposed Project. Further, although State, regional, and local plans and policies have been adopted to help address climate change (see discussions above), no current law or regulation would regulate all aspects of the Project's GHG emissions. In the absence of any adopted numeric threshold, *the City has determined that the significance of the Project's GHG emissions as provided in CEQA Guidelines Section 15064.4(b)(2) will be assessed by determining whether the Project is consistent with applicable plans, policies, regulations adopted for the purpose of reducing the emissions of greenhouse gases.* Therefore, under this analysis, *a significant impact would occur if the Project would conflict with applicable regulatory plans and policies of the lead agency (i.e., the City of Monterey Park) to reduce GHG emissions discussed within the City's CAP*. The analysis below describes the extent to which the Project complies with the regulations outlined in the CAP." (*Emphasis* added).

Accordingly, the IS/MND analyzed impacts according to the threshold of significance set by the Lead Agency and found that the Project's GHG impacts were less than significant.

In closing, the commenter states that moving the Project forward as net-zero "would help protect the City and the Applicant from CEQA GHG litigation." This portion of the comment does not

focus on the adequacy of the IS/MND or its analysis of potentially significant impacts. Therefore, no further response is required.

Comment 2-3

The MND's Discussion Concerning Cap-and-Trade is Misleading

The MND was misleading of the Project's GHG impact because it incorrectly claimed that the Project's GHG emissions are covered by cap-and-trade. The Project is not subject to cap-and-trade regulations. The City claimed that "GHG emissions associated with the electricity usage and mobile sources of most projects that are subject to CEQA are covered by the Cap-and-Trade program" because the program "was extended in 2015 to cover combustion of fossil fuels including transportation fuels used in California." (MND, p. 93.) However, this reasoning is flawed. Just because fossil fuels and transportation fuels are accounted for under the cap-and-trade program does not mean that the Project qualifies as a covered entity. There are specific category of entities which are required to comply with the cap-and-trade program, none of which would include this Project.[1] Therefore, the Project's emissions are not covered by cap-and-trade.

CEQA Guidelines section 15064.4, subdivision (b)(3) allows a lead agency to consider a project's compliance with plans for the reduction of GHG emissions to determine the significance of GHG impact. Nonetheless, the lead agency is not supposed to analyze whether the suppliers of the project's electricity comply with the plans, but rather whether the project itself does. Thus, cap-and-trade is irrelevant to determining the Project's GHG significance because the Project is not a covered entity under the cap-and-trade program and it must account for electricity usage just as any other land use development project.

Footnote 1: See Cal. Code Regs. Tit. 17, § 95811.

Response to Comment 2-3

The comment states that "the MND was misleading of the Project's GHG impact because it incorrectly claimed that the Project's GHG emissions are covered by cap-and-trade." That statement is inaccurate and untrue. The IS/MND does not claim that the Project emissions are covered by cap-and-trade. Instead, page 93 of the IS/MND clearly states that "emissions associated with the Project's electricity consumption *occur at power production facilities which are covered entities under the State's Cap-and-Trade regulations*, which limit total GHG emissions by covered sources with decreasing allocations, and are subject to the RPS standard requiring the GHG intensity of electricity production to decrease steadily." (*Emphasis* added). That statement distinguishes between the Project (which is not covered by cap-and-trade) and power production facilities (which are covered by cap-and-trade) that deliver energy to the City. Thus, the comment is incorrect and mischaracterizes the Project.

As noted by the California Legislative Analyst's Office, the cap-and-trade regulation places a "cap" on aggregate GHG emissions from large GHG emitters, such as large industrial facilities, electricity generators and importers, and transportation fuel suppliers.[1] Additionally, the cap-and-trade program takes into account the reductions from other climate policies (Low Carbon Fuel Standard, Advanced Clean Cars, Renewable Portfolio Standard, etc.) that will be achieved during the same time period. These regulations apply to covered entities and ultimately reduce direct emissions from those entities, regardless of individual development projects. Accordingly, it is foreseeable that actual indirect emissions associated with projects that obtain energy from entities subject to regulatory compliance would consume such energy in a manner that reflects the results of regulatory compliance by the energy providers.

Moreover, it should be noted that the IS/MND quantified and disclosed the Project's total emissions in Table 4.8-2: Construction Greenhouse Gas Emissions and Table 4.8-3: Operational Greenhouse Gas Emission Opening Year. It should be noted that the IS/MND did not take quantitative credit for the existing land use (approximately 3,400 $MTCO_2e$ annually) on the Project Site. In addition, it should be noted that the IS/MND, Appendix G: Greenhouse Gas Emissions Analysis Inventory, clearly stated that the Lead Agency did not apply a quantitative GHG threshold to the Project, and the analysis that calculates the amount of GHG emissions from the Project using air quality models was for informational purposes only. Therefore, the determination of significance, in any case, was not tied to a quantitative level of emissions regardless of either the direct emissions of the Project or the independent regulations that apply to covered entities. In other words, the IS/MND did not under any scenario base its applicable threshold of significance, and related impact conclusion, on quantified emissions of the Project.

The comment also states that "[t]he City claimed that "GHG emissions associated with the electricity usage and mobile sources of most projects that are subject to CEQA are covered by the Cap-and-Trade program" because the program "was extended in 2015 to cover combustion of fossil fuels including transportation fuels used in California." (MND, p. 93.) However, this reasoning is flawed. Just because fossil fuels and transportation fuels are accounted for under the cap-and-trade program does not mean that the Project qualifies as a covered entity." This comment is correct, the Project does not qualify as a covered entity. The IS/MND did not assume the Project was a covered entity under the cap-and-trade program. Neither did the IS/MND rely on any state cap-and-trade regulations to reduce GHG emission impacts as analyzed against the threshold of significance used in the IS/MND. Furthermore, to clarify the discussion, the City has further clarified the narrative on pages 93-94. See Section 4.0: Errata of the Final IS/MND.

Moreover, it is noted that the IS/MND, in Section 4.8 Greenhouse Gas Emissions, Regulatory Setting, identified Federal and State programs that address climate change and are designed to

[1] California Legislative Analyst's Office, Cap-and-Trade Extension: Issues for Legislative Oversight, December 12, 2017, https://lao.ca.gov/Publications/Report/3719. Accessed September 13, 2025.

reduce GHG emissions over time. Several programs including, but not limited to, AB 32, the applicable Scoping Plan, Cap-and-Trade Regulations, Title 20 Appliance Efficiency Regulations, and Title 24 Building Energy Efficiency Standards will continue to reduce GHG emissions in the State as emissions sources comply with applicable regulations. These programs exist and influence Statewide GHG emissions, and references to such programs in the IS/MND are factual and ultimately influence actual emissions from the emission sources.

It is also noted that the IS/MND includes Table 4.8-4: Trend of Project Greenhouse Gas Emissions Related to State Mandates. The Lead Agency did not intend for that table to convey, for a determination of potential impact significance, that compliance with State mandates, such as cap-and-trade, would directly reduce the Project's direct GHG emissions. Accordingly, in response to this comment, and to clarify the administrative record, the Lead Agency has deleted Table 4.8-4 and slightly revised the related narrative to be clear that that total modeled opening-year GHG emissions from the Project are 85,309 $MTCO_2e$. See Section 4.0: Errata of the Final IS/MND. These changes clarify that the IS/MND did not, and is not, applying the cap-and-trade program to offset the GHG emissions of the Project. These clarifications serve to inform the public and decision makers before deciding whether to approve the Project.

Comment 2-4

The GHG Significance Analysis was Inadequate

The MND adopted two significance thresholds based on the CEQA Guidelines Appendix G. Threshold (a) asks whether the Project would "generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment." (MND, p. 83.) Under this threshold, the City considered the Project's estimated operational GHG emissions of approximately 85,309 metric tons of carbon dioxide equivalent (**MTCO2e** *[sic]*) per year less than significant.

Threshold (b) asks whether the Project would "conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases." (MND, p. 83.) The City's conclusion that the Project would have a less than significant GHG impact under this threshold was based on the erroneous assumption that the Project's GHG emissions would be covered under the cap-and-trade program. Further, this significance conclusion is invalid because the MND's conclusion that the Project would be consistent with applicable plans is not supported by substantial evidence.

The City did not support its GHG significance determination with substantial evidence. The City only considered two applicable plans: The City of Monterey Park Climate Action Plan (CAP), and the 2022 Scoping Plan, both of which the Project would conflict with. In particular, none of the CAP provisions pertain to a data center which uses extremely large amounts of electricity. (See MND, pp. 84-89.) The same analysis that the City included to address the Project's compliance

with the CAP would apply even if the Project's electricity were 100 times greater than it currently is, essentially screening out any data center from having significant GHG impact no matter what amount of electricity it uses. The City does not support this analysis by substantial evidence. Further, the City cannot rely on the assumption that GHG emissions will gradually ramp down in accordance with stricter GHG regulations, because the Project's emissions will remain in the five-figure range through 2035. (MND, p. 93, Table 8.4-4.)

Overall, the MND concluded that the Project's GHG emissions would be less than significant. Given the inadequacy of analysis under both thresholds, there is a fair argument for why the Project would have a significant GHG impact. Yet, significance under either of the two thresholds would require a finding of significant impact.

Response to Comment 2-4

This comment claims that the GHG significance analysis was inadequate. As discussed below, this claim is based on several factually inaccurate statements.

First, the comment claims that "[t]he MND *adopted* two significance thresholds based on the CEQA Guidelines Appendix G." (*Emphasis* added). That is not true. The IS/MND recites the inquiries from the CEQA Guidelines regarding whether a project would: generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; and whether a project would conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases. However, as discussed above, the Lead Agency clearly stated that: "[t]herefore, under this analysis, a significant impact would occur if the Project would conflict with applicable regulatory plans and policies of the lead agency (i.e., the City of Monterey Park) to reduce GHG emissions discussed within the City's CAP." See IS/MND, Appendix G, Section 5.0: Significance Criteria and Methodology, Section 5.1 Threshold of Significance Criteria. This threshold and the related analysis are carried forward in the IS/MND greenhouse gas emissions section. Therefore, it is inaccurate for the comment to claim that the IS/MND adopted any other significance threshold for the analysis of GHG impacts.

Second, the comment states that "under this threshold, the City considered the Project's estimated operational GHG emissions of approximately 85,309 metric tons of carbon dioxide equivalent (MTCO2e [sic]) per year less than significant." That statement is also inaccurate. The IS/MND did not base its determination of significance on the amount of GHG emissions. Instead, as is permissible, the Lead Agency exercised its discretion to use a geographically specific greenhouse gas emissions reduction plan (i.e., the City's CAP] as its pathway to demonstrate compliance; and in addition disclosed the 85,309 metric tons of total GHG emissions associated with the Project for informational purposes, as repeatedly stated in the IS/MND and Appendix G. Moreover, there is not an adopted existing numerical threshold of significance for GHG emissions from the applicable air quality management district for this type of project. Therefore, the less

than significant conclusion was not based on the quantitative amount of GHG emissions as implied by the comment.

Third, the comment claims that "[t]he City's conclusion that the Project would have a less than significant GHG impact under this threshold was based on the erroneous assumption that the Project's GHG emissions would be covered under the cap-and-trade program." As described above in Response to Comment No. 2-3, the IS/MND did not assert that the GHG emissions of the Project would be covered under the cap-and-trade program; and in any case, did not base its significance conclusion on any quantitative threshold or the applicability, or lack thereof, of any State-mandated programs. Thus, this comment is inaccurate. As a related matter, the IS/MND GHG analysis was supported by specific land use assumptions for the proposed land use, qualitative and quantitative impact analysis, and a GHG technical report that analyzed the City's CAP and modeled potential GHG emissions, which collectively provide evidentiary support for the IS/MND conclusions.

Fourth, the comment states "[t]he City only considered two applicable plans: The City of Monterey Park Climate Action Plan (CAP), and the 2022 Scoping Plan, both of which the Project would conflict with" and that "none of the CAP provisions pertain to a data center which uses extremely large amounts of electricity." As noted above, the City, as the Lead Agency, has the discretion to analyze the Project according to it compliance with the CAP for projects within the City. The CAP was adopted at the time of the IS/MND analysis, is still the currently applicable legal document, and thereby is an appropriate GHG reduction plan for purposes of CEQA analysis. It should be noted that page 268 of the 2022 Scoping Plan states that when jurisdictions have a CAP, an individual project that complies with the strategies and actions within that CAP can streamline its project-specific GHG impact analysis to make a significance determination. Accordingly, for several of the reasons stated herein, the City considered compliance with its CAP as the threshold of significance for the Project's impact analysis, and in doing so did not screen out the Project from GHG analysis, as inferred by the comment.

Fifth, the comment states that " . . . the City cannot rely on the assumption that GHG emissions will gradually ramp down in accordance with stricter GHG regulations, because the Project's emissions will remain in the five-figure range through 2035." This comment is noted and the IS/MND has been clarified as discussed in Response to Comment 2-3 above. In sum, the Project would emit approximately 85,258 $MTCO_2e$ in its opening year, and even though State mandates may reduce indirect sources of GHG emissions in future years, the Lead Agency has calculated and disclosed the maximum amount of annual GHG emissions (i.e., 85,258 $MTCO_2e$ without considering the existing commercial use onsite) that would be attributable to the Project using applicable air quality models. Therefore, based on the clarifications to the IS/MND discussed herein, the whole of the administrative record, and the fact that the threshold of significance for the Project is qualitative plan-consistency compliance with the CAP instead of a specific

quantitative threshold, the City has not relied on any assumption of GHG emissions ramp down to inform its decision making for the Project.

Comment 2-5

Consistency with Identified Applicable Plans

The MND's analysis was insufficient to determine that the Project would be consistent with applicable plans. The Project would be inconsistent with both the CAP and the 2022 Scoping Plan.

First, to provide a basis for its less-than-significant determination. the City concluded that the Project would not conflict with the CAP. However, the City did not provide substantial evidence for this determination. First, GHG policy has changed significantly in the last decade, rendering the 2012 CAP outdated.

But even assuming that that the CAP is an applicable plan, the City did not adequately demonstrate that the Project would not conflict with it. For example, the City claimed that several measures were inapplicable municipal measures that are "not Project specific" to justify circumventing certain CAP measures. In particular, the City failed to provide a consistency analysis for Land Use Measure 1 (Mixed Use Development), Land Use Measure 2 (Service Nodes), Transportation Measure 1.2 (Promote Use of Transit Network), and Transportation Measure 2.2 (Increase Walking and Biking), each stating the following assumption: "This is a municipal measure and not specifically applicable to the Project. Therefore, this measure is not applicable." (MND, pp. 84–89.)

Even though the CAP as a guiding policy document describes initiatives intended for the City to carry out, the Project could still be in conflict with those measures even if the lead agency is not responsible for achieving particular objectives on a project-level. For instance, the Project's construction or operations could potentially make it more difficult or counteract the City's objectives to achieve the CAP goals. The Project conflicts with Land Use Measure 1—which suggests that Monterey Park achieve a Vehicle Miles Travelled (**VMT**) reduction target by facilitating new mixed-use development near existing and planned transit corridors—because the Project would utilize space and resources for a new industrial development which is not a mixed-use development near a transit corridor and would actively increase VMT, counteracting the City's efforts under Land Use Measure 1. The City has not adequately demonstrated that the Project would comply with the CAP as it claims.

Response to Comment 2-5

The comment claims that "[t]he MND's analysis was insufficient to determine that the Project would be consistent with applicable plans." The comment asserts the following points, which are inaccurate.

First, the comment states that ". . . . GHG policy has changed significantly in the last decade, rendering the 2012 CAP outdated." The IS/MND is permitted by law to rely on plans in effect at the time of publication. The City's CAP was in effect at publication of the IS/MND and remains in effect now. Thus, the City's CAP is legally applicable to the IS/MND analysis.

Second, the comment claims that the City did not adequately demonstrate that the Project would not conflict with the CAP and list several measures in the CAP as examples. It should be noted that Table 4.8-1: City of Monterey Park Climate Action Plan Consistency in the IS/MND includes every measure contained in the City's CAP. The comment further states that " . . . the City claimed that several measures were inapplicable municipal measures that are "not Project specific" to justify circumventing certain CAP measures." It is true that several measures in the CAP do not apply to the Project because, as stated in the CAP, it is a GHG reduction strategy document to assist the City in achieving community-wide reductions and is based on sectors instead of individual projects. It follows that not all CAP measures may apply to all projects, as is the case with the Project.

Nonetheless, in response to this comment, the following supplemental information is provided in response to specific measures questioned by the comment.

First, the comment stated that the City failed to provide a consistency analysis for Land Use Measure 1 (Mixed Use Development). That statement is false. Table 4.8-1: City of Monterey Park Climate Action Plan Consistency includes Land Use Measure 1, determines it not applicable, but also explains how the Project complies with the measure in any case, by stating that "[i]t should be noted that the land use policies in the CAP encourage infill and redevelopment, which is relevant to, and consistent with, the Project as it redevelops and [*sic*] existing infill site instead of developing undeveloped land." Thus, the IS/MND did facially analyze Land Use Measure 1.

To supplement that response, it should be noted that Land Use Measure 1 is intended to reduce VMT, and thereby GHG emissions associated with modes of transportation used to move within the City. As explained in the Appendix K: Transportation Analysis and Vehicle Miles Traveled Screening Memorandum, the Project would have only 26 employees, which equates to 52 daily vehicle trips. Per the City's Transportation Study Guidelines for Vehicle Miles Travelled and Level of Service Assessment, any project type with less than 110 daily vehicle trips are presumed to have a less than significant impact on VMT. The 52 daily vehicle trips are less than half of the screening criteria and is clearly consistent with the City's goal to reduce VMT, which is the essence of Land Use Measure 1. Moreover, Appendix K also explains that the Project Site contains an existing 205,628 square foot commercial office building that is part of the baseline conditions. According to the Institute of Transportation Engineers (ITE) Trip Generation Manual, the existing use on the Project Site could generate 2,229 daily vehicle trips. Thus, the existing land use on the Project Site could generate 41 times the daily vehicle trips and have far greater impacts on VMT and related VMT/GHG emissions than the Project. It should be noted that the IS/MND

conservatively did not take quantitative credit for the net GHG emissions reductions that result from comparing the existing use to the proposed use. In any case, it is clear that, even if Land Use Measure 1 did apply (which it does not) the development of the Project on the infill Project Site is consistent with the goal of reducing overall VMT in the City by incentivizing low VMT land uses.

Second, the comment stated that the City failed to provide Land Use Measure 2 (Service Nodes). That comment is similarly inaccurate, and for the same reasons explained above (i.e., reduction of VMT and infill development) the IS/MND stated that, even though the measure is inapplicable, "[i]t should be noted that the land use policies in the CAP encourage infill and redevelopment, which is relevant to, and consistent with, the Project as it redevelops and [*sic*] existing infill site instead of developing undeveloped land." Further, to supplement that response, it should also be noted that the CAP states that the party responsible for implementing Land Use Measure 2 is the City's Community Development Department, not project applicants. Also, it should be noted that an element of Land Use Measure 2 is for the City to provide more opportunities for walking and biking to certain service nodes. Here, the Project would improve the walkability (and overall pedestrian realm) around the Project Site by improving the sidewalks along Saturn Street and Orange Avenue, which link together the existing residential community and the employment centers located in the Saturn Park area. Therefore, even if Land Use Measure 2 did apply (which it does not) the development of the Project is consistent with the goal of providing more opportunities for walking and biking between residential populations and employment centers.

Third, the comment stated that the City failed to provide Transportation Measure 1.2 (Promote Use of Transit Network) and Transportation Measure 2.2 (Increase Walking and Biking). That comment is similarly inaccurate. Table 4.8-1: City of Monterey Park Climate Action Plan Consistency includes Transportation Measure 1.2, determines it not applicable, but also explains how the Project complies with the measure in any case, by stating that "[i]t should be noted that the Project is a low VMT generator and would be compatible with any program the City develops to increase awareness of regional transit options, which the employees of the Project may use." Thus, the IS/MND did facially analyze Transportation Measure 1.2. In addition, to supplement the analysis of Transportation Measure 1.2, it should be noted that the CAP states that the party response for implementing such measure is the City's Community Development Department, not project applicants.

Similarly, regarding Transportation Measure 2.2, it should be noted that the essence of Transportation Measure 2.2 is to facilitate walking and biking. The Project would improve the walkability of the area by improving existing, and creating new, sidewalks along the Project Site frontages. In addition, as part of the community benefits program associated with the development agreement for the Project, the applicant would extend the existing SCE trail from La Loma Park, along Orange Avenue, and to a new public park located at the intersection of Orange Avenue and Saturn Street, adjacent to the Project Site. This would encourage more

walking and biking in the neighborhood and facilitate alternative modes of transit for any employees of the Project that may reside in the surrounding community. Moreover, in response to this comment, the Applicant has added a project design feature to the Project plans that would incorporate end-of-trip facilities (such as a restroom with shower and changing area) that can encourage more non-automotive travel to the Project Site. Therefore, even if Transportation Measure 2.2 did fully apply (which it does not) the development of the Project is consistent with the goal of increasing walking and biking.

It follows that, overall, the City has adequately demonstrated how the Project would comply with the applicable measures in the CAP.

Comment 2-6

Second, although the City claimed that the Project would not "impede the State's progress towards carbon neutrality by 2045 under the 2022 Scoping Plan," the MND did not adequately address any of the 2022 Scoping Plan's goals within the context of the Project. (MND, pp. 89–90.) The 2022 Scoping Plan sets goals for 50% of all industrial energy demand to be electrified and statewide emissions be reduced to 85% below 1990 levels, both to be achieved before 2045 (2022 CARB Scoping Plan, p. 77). The 2022 CARB Scoping Plan also places particular emphasis on decarbonizing industrial facilities by "displacing fossil fuel use with a mix of electrification, solar thermal heat, biomethane, low- or zero-carbon hydrogen, and other low-carbon fuels to provide energy for heat and reduce combustion emissions" (2022 CARB Scoping Plan, p. 208). The Project is inconsistent with these goals because the facilities, including the energy used by the data center and substation would create an additional large source of emissions from non-renewable sources, contrary to the statewide electrification and decarbonization contemplated by the 2022 Scoping Plan.

And the Project's use of diesel-powered backup generators, which are projected to produce 2,062 MTCO2e *[sic]* per year indefinitely (MND, p. 92) is inconsistent with the 2022 Scoping Plan's goal of achieving carbon neutrality by 2045.

Response to Comment 2-6

The comment claims that the Project is inconsistent with certain goals of the 2022 Scoping Plan because " . . . the energy used by the data center and substation would create an additional large source of emissions from non-renewable sources, contrary to the statewide electrification and decarbonization contemplated by the 2022 Scoping Plan." This comment is inaccurate based on the following.

The comment references the 2022 CARB Scoping Plan goals for "50% of all industrial energy demand to be electrified and statewide emissions be reduced to 85% below 1990 levels, both to be achieved before 2045 (2022 CARB Scoping Plan, p. 77)." This language does not appear on

page 77 of the 2022 Scoping Plan, and thus hinders a reasoned response. Nonetheless, if the comment is generally referring to electrification goals for industry uses, see the response below, which explains how the Project is electrified for onsite operational activities.

Specifically, the Project would be consistent with this apparent goal (stated by the comment) because the Project would not use natural gas (see IS/MND page 14), and all of the Project's energy emission occur from electricity to power the data center. That electricity would be delivered by Southern California Edison (SCE), which has a mix of electricity produced by renewable energy sources as part of the utility's obligation to comply with the Renewable Portfolio Standard (RPS) in this region. Therefore, the Project is consistent with electrification goals.

Next, the comment also cites the 2022 CARB Scoping Plan statement that decarbonizing industrial facilities depends on "displacing fossil fuel use with a mix of electrification, solar thermal heat, biomethane, low- or zero-carbon hydrogen, and other low-carbon fuels to provide energy for heat and reduce combustion emissions. (2022 CARB Scoping Plan, p. 208)." It should be noted that that statement is on page 207 (not 208) of the 2022 CARB Scoping Plan. As stated therein, "California industry includes a diverse range of facilities, including cement plants, refineries, glass manufacturers, oil and gas producers, paper manufacturers, mining operations, metal processors, and food processors." Note that these types of industries are different than a high-technology data center, and typically have more onsite industrial processes that require onsite fossil fuel consumption and direct GHG emissions. Thus, the Project is distinguished from the listed industry uses because its daily operations are electrified. Hence, the Project is consistent with the aforementioned 2022 CARB Scoping Plan goal because it does not include natural gas, or other fossil fuels, to power daily operations, which thereby facilitates Statewide decarbonization goals.

Last, the comment states that "the Project's use of diesel-powered backup generators, which are projected to produce 2,062 MTCO2e [*sic*] per year indefinitely (MND, p. 92) is inconsistent with the 2022 Scoping Plan's goal of achieving carbon neutrality by 2045." That comment is not supported by evidence and the 2022 Scoping Plan does not appear to address emergency generators directly. As a basic matter, the IS/MND does not state that the generators will produce emissions "indefinitely." That is a misstatement by the comment. Moreover, the IS/MND modeled generator emissions to disclose potential impacts even though backup generators would only be used in the event of a power failure and would not be part of the Project's normal daily operations. Nonetheless, emissions associated with this equipment were included to be conservative. It should also be noted that emergency backup generators must meet SCAQMD's Best Available Control Technology (BACT) requirements and comply with SCAQMD Rule 1470 (Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines), which would minimize emissions. The comment infers that backup generators are

inconsistent with the 2022 Scoping Plan, but does not offer substantial evidence. The 2022 Scoping Plan does not prohibit backup generators. Accordingly, the comment mischaracterized the inclusion of emergency generators on a project as inconsistent with State carbon neutrality goals at the macro industry level.

Comment 2-7

The MND Should Have Also Analyzed Other Applicable Plans

The City chose, as its second GHG threshold, whether the Project would "conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases." (MND, p. 83.) This language requires that the MND analyze the Project's consistency with all other applicable plans, not just the plans that the City prefers to analyze.

The Project must show consistency with long-term State GHG goals for the entirety of the Project's anticipated lifespan to comply with CEQA. In particular, the MND must also demonstrate consistency with Senate Bill 32, which requires statewide GHG emissions to be reduced to 40% below 1990 levels by 2030, and Executive Order B-55-18 (**EO B-55-18**) which requires the State of California to achieve carbon neutrality—net zero GHG emissions—by 2045.

The Project is inconsistent with both because it does not prohibit the use of gasoline, diesel, and natural gas, and burning such non-renewable fuels results in substantial GHG emissions. Further, the data center would use an immense amount of electricity, which generates high quantities of GHGs, preventing the Project from ever achieving carbon neutrality without offsets or a 100% clean energy source.

Response to Comment 2-7

The comment incorrectly states that "[t]he City chose, as its second GHG threshold, whether the Project would "conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases." (MND, p. 83.) This language requires that the MND analyze the Project's consistency with *all* other applicable plans, not just the plans that the City prefers to analyze." (*Emphasis* added). That statement is factually and legally incorrect.

Factually, see Response to Comment 2-2, which explains the applicable threshold of significance that the Lead Agency used in the IS/MND. To summarize, that response provides that, "in the absence of any adopted numeric threshold, the City has determined that the significance of the Project's GHG emissions as provided in CEQA Guidelines Section 15064.4(b)(2) will be assessed by determining whether the Project is consistent with applicable plans, policies, regulations adopted for the purpose of reducing the emissions of greenhouse gases. *Therefore, under this analysis, a significant impact would occur if the Project would conflict with applicable regulatory plans and policies of the lead agency (i.e., the City of Monterey Park) to reduce GHG emissions discussed within the City's CAP*. The analysis below describes the extent to which the Project

complies with the regulations outlined in the CAP." (*Emphasis* added). Therefore, the City exercised its discretion to analyze GHG impacts using the City's CAP for consistency analysis. Hence, the comment is factually incorrect that the IS/MND must use all other plans to determine a significance conclusion.

Legally, the CEQA Guidelines grant agencies discretion to determine, in the context of a particular project, whether to quantify GHG emissions resulting from a project or rely on a qualitative analysis (CEQA Guidelines Section 15064.4). Here, the IS/MND used the qualitative analysis of consistency with the City's CAP to inform the impact analysis, which is permissible. In addition, the Lead Agency may employ a methodology in which an agency evaluates the significance of a project's GHG impact by looking to compliance with regulatory programs designed to reduce GHG emissions, and such compliance may, provide sufficient evidence that the project will have no significant adverse effect on the environment. Furthermore, it should be noted that the CEQA Guidelines allow lead agencies to decide what threshold of significance it will apply to a project. Therefore, the City properly exercised its discretion in the IS/MND to select the applicable threshold for GHG analysis.

The comment also states that "[t]he Project is inconsistent with both because it does not prohibit the use of gasoline, diesel, and natural gas, and burning such non-renewable fuels results in substantial GHG emissions. Further, the data center would use an immense amount of electricity, which generates high quantities of GHGs, preventing the Project from ever achieving carbon neutrality without offsets or a 100% clean energy source." This comment is largely inapplicable to the Project and misconstrues the IS/MND.

From a general perspective, neither the applicable thresholds nor other applicable programs prohibit gasoline, diesel, and natural gas, and burning of non-renewable fuels. More importantly, the Project operations are mostly electrified and do not rely on gasoline, diesel, or natural gas for daily operations. Thus, the comment is generally inapplicable to Project operations. Moreover, it should be noted that, even for mobile sources, the Project would have minimal vehicle trips and the associated transportation GHG emissions would be minimal for this infill location. In addition, it should be noted that diesel emissions would only occur from limited use of the emergency backup generators, which are analyzed in the IS/MND. Additionally, the Project would not use natural gas (see IS/MND page 14). Finally, it should be noted that there is not a legally applicable requirement for the Project to achieve carbon neutrality or purchase offsets or use a 100 percent clean energy source, as implied by the comment. As explained in the IS/MND, the utility company SCE would provide electricity to the Project and that electricity supply is comprised of clean energy sources pursuant to SCE's RPS requirements.

Comment 2-8

Additionally, the City should have demonstrated consistency with the 2017 Scoping Plan, which was developed to facilitate California's compliance with SB 32 and requires statewide GHG emissions to be reduced to 40% below 1990 levels by 2030. (Health & Safety Code § 38566.) The MND did not discuss how the Project is consistent with any of the goals, including the 2050 goal of 80% below 1990 levels. The 2017 Scoping Plan also sets out statewide goals for total GHG emissions targets of 6 MTCO2e/capita *[sic]* by 2030, and 2 MTCO2e/capita *[sic]* by 2050 (CARB Scoping Plan, p. 99).

With the Project's net operational GHG emissions at 85,309 MTCO2e *[sic]* annually, the Project's per-service population GHG emissions would be over 3,000 MTCO2e *[sic]*, nowhere near the 2030 target, let alone the 2050 target.[2] Thus, the Project's GHG impact is significant under the second threshold because it is inconsistent with applicable plans for the reduction of GHGs.

Footnote 2: 85,309 *MTCO2e* ÷ 26 e*mployees* = 3,281.1 *MTCO2e/service population [sic]*

Employee data obtained from the Population and Housing section of the MND. (MND, p. 127).

Response to Comment 2-8

The comment claims that "the City should have demonstrated consistency with the 2017 Scoping Plan." This comment is noted. However, the 2022 Scoping Plan updated all prior scoping plans. The 2022 Scoping Plan states that it is the third update to the original scoping plan adopted in 2008, and accordingly, it has carried forward and updated the scoping plans from 2008, 2013, and 2017. Therefore, the comment is incorrect that the City was required to analyze the 2017 Scoping Plan. Moreover, as noted in Response to Comment 2-2 above, the City as the Lead Agency exercised its discretion to utilize compliance with its CEQA-qualified climate action plan as the threshold of significance for analysis of the Project.

The comment also mentions the 2017 Scoping Plan's goal of 6 $MTCO_2e$ per capita by 2030. However, it should be noted that the 2022 Scoping Plan is the most recent plan and does not include a per capita target or threshold of significance for individual projects. In addition, compliance with the 2017 Scoping Plan is not the applicable threshold of significance in the IS/MND in any case. Generally, it should be noted that Statewide per capita emissions are used as a metric to evaluate Statewide emissions and are not intended for specific projects. Therefore, the comment incorrectly applies the 2017 Scoping Plan's 6 $MTCO_2e$ Statewide metric to the Project as a threshold. A project level per capita emissions threshold has not been established by CARB. Furthermore, the Statewide GHG per capita goal is also an inappropriate comparison because it based service population on California residents and employees. Additionally, even if it did apply, which it does not, it would be erroneous to compare a State-level service population target to an individual development project threshold. Since it is unknown the precise number of people that would be served by the Project annually, it would be speculative to calculate the emissions per capita (service population) without factoring in the number of end users.

Therefore, the commenter's calculation and reasoning above is based on inaccurate assumptions and an inapplicable threshold of significance.

Comment 2-9

The City Should Have Required an EIR

No mitigation measures were considered for GHGs due to the erroneous determination of less-than-significant impact. If the City had used appropriate significant thresholds and accurate analysis, it would have concluded that the Project's GHG emissions are significant. Inconsistency with applicable plans for the reduction of GHG emissions supports a fair argument that the Project would have a significant environmental effect. Therefore, the City was mistaken in its choice to create an MND for a Project that would likely create such a considerable GHG impact and the City should have prepared an EIR and mitigate to the extent required by CEQA.

It is feasible to reduce the GHG emissions from the Project's electricity usage by opting into Southern California Edison's clean power option. The Project intends to utilize SCE's default energy mix which would include 33.2 percent of the electricity to be derived from renewable sources. Yet, there is nothing preventing the City from opting into the SCE's Green Rate Program which can allow the Project to purchase solar power for up to 100% of its energy usage.[3]

Footnote 3: See https://www.sce.com/sites/default/files/custom-files/PDF_Files/Green_Rate_Business_Factsheet_2023.pdf

Response to Comment 2-9

Refer to Response to Comment 2-2 and Response to Comment 2-3 regarding the GHG thresholds. Also refer to Response to Comment 2-5 and Response to Comment 2-6 regarding consistency with applicable GHG reduction plans. The IS/MND analysis and the responses above demonstrate with substantial evidence that the Project's GHG emissions would not be significant and that the Project would not conflict with the applicable GHG reduction plans. None of the comments above identify any new significant environmental issues or impacts that were not already addressed in the IS/MND. Neither these comments nor the responses constitute new information requiring recirculation of the IS/MND or preparation of an EIR.

The comment also states that " . . . there is nothing preventing the City from opting into the SCE's Green Rate Program which can allow the Project to purchase solar power for up to 100% of its energy usage." The comment is general in nature and noted.

Comment 2-10

Conclusion

For the reasons given in this letter, the MND is not in conformance with CEQA requirements. Notably, the GHG significance analysis was inadequate, and the City should have concluded that

the Project would contribute to a significant GHG impact. The MND fails as an informational document and is misleading to decision-makers and the public.

Please put Advocates for the Environment on the interest list to receive updates about the progress of this Project. We make this request under Public Resources Code, section 21092.2.

Response to Comment 2-10

The comment provides concluding remarks and does not raise new issues. The Lead Agency will add Advocates to the interested parties list.

Letter 3

Adams Broadwell Joseph & Cardozo
601 Gateway Boulevard, Suite 1000
South San Francisco, CA 94080-7037
Received December 2, 2024

Comment 3-1

We are writing on behalf of Coalition for Responsible Equitable Economic Development Los Angeles ("CREED LA") to provide comments on the Initial Study / Mitigated Negative Declaration ("MND") prepared by the City of Monterey Park ("City") for the 1977 Saturn Data Center Project (SCH No. 2024101397) ("Project") proposed by SDCF Monterey Park, LLC ("Applicant").[1]

The Project proposes to construct a new 218,400-square-foot data center with an ancillary equipment yard, substation, parking, and landscaping.[2] An approximately 75,000-square-foot ancillary equipment yard would be located adjacent to the north side of the data center. The Project would include twelve four megawatts ("MW") back-up diesel generators to provide power in the event of an emergency. The Project would also include a 24,000-square-foot electrical substation. Project construction is anticipated to last approximately 24 months. The Project is proposed to be located at 1977 Saturn Street (APN No. 5265-026-054) in the City of Monterey Park, in Los Angeles County, California. Project construction is anticipated to occur over one phase, lasting approximately 24 months, beginning as early as September 2025 and ending as early as August 2027. These comments were prepared with the assistance of air quality, health risk, and GHG expert Dr. James Clark, Ph.D. and noise and vibration expert Ms. Deborah Jue. Comments and curriculum vitae of Dr. Clark are attached to this letter as Exhibit A.[3] Ms. Jue's comments and curriculum vitae are included as Exhibit B.[4] Exhibit A and B are fully incorporated herein and submitted to the City herewith. We reserve the right to supplement these comments at a later date and at any future proceedings related to this Project.[5]

Response to Comment 3-1

This comment is an introduction to CREED LA, represented by Adams Broadwell Joseph & Cardozo, and also contains a summary of the Project as described in **Section 2.0: Project Description** of the Public Review Draft Initial Study/Mitigated Negative Declaration (IS/MND). This comment does not focus on the adequacy of the IS/MND or its analysis of potentially significant impacts. Therefore, no further response is required. It should be noted that this comment refers to letters prepared by James Clark, from Clark & Associates, (Clark Letter) and Deborah Jue, from Wilson Ihrig, (Jue Letter), which were attachments to the CREED LA comment letter. Detailed responses to the Clark Letter and Jue Letter are provided in Response to Comments 3-21 to 3-37, respectively below.

Comment 3-2

I. STATEMENT OF INTEREST

CREED LA is an unincorporated association of individuals and labor organizations that may be adversely affected by the potential public and worker health and safety hazards, and the environmental and public service impacts of the Project. The coalition includes the Sheet Metal Workers Local 105, International Brotherhood of Electrical Workers Local 11, Southern California Pipe Trades District Council 16, and District Council of Iron Workers of the State of California, along with their members, their families, and other individuals who live and work in the City of Monterey Park. Accordingly, they would be directly affected by the Project's environmental and health and safety impacts.

Individual members of CREED LA and its member organizations include Monterey Park residents Matthew Ortiz, Jesse Estrada and Kristian Garcia. Individual members may also work on the Project itself. They would be first in line to be exposed to any health and safety hazards that exist onsite.

CREED LA seeks to ensure a sustainable construction industry over the long-term by supporting projects that have positive impacts for the community, and which minimize adverse environmental and public health impacts. CREED LA has an interest in enforcing environmental laws that encourage sustainable development and ensure a safe working environment for its members. Environmentally detrimental projects can jeopardize future jobs by making it more difficult and more expensive for business and industry to expand in the region, and by making the area less desirable for new businesses and new residents. Indeed, continued environmental degradation can, and has, caused construction moratoriums and other restrictions on growth that, in turn, reduce future employment opportunities.

Response to Comment 3-2

This comment generally introduces CREED LA as an unincorporated association of individuals and claims that members of CREED LA, living in the City, could be affected by the Project's environmental impacts. The comment does not provide evidence that members of CREED LA live in the City. Nor does this comment substantiate how CREED LA members potentially working on the Project (which is speculative) could be exposed to impacts. Next, the comment generally sets forth CREED LA's mission regarding the construction industry, which does not focus on the adequacy of the IS/MND or its analysis of potentially significant impacts. Therefore, no further response is required.

Comment 3-3

II. LEGAL BACKGROUND

CEQA requires that lead agencies analyze any project with potentially significant environmental impacts in an EIR, except in limited circumstances.[6] The purpose of an EIR "is to inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made. Thus, the EIR protects not only the environment, but also informed self-government."[7] The EIR has been described as "an environmental 'alarm bell' whose purpose is to alert the public and its responsible official to environmental changes before they have reached ecological points of no return."[8]

A negative declaration may be prepared instead of an EIR when, after preparing an initial study, a lead agency determines that a project "would not have a significant effect on the environment."[9] Courts have held that if "no EIR has been prepared for a nonexempt project, but substantial evidence in the record supports a fair argument that the project may result in significant adverse impacts, the proper remedy is to order preparation of an EIR."[10]

The presumption in favor of preparing an EIR, rather than a negative declaration, is reflected in the "fair argument" standard. Under that standard, the lead agency "shall" prepare an EIR whenever substantial evidence in the whole record before the agency supports a fair argument that a project may have a significant effect on the environment.[11] The fair argument standard creates a "low threshold" of favoring environmental review through an EIR, rather than through a negative declaration.

"Substantial evidence" required to support a fair argument is defined as "enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached."[12] "[I]n marginal cases where it is not clear whether there is substantial evidence that a project may have a significant effect on the environment, the lead agency shall be guided by the following principle: If there is disagreement among expert opinion supported by facts over the significance of an

effect on the environment, the Lead Agency shall treat the effect as significant and shall prepare an EIR."[13]

With respect to this Project, the MND fails to satisfy the basic purposes of CEQA. The MND fails to adequately disclose, investigate, and analyze the Project's potentially significant impacts, and fails to provide substantial evidence to conclude that impacts will be mitigated to a less than significant level. Because the MND lacks basic information regarding the Project's potentially significant impacts, the MND's conclusion that the Project will have a less than significant impact on the environment is unsupported.[14] The City failed to gather the relevant data to support its finding of no significant impacts, and substantial evidence shows that the Project may result in potentially significant impacts. As detailed herein and in the attached expert comments, substantial evidence supports a fair argument that the Project may result in significant and unmitigated impacts to air quality, public health, greenhouse gases, and from noise. The City must prepare an EIR that analyzes, discloses, and mitigates these impacts and which considers less environmentally damaging alternatives.

Footnote 11: Pub. Resources Code, §§ 21080(d), 21082.2(d); CEQA Guidelines, §§ 15002(k)(3), 15064(f)(1), (h)(1); *Laurel Heights Improvement Assn. v. Regents of the Univ. of Cal.* (1993) 6 Cal.4th 1112, 1123; *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.3d 68, 75, 82; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 1501-51; *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.Appl.4th 1597, 1601-1602.

Footnote 12: CEQA Guidelines, § 15384(a).

Footnote 13: CEQA Guidelines, § 15064(g).

Footnote 14: Pub. Resources Code, § 21064.5.

Response to Comment 3-3

This comment first describes various levels of CEQA review available under the law including negative declarations and environmental impact reports. That portion of the comment does not focus on the adequacy of the IS/MND or its analysis of potentially significant impacts. Therefore, no further response is required.

With respect to this Project, the comment generally claims that the IS/MND fails to satisfy the basic purposes of CEQA and fails to provide substantial evidence, and then generally refers to issues identified in the remainder of the comment letter. Responses to the specific claims in this comment are provided below in Response to Comments 3-4 through 3-37. The comment is incorrect regarding its substantial evidence claim. It should also be noted that the IS/MND contains over 5,000 pages of impact analysis and analytical technical reports, including but not limited to, an air quality report, health risk assessment, tree evaluation, cultural resources assessment, energy evaluation, geotechnical investigation, greenhouse gas emissions report, environmental site assessment report, water resources technical report, noise and vibration report, transportation report, tribal consultation documentation, water and sewer infrastructure report, and a water efficiency report. Together, these reports and the supplemental information provided in response to public comments on the IS/MND provide substantial evidence to support the conclusions of the CEQA document.

Moreover, it should be noted that the commenter (the Adams Broadwell Joseph & Cardozo law firm on behalf of CREED LA) has withdrawn its comments and supports the Project. Specifically, on August 12, 2025, the law firm submitted a letter to the City stating in part that " . . . CREED LA's objections to the Project, and concerns regarding the MND are fully resolved, and we respectfully request that the City adopt the MND, approve the Project, and conclude the administrative review process as soon as possible." Similarly, on August 13, 2025, CREED LA submitted a letter to the City that memorialized CREED LA's strong support for the Project and applauding the applicant for creating a high-technology project in an environmentally sensitive manner. CREED LA requested that the City approve the Project at its earliest convenience. These comments are noted for the record.

Acknowledging the support from CREED LA, and the retraction by its law firm, the reasoned responses to comments below are nonetheless provided in good faith to supplement the administrative record for the IS/MND.

Comment 3-4

III. THE MND FAILS TO PROVIDE AN ADEQUATE DESCRIPTION OF THE ENVIRONMENTAL SETTING

The MND fails to adequately describe the environmental setting against which the Project's environmental impacts are to be measured for several critical aspects of the Project. This contravenes the fundamental purpose of the environmental review process, which is to determine whether there is a potentially substantial, adverse change compared to the existing setting. [15] CEQA requires that a lead agency include a description of the physical environmental conditions, or "baseline," in the vicinity of the project as they exist at the time environmental review commences.[16] As the courts have repeatedly held, the impacts of a project must be measured against the "real conditions on the ground."[17] The description of the environmental setting constitutes the "baseline" physical conditions against which the lead agency assesses the significance of a project's impacts.[18] An Environmental Setting is required "to give the public and decision makers the most accurate and understandable picture practically possible of the project's likely near-term and long-term impacts.[19]

Footnote 15: CEQA Guidelines, § 15063, subd. (d).

Footnote 16: CEQA Guidelines, § 15125(a); *Communities for a Better Environment v. South Coast Air Quality Management Dist.* (2010) 48 Cal. 4th 310, 321 ("*CBE v. SCAQMD*").

Footnote 17: *CBE v.* SCAQMD, 48 Cal. 4th at 321; *Save Our Peninsula Com. v. Monterey County Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 121-22; *City of Carmel-by-the-Sea v. Bd. of Supervisors of Monterey County* (1986) 183 Cal.App.3d 229, 246.

Footnote 18: CEQA Guidelines, § 15125(a); *CBE v.* SCAQMD, 48 Cal. 4th at 321.

Footnote 19: 14 CCR § 15125(a).

Response to Comment 3-4

The comment states that the "MND fails to adequately describe the environmental setting against which the Project's environmental impacts are to be measured…" and provides general citations regarding baseline conditions. This comment is an introduction to Comments 3-5 and 3-6. Responses to those specific comments are provided below.

Comment 3-5

A. The MND Fails to Adequately Describe the Proximity to Sensitive Receptors

The MND provides that the "nearest sensitive receptors to the Project Site are multi-family residences located approximately 65 feet (approximately 20 meters) northwest of the Project Site."[20] The Health Risk Impact Assessment also relies on a 65 feet distance to nearby sensitive receptors to undergird its analysis.[21] However, substantial evidence demonstrates that sensitive receptors are closer than 65 feet from the Project site.[22] Based on the MND's Local Vicinity Map in Figure 2-2, the Project site directly abuts the residence at 2204 Iris Way, and may be as close

as 20 feet northwest from the construction zone of the Project site.[23] Construction activities occurring along to the Project's northwest property line will result in significant noise, air quality, and health risk impacts more severe than analyzed in the MND.[24] The MND's reliance on the geographic center of the Project site to inform its analysis of distances to sensitive receptors is therefore misplaced and unsupported by substantial evidence. As discussed below, the MND's failure to analyze the Project's proximity to nearby sensitive receptors results in an inaccurate analysis of the Project's construction and operational noise impacts.[25] The City must prepare an EIR which accurately analyzes the Project's environmental setting with respect to nearby sensitive receptors for air quality, health risk, and noise impacts before the Project can lawfully be approved.

Footnote 20: MND, p. 46.

Footnote 21: MND, Appendix B, p. 7.

Footnote 22: Jue Comments, p. 4.

Footnote 23: *Id.* at 5.

Footnote 24: *Id.*

Footnote 25: Jue Comments, p. 4.

Response to Comment 3-5

The main comments here claim that the IS/MND does not adequately analyze sensitive receptors with respect to air quality, noise and health risks. That claim is incorrect for several reasons, as discussed below. Overall, it should be noted that this comment refers to the letter prepared by Deborah Jue, from Wilson Ihrig, (Jue Letter), which were attachments to the CREED LA comment letter. See Response to Comment 3-36 for additional technical analysis for certain issues raised in this comment. In addition, see below for related responses. Also, see the Supplemental Technical Analysis for additional information verifying that impacts to sensitive receptors remain less than significant, as identified in the IS/MND.

First, the comment claims that the Health Risk Assessment relies on a 65 feet distance to nearby sensitive receptors to undergird its analysis. As a fundamental point, it should be noted that the 65-foot distance does not undergird the HRA, and such distance is largely irrelevant for air quality modeling purposes. That distance assumption by the comment misunderstands the methodology for performing HRA analysis. The HRA does not assume a setback distance from receptors. Instead, to be conservative, the HRA assigned and modeled emissions up to the fence line shared with the nearby sensitive receptors. That same approach is generally used for air quality analysis, including certain receptor distances from point sources. Therefore, the cancer risk assessment

included in Table 4.3-10: Construction Carcinogenic Risk Assessment of the IS/MND is accurate and not underestimated. In addition, see the Supplemental Technical Analysis, which contains additional health risk assessment and air quality analysis, as requested by a public agency, that also verifies health risks and air quality impacts to sensitive receptors are below the applicable thresholds and less than significant.

Second, the comment claims that the MND's reliance on the geographic center of the Project Site to inform its analysis of distances to sensitive receptors is misplaced and unsupported by substantial evidence. That claim is not true and is not consistent with established methodology for impact analysis. It is well-established industry protocol to use the center of a construction site for impact modeling purposes. Per FTA Noise and Vibration Impact Assessment Manual (2018) (FTA guidance) "Distance (D) – Assume that all equipment operates at the center of the project". The FTA guidance is regularly applied to land use projects by noise experts to determine potential noise impacts. This methodology is also factually accurate because construction equipment moves throughout a site over the course of a day and some equipment would be closer, and some equipment would be further away, from receptors during stages of construction.

The IS/MND (Appendix J Noise and Vibration Analysis Memorandum, page 12) clearly explains that "[t]he Project's existing surroundings include both residential and commercial uses. Following the FTA methodology for quantitative construction noise assessments, FHWA's Roadway Construction Noise Model (RCNM) was used to predict construction noise. All construction equipment is assumed to operate at the main construction area of the Project Site. During construction, equipment would be operating throughout the Project Site and not all equipment would be operating at the point closest to the sensitive receptors." And the IS/MND states that "[f]or the purposes of this analysis, the main construction activity areas are defined as the anticipated building construction area. Although some construction activities may occur at distances closer than 380 feet from the nearest properties, construction equipment would be dispersed throughout the Project Site during various construction activities. Therefore, main construction activity areas represent the most appropriate distance based on the sporadic nature of construction activities." Also, note that for construction noise impacts, the Monterey Park Municipal Code (MPMC) exempts construction noise impacts in any case.

It follows that, the IS/MND impact analysis used the proper modeling methodology and disclosed the accurate potential impacts. Accordingly, the IS/MND adequately analyzed potential impacts according to established protocol and applicable guidance.

Comment 3-6

B. The MND Fails to Adequately Quantify the Existing Noise Environment

The MND fails to adequately quantify the existing noise environment, against which to measure the Project's operational and construction noise impacts. Deborah Jue's comments provide that the MND's reliance on the metric Leq instead of the median noise level, L50, is misplaced.[26] L50 is the median noise level, Leq is the Equivalent Continuous Sound Level, but these metrics are not the same. The Leq can be very similar to L50, but it is often several decibels higher.[27] Ms. Jue's comments demonstrate that MND Table 4.13-6 erroneously relies on Leq instead of L50, which results in a significant underestimation of the Project's operational noise impacts.[28]

Further, the MND noise analysis relies on ambient noise levels of 56 to 65 Leq because the MND provides that "[a]mbient daytime noise levels include the operations of the two generators closest to sensitive receptors for generator testing."[29] Ambient noise levels should be calculated utilizing the noise levels in the existing environment, the baseline, not including Project components such as the two generators closest to sensitive receptors. Since the generators are part of the Project, their operation should be compared to the existing ambient noise level, without the project. The MND's analysis of the environmental setting with respect to noise is therefore unsupported. The Project may result in potentially significant noise impacts as demonstrated herein.

Footnote 26: *Id.* at 2.

Footnote 27: *Id.*

Footnote 28: *Id.* at 3.

Footnote 29: MND, p. 123.

Response to Comment 3-6

This comment claims that "[t]he MND fails to adequately quantify the existing noise environment, against which to measure the Project's operational and construction noise impacts." This comment is technically inaccurate for the following reasons.

To start with, the IS/MND, Appendix J: Noise and Vibration Analysis Memorandum explained that construction noise is exempt from the noise standards in the MPMC. Specifically, MPMC Section 4.50.100: Sound level limits – Exceptions provides that "[c]onstruction activities between seven a.m. and seven p.m. Monday through Friday, and between nine a.m. and six p.m. on Saturdays, Sundays and Holidays" are exempt from sound level limits in the MPMC. The Project would comply with the days and hours of activity established by the City code.

Second, the comment claims that " . . . the MND's reliance on the metric L_{eq} instead of the median noise level, L_{50}, is misplaced." That claim is inaccurate because it misstates the acceptable noise modeling methodology used in the IS/MND. The ambient noise measurements shown in IS/MND Table 4.13-2 are based on data collected by Veneklasen Associates (refer to IS/MND Appendix J). This noise measurement data are in fact the L_{50} (median) noise levels. IS/MND Table 4.13-2 uses the term "Average Level" in the column heading, but is not intended to mean L_{eq}. The term "Average Level" is intended to differentiate between the daytime and nighttime noise levels also reported in the table. The comment incorrectly assumes that the measured noise levels are L_{eq} and not L_{50}. Additionally, it is noted that the IS/MND inadvertently labeled the noise metrics in the column headings as L_{eq}. Therefore, IS/MND Table 4.13-6 will be revised in the Supplemental Technical Analysis to correct this typographical error and indicate the dBA as L_{50} for the Ambient Noise Level Daytime and Ambient Noise Level Nighttime columns. Note that there are no quantitative changes to the noise levels in the table, this correction is merely to the column headings to reflect that L_{50} was used.

Table 4.13-6: Mechanical Equipment Noise Levels

Receptor	Project Operational Noise Level - Daytime (dBA L_{eq})[1]	Ambient Noise Level - Daytime (dBA ~~L_{eq}~~ L_{50})[2]	Exceed?	Project Operational Noise Level - Nighttime (dBA L_{eq})	Ambient Noise Level - Nighttime (dBA ~~L_{eq}~~ L_{50})[2]	Exceed?
Single Family Residences (West)	50	56	No	50	54	No
Single Family Residences (Northeast)	56	61	No	56	56	No
Commercial Use (Northeast)	55	65	No	55	65	No

1. Ambient daytime noise levels include the operations of the two generators closest to sensitive receptors for generator testing.
2. Per MPMC Section 4.50.080, the generated noise levels must not exceed the median ambient noise level at the receptors or the measured ambient noise level, whichever is greater.

Source: Refer to Attachment B of **Appendix J** for noise modeling results.

Finally, the comment claims that "[a]mbient noise levels should be calculated utilizing the noise levels in the existing environment, the baseline, not including Project components such as the two generators closest to sensitive receptors." The comment is correct, and as explained below, the applicable footnote has been revised to clarify that the IS/MND did in fact measure and model the existing baseline noise condition without inclusion of any component of the Project. This comment refers to Table 4.13-6 on page 123 of the IS/MND, which stated that "[a]mbient

daytime noise levels include the operations of the two generators closest to sensitive receptors for generator testing." To be clear, the noise modeling did not assume generator operations for existing ambient conditions (existing noise sources are discussed on page 115 of the IS/MND and page 29 of Appendix J). Thus, the footnote will be revised to state instead that "Ambient daytime Project operational noise levels include the operations of the two generators closest to sensitive receptors for generator testing." Therefore, noise levels assumed for existing ambient conditions, as well as the noise levels from the testing of emergency generators, although temporary and occasional, have been accurately accounted for in the operational noise analysis.

Comment 3-7

IV. AN EIR IS REQUIRED FOR THE PROJECT BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY HAVE SIGNIFICANT, UNMITIGATED AIR QUALITY IMPACTS

A negative declaration is improper, and an EIR must be prepared, whenever it can be fairly argued on the basis of substantial evidence that the project may have a significant environmental impact.[30] [S]ignificant effect on the environment" is defined as "a substantial, or potentially substantial, adverse change in the environment."[31] An effect on the environment need not be "momentous" to meet the CEQA test for significance; it is enough that the impacts are "not trivial."[32] Substantial evidence, for purposes of the fair argument standard, includes "fact, a reasonable assumption predicated upon fact, or expert opinion supported by fact."[33]

Moreover, the failure to provide information required by CEQA is a failure to proceed in the manner required by CEQA.[34] Challenges to an agency's failure to proceed in the manner required by CEQA, such as the failure to address a subject required to be covered in an MND or to disclose information about a project's environmental effects or alternatives, are subject to a less deferential standard than challenges to an agency's factual conclusions.[35] Even when the substantial evidence standard is applicable to agency decisions to certify an MND and approve a project, reviewing courts will not 'uncritically rely on every study or analysis presented by a project proponent in support of its position. A clearly inadequate or unsupported study is entitled to no judicial deference.'"[36]

As discussed below, CREED LA's expert James Clark presented direct and substantial evidence raising a fair argument that the Project will have significant environmental impacts. An EIR must be prepared to further evaluate and mitigate the significant impacts to less than significant levels.

Response to Comment 3-7

This comment is an introduction to the specific comments thereafter. The comment generally recites legal cases and claims that an EIR must be prepared to further evaluate and mitigate potential impacts. Refer to Response to Comments 3-8 through 3-10 for more detailed responses.

Comment 3-8

A. Substantial Evidence Supports a Fair Argument that the Project May Result in Potentially Significant Impacts from the Backup Generators

The MND fails to analyze the Project's potentially significant environmental impacts from the use of backup generators. Twelve four-MW backup generators with a total generation capacity of up to 48 MW and the two redundant back-up generators would be located outdoors in an approximately 75,000-square-foot ancillary equipment yard, adjacent to the north side of the data center.[37] Dr. Clark's comments demonstrate that the Project results in significant air quality and health risk impacts associated with operation of the backup generators that are more severe than disclosed in the MND.[38] Dr. Clark determined that the MND only accounts for a total of 50 hours of testing for the generators.[39] But, each of the 14 generators is permitted to be tested for 50 hours per year, which accounts for a total of 700 hours per year. This results in significant emissions of diesel particulate matter ("DPM") which are not accounted for in the MND.[40] Without binding mitigation to limit the testing of the backup generators to 50 hours total per year, the air quality and health risk impacts associated with DPM and TAC emissions is significant and unmitigated.[41]

DPM is a toxic air contaminant (TAC) that is recognized by state and federal agencies as causing severe health risk because it contains toxic materials, unlike PM2.5 and PM10.42 Diesel exhaust has been linked to a range of serious health problems including an increase in respiratory disease, lung damage, cancer, and premature death.[43] Fine DPM is deposited deep in the lungs in the smallest airways and can result in increased respiratory symptoms and disease; decreased lung function, particularly in children and individuals with asthma; alterations in lung tissue and

respiratory tract defense mechanisms; and premature death.[44] Exposure to DPM increases the risk of lung cancer.[45] It also causes non-cancer effects including chronic bronchitis, inflammation of lung tissue, thickening of the alveolar walls, immunological allergic reactions, and airway constriction.[46] Dr. Clark's comments provide substantial evidence that DPM emissions represent a significant health risk requiring additional analysis and mitigation in an EIR.

Under the fair argument standard, a lead agency "shall" prepare an EIR whenever substantial evidence in the whole record before the agency supports a fair argument that a project may have a significant effect on the environment.[47] The phrase "significant effect on the environment" is defined as "a substantial, or potentially substantial, adverse change in the environment."[48] Dr. James Clark finds a significant health risk from exposure to TAC emissions, which constitutes substantial evidence supporting a fair argument that health risk is significant and unmitigated.

An EIR must be prepared which quantifies the Project's emissions of toxic air contaminants ("TAC"), and compares them to the SCAQMD's quantitative cancer threshold of 10/million,[49] in order to adequately assess and disclose the Project's air quality impacts on human health.[50] Absent this analysis, the City lacks substantial evidence to conclude that the Project's health risk impacts are less than significant.

Response to Comment 3-8

This comment summarizes the points contained in Comment 3-9, Comment 3-22, Comment 3-23, and Comment 3-25. This comment asserts several claims associated with its main claim that "[t]he MND fails to analyze the Project's potential significant impact from the use of backup generators. This claim is inaccurate as explained below.

First, the comment acknowledges that the IS/MND did in fact model the emergency generators. To clarify for the record, the IS/MND modeled the potential emissions from the emergency generators in Sections 4.6: Energy and 4.8: Greenhouse Gas Emissions. For the operational noise analysis in 4.13: Noise, MPMC Section 4.50.50 exempts generators used during an emergency situation (page 123 of the IS/MND). The commentor is correct that the generators when permitted could be tested for up to 50 hours per year, however not all generators would be tested for the full amount. The SCAQMD's permit to operate would impose standard operating procedures on the generators before operation.

In addition, it should be noted that the City has supplemented the IS/MND with further quantitative modeling of the emergency generators in response to agency public comments. That additional analysis is included in the Supplemental Technical Analysis (Kimley Horn, 2025). In the Supplemental Technical Analysis, the DPM associated with the testing and maintenance of the emergency generators has been modeled and analyzed. This supplemental information adds to the substantial evidence provided in the record that the Project's generators would not expose nearby receptors (both residences and workers) to health risk exceeding the SCAQMD thresholds or exceedances of either State or Federal standards. Therefore, the Project does not have a significant impact regarding generator emissions.

Moreover, as discussed on page 45 of the IS/MND, the Applicant is required to obtain Permits to Operate (PTO) from SCAQMD before the installation of or operation of any emergency generators, which would verify that the generators meet all applicable Best Available Control Technologies (BACT) requirements and that the generators comply with SCAQMD Rule 1470 (Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines) and Rule 1401 (New Source Review of Toxic Air Contaminants). Further, as noted on

page 52 of the IS/MND, an operational health risk analysis would be required to comply with SCAQMD's Rule 1401 permit requirements. Before the generators can operate, DPM emissions and cancer risk associated with the proposed diesel generators would be regulated by the SCAQMD permit process to ensure that associated emission levels remain less than significant. Refer also to the responses to the SCAQMD letter in Letter 5.

Comment 3-9

Furthermore, Dr. Clark remodeled the operational emissions of the Project and found that based on a generator size of 5,376 brake horsepower (which would generate 4-MW of power), and limiting the operation to a total of 4.2 hours per month for all 14-generators, the generators would emit up to 166 lbs. per day of NOx, exceeding the SCAQMD's significance threshold of 55 lbs. per day.[51] Dr. Clark's comments provide substantial evidence demonstrating that the Project results in a significant air quality impact requiring review and mitigation in an EIR, before the Project can be approved.

Footnote 51: Clark Comments, p. 5.

Response to Comment 3-9

This comment summarizes comments in the Clark Letter. See Response to Comment 3-23 below. It is noted that the comment states that the Clark Letter remodeled Project operational emissions. However, the Clark Letter did not include attachments or modeling outputs and therefore lacks supporting evidence for its claims. Nonetheless, Response to Comment 3-23 responds to the points raised in the Clark Letter and clarifies the record.

Comment 3-10

V. AN EIR IS REQUIRED FOR THE PROJECT BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY HAVE SIGNIFICANT, UNMITIGATED GHG IMPACTS

The MND concludes, absent substantial evidence, that the Project will result in less than significant GHG impacts.[52] The MND's GHG analysis memorandum does not include modeling files to support the GHG emissions calculations for the emergency generators. MND Table 5 provides that emergency generators will emit 2,062 metric tons of carbon dioxide equivalent ("$MTCO_2e$") but this estimate is unsupported. The CalEEMod modeling does not include emissions from the emergency generators and the City does not actually document how the 2,062 $MTCO_{2eq}$ value was derived.[53] The MND's conclusions regarding the Project's GHG impacts are therefore unsupported, and these impacts must be evaluated in an EIR for the Project.

Furthermore, Dr. Clark calculated that the Project will result in a more severe GHG impact than analyzed in the MND. Dr. Clark's comments demonstrate that the use of the General Office Building setting in the MND's CalEEMod air modeling underestimates the energy consumption

rate and resulting GHG and air pollutant emissions from the Project.[54] The GHG emissions are more significant than analyzed in the MND and require mitigation in an EIR before the Project can be approved.[55]

Footnote 52: MND, p. 75.

Footnote 53: Clark Comments, p. 6.

Footnote 54: *Id.*

Footnote 55: *Id. a*t 9.

Response to Comment 3-10

This comment summarizes comments in the Clark Letter. See Response to Comment 3-22, Comment 3-23, and Comment 3-25 below for a technical response.

Furthermore, as discussed in the project description on page 5 of the IS/MND, "the Applicant would install 14 gen-sets, each capable of producing four megawatts." The modeling of generators was included in Table 4.8-3: Operational Greenhouse Gas Emissions Opening Year (page 92) which shows the emissions related to testing and maintenance for 14 diesel emergency backup generators. While the exact model was unknown at the time of modeling, the generators would be CARB Tier 4 Final and therefore US EPA Tier 4 Final emission standards were used. Multiplied by 50 hours of testing and maintenance per year per engine, the facility pounds per day for each criteria pollutant and GHG was converted to tons per year. The revised GHG emissions calculations with 24 smaller emergency generators were calculated and included in the Supplemental Technical Analysis.

The second point the commentor makes is that ". . . use of the General Office Building setting in the MND's CalEEMod air modeling underestimates the energy consumption rate and resulting GHG and air pollutant emissions from the Project." That is incorrect and misstates how the CalEEMod air modeling was performed. In sum, the modeling used general CalEEMod land use assumptions, and importantly, user-provided assumptions that supplement the modeling to accurately reflect data center operations.

For example, the land use type selected in CalEEMod is appropriate and accurately represents the characteristics and operational use of the Project because it includes building construction for a generic structural shell of a building. Then the operational characteristics of a data center within that structure are provided as inputs to CalEEMod so the model accurately represents the proposed land use and operational characteristics. Furthermore, from a technical modeling perspective, CalEEMod offers a set of predefined land use categories based on standard land use types, however "data center" is not a predefined option. Hence, when selecting an input

category, the Lead Agency has the discretion to identify the category that most closely aligns with the proposed development in terms of use, density, and intensity. In this case, the land use type selected was General Office Building as it most closely matched the construction activities associated with the Project and overall building footprint. Then, importantly, that set of assumptions is supplemented to more accurately reflect data center operations.

Accordingly, where applicable, the modeling was further refined with Project-specific data or adjustments to default assumptions, such as trip generation rates, vehicle miles traveled (VMT), energy use, water and wastewater use. These refinements provide an accurate and precise depiction of the Project's emissions and are consistent with CEQA Guidelines and the CalEEMod User Guide recommendations. CalEEMod User Guide (2022) page 5 "The user has control over which defaults are overridden with more accurate, project-specific information, and how changes to those values affect other, linked inputs in the model."

Finally, the model outputs and assumptions were reviewed by qualified environmental professionals and are supported by substantial evidence in the administrative record.

Comment 3-11

VI. AN EIR IS REQUIRED FOR THE PROJECT BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY HAVE SIGNIFICANT, UNMITIGATED HAZARDS IMPACTS

There is substantial evidence in support of a fair argument that the Project will create significant and unmitigated risks to human health and the environment from the accidental release of soil contaminants. These impacts are not disclosed in the MND and require preparation of an EIR. The MND is further inadequate because it relies on impermissibly vague and deferred mitigation measures to purportedly lessen or avoid these impacts, in violation of CEQA.

Response to Comment 3-11

This comment asserts that there is evidence that the Project could create a significant risk from the accidental release of soil contaminants. A more detailed response is provided below.

Comment 3-12

A. The MND Fails to Disclose the Project's Potentially Significant Hazards Impacts

The MND provides that the "[t]he Project site is not identified on a compiled hazardous materials site list pursuant to California Government Code Section 65962.5."[56] However, the Project site is on the Cortese List due to groundwater contamination issues, and, for that reason, is also listed on SWRCB's GeoTracker website.[57] The Project site was contaminated via leaks from three diesel underground storage tanks ("UST"). As of June 28, 2022, the Los Angeles Regional Water Quality Control Board Site data indicate that there may be residual concentrations of pollutants in soil at

this site that could pose an unacceptable risk as a result of future construction/redevelopment activities, and/or change to a more sensitive land use from commercial use.[58] The severity of this impact is not disclosed or mitigated in the MND.

Footnote 56: MND, p. 99.

Footnote 57: State Water Resources Control Board, Geotracker, BRE CA SATURN, LLC (T10000018576)
https://geotracker.waterboards.ca.gov/profile_report?global_id=T10000018576

Footnote 58: Letter from Yue Rong, Ph.D. Program Manager, Underground Storage Tank Program, Los Angeles Regional Water Quality Control Board, to BRE CA SATURN LLC, Underground Storage Tank Program – Non-Case Determination (June 28, 2022), *available at*: https://documents.geotracker.waterboards.ca.gov/regulators/deliverable_documents/9720914542/1977%20Saturn%20St%20ncl%20(June%2028,%202022).pdf.

Response to Comment 3-12

As stated on page 99 of the IS/MND, Government Code Section 65962.5 refers to the Hazardous Waste and Substances Site List, commonly known as the Cortese List. The closest site on the Cortese List, and the only site listed within the City, is located at 900 Potrero Grande Drive, located approximately 0.37 miles southeast of the Project Site.[2] Therefore, there are no records of the Project Site being located on the Cortese List.

The State Water Resources Control Board (SWRCB) reference provided by the commenter for GeoTracker notes that there are no potential contaminants of concern, and that the informational item/review is completed as of June 28, 2022, which means that there is no need for a regulatory case and additional work required.[3] Therefore, there is no further action required by the SWRCB for the Project Site.[4] The USTs are discussed on pages 97 and 98 of the IS/MND and in the Phase I Environmental Site Assessment, included as Appendix H to the IS/MND. As noted therein, based on the regulatory closure, reported removal of the identified USTs, completion of the assessment and remedial activities, and indicated analytical results meeting the applicable regulatory standards for commercial use, the historical USTs and closed LUST case are considered a controlled recognized environmental condition (CREC), and no further

[2] California Department of Toxic Substances Control, Cortese List, Operating Industries, Inc. Landfill (19490207), https://www.envirostor.dtsc.ca.gov/public/profile_report?global_id=19490207. Accessed August 18, 2025.

Accessed September 12, 2025.

investigation is warranted. Therefore, the commenter is incorrect that impact is not disclosed or mitigated in the IS/MND.

Comment 3-13

A. The MND Fails to Adequately Mitigate the Project's Potentially Significant Hazards Impacts

The MND's conclusion that hazards impacts are mitigated to less than significant levels, is not supported by substantial evidence. The MND includes unenforceable, deferred, and impermissibly vague mitigation measures to purportedly reduce significant hazards impacts. Mitigation measures are conditions on the construction and operation of a project that are designed to lessen or avoid a project's environmental impacts.[59] If a project has the potential to have a significant effect on the environment, the lead agency must prepare an EIR that incorporates feasible mitigation measures to reduce impacts to less-than-significant levels.[60] It is the possibility of a significant effect, not a determination of the actual effect, which would be the subject of a negative declaration or an EIR.[61]

Here, the MND proposes to develop a Soil Management Plan ("SMP") to address potential soils with residual impacts remaining on the Project Site during future construction/redevelopment activities, pursuant to mitigation measure MM HAZ-1. CEQA requires disclosure of the severity of a project's impacts and the probability of their occurrence before a project can be approved.[62] In *Bozung v. Local Agency Formation Commission*, the Supreme Court upheld "the principle that the environmental impact should be assessed as early as possible in government planning."[63] A study conducted after approval of a project will inevitably have a diminished influence on decisionmaking.[64] Even if the study is subject to administrative approval, it is analogous to the sort of post hoc rationalization of agency actions that has been repeatedly condemned in decisions construing CEQA.[65]

MM HAZ-1 results in improper deferral of required analysis until after project approval, and may therefore not sufficiently mitigate impacts to construction workers exposed to soil contamination before the site is properly characterized and cleaned. CEQA Guidelines § 15126.4(a)(1)(B) provide that formulation of mitigation measures shall not be deferred until some future time.[66] Deferral of the formulation of mitigation measures is only permissible when the agency adopts performance standards and conditions approval of the project on meeting those performance standards, or lists alternative means of mitigating the impacts, which must be disclosed and analyzed.[67] Here, the SMP lacks any performance standards, and would require additional analysis and potential formulation of unidentified remedial procedures at some later date. In order to comply with CEQA, the City must identify mitigation measures before Project approval, and include such measures in an EIR circulated for public review.

Response to Comment 3-13

The comment states that the IS/MND's "conclusion that hazards impacts are mitigated to less than significant levels, is not supported by substantial evidence." That comment is inaccurate. As discussed in Response to Comment 3-12, the USTs are discussed on pages 97 and 98 of the IS/MND and in the Phase I Environmental Site Assessment, included as Appendix H to the IS/MND. The evidence contained in the Phase I Environmental Site Assessment is detailed and substantial. As noted therein, the historical USTs and closed LUST case were analyzed carefully, and based on findings from several regulatory agencies, were considered controlled. Accordingly, the agencies, the IS/MND, and Phase I Environmental Site Assessment determine that no further investigation of potentially hazardous conditions on the Project Site was warranted. In addition, it is important to note that the IS/MND recognized this fact, and nonetheless in an abundance of caution, voluntarily imposed Mitigation Measure MM HAZ-1 to further reduce the potential impact of an already less-than-significant impact.

Specifically, as noted on page 97 of the IS/MND, Mitigation Measure MM HAZ-1 is provided in an abundance of caution to address potential soils with residual impacts remaining on the Project Site during future construction/redevelopment activities. As noted within MM HAZ-1 on page

100 of the IS/MND, the SMP must be prepared by a qualified environmental professional approved by the City and includes provisions for protection and monitoring exposure, requirements for construction workers to be appropriately trained, and additional standard operating procedures. Also, as there was no potentially significant impact under Hazards and Hazardous Materials Threshold 4.9(b) to be mitigated, and because MM HAZ-1 is provided for additional safety precautions, this mitigation is not considered improperly deferred.

The comment also claims that MM HAZ-1 results in improper deferral of required analysis until after project approval; and that the SMP lacks any performance standards. As discussed above, the IS/MND, including the Phase I Environmental Site Assessment contains extensive analysis of potential hazards onsite. Thus, the comment is inaccurate that analysis was deferred. In addition, in response to this comment, a clarifying correction has been made to the text of the IS/MND to state that MM-HAZ-1 "further" reduces an already less than significant impact. It should be noted that, even before referencing MM HAZ-1, the IS/MND concluded that "[a]ccordingly, the risk of hazard to the public or the environment through future upset conditions is low because the CREC identified on-site has been resolved to the satisfaction of the regulatory agencies." See page 94 in the IS/MND. Thus, the IS/MND did not identify a significant impact for hazards in any case.

Regarding performance standards, corrections have been made to MM HAZ-1 to add additional performance standards to the measure, even though it does not constitute deferred mitigation in any case. The updated MM HAZ-1 will include the following additional performance standards: "[i]n the instance that previously unknown soil constituents are discovered during site excavation, the contractor shall ensure that any soil contaminated beyond acceptable regulatory levels, shall be contained, remediated if necessary, and disposed of pursuant to the performance standard levels established by federal OSHA, Cal/OSHA, SCAQMD, RWQCB, and any other regulatory agency with jurisdiction over CRECs or RECs on the Project Site."

Comment 3-14

VII. AN EIR IS REQUIRED FOR THE PROJECT BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY HAVE SIGNIFICANT, UNMITIGATED NOISE IMPACTS

Deborah Jue's comments provide substantial evidence that the Project results in significant operational noise impacts. Noise from the Project's generators was not evaluated, and the combined operation of all mechanical equipment could be 3 dBA or more than predicted in the MND.[68] Ms. Jue's comments also demonstrate that the mechanical equipment noise would exceed the City's noise limits during the nighttime hours at the residences to the west of the Project site.[69] Moreover, when accounting for the correct ambient noise level, Ms. Jue identified a significant operational noise impact during daytime hours as well.[70]

Footnote 68: Jue Comments, pg. 4.

Footnote 69: Jue Comments, pg. 3.

Footnote 70: Jue Comments, pg. 3.

Response to Comment 3-14

See Response to Comment 3-35 for a detailed technical response to this comment. In addition, as discussed on page 123 of the IS/MND, MPMC Section 4.50.050: Noise Disturbances – Exemptions states that generators used during a power outage or other emergency situation are exempt from the noise standards. Therefore, the noise levels from generators operating during a power outage or other emergency situation are not considered potential noise impacts pursuant to the standards established by the Lead Agency and thus were not evaluated. Also, it should be noted that potential noise levels from testing of emergency generators, although temporary and occasional, have been accounted for in the operational noise analysis in the IS/MND.

Comment 3-15

The MND also lacks support for its conclusions regarding operational noise impacts. It provides that "[p]ackaged HVAC rooftop units would provide cooling for the administrative and ancillary spaces."[71] The MND provides that the "heating, ventilation, and air conditioning ("HVAC") equipment would include 23 air cooled chillers with free cooling modules, each rated at 460-tons of capacity, in an N+1 redundancy configuration to support data hall operations." However, the MND fails to identify the source of the reference sound power levels used in its analysis of HVAC rooftop equipment and lacks sound power data for the generators.[72] Deborah Jue's comments provide that, absent documentation of the reference sound power levels for the rooftop equipment and generators, it is impossible to evaluate the MND's conclusions regarding operational noise impacts.[73] The MND's analysis of operational noise impacts is therefore not supported by substantial evidence. This information must be included in an EIR to accurately quantify and mitigate significant operational noise impacts.

Footnote 71: MND, p. 16.

Footnote 72: Jue Comments, pgs. 2-3.

Footnote 73: Jue Comments, p. 3.

Response to Comment 3-15

See Response to Comment 3-16, Comment 3-30, Comment 3-31, Comment 3-32, Comment 3-34, and Comment 3-35 for a detailed technical response to this comment. Moreover, this comment claims that ". . . the MND fails to identify the source of the reference sound power levels used in its analysis of HVAC rooftop equipment and lacks sound power data for the generators." This comment is noted. In response to this comment, the IS/MND has been clarified with the

manufacturer specification sheets for the HVAC rooftop equipment, which includes the reference sound power levels. This is included in the Supplemental Technical Analysis.

In addition, note that the noise analysis included in the IS/MND did rely on valid and project-specific reference noise levels for the proposed air cooled chiller equipment (see page 29 of Appendix J). The reference noise levels from the manufacturer's specifications are summarized within the noise modeling and used for the impact conclusions.

Comment 3-16

Furthermore, given that the MND fails to accurately characterize the existing noise environment against which to measure the construction noise emissions and fails to accurately calculate the distance of construction equipment to sensitive receptors, construction noise impacts are underestimated in the MND. Deborah Jue's comments demonstrate that the Project would result in construction noise impacts so severe to neighboring sensitive receptors that the noise "would interfere with speech at neighboring properties."[74] Ms. Jue's calculations demonstrate that construction noise emission would be between 10 and 25 decibels higher than the ambient noise level.[75] The MND's conclusion that construction noise impacts are less than significant is therefore unsupported.

CEQA caselaw provides that the magnitude of noise increase over ambient levels must be addressed to determine the significance of change in noise levels.[76] The MND fails to adequately analyze impacts from noise and fails as an informational document. In *King and Gardiner Farms LLC. v. County of Kern* (2020) 45 Cal.App.5th 814, 893, determined that the use of an absolute noise level as the threshold of significance violated CEQA.[77] The court in *Keep Our Mountains Quiet* (2015) 236 Cal.App.4th 714, lead agency should consider both the increase in noise level and the absolute noise level associated with a project.[78] Here, the City's failure to consider the impact of a substantial increase in noise over ambient levels violates CEQA. The increase in noise to sensitive receptors necessitates further analysis in an EIR.

Substantial evidence in Ms. Jue's comments demonstrates significant construction and operational noise impacts from the Project on neighboring sensitive receptors. An EIR must be prepared which accurately analyzes and mitigates the Project's significant noise impacts.

Footnote 78: *Keep Our Mountains Quiet*

Response to Comment 3-16

This comment references noise issues raised (and responded to below) in the Jue Letter. For a technical response: see Responses to Comment 3-5, 3-6, and 3-33 regarding the existing noise environment and baseline; see Responses to Comment 3-5 and 3-36 regarding the FTA methodology for distances from construction equipment; see Responses to Comment 3-6, 3-35, and 3-36 regarding construction noise and emergency generator noise being exempt by the MPMC. Based on those responses, the IS/MND analysis, and the Supplemental Technical Analysis, the conclusion that construction and operational noise are less than significant is supported by adequate technical analysis and substantial evidence.

Comment 3-17

VIII. THE CITY LACKS SUBSTANTIAL EVIDENCE TO APPROVE THE PROJECT'S LAND USE PERMITS

The Project requires the following entitlements:

- Approval of CUPs for a project on a lot size over one acre, and mechanical equipment exceeding height, if needed;
- Design Review;
- Approval of a Development Agreement, due to the Project's large scale development, and activation of the BRDZ pursuant to the MPMC;
- Tree removal;
- SCAQMD Authority to Construct/Permit to Operate; and
- Permits to Construct SCE Facilities.

Response to Comment 3-17

The comment lists the discretionary permits/approvals listed on page 21 of the IS/MND. Responses to the claims in this comment are provided below in Response to Comments 3-18 and 3-19.

Comment 3-18

A. The City Cannot Make the Necessary Findings to Approve the Conditional Use Permit

Approval of a Conditional Use Permit ("CUP") requires investigation and determination by the Planning Commission subject to appeal to the City Council.[79] Pursuant to Municipal Code Section

21.32.020(B), in order to grant a CUP, the Planning Agency must find, based upon substantial evidence:

a. That the site is adequate in size, shape and topography for the proposed use including, without limitation, any required yards, walls, fences, parking and loading facilities, landscaping, setbacks, and other development standards required in this code;

b. That the site has sufficient access to streets and highways, adequate in width and pavement type to carry the quantity and quality of traffic generated by the proposed use;

c. That the proposed use is consistent with the General Plan, any applicable specific plan, and applicable law;

d. That the proposed use will not create unusual noise, traffic, or other conditions that may be objectionable, detrimental, or incompatible with surrounding properties or other permitted uses in the City;

e. That the proposed use will not have an adverse effect on the public health, safety and general welfare; and

f. That the use applied for at the location set forth in the application is properly one authorized by conditional use permit pursuant to this code.

As demonstrated herein, and in the expert consultant reports attached hereto, the Project results in a significant adverse effect on the public health, safety, and general welfare due to the Project's significant air quality, health risk, and noise impacts. An EIR must be prepared which adequately analyzes and mitigates the Project's significant environmental impacts before the Project's entitlements can be approved.

Footnote 79: City of Monterey Park, California, Planning Commission, available at: https://www.montereypark.ca.gov/649/Planning-Commission.

Response to Comment 3-18

The comment claims that the "Project results in a significant adverse effect on the public health, safety, and general welfare due to the Project's significant air quality, health risk, and noise impacts" and that the City cannot make Finding (e) regarding public health, safety and general welfare. As described in detail throughout the Response to Comments for Letter 3, the IS/MND adequately and accurately describes the Project's impacts on air quality, health risk, and noise impacts. Moreover, the City as the Lead Agency will consider the entire administrative record before making any findings to approve the Project. As described herein, and in the IS/MND, impacts would be less than significant. Therefore, the Lead Agency has adequate evidence to support the findings for approval of a CUP.

Comment 3-19

B. The City Cannot Make the Necessary Findings to Approve the Design Review

In order to approve a design review application, the Applicant must show, to the satisfaction of the City Planner, the following:

(A) The architecture and mass of new buildings and structures and modifications of existing buildings and structures are compatible and in keeping with the character of the neighborhood and not detrimental to the general welfare of the neighborhood in which they are located. [80]

As demonstrated herein, and in the expert consultant reports attached hereto, the proximity of the Project to sensitive receptors will result in significant unmitigated noise, air quality, and health risk impacts that are detrimental to the general welfare of the neighborhood in which it is located, in violation of the municipal code. An EIR must be prepared which adequately analyzes and mitigates the Project's significant environmental impacts before the Project's entitlements can be approved.

Footnote 80: Monterey Park Municipal Code § 21.36.060.

Response to Comment 3-19

This comment claims that the City cannot make the findings to approve design review. It should be noted that the discretion to make findings for any project rests with the City. Accordingly, the City would rely on evidence in the administrative record, and applicable sections of the MPMC to make findings for the Project, if approved. It should be noted that the Project is required to execute a development agreement pursuant to the MPMC and is activating the Business Recovery Development Agreement Zone (BRDZ) in conjunction with the adoption of a development agreement. Therefore, pursuant to MPMC Section 21.45.020, the proposed development and land uses within a BRDZ must comply with all applicable development and land use standards and exaction requirements specified in the development agreement. Accordingly, the Project shall comply with applicable development standards sufficient to support required findings for approval, if granted by the Lead Agency.

Comment 3-20

IX. CONCLUSION

For the reasons discussed above, the MND for the Project is wholly inadequate under CEQA. An EIR must be circulated to provide legally adequate analysis of, and mitigation for, all of the Project's potentially significant impacts. Until an EIR has been prepared and circulated for public review, as described herein, the City may not lawfully approve the Project.

Response to Comment 3-20

This comment serves as a conclusion to the comment letter. For further details, please see Response to Comments 3-1 through 3-19 above.

Comment 3-21

At the request of Adams Broadwell Joseph & Cardozo (ABJC), Clark and Associates (Clark) has reviewed materials related to the IS/MND for the above referenced project.

Clark's review of the materials in no way constitutes a validation of the conclusions or materials contained within the project record. If we do not comment on a specific item this does not constitute acceptance of the item.

Project Description

The Project would demolish the existing site improvements and construct a new 218,400-square-foot data center with an ancillary equipment yard, substation, parking, and landscaping. The Data Center would include approximately 109,970 square feet of data hall space and approximately 91,889 square feet of support space (collectively, the "Project"). The proposed data center building would be one story and 36 feet in height (46.5 feet to top of mechanical equipment platform screening). An approximately 75,000-square-foot ancillary equipment yard would be located adjacent to the north side of the data center. The Project would include fourteen (14) four-megawatt (4-MW) back-up diesel generators to provide power in the event of an emergency.

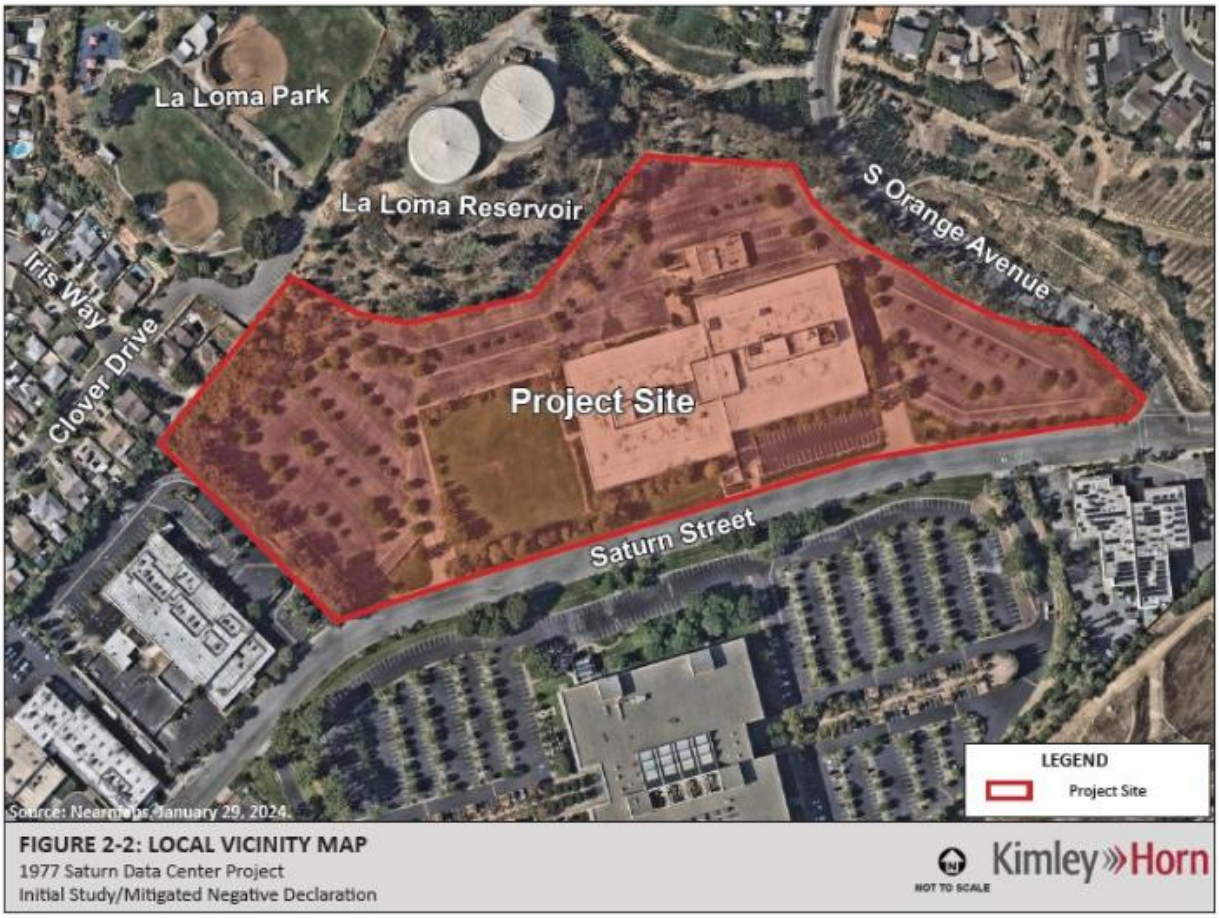

Figure 1: Project Site

The Project would also include a 24,000-square-foot electrical substation, appurtenant to the function of the data center. Project construction is anticipated to occur over one phase, lasting approximately 24 months, beginning as early as September 2025 and ending as early as August 2027.

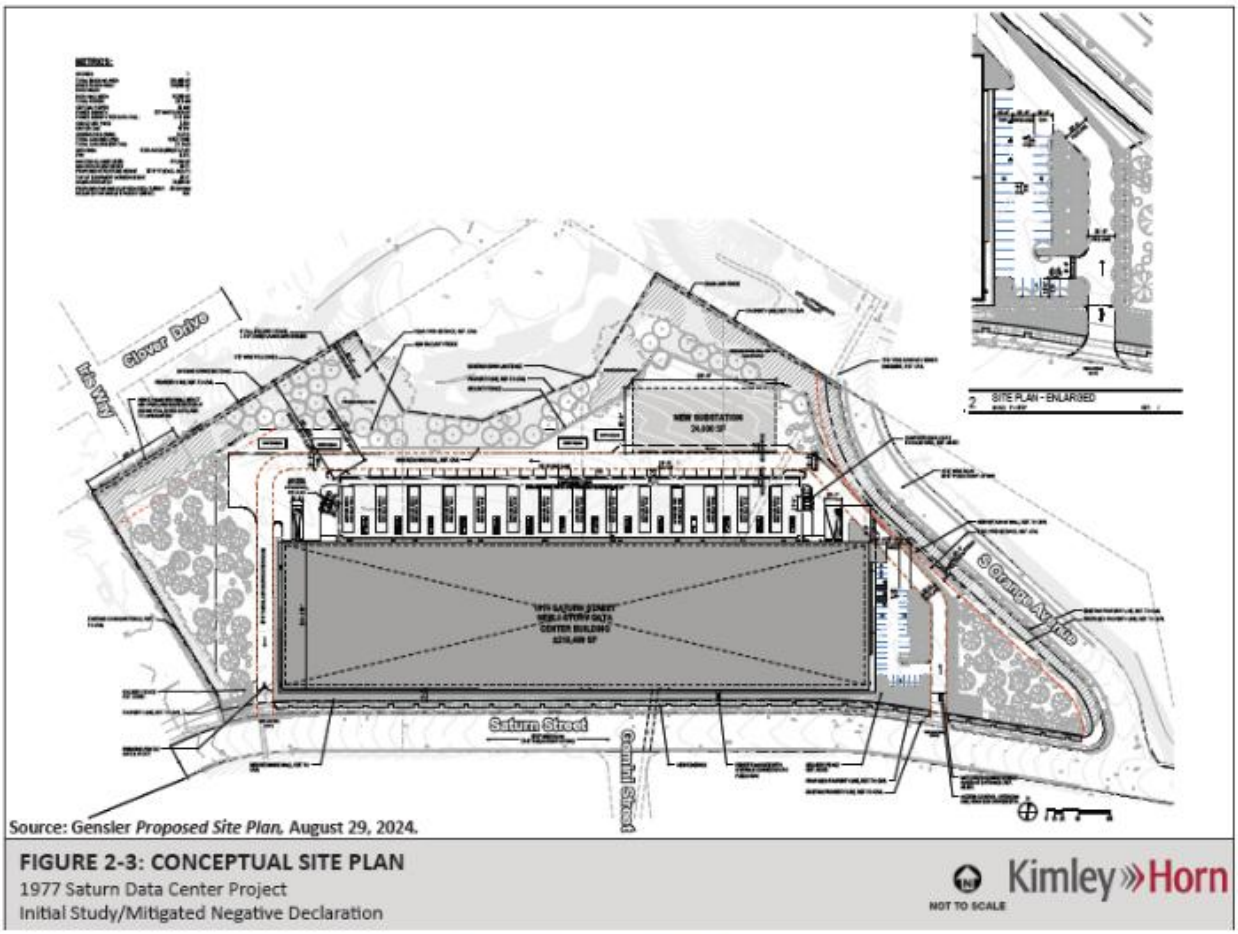

Figure 2: Conceptual Site Plan

Grading for the proposed improvements would require cut and fill to create building pads. The Project Site is bordered on the north by hillside that would remain undisturbed where the proposed design permits, as a general guideline using the existing parking lot limits and the limit of grading. There is currently only one area where there is cut into the hillside to accommodate the future substation. The proposed data center building takes up majority of the buildable land on the Project Site and spans nearly the entire frontage of Saturn Street. Project construction is anticipated to occur in the following sequence:

- Demolition of existing structures,
- Site grading and construction preparation,
- Building construction,
- Utility work,
- Paving,

- Interior construction and build-out,
- Installation of equipment and infrastructure, and
- Final inspections, testing, and commissioning.

Project Site preparation for the Project would require cutting and removal of approximately 500,000 square feet of concrete and approximately 65,000 cubic yards of soil export.

The backup generators are designed to start up quickly and run only as demand requires. All generators would be located outdoors in the equipment yard and would be surrounded by an acoustic screen wall. Generators would be placed in sound-attenuating enclosures. The generators would be laid out in one row and reach a height of approximately 20 feet to top of generator enclosure, and up to 40 feet to top of exhaust stack. Each generator would be provided with a 7,000-gallon sub-base fuel storage tank, equating to 24 hours of runtime in emergency conditions.

The heating, ventilation, and air conditioning ("HVAC") equipment would include 23 air cooled chillers with free cooling modules, each rated at 460-tons of capacity, in an N+1 redundancy configuration to support data hall operations.

The IS/MND claims that as formulated the Project would result in air quality impacts that are less than significant while failing to consider at least one major source of pollution on-site (the back-up generators). This conclusion is not supported by the data contained within the IS/MND and the City must fully evaluate the air quality impacts in an environmental impact report (EIR).

Specific Comments:

Response to Comment 3-21

This comment contains a summary of the Project as described in Section 2.0: Project Description of the IS/MND. This comment also states that the City must fully evaluate air quality impacts in an EIR. Refer to Response to Comment 3-22 through 3-27 below for detailed responses.

Comment 3-22

1. **The Claims Regarding Greenhouse Gas (GHG) Emissions Are Not Supported In The Appendices To The Air Quality Analysis And The GHG Analysis**

According to the IS/MND the operational or long-term emissions would occur over the life of the proposed Project. GHG emissions would result from area sources (consumer products, landscape maintenance equipment, and painting), vehicular traffic, and diesel fuel associated with the emergency generators. Operational GHG emissions would also result from indirect sources, such as off-site generation of electrical power, the energy required to convey water to, and

wastewater from the Project, the emissions associated with solid waste generated from the Project, and any fugitive refrigerants from air conditioning or refrigerators.

In the GHG analysis memorandum[1] it is stated that the Project electricity usage would be mainly from the operation of the data center. The stated purpose of a data center is to house computer servers, which require electricity and cooling 24 hours a day to operate. Based on data received from the Applicant, the Project during peak load conditions would have a demand of 49,999 kilowatts per hour (KW/h). The analysis assumes 24/7 operations (8,760 hours per year) which would result in a maximum electrical usage of 437,991 megawatt hours (MWh) per year, including CalEEMod default assumptions for lighting for surface parking. The modeling also conservatively assumed the 14 gen-sets, which are each capable of generating 4 megawatts (MW) of power, would be used for up to 50 hours per year per generator for testing and maintenance. The generators would utilize diesel fuel releasing diesel particulate matter (DPM), a known human carcinogen. The Air Quality Analysis (Appendix A-1 to IS/MND) states that the proposed Project would include up to 12 4-MW stationary emergency diesel generators upon loss of grid power.[2] The other two generators would be on stand-by in case of failure for one of the 12 assigned to the system. The Air Quality Analysis and GHG Analysis of the Project both rely on the CalEEMOD model to calculate emissions, and model outputs are included as attachments to the Air Quality and GHG analyses.

Footnote 1: Appendix G to IS/MND. Pg 31

Footnote 2: Appendix A-1 to IS/MND pg 20

Response to Comment 3-22

This comment generally claims that the IS/MND analysis is not supported by the technical reports contained in its appendices, which is not true as explained below. The comment summarizes, in some cases inaccurately, the IS/MND analysis of air quality and GHG impacts from the Project. This comment is noted and responses to specific issues are provided below.

Comment 3-23

A review of the CalEEMOD analyses outputs for the operational phase of the Project reveals that the analyses do not include the emergency generators. The failure to include the testing and maintenance for the 14 generators onsite means that the TAC emissions and NOx emissions were not included in the operational analysis of the Project. Using the same input values for the construction and operational phases, but now including the 14 emergency generators, I have used the CalEEMOD model to calculate the operational emissions of the complete Project (attached to this letter). Based on a generator size of 5,376 brake horsepower (which would generate 4-MW of power), and limiting the operation to a total of 4.2 hours per month for all 14-

generators, the model demonstrates that the generators would emit up to 166 lbs per day of NOx, exceeding the SCAQMD's significance threshold of 55 lbs per day.

Table 5: Operational Greenhouse Gas Emissions Opening Year

Emissions Source	$MTCO_2e$ per Year[1]
Amortized Construction Emissions	41
Area Source	5
Emergency Generators[2]	2,062
Mobile	80
Waste	70
Water and Wastewater	27
Refrigeration	0.1
Energy[3]	83,020
Total Emissions	85,305

1. Total values are from CalEEMod and may not add up due to rounding.
2. Emergency backup generator emissions calculated assuming 50 hours per year per generator (14 generators).
3. The servers in the data center were estimated to require approximately 50 MW of power per hour, and operations were conservatively estimated to be 8,760 hours per year. Total MW per year would be 437,991. Total CO_2e in tons per year would be 83,020. The Project does not include natural gas heaters or water heaters.

Source: CalEEMod version 2022.1. Refer to **Attachment A** for model outputs.

According to Table 5 from the GHG analysis, the emergency generators would generate 2,062 metric tons of carbon dioxide equivalent ($MTCO_{2eq}$) per year. While Table 5 attributes 2,062 $MTCO_{2eq}$ to emergency generators, this estimate is unsupported. The CalEEMod modeling provided in the IS/MND does not include emissions from the emergency generators and the City does not actually document how the 2,062 $MTCO_{2eq}$ value was derived. As I demonstrated in my own model, the generators will contribute significantly to the total pollutant emissions from the Project and this must be clearly detailed in an EIR for the Project.

Response to Comment 3-23

The comment first states that the CalEEMod outputs from the operational phase of the Project do not include the emergency generators. The comment then claims that Clark calculated the operational emissions of the generators based on a generator size of 5,376 brake horsepower and limiting operation to 4.2 hours per month, which Clark indicates could exceed applicable thresholds. The Clark Letter references an "Attachment: CalEEMOD Output Including Emergency Generators in Operational Analysis." However, the Clark Letter did not include any such attachment and therefore lacks supporting evidence for its claims. Nonetheless, the following points are provided to clarify the record.

First, the Applicant reduced the total energy load of the Project and accordingly reduced the size and overall demand from the emergency generators. This adjustment was made based on the market availability of emergency generators from vendors, and to implement more stringent emissions controls on the emergency generators anticipated for use during Project operation. The current design of the Project includes 24 smaller 2.75 MW (3,705 brake horsepower), Tier 4 Final emergency generators. The analysis of these generators is included in the Supplemental Technical Analysis.

Regarding the claim that emissions could potentially exceed a threshold, the Supplemental Technical Analysis includes detailed modeling information and analysis of the emergency generators. Per consultation with SCAQMD, the IS/MND contains supplemental information to quantitatively analyze emergency generators utilizing emissions spreadsheets. These spreadsheets supplement the CalEEMod modeling because CalEEMod does not contain the capability to account for the specific equipment configurations, manufacturer-rated emissions, and operational assumptions associated with these emergency generators. Instead, a project-specific emissions inventory was prepared using U.S. EPA- and CARB-approved emission factors, manufacturer specification sheets, and conservative assumptions regarding operating hours and load. That quantitative modeling provides a detailed, accurate, and project-specific analysis of potential emissions. These calculations supplement the IS/MND and are included to support the impact conclusions, which remain less than significant, as identified in the IS/MND.

In addition, the comment states that the " . . . City does not actually document how the 2,062 $MTCO_2e$ value was derived" for the emergency generators identified in Table 5: Operational Greenhouse Gas Emissions Opening Year, in the IS/MND. However, Table 5 clearly identifies in footnote 2 that "[e]mergency backup generator emissions calculated assuming 50 hours per year per generator (14 generators)," which does in fact document how the 2,062 $MTCO_2e$ value was derived. Thus, the comment is mistaken on this point.

In addition, refer to Response to Comments 3-8, 3-9, and 3-10.

Comment 3-24

2. The Operational Air Quality Analysis Fails To Consider The Direct Impacts Of Cooling The System While In Operation.

The operational air quality emissions estimate fails to include critical stationary sources required to cool the data center. As stated above, according to the IS/MND the heating, ventilation, and air conditioning ("HVAC") equipment would include 23 air cooled chillers with free cooling modules, each rated at 460-tons of capacity, in an N+1 redundancy configuration to support data hall operations. Figure 3 of the Air Quality Analysis shows that the cooling system will be rated for 550 tons. The CalEEMOD analysis for operational emissions lists general office building under the refrigeration and air conditioning equipment. The GHG and Air Quality analyses assess the

impacts of the Project based on the consumption of 50-MW per hour of energy and does not include a specific analysis of the amount of energy (and resulting pollution emissions) that would be required to maintain the cooling system for the data center. The model used in the CalEEMOD analysis assumed that the energy used to cool the data center would be equivalent to a typical air conditioning system for an office building. A recent paper by Zhu et al (2023) showed that refrigeration systems in Data Centers consume 35% of the energy utilized onsite. Based on the work from Zhu it is clear that the total energy need to maintain the 50 MW of energy required to operate the data center would have to be increased by 17.5 MW to cover the energy required to cool the data center (0.35 * 50 MW = 17.5 MW for cooling) The General Office Building setting in CalEEMOD clearly underestimates that energy consumption rate and resulting GHG and air pollutant emissions from the Project. The City must address this flaw in an EIR of the Project.

Response to Comment 3-24

The comment incorrectly claims that "[t]he operational air quality emissions estimate fails to include critical stationary sources required to cool the data center" and that "[t]he CalEEMOD analysis for operational emissions lists general office building under the refrigeration and air conditioning equipment." To be clear, the IS/MND modeled air quality emissions using the specific energy demand, and related cooling demands, of the Project as a data center, and not as a general office building.

As shown in Table 4.6-2 (footnote 1) on page 65 of the IS/MND, electricity usage is ". . . based on Project-specific estimates and CalEEMod defaults" for building energy. More specifically, Appendix E of the IS/MND includes a report from Curtis Spraggins, PE, LEED AP at DFWCGI, which provides the estimated peak energy load for the Project, which includes the energy load from the equipment to cool the Project. That energy load was used in CalEEMod to estimate energy uses. See page 85 in Appendix A showing how energy use from CalEEMod was changed from default data with the justification "values provided by client," which represent data center operations more precisely. Additionally, page 6 of Appendix E includes 437,991,240 kWh per year of electricity for the general office building land use. This calculation includes the client provided 49,999 kWh multiplied by 8,760 hours in a year. This is a conservative estimate as it assumes full load every hour of the year. However, the IS/MND uses these demand assumptions in the modeling and analysis. In addition, to clarify, the "general office building" category used in the IS/MND and its appendix relates to construction of the physical building footprint. All operational inputs, such as trip generation, energy demand, and water demand, were revised to reflect the data center use. Therefore, the IS/MND does not underestimate the energy consumption rate of the Project.

Comment 3-25

3. The IS/MND Fails To Model The Diesel Particulate Matter (DPM) Concentration From The Emergency Generators Onsite To The Closest Sensitive Receptor To The Site

According to the HRA prepared for the IS/MND, operational emissions from the Project would result from mobile sources (i.e., motor vehicle use) and area sources (such as the use of landscape maintenance equipment, consumer products, and architectural coatings). Toxic air contaminants (TACs) that would be emitted from those sources include benzene, 1,4-butadiene, acrolein, and diesel exhaust.

Diesel exhaust contains nearly 40 toxic substances, including TACs and may pose a serious public health risk for residents in the vicinity of the facility. TACs are airborne substances that are capable of causing short-term (acute) and/or long-term (chronic or carcinogenic, i.e., cancer causing) adverse human health effects (i.e., injury or illness). TACs include both organic and inorganic chemical substances. The current California list of TACs includes approximately 200 compounds, including particulate emissions from diesel-fueled engines.

Diesel exhaust has been linked to a range of serious health problems including an increase in respiratory disease, lung damage, cancer, and premature death. Fine DPM is deposited deep in the lungs in the smallest airways and can result in increased respiratory symptoms and disease; decreased lung function, particularly in children and individuals with asthma; alterations in lung tissue and respiratory tract defense mechanisms; and premature death. Exposure to DPM increases the risk of lung cancer. It also causes non-cancer effects including chronic bronchitis, inflammation of lung tissue, thickening of the alveolar walls, immunological allergic reactions, and airway constriction. DPM is a TAC that is recognized by state and federal agencies as causing severe health risk because it contains toxic materials, unlike PM2.5 and PM10.

This *a priori* assumption regarding the sources of TACs in the HRA ignores a significant source of diesel particulate matter (DPM) emanating from the Project Site, the 14 emergency generators that will be present onsite. The failure to consider the DPM emissions from the generators is a major flaw in the air quality and health risk analyses.[3]

The Health Risk Analysis[4] for the IS/MND states that the Applicant will obtain Permits to Operate (PTO) from the SCAQMD prior to installation or operation of the emergency generators, which verifies that the generators meet the applicable Best Available Control Technology (BACT) requirements and comply with SCAQMD Rule 1470 (Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines) and Rule 1401 (New Source Review of Toxic Air Contaminants), which would minimize TAC emissions.

Based on the Air Quality Analysis it was assumed that the testing and maintenance of the generators would be limited under the terms of SCAQMD operating permits to be obtained by the Applicant, to operate for a maximum of 4.2 hours each month[5] or approximately 18 minutes per month per generator. Permits from SCAQMD under Rule 1470 normally limit testing of each generator to 50 hours per year (in this case testing could be assumed to take up to 700 hours per year (14 generators * 50 hours per year)). 700 hours per year of diesel emergency generator

operation would result in a significant air quality and health risk impacts from exposure to TAC emissions to nearby sensitive receptors.

If the City is proposing to limit the total testing of generators to 50 hours per year combined for all generators it must enter into a binding agreement with SCAQMD to ensure compliance with that requirement and include such limitations as a binding mitigation measure. The MND's assumptions regarding diesel emissions from generators and the resulting conclusions regarding health risk are not supported by substantial evidence. The City must re-analyze the Project impacts and present them in an EIR for the Project Site.

Footnote 3: ibid.

Footnote 4: Appendix B to IS/MND pg 12

Footnote 5: Appendix A-1 to IS/MND pg 21

Response to Comment 3-25

This comment generally claims that the IS/MND fails to model diesel particulate matter (DPM) from the emergency generators to the closest sensitive receptor. It should be noted that the IS/MND explained how the Project would comply with the applicable regulatory compliance process prior to operations of any emergency generators. Specifically, the Health Risk Assessment Memorandum in Appendix B provides that: "[t]he proposed Project would include up to 12 4-MW stationary emergency diesel generators upon loss of grid power. As discussed in the 1977 Saturn Data Project – Air Quality Analysis (Kimley-Horn, April 2024), as part of the regulatory compliance process, the Applicant will obtain PTO from the SCAQMD prior to installation or operation of the emergency generators, which verifies that the generators meet the applicable BACT requirements and comply with SCAQMD Rule 1470 (Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines) and Rule 1401 (New Source Review of Toxic Air Contaminants), which would minimize TAC emissions. An operational health risk analysis would be required to comply with SCAQMD's Rule 1401 permit requirements. DPM emissions and cancer risk associated with the proposed diesel generators would be analyzed within the required SCAQMD permit to ensure that associated emission levels remain less than significant."

In addition, in response to agency comments on the IS/MND, the Supplemental Technical Analysis was prepared to evaluate emissions associated with the testing and maintenance of the proposed emergency generators. The Supplemental Technical Analysis assumed up to 50 hours per year of generator operation for testing and maintenance. This assumption reflects the applicable regulatory limit under SCAQMD Rule 1470 and represents standard industry practice. By adopting this assumption, the analysis captures the maximum reasonably foreseeable emissions associated with generator operations. The results of the analysis demonstrate that TAC

emissions from the enhanced Tier 4 Final (24 proposed 2.75 MW) emergency generators would result in a maximum incremental cancer risk of 6.97 in one million at the nearest sensitive receptor, which is well below SCAQMD's CEQA significance threshold of 10 in one million. Accordingly, the Project would not result in a significant health risk impact. Additional details are provided in the Supplemental Technical Analysis.

Therefore, the conclusions in the IS/MND regarding potential emergency generator impacts are supported with substantial evidence.

In addition, refer to Response to Comment 3-9.

Comment 3-26

Conclusion

The facts identified and referenced in this comment letter lead me to conclude that the Project could result in significant unmitigated impacts if the air quality, GHG and health risk analyses are not corrected.

Response to Comment 3-26

This comment provides a conclusion to the commenter's letter. Responses to commenter's comments are provided in Responses to Comment 3-21 through 3-25. No further response is required.

Comment 3-27

Attachment: CalEEMOD Model Output Including Emergency Generators in Operational Analysis

Response to Comment 3-27

The CalEEMod Model Outputs referenced in the comment are not provided in the comment letter. Therefore, no responses are required.

Comment 3-28

Per your request, I have reviewed the subject matter documents for the 1977 Saturn Data Center Project (Project) Mitigated Negative Declaration (MND) in Monterey Park, California. The MND includes a Noise and Vibration Analysis Memorandum as Appendix J (Noise Memo). The project would demolish existing structures and construct a one story building.

Wilson Ihrig, Acoustical Consultants, has practiced exclusively in the field of acoustics since 1966. During our 58 years of operation, we have prepared hundreds of noise studies for Environmental Impact Reports and Statements. We have one of the largest technical laboratories in the acoustical consulting industry. We also utilize industry-standard acoustical programs such as

Roadway Construction Noise Model (RCNM), SoundPLAN, and CADNA. In short, we are well qualified to prepare environmental noise studies and review studies prepared by others.

Response to Comment 3-28

This comment introduces the comments in the Jue Letter. The comment is noted, and no further response is required.

Comment 3-29

Adverse Effects of Noise[1]

Noise-Induced Hearing Loss. If a person is repeatedly exposed to loud noises, he or she may experience noise-induced hearing impairment or loss. In the United States, both the Occupational Health and Safety Administration (OSHA) and the National Institute for Occupational Safety and Health (NIOSH) promote standards and regulations to protect the hearing of people exposed to high levels of industrial noise.

Speech Interference. Another common problem associated with noise is speech interference. In addition to the obvious issues that may arise from misunderstandings, speech interference also leads to problems with concentration fatigue, irritation, decreased working capacity, and automatic stress reactions. For complete speech intelligibility, the sound level of the speech should be 15 to 18 dBA higher than the background noise. Typical indoor speech levels are 45 to 50 dBA at 1 meter, so any noise above 30 dBA begins to interfere with speech intelligibility. The common reaction to higher background noise levels is to raise one's voice. If this is required persistently for long periods of time, stress reactions and irritation will likely result.

Sleep Disturbance. Noise can disturb sleep by making it more difficult to fall asleep, by waking someone after they are asleep, or by altering their sleep stage, e.g., reducing the amount of rapid eye movement (REM) sleep. Noise exposure for people who are sleeping has also been linked to increased blood pressure, increased heart rate, increase in body movements, and other physiological effects. Not surprisingly, people whose sleep is disturbed by noise often experience secondary effects such as increased fatigue, depressed mood, and decreased work performance.

Cardiovascular and Physiological Effects. Human's bodily reactions to noise are rooted in the "fight or flight" response that evolved when many noises signaled imminent danger. These include increased blood pressure, elevated heart rate, and vasoconstriction. Prolonged exposure to acute noises can result in permanent effects such as hypertension and heart disease.

Impaired Cognitive Performance. Studies have established that noise exposure impairs people's abilities to perform complex tasks (tasks that require attention to detail or analytical processes), and it makes reading, paying attention, solving problems, and memorizing more difficult. Therefore, there are standards for classroom background noise levels, which is why offices and

libraries are designed to provide quiet work environments. One societal change brought about by the COVID-19 pandemic is that many people now routinely work and learn from home, and this has given rise to more noise complaints from loud daytime activities such as construction work.

Footnote 1: More information on these and other adverse effects of noise may be found in *Guidelines for Community Noise*, eds B Berglund, T Li nd vail, and D Schwela, World Health Organization, Geneva, Switzerland, 1999. (https://www.who.int/docstore/peh/noise/Comnoise-l.pdf)

Response to Comment 3-29

This comment contains a general summary of the effects of noise and does not focus on the adequacy of the IS/MND or its analysis of potentially significant impacts. Therefore, no further response is required.

Comment 3-30

Errors and Omissions

The MND and Noise Memo contain several errors and omits several items. Several of these items are explored in more detail following this list:

1. The MND does not identify the noise metrics used for the existing noise data. The Noise Memo describes several different metrics, and it not clear which ones are being used to present the existing noise in Table 4.13-2. In order to use this data to adjust the City's noise ordinance for the measured noise level, this should be the **L_{50}, or median noise** level, however Table 4.13-6 references these values as L_{eq}, and the construction noise analysis uses L_{eq}. L_{50} and L_{eq} are not the same metric; the L_{eq} can be very similar to L_{50}, but it is often several decibels higher. Using the proper median value would result in significant impacts.

2. For the purposes of CEQA, the MND must provide an analysis of potentially significant impacts. Therefore, the existing noise in Table 4.13-2 must show the range of the median noise level (L_{50}) derived on an hourly basis during daytime and nighttime periods, and the minimum values must be used to evaluate potentially significant impacts.

Response to Comment 3-30

This comment claims the IS/MND should have used L_{50} instead of L_{eq} to analyze potential noise impacts. This comment is incorrect because the ambient noise measurements shown in IS/MND Table 4.13-2 are L_{50} (median) noise measurement data collected by Veneklasen Associates (refer to IS/MND Appendix J). IS/MND Table 4.13-2 uses the term "Average Level" in the column heading but is not intended to mean L_{eq}. The term "Average Level" is intended to differentiate

between the daytime and nighttime noise levels also reported in the table. The source data for IS/MND Table 4.13-2 (i.e., Table 1 in Attachment B to IS/MND Appendix J) uses the term "Measured Level", which is the L_{50} (median) level and not L_{eq} or "Average Level". As the comment incorrectly assumes that the measured noise levels are L_{eq} and not L_{50}, the assertion that impacts are underestimated is incorrect. Additionally, the IS/MND Table 4.13-6 incorrectly labeled the noise metrics in the column headings as L_{eq}. Therefore, the IS/MND will be revised to correct this typographical error; refer to Response to Comment 3-6.

In addition, refer to Response to Comment 3-6 regarding the median and the L_{eq} noise level. As noted above, the correct noise metric was used in the IS/MND analysis and no potentially significant impacts were identified.

Comment 3-31

3. The noise analysis neglects to take into account the tonal penalty that the City applies to noise equipment (such as chillers and generators). This is an error, and the noise limits shown in Table 4.13-6 must reflect a lower noise limit reduced by 5 dBA. As described below, using the correct noise limit would result in significant noise impacts.

Response to Comment 3-31

This comment incorrectly claims that "[t]he noise analysis neglects to take into account the tonal penalty that the City applies to noise equipment (such as chillers and generators)." The comment does not cite which section of the MPMC contains the alleged requirement. Nonetheless, to provide a good-faith response, it is assumed the commenter is referring to MPMC Section 4.50.090, which states that "[s]hould an alleged noise disturbance contain a steady, audible tone, such as a whine, screech, beating, pulsating, throbbing, or hum, the noise level limits set forth in this chapter will be reduced by five dB for purposes of determining whether a violation exists." Importantly, note that this section is for "alleged noise disturbances" and is not for modeling noise impacts pursuant to CEQA thresholds. Thus, the comment is misapplying the MPMC as a fundamental point.

Moreover, it should be noted that the noise modeling in the IS/MND and Supplemental Technical Analysis accounts for the full frequency spectrum of the equipment based on manufacturer specifications. Therefore, the modeling already accounts for the potential noise characteristics of the equipment because sound power level provided by the manufacturer includes the total acoustic energy or total of all frequencies the equipment would emit.

Additionally, as discussed in IS/MND page 114, the Project's mechanical equipment is subject to MPMC Section 21.14.150, which requires mechanical equipment to be installed with permanent sound proofing measures, including, but not limited to, enclosures, parapet and sound attenuating walls and screens. These type of features are included in the Project design.

Comment 3-32

4. The Noise Memo does not provide evidence to document the source of the Project's rooftop equipment noise emission levels. The MND states that 23 rooftop chillers and 14 emergency generators will be utilized (p. 10). The Noise Memo does not identify the source of the reference sound power levels used in its analysis for HVAC rooftop equipment and it lacks sound power data for the generators. The failure to identify the HVAC and generator sound power data makes it impossible to evaluate the Noise Memo's conclusions regarding operational noise impacts. The MND's conclusions that the project will not cause significant noise impact is therefore not supported by substantial evidence.

Response to Comment 3-32

The comment claims that "[t]he Noise Memo does not identify the source of the reference sound power levels used in its analysis for HVAC rooftop equipment and it lacks sound power data for the generators." The comment is correct. In response, and to clarify the IS/MND analysis, the following information is added.

The source reference sound power level for the chillers used in the analysis is included in Appendix J: Noise and Vibration Analysis Memorandum. The emergency generators are exempt from analysis per MPMC Section 4.50.050, therefore no reference levels are required for analysis.

In addition, refer to Response to Comment 3-15.

Comment 3-33

5. The construction noise analysis erroneously relies on FTA guidance criteria without taking into account the existing noise environment. The FTA guidance states, "Project construction noise criteria should account for the existing noise environment, the absolute noise levels during construction activities, the duration of the construction, and the adjacent land use."

For the purposes of CEQA, the closest distances must be used to identify potentially significant noise impacts.

Response to Comment 3-33

This comment makes two inaccurate claims regarding the existing noise environment and the distances used to identify noise impacts.

Regarding the existing noise environment, the FTA guidance quoted in the comment also states that the absolute noise levels should be accounted for as well as the duration of construction and adjacent land use. The IS/MND's construction noise analysis accounts for all of these criteria. Existing noise levels are documented in IS/MND Table 4.13-2 and range from 55 to 65 dBA. The

construction noise analysis modeled specific pieces of equipment for each stage of construction and accounted for the distances to the surrounding sensitive receptors. Unlike operational noise, which persists indefinitely, construction noise is temporary and limited to specific phases. Additionally, the existing noise environment shown in IS/MND Table 4.13-2 are levels that are typical of an urban/suburban area.[5] The existing noise levels would not combine or interact with Project construction levels because of the logarithmic nature of sound energy (i.e., the existing noise environment would not increase construction noise levels). Due to the temporary nature of construction noise and the fact that it would occur only during daytime, and the fact that construction noise would not exceed the FTA's standards, increases above the existing noise environment would not be significant.

The FTA Transit Noise and Vibration Assessment Manual provides guidelines that are considered reasonable criteria for assessment. Regarding the distances used to analyze impacts, the FTA guidance establishes guidelines for quantitative construction noise assessments and notes that mobile equipment moves around the construction site and therefore permits the use of modeling that assumes all equipment operates at the center of the project. Accordingly, the noise modeling for construction applied this acceptable noise modeling method for the operation of construction equipment consistent with the relevant provisions of the FTA guidance.

Comment 3-34

Item #3 Mechanical Equipment Noise Levels Would Be Significant

Table 4.13-6 contains two errors: 1) the Ambient noise level referenced must be the median noise level, L50 *[sic]*, not the Leq *[sic]*, 2) the noise limit must be lowered by 5 dBA as noted above. Furthermore, for the purposes of CEQA and an MND analysis, the ambient median noise levels referenced should be reflective of the lowest values in the daytime and nighttime periods.

As shown, with these errors, the mechanical equipment noise would exceed the noise limits during the nighttime hours at the residences to the west, and at the northeastern residences the noise limits would be exceeded during the daytime and nighttime hours. See Figure 1. Since the L50 *[sic]* is less than the Leq *[sic]*, the actual quiet range of the median levels should be even lower than shown in the MND Table 4.13-6, which could result in significant noise impacts for daytime hours.

[5] James P. Cowan, *Handbook of Environmental Acoustics*, page 37, 1994.

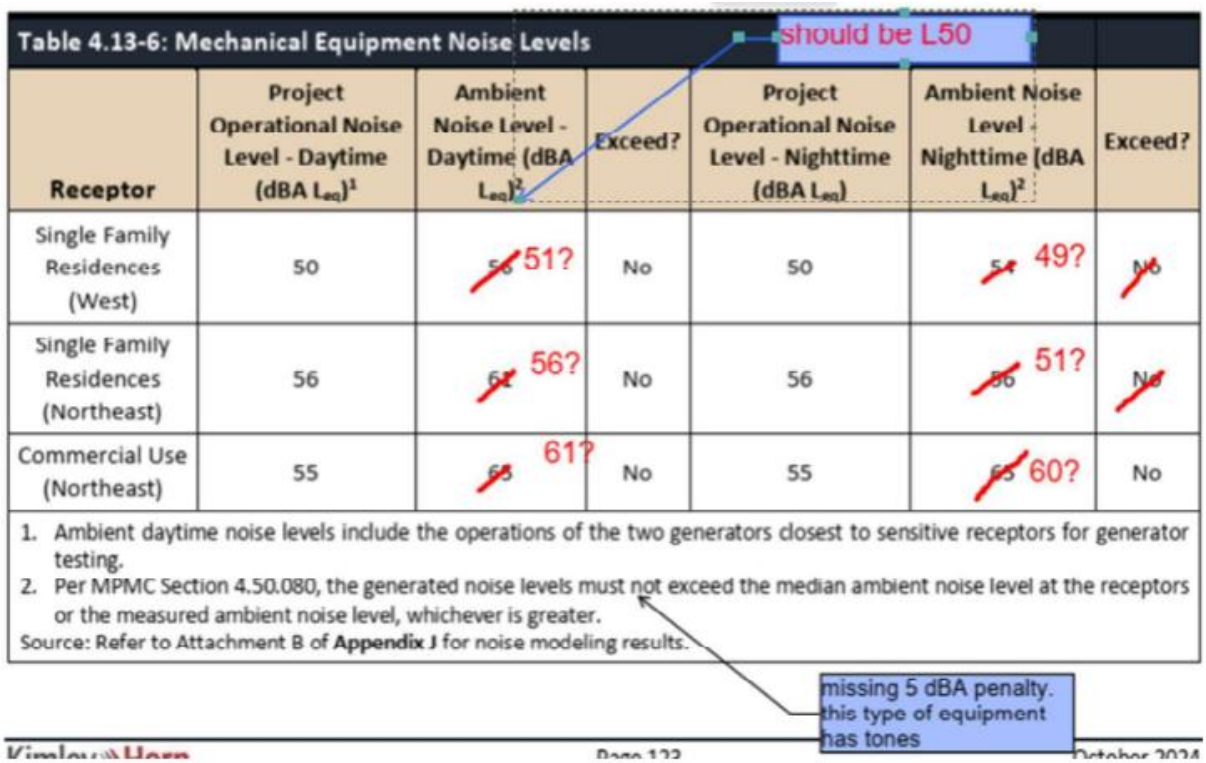

Table 4.13-6: Mechanical Equipment Noise Levels

should be L50

Receptor	Project Operational Noise Level - Daytime (dBA L_{eq})[1]	Ambient Noise Level - Daytime (dBA L_{eq})[2]	Exceed?	Project Operational Noise Level - Nighttime (dBA L_{eq})	Ambient Noise Level - Nighttime (dBA L_{eq})[2]	Exceed?
Single Family Residences (West)	50	51?	No	50	49?	No
Single Family Residences (Northeast)	56	56?	No	56	51?	No
Commercial Use (Northeast)	55	61?	No	55	60?	No

1. Ambient daytime noise levels include the operations of the two generators closest to sensitive receptors for generator testing.
2. Per MPMC Section 4.50.080, the generated noise levels must not exceed the median ambient noise level at the receptors or the measured ambient noise level, whichever is greater.

Source: Refer to Attachment B of **Appendix J** for noise modeling results.

missing 5 dBA penalty. this type of equipment has tones

Kimley»Horn Page 122 October 2024

Figure 1 Markup of Table 4.13-6 from MND – MND Omits Generator Noise

Response to Comment 3-34

This comment claims that there are two errors in Table 4.13-6 of the IS/MND, which is incorrect, as discussed below.

First, the comment claims that the ambient noise level referenced must be the median noise level, L_{50}, not L_{eq}. This claim is not technically accurate because the ambient noise measurements shown in IS/MND Table 4.13-6 are in fact L_{50} (median) noise levels. As noted above, the IS/MND Table 4.13-6 incorrectly labeled the noise metrics in the column headings as L_{eq}. Therefore, the IS/MND will be revised to correct this typographical error; refer to Response to Comment 3-6. As the comment incorrectly assumes that the measured noise levels are L_{eq} and not L_{50}, the assertion that impacts are underestimated is incorrect.

Second, the comment claims that the noise limit must be lowered by 5 dBA, which is also inaccurate because the analysis uses the correct L_{50} (median) noise levels. The comment also arbitrarily identifies a 5 dBA correction from L_{eq} to L_{50} without any citation or source. Regardless, as noted above, the analysis is based on the correct L_{50} levels and the analysis's conclusions remain unchanged. In addition, refer to Response to Comment 3-31 regarding mechanical equipment and the inapplicable 5 dB penalty.

Comment 3-35

Item #4 Generator Mechanical Equipment Noise Levels Would Be Significant

The results Table 4.13-6 cannot be verified since the source power levels for the chillers and RTUs are not provided in the Noise Memo. Furthermore, the noise from generators was not evaluated citing an "emergency" exemption. However, given the challenges with the California power grid and wildfire in recent years, a power outage could occur at the Project site that would not be considered a local "emergency". Therefore, for purposes of CEQA the noise from 12 simultaneously operating generators must be included. The sound from the generators could be the same or higher than the chillers and RTUs, and the combined operation of all mechanical equipment could be 3 dBA or more than shown in Table 4.13-6 (replicated above in Figure 1). Generators can be provided with sound reducing enclosures, and these must be included as mitigation.

Response to Comment 3-35

This comment initially claims that results Table 4.13-6 cannot be verified since the source power levels for the chillers and rooftop units (RTUs) are not provided in the Noise Memo. In response to this comment, the RTUs (chillers) reference levels have been added to the Supplemental Technical Analysis. Accordingly, the noise modeling for the RTUs is included in the IS/MND and supported by evidence.

Next, this comment questions the emergency exemption in the MPMC based on the commenter's speculation of power outages. This comment is inaccurate for the following reasons.

As discussed on page 123 of the IS/MND, and as provided precisely by Section 4.50.050(b), Noise Disturbances – Exemptions, of the MPMC ". . .. emergency generators or equipment used during a power outage or other emergency" are exempt and therefore not considered noise disturbances. Therefore, the IS/MND was not required to analyze the hypothetical case of generator noise during a potential emergency or power outage, nor would such noise be considered a noise disturbance per the MPPC. In addition, the noise from foreseeable periodic testing of emergency generators, although temporary and occasional, was included in the IS/MND operational noise analysis.

Also, it should be noted that Southern California Edison will supply power to the Project Site with newly constructed power facilities. See Figure 2-4 in the IS/MND, which illustrates the dedicated power lines for the Project. The Project will have a dedicated feed line that will directly service the data center power demand. Accordingly, the Project is less likely to experience potential power outages than other facilities without dedicated power interconnections. This further reduces the likelihood of a hypothetical power loss scenario.

Finally, it should also be noted that the generators are in fact enclosed with noise-reducing enclosures. That design is already built into the generator unit and thus these design features attenuate noise from the source. Thus, the commenter is mistaken that such features must be included as mitigation.

In addition, refer to Response to Comment 3-14.

Comment 3-36

Item #5 Construction Noise Impacts Would Be Significant

If the ambient L_{eq} are what is shown in Table 4.13-2, based on the discussions above, the ambient noise levels at residential areas ranges from 55 to 60 dBA, and the FTA 80 dBA noise threshold for residential shown in Table 4.13-5 would be 20 to 25 dBA higher than the ambient. This would be experienced as noise that is more than four times the existing environment, and it would be a significant impact. Allowing construction noise to exceed the ambient by more than 10 dBA would interfere with speech at neighboring properties. For purposes of CEQA and the MND, the construction analysis must also consider the construction noise from activities near the property line; the noise from these activities would be higher than those shown in Table 4.13-5 which were calculated at distances from the "main activity center". The Noise Memo provides that Sensitive Receptors in single family residences are 65 feet west of the Project site (Table 3). But, based on review of the MND's Figure 2-2 Local Vicinity Map, it is clear that the Project site directly abuts the residence at 2204 Iris Way, and may be as close as 20 feet from the construction zone on the Project site. Construction noise closer to the property line will result in significant noise impacts to nearby sensitive receptors, which will be more severe than analyzed in the MND. These significant impacts would require mitigation, such as sound walls and a construction noise plan. It is possible that some of these potentially significant impacts could not be mitigated below the level of significance, in which case an EIR must be provided.

Response to Comment 3-36

This comment claims generally that construction noise impacts would be significant. That claim is facially inaccurate because the MPMC exempts construction noise from numerical standards. See MPMC Section 4.50.100(a), which states that construction activities are expressly exempted from the sound level limits in the MPMC. The Project would comply with the hours of operation provided in the MPMC, and thus, all construction activities related to the Project are considered exempt from the standards established in the noise ordinance.

Appendix J: Noise and Vibration Analysis Memorandum of the IS/MND explained that construction noise is exempt from the noise standards in the MPMC. Specifically, MPMC Section 4.50.100: Sound level limits – Exceptions provides that "[c]onstruction activities between seven a.m. and seven p.m. Monday through Friday, and between nine a.m. and six p.m. on Saturdays,

Sundays and Holidays" are exempt from sound level limits in the MPMC. The Project would comply with the days and hours of activity established by the City code. Therefore, as explained in the IS/MND, the construction noise analysis provided was for informational purposes only.

Moreover, from a CEQA perspective, the applicable threshold of significance is whether the Project would generate noise levels "in the vicinity of the project in excess of standards established in the noise ordinance." In addition, the City established the noise limits currently in the MPMC with Ordinance No. 2204, which defines a "noise disturbance" as noise that "affects at the same time an entire neighborhood or any considerable number of persons." This standard also aligns with CEQA impact analysis rationale whereby the impacts of a project are analyzed in the context of the environment and not necessarily the impacts on an individual. As demonstrated in the IS/MND and the Supplemental Technical Analysis, the Project does not have a significant construction noise impact due to the MPMC exemption, and in any case, construction noise is not excess of standards within the vicinity of the Project and does not affect an entire neighborhood or any considerable number of persons. Therefore, construction noise impacts remain less than significant.

It should also be noted that the comment identifies only one receptor which may be located as close as 20 feet from the construction zone. As discussed above, and in Response to Comment 3-5 above, noise impacts are analyzed (per applicable FTA protocol) by considering the noise generating equipment located primarily in the middle of the construction site due to the mobile nature of construction equipment and the fact that construction activities are spread throughout the construction site. That methodology reflects actual construction activities because construction activities would not be located adjacent to the identified receptor for the entire duration of construction, and the vast majority of construction required to build the Project (i.e. heavy grading of the site, demolition of the existing building, and construction of the data center) is not located within close proximity to any considerable number of persons. Accordingly, even if the comment regarding receptor distance is true, the noise impact analysis was performed accurately according to established FTA methodology and the parameters of the MPMC.

Thus, the commenter's claim of significance is not accurate and is inconsistent with the applicable threshold and the applicable noise ordinance in the MPMC.

In addition, refer to Responses to Comment 3-5 and 3-33 regarding the appropriate methodology for measuring construction noise from the Project Site, which is supported by substantial evidence and industry standard for noise modeling.

Comment 3-37

Conclusions

The noise analysis for MND contains substantial omissions and errors. Correcting these issues would identify that Project would generate additional significant noise impacts and warrant an Environmental Impact Report (EIR) that includes mitigation measures to manage the anticipated impacts and full disclosure of any impacts that would remain significant.

Please feel free to contact me with any questions on this information.

Response to Comment 3-37

This comment concludes the commentor's remarks on the IS/MND. Good-faith reasoned responses, supported by evidence, are provided in Responses to Comment 3-28 through 3-36.

Letter 4

California Department of Conservation, Geologic Energy Management Division
3780 Kilroy Airport Way, Suite 400
Long Beach, CA 90806
Received on December 2, 2024

Comment 4-1

The Department of Conservation's Geologic Energy Management Division (Division) has reviewed the above-referenced project for impacts with Division jurisdictional authority. The Division supervises the drilling, maintenance, and plugging and abandonment of oil, gas, and geothermal wells in California. The Division offers the following comments for your consideration.

Response to Comment 4-1

This comment serves as an introduction to the commenter and comment letter. As this comment does not concern any information addressed or contained in the Public Review IS/MND, no further response is required.

Comment 4-2

The project area is in Los Angeles County and lies outside any designated oil field. However, based on the Division's online "Well Finder" application, an abandoned well, the "Monterey Park" 1 (API #03720192), is located within the footprint of the proposed new 1-story data center building. The Division's Construction Site Well Review Program should be contacted to review the status of this well. Division information can be found at: www.conservation.ca.gov. Individual well records are also available on the Division's web site, or by emailing CalGEMSouthern@conservation.ca.gov.

Response to Comment 4-2

The comment states that an abandoned well is located within the footprint of the new data center building. As discussed in the Phase I Environmental Site Assessment, provided as Appendix H of the Public Review IS/MND, a Report of Well Abandonment prepared by CalGEM is dated August 9, 1967. CalGEM indicated in their review of the associated reports and records that all requirements relative to plugging and abandonment of the well, removal of the well equipment and junk, and filling of the well records were fulfilled. In addition, the Phase I Environmental Site Assessment states that API #03720192 was a plugged and abandoned dry hole that did not produce oil or gas located on the subject property. Therefore, the Public Review IS/MND includes adequate information related to the well identified in this comment. As this comment does not provide further information that is not already included in the Public Review IS/MND, no further response is required. The comment is noted for the administrative record.

Comment 4-3

The scope and content of information that is germane to the Division's responsibility are contained in Section 3000 et seq. of the Public Resources Code, and administrative regulations under Title 14, Division 2, Chapters 2, 3 and 4 of the California Code of Regulations.

If any wells, including any plugged, abandoned or unrecorded wells, are damaged or uncovered during excavation or grading, remedial plugging operations may be required. If such damage or discovery occurs, the Division's district office must be contacted to obtain information on the requirements and approval to perform remedial operations.

The possibility for future problems from oil and gas wells that have been plugged and abandoned, or reabandoned, to the Division's current specifications are remote. However, the Division recommends that a diligent effort be made to avoid building over any plugged and abandoned well.

Questions regarding the Division's Construction Site Well Review Program can be addressed to the local Division's office in Long Beach by emailing CalGEMSouthern@conservation.ca.gov or by calling (562) 637-4400.

Response to Comment 4-3

This comment provides regulatory background related to the commenter's responsibilities and information related to any damage or discovery of wells. As this comment does not concern any information addressed or contained in the Public Review IS/MND, no further response is required. The comment is noted for the administrative record.

Letter 5

South Coast Air Quality Management District
Sam Wang
Program Supervisor, CEQA IGR
Planning, Rule Development & Implementation
21865 Copley Drive
Diamond Bar, CA 91765-4178
Received on December 3, 2024

Comment 5-1

South Coast Air Quality Management District (South Coast AQMD) staff appreciate the opportunity to review the above-mentioned document. The City of Monterey Park is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. To provide context, South Coast AQMD staff has provided a brief summary of the project information and prepared the following comments which are organized by topic of concern.

Response to Comment 5-1

This comment serves as an introduction to the comment letter. This comment does not focus on the adequacy of the IS/MND or its analysis of potentially significant impacts. Therefore, no further response is required.

Comment 5-2

Summary of Proposed Project Information in the MND

Based on the Draft Initial Study/Mitigated Negative Declaration (IS/MND), the Proposed Project consists of demolishing an existing site and constructing a new 218,400 square-foot data center with a new ancillary equipment yard, new electrical substation, parking, and landscaping. The ancillary equipment yard would be approximately 75,000 square feet and located adjacent to the data center's north side. The Proposed Project would include 14 new emergency diesel generators/engines to provide backup power in the event of an emergency. The Proposed Project would also include a new 24,000 square-foot electrical substation to provide electricity to the data center.[1] Based on a review of aerial photographs, South Coast AQMD staff found that the nearest sensitive receptor (e.g., residential development) is located 65 feet west of the Proposed Project.[2] Construction is anticipated to occur over one phase, lasting approximately 24 months, beginning as early as September 2025 and ending as early as August 2027.[3] The site of the Proposed Project encompasses 15.8 acres and is located at 1977 Saturn Street.[4]

Footnote 1: IS/MND, Page 11.

Footnote 2: *Ibid,* Page 46.

Footnote 3: *Ibid,* Page 21.

Footnote 4: *Ibid,* Page 11.

Response to Comment 5-2

This comment summarizes the project description provided in the Public Review Draft Initial Study/Mitigated Negative Declaration (IS/MND). As noted in the Supplemental Technical Analysis (see **Appendix B**), the Applicant has refined the Project based on responses from the public and agencies, and a request from the City to improve the architectural design. As relevant for the South Coast Air Quality Management District (South Coast AQMD or SCAQMD) comments, it should be noted that the Applicant slightly reduced the total energy load of the Project and accordingly reduced the size and overall demand from the emergency generators. Also, importantly, the Applicant committed to using Tier 4 emergency generators for the Project based on the South Coast AQMD Certified ICE-Emergency Generators list (May 23, 2025) and in consideration of type of generator units recommended by generator vendors based on the Project characteristics. Refer to Supplemental Technical Analysis for generator specification data sheets. As further demonstrated below, and in the Supplemental Technical Analysis, the emissions from the Project remain below the applicable South Coast AQMD thresholds.

Comment 5-3

Recommend Revisions to the CEQA Regional and Localized Operational Air Quality Impacts Analysis

According to the Public Review IS/MND, the Proposed Project includes 14 new emergency diesel engines, each with a capacity of four megawatts (MW) which is equivalent to approximately 5,364 horsepower (hp), to be located on the north side of the site. The operational emissions, both regional and localized, have been evaluated and calculated using the California Emissions Estimator Model (CalEEMod), as detailed in Appendix A-1: Air Quality Analysis Memorandum. The Lead Agency concludes that the Proposed Project's operational emissions are less than the South Coast AQMD air quality significance thresholds for both regional and localized emissions.

However, the emissions calculations do not include operational emissions from the 14 new 5,364 hp emergency diesel engines, which would require air permits from South Coast AQMD. The omission of these operational emissions from the calculations is a major flaw in the analysis because the conclusion of less than significant air quality impacts is relying on underestimated emissions from all criteria pollutants. This is especially concerning considering the Proposed Project's proximity to residential neighborhoods.

Response to Comment 5-3

This comment generally recommends revisions to the regional and localized operational air quality impact analysis. As discussed below, the City has accordingly updated relevant impact analysis in response to this comment. As demonstrated in the IS/MND, and the Supplemental

Technical Analysis, the Project's peak daily emissions remain less than the South Coast AQMD's regional air quality significance thresholds and impacts remain less than the South Coast AQMD's localized impact thresholds. As recommended by South Coast AQMD, the operational emissions for the emergency generators are calculated in the Supplemental Technical Analysis.

The Project's operational CalEEMod run included the emissions associated with the data center including area, mobile emissions, and energy sources (IS/MND page 45). As discussed recently with South Coast AQMD staff, the emissions associated with the emergency generators were not initially included in the CalEEMod model as the exact operating limits were to be determined during the process of obtaining South Coast AQMD permits to operate consistent with regulatory compliance. This approach was explained on pages 45-46 of the IS/MND stating that "periodic testing and maintenance of the generators would be limited under the terms of South Coast AQMD operating permits to be obtained by the Applicant. Thus, the temporary emissions from the generators during testing and maintenance would be regulated by South Coast AQMD to ensure adherence to applicable thresholds and permit limits set by the regulating agency. As part of the regulatory compliance process, the Applicant will obtain Permits to Operate (PTO) from the South Coast AQMD before installation or operation of the emergency generators, which verifies that the generators meet the applicable Best Available Control Technology (BACT) requirements and comply with South Coast AQMD Rule 1470 (Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines) and Rule 1401 (New Source Review of Toxic Air Contaminants).

In addition to the information provided in the IS/MND, and in response to South Coast AQMD's recommendation to quantify operational emissions from the emergency generators, the Supplemental Technical Analysis now provides such information. The Supplemental Technical Analysis includes detailed modeling information and analysis of the potential emissions. As discussed with South Coast AQMD, emissions were calculated using U.S. EPA- and CARB-approved emission factors in spreadsheets because CalEEMod does not account for the specific equipment configurations, manufacturer-rated emissions, and operational assumptions associated with these generator units. This provides a detailed, accurate, and project-specific analysis of potential emissions.

In addition, due to adjustments in the Project (based on responses to comments and Lead Agency's request) CalEEMod was updated for the current design. Table 5 in the Supplemental Technical Analysis includes the CalEEMod input changes. It should be noted that, while the maximum facility demand could be met with 18 generators, 6 additional generators will be installed to provide redundancy. However, all generators are for emergency use only. The analysis assumes up to 50 hours per year of generator use for testing and maintenance consistent with applicable regulatory limits and industry practice.

The Project will implement a Standard Operating Procedure (SOP) that limits testing and maintenance across all generators to no more than 13 hours per day. Testing and maintenance activities include regularly scheduled start-ups, and run-time checks to ensure the generators remain in proper working condition. These activities typically involve operating each generator under load for a short period of time (e.g., 15–60 minutes) on a monthly or quarterly basis), inspecting fuel, oil, and cooling systems, and verifying that emissions controls are functioning as designed. These procedures are carried out under controlled conditions and are required to ensure the generators will perform reliably in the event of an emergency outage. This modeling provided quantitative emissions for potential regional impacts and 1-hour, 8-hour, and 24-hour averaging times for localized impacts, as requested by South Coast AQMD.

Table 1 below demonstrates that the Project's regional operational emissions, inclusive of emergency generators, would not exceed applicable South Coast AQMD thresholds.

Table 1: Project Operational Emissions

Source	Emissions (pounds per day)[1]					
	ROG	**NO_X**	**CO**	**SO_2**	**PM10**	**PM2.5**
Area	8.44	0.10	11.80	<0.01	0.02	0.02
Energy	0.00	0.00	0.00	0.00	0.00	0.00
Mobile	0.18	0.16	1.81	<0.01	0.46	0.12
Emergency Generators[2]	14.80	52.85	105.69	0.58	2.33	2.33
Total	**23.42**	**53.11**	**119.38**	**0.58**	**2.78**	**2.44**
SCAQMD Threshold	55	55	550	150	150	55
SCAQMD Threshold Exceeded?	**No**	**No**	**No**	**No**	**No**	**No**

1. Emissions were calculated using the California Emissions Estimator Model (CalEEMod) version 2022.1.1.22, as recommended by South Coast AQMD. Worst-case seasonal maximum daily emissions are reported.
2. Calculations were performed in spreadsheet calculations. The modeling assumed no more than 13 hours of testing and maintenance run time in any one day for all generators.

Source: CalEEMod version 2022.1.1.22. Refer to **Appendix B: Supplemental Technical Analysis** for model outputs.

Comment 5-4

To ensure a comprehensive analysis of the Proposed Project's regional and localized air quality impacts on the surrounding area, it is recommended that the Lead Agency:

- Include the calculated emissions from the 14 new 5,364 hp emergency diesel engines. Permits for emergency engines are typically limited to up to 50 hours per year for maintenance and testing and no more than 200 hours per year of total operation (this

includes emergency use). Therefore, the CEQA document should calculate the emissions from the operation of all 14 emergency engines for 200 hours per year or if a lower number of hours of operation is used, South Coast AQMD staff would have to include a condition in the permit limiting the hours of operation to what was assumed in the CEQA document. Please also note that depending on the engine tier, the Proposed Project might trigger Title V requirements, as described later.

- Re-run CalEEMod to incorporate these emissions and reassess the total operational emissions.

Response to Comment 5-4

The comment recommended that the IS/MND include calculated emissions for the emergency diesel engines. In response to this comment, the Lead Agency has supplemented the IS/MND and it includes emission estimates from operation of the anticipated generators.

As discussed in Response to Comment 5-3, the emergency generator emissions calculations and operating limits for the emergency generators have been evaluated and calculated in the Supplemental Technical Analysis. The engine parameters utilized in the IS/MND were Tier 4 certified engines on the South Coast AQMD Certified ICE-Emergency Generators list updated May 23, 2025. See **Table 2** below for the engine parameters associated with the Project as refined based on public comments and Lead Agency requests.

Table 2: Project Engine Parameters

Make	Model	#	MW
Cummins	QSK78-G11 W/ D5F-H Tier 4f Aftertreatment	18 generators (plus 6 for redundancy)	2.75

Additionally, **Table 3** below provides operational and modeling assumptions used in the Supplemental Technical Analysis.

Table 3: Operational Assumptions

Analysis Scenario	Number of Generators	Generator Rating (MW)	Hours of Operation
Criteria Pollutants, regional[1]	4-24	2.75	13/day
Criteria Pollutants, localized[1]			
1-hour averaging time	1+		1/day
8-hour averaging time	2+		8/day
24-hour averaging time	4-24		13/day
Potential to Emit (PTE)[2]	24	2.75	50/year
Greenhouse Gas Emissions[1]			
Health Risk (Toxic Air Contaminants Emissions)[3]			
NO_X National Ambient Air Quality Standard (NAAQS) Analysis[4]	24		200/year

1. Engine testing represents the maximum reasonably foreseeable operational scenario, and the Applicant will limit the total hours of maintenance and testing to no more than 13 hours per day from all generators. South Coast AQMD permits typically limit each generator to no more than 4.2 hours per calendar month. Routine testing must be performed during the day so that the operator can view the exhaust.
2. South Coast AQMD Rule 1470 (c)(2)(C)(i) limits engine operation for maintenance and testing to 50 hours per year. Also pursuant to South Coast AQMD's policy and procedures No. EC-02-09, dated February 24, 2009.
3. The analysis assumes up to 50 hours per year of generator use.
4. In accordance with U.S. EPA's *Modeling Compliance of The Federal 1-Hour NO_2 NAAQS Guidance*. This hours of operations assumption forNO_2 NAAQS analysis only.

Refer to **Appendix B: Supplemental Technical Analysis** for model outputs.

The comment stated that the CEQA document should calculate the emissions from the operation of the emergency generators for 50 hours per year for maintenance and testing and no more than 200 hours per year (based on typical permits) total operation or a lower number of hours of operations if that is assumed for the Project. It should be noted, however, that South Coast AQMD CEQA thresholds for criteria pollutants are based on maximum daily emissions, not annual permitted emissions. For this Project, typical testing for a generator is approximately 15 minutes with some tests requiring more time, up to 4.2 hours. The standard operating procedure (SOP) applied here is no more than 13 generator hours being operated per day. These operating conditions and limits are reflected in **Table 3**, above.

In addition, it should be noted that the presumed permit limit of 200 hours per year from all 24 generators was used in the federal NO_2 NAAQS modeling, in accordance with U.S. EPA guidance

on intermittent sources. As discussed above, and discussed in the IS/MND, regulatory permitting for the generators would occur in the future once the Applicant procures generators for the Project and applies for permits to operate from the South Coast AQMD. Hence, reasonable operational assumptions, based on anticipated generator models and related emissions factors, were utilized for impact analysis in the CEQA document. Also note that 50 hours was used to calculate emissions of toxic air contaminants (TACs), including diesel particulate matter (DPM), which reflects the California Air Resources Board (CARB) Airborne Toxic Control Measure (ATCM) for Stationary Diesel Engines (California Code of Regulations, Title 17, §93115) and South Coast AQMD Rule 1470 parameters; and applicable OEHHA guidance.

Table 4 below lists the potential to emit (PTE) assuming 24 engines certified to U.S. EPA Tier 4 emissions standards operating at 50 hours per year, as required by South Coast AQMD Rule 1470 (c)(2)(C)(i). It should also be noted that the Project PTE would not exceed Title V major source thresholds, as further discussed below.

Table 4: Engine Potential to Emit

Scenario	Criteria Pollutant Emissions (tons per year)						
	VOC	**NO_x**	**CO**	**SO_2**	**PM_{10}**	**HAPs**	**Single HAP**
50 hours per year per generator							
Project PTE [1]	0.68	2.44	4.90	0.03	0.11	<0.10	<0.10
Title V Threshold	10	10	50	100	70	25	10
Exceed Title V Threshold?	***No***	***No***	***No***	***No***	***No***	***No***	***No***

1. PTE assumed the installation of 18 plus 6 redundant Tier 4 2.75 MW generators operating at 50 hours per year, and South Coast AQMD's policy and procedures No. EC-02-09, dated February 24, 2009.
Refer to **Appendix B.**

Accordingly, the Project does not trigger Title V requirements as emissions remain below South Coast AQMD, California Ambient Air Quality Standards (CAAQS), and National Ambient Air Quality Standards (NAAQS).

Comment 5-5

Utilize an appropriate air quality dispersion model, such as AERMOD, to evaluate localized air quality impacts to the 1-hour NOx federal and state ambient air quality standards (AAQS) from the operation of all 14 new 5,364 hp emergency diesel engines. Since the engines are not restricted to when they will be operated for maintenance and testing, the CEQA document should analyze the impacts from all 14 new 5,364 hp emergency diesel engines concurrently operating during a one-hour duration and compare the results to the AAQS.

Response to Comment 5-5

The comment recommended that the IS/MND include air quality dispersion modelling, such as AERMOD, to evaluate localized air quality impacts to the 1-hour NO_X federal and state ambient air quality standards (AAQS) from the operation of emergency diesel engines. In response, the Lead Agency has supplemented the IS/MND to include the recommended air quality dispersion modeling.

As discussed in Responses to Comment 5-3 and 5-4, the Supplemental Technical Analysis includes AERMOD dispersion modeling for the NAAQS, localized air quality impacts, and cancer risk for the emergency generators. Dispersion modeling was performed using the South Coast AQMD - preferred model, AERMOD, including building downwash considerations for the point sources. Emissions were calculated using project-specific emission data and factors described in Supplemental Technical Analysis. For the purpose of modeling NAAQS impacts, the Project appropriately applied different operational assumptions for federal and state analyses, consistent with applicable guidance. For the 1-hour NO_X National Ambient Air Quality Standards (NAAQS) modeling, emissions were modeled assuming up to 200 hours of annual operation per generator. This approach follows U.S. EPA and South Coast AQMD guidance, including the 1995 EPA *Seitz Memorandum* and U.S. EPA's *Modeling Compliance of The Federal 1-Hour NO_2 NAAQS Guidance*, which recommends using 200 hours per year to represent a conservative, but reasonable upper bound of operation for intermittent emergency engines when evaluating compliance with short-term criteria pollutant standards. Because the 1-hour NAAQS is intended to assess short-duration peak concentrations, use of the 200-hour scenario provides a protective demonstration of potential worst-case impacts to ambient air quality. See **Table 3** above in Response to Comment 5-4 for more information.

The maximum off-site concentrations of NO_2 from Project operations were added to the appropriate historical background concentrations and compared to the applicable AAQS. If a source's maximum impacts are below the applicable significant impact thresholds, the project is judged to not cause or contribute significantly to an AAQS violation or cause an increment violation. As shown in **Table 5** below, maximum emissions from the Project will not cause or contribute to a violation of an applicable NO_2 NAAQS or CAAQS. Therefore, impacts remain below applicable thresholds.

Table 5: AAQS Table

Pollutant	Averaging Time	Maximum Modeled Concentration ($\mu g/m^3$)	Background Concentration[1] ($\mu g/m^3$)	Total Ground Level Concentration ($\mu g/m^3$)	SCAQMD Threshold ($\mu g/m^3$)[2]	Threshold Exceeded?[3]
NO_2[4]	1-hour	17.37	101.05	118	339 (state)	No
	1-hour[5]	15.41	121.38	137	188 (federal)	No

	Annual	2.09	31.99	348	57 (state)	No
	Annual	2.09	31.99	34	100 (federal)	No

Notes:
1. Background concentrations are from the Pico Rivera Monitoring Station is located at 4144 San Gabriel River Parkway, Los Angeles. https://www.aqmd.gov/home/air-quality/historical-air-quality-data/historical-data-by-year.
2. All thresholds are shown in micrograms per cubic meter ($\mu g/m^3$) for comparison to modeled concentrations.
3. Exceedances of the thresholds are indicated in bold.
4. NO_2 concentrations were calculated per Tier 1 conversion in U.S. EPA's 40 CFR Part 51 Appendix W, Section 4.2.3.4.
5. This comparison is to the federal NAAQS, which is a 98th percentile threshold. The background concentration is the average of the 8th highest daily maximum 1-hour concentration.

Source: Refer to **Appendix B: Supplemental Technical Analysis.**

Comment 5-6

These updated calculations, along with their associated impact analyses, should be discussed and included in a revised CEQA document to provide a transparent and complete assessment of the Proposed Project's air quality impacts.

Response to Comment 5-6

The comment requested that the IS/MND include updated calculations and associated emissions analysis for the emergency generators. In response, the Lead Agency has supplemented the IS/MND with the Supplemental Technical Analysis and the quantitative modeling referenced in the responses to South Coast AQMD.

Comment 5-7

Recommend Revisions to Greenhouse Gas Analysis

According to Section 4.8, *Greenhouse Gas Emissions*, the Draft IS/MND concluded a less than significant impact on greenhouse gases (GHG). However, Table 4.8-3 – *Operational Greenhouse Gas Emissions Opening Year* indicates that the total GHG emissions from the Proposed Project would be 85,309 MTCO2e *[sic]* per year, which significantly exceeds South Coast AQMD's air quality significance threshold for GHGs emissions of 10,000 MTCO2e *[sic]* per year. As such, the GHG emission impacts of the Proposed Project should be concluded as significant. If the Proposed Project results in significant environmental impacts that cannot be mitigated to a "less than significant" level through feasible mitigation measures, a more comprehensive environmental review, such as an Environmental Impact Report (EIR), will be required. The EIR must also include an analysis of alternative project options that could potentially reduce the environmental

impacts. The Lead Agency is recommended to address this issue and revise the CEQA document accordingly.

Response to Comment 5-7

The comment stated that the Project emissions exceed " . . . the South Coast AQMD's air quality significance threshold for GHGs emissions of 10,000 MTCO2e per year." As discussed below, that threshold does not apply to the Project or the IS/MND.

The 10,000 $MTCO_2e$ GHG interim threshold referenced above is for projects where South Coast AQMD is the lead agency. The comment appears to be referencing threshold guidance in the *Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans* (December 5, 2008 board meeting).[6] In that document, the South Coast AQMD states: "This action is to adopt a resolution approving the Interim CEQA GHG Significance Threshold for Stationary Sources, Rules, and Plans where AQMD is the lead agency." South Coast AQMD is not the lead agency for the Project. Therefore, the threshold noted in the comment does not apply here. The document continues to explain on page 2, "The interim GHG significance threshold proposal recommended by staff to the Board that applies only to industrial (stationary source) projects where the AQMD is the lead agency is a narrower recommendation than the version presented at the October 29, 2008 Climate Change Committee meeting." It should be noted that the Project is not considered an industrial source.

In addition, it should be noted that the document also states that "[i]f the proposed project is consistent with the qualifying local GHG reduction plan, it is not significant for GHG emissions." As explained below, and in other responses to comments, the Project is consistent with the Lead Agency's local GHG plan.

Specifically, as discussed in the IS/MND, the City of Monterey Park has a Climate Action Plan (CAP). The CAP outlines the actions the City would undertake to achieve its proportional share of State GHG emission reductions for the target year 2035. Individual projects demonstrate their compliance with the CAP through the consistency table analysis. The CAP is a qualified local GHG reduction plan under CEQA, which can be used to determine the significance of GHG emissions from a Project. Therefore, the Lead Agency applied the correct GHG threshold of significance and the IS/MND determined impacts to be less than significant.

Comment 5-8

Health Risk Assessment (HRA) during Project Operation

Similarly, the Draft IS/MND for the Proposed Project does not include a comprehensive assessment of the health risks associated with operating 14 new 5,364 hp emergency diesel engines. This omission of a health risk analysis from the calculations is another major flaw in the analysis because the majority of toxic air contaminants (TACs) emissions, primarily as diesel

[6] South Coast AQMD, *Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans*, 2008. https://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/ghgboardsynopsis.pdf. Accessed September 29, 2025.

particulate matter (DPM) which is an air toxic and a carcinogen, will be emitted by these 5,364 hp engines. Additionally, the site of the Proposed Project is adjacent to multiple residential neighborhoods, with the nearest sensitive receptor located within 65 feet north of the Proposed Project site. As a result, the potential cancer risk associated with these 14 new 5,364 hp emergency diesel engines from the Proposed Project remains unknown and undisclosed.[5]

Based on the project description for the 14 new 5,364 hp emergency diesel engines, South Coast AQMD staff conducted a preliminary evaluation to estimate the potential cancer risk (CR). Using the Health Risk Assessment Tool and AERMOD-Ready Meteorological Data Files for South Coast AQMD permit applications and CEQA analyses[6], the estimated CR from one new 5,364 hp emergency diesel engine could be as high as 134 in one million, which significantly exceeds the South Coast AQMD CR threshold of 10 in one million.[7]

This calculation is based on the following assumptions:

- The diesel generator is equipped with a U.S. EPA-certified Tier 2 non-road diesel engine.[8]
- Particulate matter (PM) emission rate of 0.15 grams per brake horsepower-hour (g/bhp-hr) for diesel engines rated at ≥560 kilowatts (kW).
- Emergency diesel engine capacity: 4-MW (equivalent to 5,364 hp)
- Operation: up to 200 hours per year.
- Distance to the nearest sensitive receptor: 65 feet.

When the CR is estimated for all 14 new 5,364 hp emergency diesel engines, the total CR will be 1,876 in one million, far exceeding South Coast AQMD's air quality significance threshold of 10 in one million for TAC impacts. This substantial cancer risk highlights the potential to create significant adverse impacts from the 14 new 5,364 hp emergency diesel engines to the surrounding community, with the nearest residential receptors bearing the largest burden of that exposure.

Footnote 5: South Coast AQMD's guidance for performing a mobile source health risk assessment is available at: https://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis

Footnote 6: South Coast AQMD's Health Risk Assessment Tool and AERMOD-Ready Meteorological Data Files. https://www.aqmd.gov/assets/aermet/AERMET_files_And_HRA_Tool.html

Footnote 7: South Coast AQMD Air Quality Significance Thresholds. https://www.aqmd.gov/docs/default-source/ceqa/handbook/south-coast-aqmd-air-quality-significance-thresholds.pdf

Footnote 8: EPA Emission Standards for Nonroad Engines and Vehicles. https://www.epa.gov/emission-standards-reference-guide/epa-emission-standards-nonroad-engines-and-vehicles

Response to Comment 5-8

The comment stated that the IS/MND did not include a comprehensive assessment of health risks associated with operating the emergency diesel engines; and recommended that the Lead Agency conduct an operational phase Health Risk Assessment (HRA) and include it in an updated CEQA document. In response to this comment, the City has prepared a comprehensive operational HRA that includes all emissions sources from the Project (including the emergency generators) and provided that in the Supplemental Technical Analysis as part of administrative record for the IS/MND. In addition, it should be noted that the IS/MND did include an HRA (as Appendix B) for Project construction and operations.

Nonetheless, the City has supplemented that HRA will additional analysis as requested by the comment. The HRA analysis requested by the South Coast AQMD, and provided in the Supplemental Technical Analysis, provides further evidence that the Project does not exceed applicable thresholds. As discussed below, and quantitatively demonstrated in the Supplemental Technical Analysis, the Project remains below applicable emissions thresholds for cancer risks and toxic air contaminants.

Also note that, as part of regulatory compliance, the Applicant will obtain Permits to Operate (PTO) from the South Coast AQMD prior to operation of the emergency generators. That permitting process further ensures that generators meet the applicable Best Available Control Technology (BACT) requirements and comply with South Coast AQMD Rule 1470 (Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines) and Rule 1401 (New Source Review of Toxic Air Contaminants).

As discussed in Responses 5-3 and 5-4, the Supplemental Technical Analysis includes AERMOD dispersion modeling for the 18 plus 6 redundant 2.75 MW Tier 4 emergency diesel engines, which is the operational expectations at this time for the Project. As discussed in the Supplemental Technical Analysis, the generator exhaust stacks will be routed to the roof of the data center building along the northern wall. The nearest residential receptors would be located approximately 330 feet away from these sources, with other receptors located further away. **Table 6** below demonstrates that the cancer risk , inclusive of construction and operational activities, remains below the applicable thresholds for residential and worker receptors, as identified in the IS/MND.

In addition, it should be clarified for the record that several of the assumptions listed in the comment are inaccurate. The clarifications are as follows. The comment assumed Tier 2 diesel engines, which is inaccurate. The Project will include Tier 4 diesel engines for emergency

generators, which have superior emissions control. The comment assumed engine capacity was 4 megawatt (MW), which is inaccurate. Based on detailed discussions with generator vendors, and anticipated market availability, the Applicant downsized the generators to approximately 2.75 MW, and used generator assumptions associated with the units identified on the South Coast AQMD Certified ICE-Emergency Generators list (May 23, 2025). The comment assumed the nearest sensitive receptor is 65 feet away, which is inaccurate. The nearest receptor is approximately five times further away (at 330 feet) from the closest operational point-source of emissions. Other receptors are even further away. Therefore, for several reasons, the emissions calculations in the comment are not representative of the Project. Accordingly, the Supplemental Technical Analysis, and related quantitative analysis in the IS/MND, more accurately represent the operational characteristics of the Project and the potential emission levels.

Therefore, as demonstrated by the comprehensive operational phase HRA requested, the potential health risk for residents and workers are below the applicable thresholds.

Table 6: Carcinogenic Risk Analysis

Exposure Scenario	Cancer Risk (Risk per Million)[1]	Significance Threshold (Risk per Million)	Exceeds Significance Threshold?
Construction			
Residential Receptors	3.41	10	No
Worker Receptor	0.16	10	No
Operations			
Residential Receptors	6.97	10	No
Worker Receptor	2.52	10	No
Combined Construction + Operation			
Residential Receptors	7.03	10	No
Worker Receptor	2.68	10	No
1. The reported cancer risk is at the closest maximally exposed individual receptor (MEIR) to the Project Site. Source: Refer to **Appendix B: Supplemental Technical Analysis.**			

Comment 5-9

Title V Permit Requirements

Title V is a federal program designed to standardize air quality permits and the permitting process for major sources of emissions across the country. Title V requirements are implemented by the South Coast AQMD through its Regulation XXX – Title V Permits.[11] *[sic]* Title V only applies to major sources, which the U.S. EPA defines as facilities that emit or have the potential to emit

(PTE) any criteria pollutant or hazardous air pollutant (HAP) at levels equal to or greater than the Major Source Thresholds (MST) found in Table 2 of South Coast AQMD's Rule 3001 – Applicability. For the South Coast Air Basin, which is where the Proposed Project is located, the MST is 10 tons per year for NOx.[9]

The U.S. EPA nonroad Tier 2 diesel engine emission limit for NOx + (Non-Methane Hydrocarbon) NMHC is 4.8 g/bhp-hr. Typically, NMHC accounts for 5% of this total (0.24 g/bhp-hr), leaving NOx emissions at 4.56 g/bhp-hr. Assuming NOx emissions are 4.56 g/bhp-hr and each 5,364 hp emergency diesel engine would be permitted to operate up to 50 hours per year for maintenance and testing, the 14 new emergency engines would emit 19 tons of NOx per year, which exceeds the MST. Therefore, the Proposed Project/facility would require an initial Title V permit application and be subject to Title V as well as South Coast AQMD Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards .[13] *[sic]* As part of the Title V permitting requirements, the facility will be required to install equipment that meets the Lowest Achievable Emissions Rate (LAER) at the time the permit is issued, which is currently a Tier 4 Final engine.

Therefore, the Lead Agency is recommended to revise the CEQA document to include a discussion of the Title V applicability requirements or apply additional feasible mitigation measures to ensure that the NOx emissions remain less than the MST.

Footnote 9: South Coast AQMD. Rule 3001 available at https://www.aqmd.gov/docs/default-source/rule-book/reg-xxx/rule-3001-applicability.pdf

Response to Comment 5-9

The comment generally explains the Title V federal program and its applicability. The comment identifies that Title V only applies to major sources, which the U.S. EPA defines as facilities that emit or have the potential to emit (PTE) any criteria pollutant at levels equal to or greater than the Major Source Thresholds (MST) found in Table 2 of South Coast AQMD's Rule 3001 – Applicability, which for the South Coast Air Basin, is 10 tons per year for NOx. This comment is noted. However, as discussed below, the Project does not have a PTE that triggers Title V applicability.

It should be noted that the comment assumed the Project would include Tier 2 diesel engines, at a larger size, when preliminarily calculating potential MST related to the Project. As noted above, those assumptions are inaccurate. The Project would include Tier 4 engines, which include superior air emissions control technology.

As shown on **Table 4** above, the PTE assuming emergency generator engines are Tier 4 (which accurately reflects the Project) would not exceed MST thresholds. Therefore, Title V does not apply to the Project. This analysis has been included in the supplemental analysis for the IS/MND as recommended by the comment.

Comment 5-10

Use of South Coast AQMD's Mass Rate Localized Significance Threshold (LST) Look-Up Table to Analyze the Proposed Project's Localized Air Quality Impact is not Consistent with Guidance for the LST Methodology

Based on the Project Description in MND, the Proposed Project covers approximately 15.8 acres.[10] The Lead Agency uses South Coast AQMD's Mass Rate LST Look-up Table for five acres as a screening tool to determine if the Proposed Project's operational daily emissions of NOx, CO, PM10 and PM2.5 could result in a significant impact to local air quality.[11] However, South Coast AQMD staff developed the LST methodology specifically for proposed projects that are less than or equal to five acres.[12] For projects exceeding five acres in size or projects that fall into specific categories outlined in Table 3-2 of the LST methodology, the Lead Agency is recommended to conduct project-specific dispersion modeling to accurately assess localized air quality impacts. Since the Proposed Project site is larger than five acres in size, includes numerous large combustion sources, and may potentially be subject to Title V requirements, the LST lookup tables are not applicable. Therefore, the Lead Agency is recommended to: 1) perform project-specific air dispersion modeling for the Proposed Project's operational phase emissions to determine localized air quality impacts; and 2) include the results in the revised CEQA document.

Footnote 12: South Coast AQMD. Final Localized Significance Threshold Methodology available at

https://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/final-lst-methodology-document.pdf

Response to Comment 5-10

The comment generally asserts that the use of South Coast AQMD's Localized Significance Threshold (LST) look-up tables is not consistent with guidance for the LST methodology; and then recommended that the Lead Agency perform project-specific dispersion modeling to evaluate localized operational air quality impacts. As discussed below, the City has performed additional dispersion modeling as recommended, even though the LST analysis in the IS/MND is conservative and provides adequate impact analysis. See the Supplemental Technical Analysis for supplemental technical analysis.

Regarding the IS/MND analysis, the South Coast AQMD's Localized Significance Threshold (LST) lookup tables and analysis were used as a conservative screening analysis. Page 4-1 of the South Coast AQMD's LST Guidance states:

> *"Screening procedures are by design conservative, that is, the predicted impacts tend to overestimate the actual impacts. If the predicted impacts are acceptable using the LST approach presented here, then a more detailed evaluation is not necessary."*

The allowable emissions under South Coast AQMD's LST screening tables increase as the acreage and distance to receptors increase because pollutants become dispersed (i.e., pollutants are less concentrated) over larger areas. Accordingly, the use of LST lookup values for this Project is conservative, as the screening thresholds already account for dispersion effects at larger sites and greater receptor distances. Therefore, the LST analysis in the IS/MND is conservative and project-specific air dispersion modeling is not technically necessary. However, as discussed above, dispersion modeling for the Project's localized operational pollutant concentrations was prepared and is included in the Supplemental Technical Analysis.

Using the South Coast AQMD's recommended approach, **Table 7** shows the maximum localized operational pollutant concentrations in the vicinity from peak day operational activity. These concentrations are the maximum levels and all other modeled locations in the study area would experience lower concentrations.. As shown in **Table 7**, the pollutant concentrations are well below the applicable ambient air quality standards and would not exceed the South Coast AQMD's thresholds.

Table 7: Modeling to Demonstrate Localized Operational Impacts

Pollutant	Averaging Time	Maximum Modeled Concentration	Background Concentration (µg/m^3) [1]	Total Ground Level Concentration (µg/m^3)	Threshold (µg/m^3) [2]	Threshold Exceeded?
NO_2 [3]	1-hour	61.34	101.05	162.39	339	No
CO	1-hour	216.24	2,176.66	2,392.89	23,000	No
	8-hour	89.13	1,718.41	1,807.54	10,000	No
PM_{10} [4]	24-hour	0.45	--	0.45	2.5	No
$PM_{2.5}$ [4]	24-hour	0.44	--	0.44	2.5	No

1. Background concentrations are from the Pico-Rivera Monitoring Station (4144 San Gabriel River Pkwy. Pico Rivera, CA 90660, AQS# 060371602).
2. Ambient air quality thresholds are from South Coast AQMD Rule 1303 and Rule 403. All thresholds are shown in micrograms per cubic meter (µg/m^3) for comparison to modeled concentrations.
3. NO_2 concentrations were calculated per Tier 2 ARM2 ratios in U.S. EPA's 40 CFR Part 51 Appendix W, § 4.2.3.4. Conversion of NO_X to NO_2 use U.S. EPA minimum and maximum default values NO_2/NO_X of 0.5 and 0.9, respectively.
4. The thresholds for PM10 and PM2.5 are incremental thresholds; therefore, the incremental concentration without background is compared to the threshold.

Comment 5-11

South Coast AQMD Air Permits and Role as a Responsible Agency

Since implementation of the Proposed Project would require the use of new stationary sources, including but not limited to emergency generators, air permits from South Coast AQMD will be required. The revised CEQA document should include a discussion about the South Coast AQMD rules that may potentially apply to the Proposed Project. In addition to Regulation XXX and Rule 317.1, those rules may include, for example, Rule 201 – Permit to Construct,[13] Rule 203 – Permit to Operate,[14] Rule 401 – Visible Emissions,[15] Rule 402 – Nuisance,[16] Rule 403 – Fugitive Dust,[17] Rule 1110.2 – Emissions from Gaseous and Liquid Fueled Engines,[18] Rule 1166 – VOC Contaminated Soil Excavation,[19] Regulation XIII – New Source Review,[20] Rule 1401 – Air Toxics,[21] Rule 1466 – Control of Particulate Emissions from Soils with Toxic Air Contaminants,[22] Rule 1470 – Requirements for Stationary Diesel Fueled Internal Combustion and Other Compression Ignition Engines,[23] Rule 1472 – Requirements for Facilities with Multiple Stationary Emergency Standby Diesel-Fueled Internal Combustion Engines, and etc.[30] *[sic]* It is important to note that when air permits from South Coast AQMD are required, the role of South Coast AQMD would change from a Commenting Agency to a Responsible Agency under CEQA. In addition, if South Coast AQMD is a Responsible Agency, per CEQA Guidelines Section 15086, the Lead Agency is required to consult with South Coast AQMD.

Footnote 22: South Coast AQMD. Rule 1466 available https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1466.pdf

Footnote 23: South Coast AQMD. Rule 1470 available at https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1470.pdf

Response to Comment 5-11

The proposed Project would be required to comply with South Coast AQMD Rules 402, 403, 1113, 1401, 1402, 1403, 1415, 1466, and 1470 which were included on pages 36-38 of the IS/MND. This comment is noted. It should also be noted that the IS/MND environmental consultants consulted with South Coast AQMD regarding issues raised in this comment letter as part of the process to prepare the final IS/MND.

Comment 5-12

CEQA Guidelines Section 15096 sets forth specific procedures for a Responsible Agency, including making a decision on the adequacy of the CEQA document for use as part of the process for conducting a review of the Proposed Project and issuing discretionary approvals. Moreover, it is important to note that if a Responsible Agency determines that a CEQA document is not adequate to rely upon for its discretionary approvals, the Responsible Agency must take further actions listed in CEQA Guideline Section 15096(e), which could have the effect of delaying the implementation of the Proposed Project. In its role as CEQA Responsible Agency, the South Coast AQMD is obligated to ensure that the CEQA document prepared for this Proposed Project contains a sufficient project description and analysis to be relied upon in order to issue any discretionary approvals that may be needed for air permits. South Coast AQMD staff is concerned that the project description and analysis in its current form in the MND is inadequate to be relied upon for this purpose.

Response to Comment 5-12

The comment references CEQA Guidelines Section 15096 regarding the procedures for a Responsible Agency. This comment is noted. It should also be noted that Responsible Agencies are agencies, other than the Lead Agency, that have some discretionary authority over an aspect of a project per CEQA Guidelines Section 15381. Here, the South Coast AQMD has discretionary authority over the permits to operate for the emergency generators proposed as part of the Project. In comparison, the City is the Lead Agency and has discretionary authority for purposes of CEQA compliance and the entitlements for the Project holistically.

As discussed in the IS/MND, and the responses to comments, the Applicant will, as part of the regulatory compliance process, obtain permits to operate from the South Coast AQMD before operation of the emergency generators to ensure that the generators meet the applicable Best Available Control Technology (BACT) requirements and comply with South Coast AQMD Rule 1470 (Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines) and Rule 1401 (New Source Review of Toxic Air Contaminants).

Furthermore, it should be noted that the Applicant requested and participated in a meeting with South Coast AQMD to review the agency's comment letter and help inform the responses to the comments prepared by the Lead Agency. In addition, the Lead Agency has provided good-faith reasoned responses to South Coast AQMD's comments, supported with evidence and quantitative technical modeling, as recommended by and discussed with the Responsible Agency. Also, Section 2.8 of the IS/MND identifies South Coast AQMD as an agency that may issue discretionary permits and rely on the scope of the IS/MND analysis and information included in the final administrative record. As demonstrated in the IS/MND, the Supplemental Technical Analysis, and responses to comments, the Project (including the emergency generators) does not exceed applicable thresholds of significance. Accordingly, the whole of the record for the final CEQA document contains sufficient analysis to support Project approvals and permits.

Finally, the City as the Lead Agency, understands and appreciates the South Coast AQMD's role as a Responsible Agency for the emergency generators permit to operate. Accordingly, the City has prepared comprehensive responses to, and provided technical analysis aligned with, South Coast AQMD's comment letter. Hence, the IS/MND and record for the Project contain detailed analysis for new equipment that could require South Coast AQMD air permits, and the totality of the record can provide a basis for eventual issuance of air permits from the Responsible Agency when it exercises its discretionary decision making.

Comment 5-13

For these reasons, the Final CEQA document should be revised to include a discussion about any and all new stationary and portable equipment requiring South Coast AQMD air permits, provide the evaluation of their air quality and greenhouse gas impacts, and identify South Coast AQMD as a Responsible Agency for the Proposed Project as this information will be relied upon as the basis for the permit conditions and emission limits for the air permit(s). Please contact South Coast AQMD's Engineering and Permitting staff at (909) 396-3385 for questions regarding what types of equipment would require air permits. For more general information on permits, please visit South Coast AQMD's webpage at https://www.aqmd.gov/home/permits.

Response to Comment 5-13

The comment stated that the CEQA document should be revised to address the issues raised in the South Coast AQMD comment letter. As explained in numerous responses above, the Lead

Agency has supplemented the IS/MND with additional analysis as recommended by South Coast AQMD, where applicable and accurate based on the characteristics of the Project. The remainder of this comment is noted.

Comment 5-14

Conclusion

Staff recommends that the Lead Agency revise the CEQA analysis to address the aforementioned comments by including emissions from the 14 new emergency engines and estimating the health risks to provide the necessary evidence to support the conclusions reached. If the requested information and analysis are not included in the Revised or Final MND or other type of CEQA document, the Lead Agency should provide reasons for not doing so. Pursuant to California Public Resources Code Section 21092.5(b) and CEQA Guidelines Section 15074, prior to approving the Proposed Project, the Lead Agency shall consider the MND for adoption together with any comments received during the public review process and notify each public agency when any public hearings are scheduled. Please provide South Coast AQMD with written responses to all comments contained herein prior to the adoption of the Final MND. When responding to issues raised in the comments, detailed reasons supported by substantial evidence in the record to explain why specific comments and suggestions are not accepted must be provided. In addition, if the Lead Agency decides to adopt the Final MND, please provide South Coast AQMD with a notice of any scheduled public hearing(s).

Response to Comment 5-14

This comment recommended that the Lead Agency revise the CEQA analysis to address the aforementioned comments by including emissions from the emergency engines and estimating the health risks to provide evidence to support the conclusions. The Lead Agency has provided such information, as recommended, and supported that information with evidence and quantitative modeling, in the Supplemental Technical Analysis and responses to comment above. In addition, the comment is noted regarding South Coast AQMD's request for notice of public hearings. The Lead Agency will adequately notice public hearings as required, including notifying interested parties and agencies.

Comment 5-15

Thank you for the opportunity to provide comments. South Coast AQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact me at swang1@aqmd.gov or Sahar Ghadimi, Air Quality Specialist, at sghadimi@aqmd.gov should you have any questions.

Response to Comment 5-15

This comment serves as a conclusion to the comment letter and provides contact information should any questions arise. This comment is noted.

4.0 ERRATA

This Errata also includes changes that were made to clarify, correct, or supplement information provided in the Public Review IS/MND. These changes and additions were made to respond to comments received during the public review period. The changes provided do not add significant new information or require substantial revisions that would require recirculation of the IS/MND. Changes to the IS/MND are indicated below under the respective IS/MND section heading, page number, and paragraph. Paragraph reference is to the first full paragraph on the page. Deletions are shown with strikethrough and additions are shown with double underline.

1. Page 5, the first paragraph is revised as follows:

   The Applicant proposes to demolish the existing improvements on the real property located at 1977 Saturn Street, Monterey Park CA and construct a new data center with an ancillary equipment yard, substation, parking, and landscaping. The proposed data center would comprise a total of approximately ~~218,400~~ 247,480 square feet that would include approximately ~~109,970~~ 108,400 square feet of data hall space and approximately ~~91,889~~ 139,080 square feet of support and circulation space (collectively, the "Project"). A portion of the 139,080 square feet of support and circulation space consists of 13,264 square feet of unoccupiable area and overhangs that would be external to the building.

2. Page 5, the second paragraph is revised as follows:

   The data center building's support space would consist of office, loading docks, storage, mechanical/electrical/fiber entry rooms, and other ancillary uses. The proposed data center building would have an FAR of 0.3~~2~~6.

3. Page 5, the third paragraph is revised as follows:

   The preliminary design of the proposed data center building would be ~~one story~~ two stories and ~~36~~ 39 feet and 10.5 inches in height measured from the Average Grade Plane to the top of the stair penthouse and 51 feet and 5.5 inches to top of mechanical equipment platform (~~46.5~~ 60 feet and 7 inches overall building height to the top of mechanical equipment platform screening when measured from the lowest corner of the building). . . To provide power during an interruption in SCE service, the Applicant would also install ~~14~~ 24 stationary diesel-fueled internal combustion engines and generators ("gen-sets"). The ~~14~~ 24 gen-sets, each capable of producing ~~four~~ 2.75 megawatts ("MW"), would be used only in the event of an emergency. The maximum power demand to maintain full ~~functionary~~ functionality of the data center is calculated to be approximately 49.~~9~~5 MW, which could be produced by ~~12~~ 18 of the gen-sets, allowing ~~2~~ 6 gen-sets to be a redundant back-up. ~~Twelve four~~ Eighteen 2.75 MW backup generators with a total generation capacity of up to ~~48~~ 49.5 MW and the ~~two~~ six redundant back-up generators

would be located outdoors in an approximately 75,000-square-foot ancillary equipment yard, adjacent to the north side of the data center. The ancillary equipment yard would be screened by a 20-foot tall ~~perforated~~ metal panel screen wall with louvers.

4. Page 5, the last paragraph is revised as follows:

   Additional on-site improvements would include ~~a~~ two trash enclosures, gated driveway access, parking lot, perimeter fencing, masonry wall on the northwestern portion of the site, two retaining walls along the northeasterly ~~and southwesterly~~ site boundary on Orange Avenue ~~and Saturn Street, respectively~~, and landscaping, as further described below.

5. Page 6, the last paragraph is revised as follows:

   Access to the Project Site is provided via two driveways off Saturn Street, one each off the eastern and western boundaries of the Project Site. Pedestrian access is provided via an existing sidewalk along the portion of Saturn Street that abuts the ~~southeastern~~ southwestern portion of the existing commercial office building. The Project Site includes existing utility connections (water, sewer, and electrical).

6. Page 10, Table 2-2: Major Equipment is revised as follows:

Table 2-2: Major Equipment		
Equipment	**Quantity**	**Location**
~~4~~ 2.75-MW standby generators	~~14~~ 24	North of and adjacent to the data center
~~125 kW~~ 525 Ton chillers	~~23~~ 24	On the roof of the proposed building

7. Page 10, the second to last paragraph is revised as follows:

   Exterior building elements and materials for the proposed data center would include metal panels, insulated precast concrete panels, ~~aluminum-framed~~ shadow box glass ~~storefront with an aluminum canopy~~, ~~aluminum-framed doors, and glazed windows~~ and perforated/louvered screen walls. Rooftop equipment would be screened from view from the surrounding area by 16-foot-tall metal panel acoustic and visual screens, and the gen-sets in the equipment yard would be screened from view by an approximate 20-foot-tall ~~perforated~~ metal panel screen wall with louvers.

8. Page 10, the last paragraph is revised as follows:

   The Project is required to provide ~~848~~ 990 parking spaces per MPMC Table 21.22(c), Nonresidential Parking Standards, of Section 21.22.120, Minimum Parking Spaces Required. . . Accordingly, the Project would include 68 parking spaces adjacent to the ~~eastern~~ western and northern sides of the proposed data center building, including three handicapped accessible spaces and three spaces for electric vehicles ("EV"). The Project would also include ~~two~~ one loading dock with four berths to accommodate deliveries and loading activities for the proposed data center.

9. Page 13, the first two paragraphs are revised as follows:

   . . . The driveway along the ~~eastern~~ western perimeter of the Project Site would serve as the main entry to the Project Site for passenger and service vehicles. . .

   Pedestrian access within the Project Site would also be provided via a walkway along the western, southern, and eastern sides of the data center. A pedestrian gate with sidewalk connection to the public right-of-way would be provided on Saturn Street west of the new ~~eastern~~ westerly driveway.

10. Page 13, the last paragraph is revised as follows:

    . . . A landscape buffer with a minimum width of three feet would also be provided along the northwestern boundary of the Project Site that abuts adjacent residential uses. The Applicant would provide to the City an approximately 39,915 square foot parcel to be owned and operated by the City as a landscaped public park located to the east of the proposed data center building and eastern driveway. Proposed landscaping for the Project Site would include native trees, shrubs, grasses, and groundcover, all of which would have very low or low water needs. The Project would plant ~~77~~ 186 new trees throughout the Project Site, ~~21~~ 28 of which would be street trees along the proposed sidewalk. Project development would include the removal of approximately 186 existing trees on-site.

11. Page 15, the second to last paragraph is revised as follows:

    Project Site preparation for the Project would require cutting and removal of approximately 500,000 square feet of concrete and approximately ~~65,000~~ 196,275 cubic yards of soil ~~export~~ import. Final grading plans would be approved by the City, as applicable.

12. Pages 15-16, the last paragraph on page 15 and the first paragraph on page 16 are revised as follows:

    A data center relies upon a constant supply of power to allow servers to operate continuously: 24 hours per day, seven days per week. To ensure continuous energy supply, the Project would utilize up to ~~12 4~~ eighteen 2.75-MW backup generators upon loss of grid power. . . The generators would be laid out in one row and reach a height of approximately 20 feet to top of generator enclosure, and up to ~~40~~ 38 feet to top of exhaust stack measured from Average Grade Plane.

13. Page 16, the third paragraph is revised as follows:

    Each generator would be provided with a ~~7,000~~ 4,600-gallon sub-base fuel storage tank, equating to 24 hours of runtime in emergency conditions. . . Batteries would provide

enough energy to cover the critical load of ~~36~~ 33 MW in the event of a power failure. UPS and batteries would be located in the data center, adjacent to the computer room the system serves.

14. Page 16, the fourth paragraph is revised as follows:

    . . . The heating, ventilation, and air conditioning ("HVAC") equipment would include ~~23~~ 24 air cooled chillers with free cooling modules, each rated at ~~460~~ 525-tons of capacity, in an N+1 redundancy configuration to support data hall operations. . .

15. Page 16, the last paragraph is revised as follows:

    Major sources of energy demand for Project operations would be client servers and the cooling system. The facility would use a maximum of ~~49.9~~ 49.5 MW for a maximum load of ~~1,197,160~~ 1,188,000 kilowatt-hours ("kWh") daily.

16. Page 21, an additional bullet is added to the list of discretionary permits/approvals:

    - Approval of a Development Agreement, due to the Project's large scale development, and activation of the BRDZ pursuant to the MPMC;

    - City actions and permits to subdivide or parcel a portion of the Project Site, if needed, for dedication of a public park parcel;

17. Page 26, the second to last paragraph is revised as follows:

    . . . The proposed FAR for the Project is ~~0.32~~ 0.36, which is below the maximum permitted FAR. The Project would also have a maximum height of ~~36~~ 39 feet and 10.5 inches (exclusive of the mechanical equipment platform screening), which is below the maximum permitted height measured from the average grade plane (60 feet and 7 inches overall building height to the top of mechanical equipment platform screening when measured from the lowest corner of the building). The maximum building height is permitted pursuant to activation of the zoning standards in the BRDZ for the Project.

18. Page 45, the first paragraph under Operations is revised as follows:

    The primary purpose of the data center is to house computer servers for data processing. Operational sources of emissions include mobile sources (i.e., motor vehicle use for employee commuting) and area sources (such as the use of landscape maintenance equipment, consumer products, and architectural coatings). In addition, the proposed Project would include up to ~~12 4~~ 24 2.75-MW stationary emergency diesel generators, comprised of 18 generators with a total generation capacity of up to 49.5 MW and 6 redundant back-up generators, that would only be used if there was a loss of grid power; and occasionally for periodic maintenance and testing.

19. Page 52, the second paragraph under Operational Health Risk Analysis is revised as follows:

    The Project would include up to ~~12 4~~ 24 2.75-MW stationary emergency diesel generators, comprised of 18 generators with a total generation capacity of up to 49.5 MW and 6 redundant back-up generators, which would only be used upon hypothetical loss of grid power, and for periodic maintenance and testing, which is regulated by the SCAQMD permit process.

20. Page 66, the first paragraph is revised as follows:

    . . . It should also be noted that the Project is anticipated to have a blended Power Usage Effectiveness ("PUE") of ~~1.2~~ 1.5 due to free cooling modules on the air-cooled chillers. . .

21. Page 66, the third paragraph is revised as follows:

    Thus, the proposed Project would not result in a substantial demand for energy that would require expanded supplies or the construction of other infrastructure or expansion of existing facilities. The ~~14~~ 24 emergency generators are estimated to utilize approximately ~~198,912~~ 226,800 gallons per year of diesel due to testing and maintenance.

22. Page 91-92, the last paragraph on page 91 and the first paragraph on page 92 is revised as follows:

    The Project electricity usage would be mainly from the operation of the data center. The purpose of a data center is to house computer servers, which require electricity and cooling 24 hours a day to operate. Based on data in the **Appendix E**, Peak Power Demand Estimate Memorandum, the Project during peak load conditions would have a demand of ~~49,999 kilowatts per hour (KW/h)~~ 49.5 MW. The analysis assumes 24/7 operations (8,760 hours per year) which would result in a maximum electrical usage of ~~437,991~~ 438,015 megawatt hours (MWh) per year, including CalEEMod default assumptions for lighting for surface parking. The modeling also conservatively assumed the ~~14~~ 24 gen-sets would be used for up to 50 hours per year per generator for testing and maintenance. The generators would utilize diesel fuel.

23. Page 92, the first paragraph is revised as follows:

    . . . The proposed Project is anticipated to have a blended PUE of ~~1.2~~ 1.5 due to free cooling modules on the air-cooled chillers, below the average for data centers. . .

24. Pages 92-94, the following paragraphs are revised as follows:

    As shown above in **Table 4.8-3**, the emissions related to electricity use by the data center is a majority of the emissions. SCE is the utility providing electricity to the Project site. SCE's carbon intensity factor in 2022 was 552 lbs CO_2e/MWh which includes 33.2 percent

eligible renewable energy in the power mix.[7] Emissions associated with the Project's electricity consumption occur at power production facilities which are covered entities under the State's Cap-and-Trade regulations, which limit total GHG emissions by covered sources with decreasing allocations, and are subject to the RPS standard requiring the GHG intensity of electricity production to decrease steadily. These regulatory schemes serve as the foundation for the State's goal of net neutrality in 2045. Likewise, the implementation of these Statewide measures, including but not limited to SCE procuring and delivery electricity from renewable energy sources result in an annual reduction of GHG emissions. ~~associated with operation of t~~The Project is not considered a covered entity and the analysis and GHG impact conclusion in this IS/MND have not taken any quantitative credits for Cap-and-Trade regulations associated with covered entities.

~~T~~Generally, the Cap-and-Trade program covers approximately 80 percent of California's GHG emissions.[8] The statewide limit on GHG emissions from the capped sectors (i.e., electricity generation, industrial sources, petroleum refining, and cement production) will decline every year, achieving GHG emission reductions throughout the program's duration. The passage of AB 398 in July 2017 extended the duration of the Cap-and-Trade program from 2020 to 2030. The Cap-and-Trade program was extended in 2015 to cover combustion of fossil fuels including transportation fuels used in California. ~~Accordingly, GHG emissions associated with the electricity usage and mobile sources of most projects that are subject to CEQA are covered by the Cap-and-Trade program.~~

25. Page 93-94, the last paragraph on page 93 and the first paragraph on page 94 is revised as follows:

~~**Table 4.8-4: Trend of Project Greenhouse Gas Emissions Related to State Mandates** shows the Project emissions in the opening year 2027, in 2035, consistent with the City's CAP horizon, and in 2045, the year the State will meet its carbon neutrality goal. **Table 4.8-4** also highlights the reduction in mobile emissions as passenger vehicle fleets become cleaner and technology improves. The trends show a steady decrease in Project GHG emissions, consistent with the overarching goals of the State's 2022 Scoping Plan and the City's CAP.~~

~~**Table 4.8-4: Trend of Project Greenhouse Gas Emissions Related to State Mandates**~~

	~~**Annual Emissions ($MTCO_2e$ per Year)[1]**~~		
~~**Emissions Source**~~	~~**2027 (Project Opening)**~~	~~**2035 (CAP Horizon)**~~	~~**2045 (CA GHG Neutrality)**~~
~~Mobile~~	~~80~~	~~71~~	~~67~~
~~Area~~	~~5~~	~~5~~	~~5~~
~~Energy[2]~~	~~83,020~~	~~62,657~~	~~0~~

[8] California Air Resources Board, Cap-and-Trade Program: Frequently Asked Questions, September 2022. https://ww2.arb.ca.gov/sites/default/files/2022-09/nc-FAQ_CT.pdf. Accessed April 22, 2024.

~~Water~~	~~21~~	~~18~~	~~0~~
~~Waste~~	~~70~~	~~70~~	~~70~~
~~Generators~~	~~2,062~~	~~2,062~~	~~2,062~~
~~Total~~	~~85,258~~	~~64,883~~	~~2,204~~

~~1. Total values are from CalEEMod and may not add up due to rounding.~~
~~2. The Project does not include natural gas. GHG emissions from electricity are shown to decline in accordance with State mandates and regulations including RPS standard that requires an increasing amount of renewable energy electric utilities procure to comply with the various goals including 50 percent eligible renewable energy resources in 2030. In line with the Governor's mandate emissions in 2045 are shown to achieve the carbon neutrality goal.~~
~~Source: CalEEMod version 2022.1. Refer to **Appendix G** for model outputs.~~

~~As shown above in **Table 4.8-3** and **Table 4.8-4**, the majority of GHG emissions associated with the Project is the electricity energy use (approximately 97 percent). Because GHG emissions from covered entities are accounted for in the State's GHG future inventories and reduction targets and are subject to existing regulatory schemes to reduce emissions, those emissions are considered consistent with the 2022 Scoping Plan Update.~~

26. Page 97, the last paragraph is revised as follows:

Nonetheless, in an abundance of caution, and because construction activities for the Project would result in temporary ground-disturbing activities Project would implement **MM HAZ-1**, which would require preparation of a Soil Management Plan (SMP) to address potential soils with residual impacts remaining on the Project Site during future construction/redevelopment activities. ~~With i~~Implementation of **MM HAZ-1**~~, impacts~~ would further ~~be~~ reduce ~~d to~~ an already less than significant impact.

27. Page 100, MM HAZ-1 is revised as follows:

MM HAZ-1 **Soil Management Plan.** Before the Building Official issues grading permits, a site-specific Soil Management Plan ("SMP") must be prepared by a qualified environmental professional approved by the City and submitted to the City of Monterey Park Building and Safety Division. The SMP must include the following elements, as applicable:

- Provisions for personal protection and monitoring exposure to construction workers,
- Requirements for construction workers to be Hazardous Waste Operations and Emergency Response ("HAZWOPER") trained,
- Procedures to be undertaken in the event that contamination is identified above action levels or previously unknown contamination is discovered,
- Procedures for the safe storage, stockpiling, and disposal of any impacted soils,

- Emergency procedures and responsible personnel

In the instance that previously unknown soil constituents are discovered during site excavation, the contractor shall ensure that any soil contaminated beyond acceptable regulatory levels, shall be contained, remediated if necessary, and disposed of pursuant to the performance standard levels established by federal OSHA, Cal/OSHA, SCAQMD, RWQCB, and any other regulatory agency with jurisdiction over CRECs or RECs on the Project Site.

28. Page 109, the first paragraph is revised as follows:

. . . Furthermore, the maximum FAR for the Innovation/Technology designation is 0.60. The proposed FAR for the Project is ~~0.32~~ 0.36, which is below the maximum permitted FAR.

29. Page 109, the last paragraph is revised as follows:

The Project would be required to provide ~~848~~ 990 parking spaces per Table 21.22(C) of MPMC Section 21.22.120, Minimum Parking Spaces Required. . . Upon City approval, the Project would include 68 parking spaces adjacent to the ~~eastern~~ western and northern sides of the proposed data center building. . .

30. Page 123, the first paragraph is revised as follows:

During loading activities and trash and recycling pickups, noise would be generated by the trucks' diesel engines, exhaust systems, and brakes during low gear shifting' braking activities; opening and closing of the trash/recycling bins. The Project would have ~~two~~ one loading dock~~s~~ with four berths and two trash enclosures located in the northwest and northeast corner of the proposed Project building.

31. Page 131, the last paragraph is revised as follows:

No Impact. The recreational facility nearest the Project Site is La Loma Park located approximately 135 feet northwest from the Project Site. In addition, the Applicant would provide to the City, as part of the development agreement, an approximately 39,915 square foot parcel to be owned and operated by the City as a public park. Because the Project would not include housing or other uses that would induce substantial population growth in the area, the Project is not anticipated to increase the demand for existing recreational facilities or generate a demand for new ones. The limited number of employees during operation of the Project would not materially increase use of local recreation facilities.

32. Page 132, the last sentence of the second to last paragraph is revised as follows:

A pedestrian gate with sidewalk connection to the public right-of-way would be provided on Saturn Street west of the new ~~eastern~~ westerly driveway.

33. Page 133, the last paragraph is revised as follows:

. . . These two driveways would connect with each other along the northern side of the proposed equipment yard. The driveway along the ~~eastern~~ western perimeter of the Project Site would serve as the main entry to the Project Site for passenger and service vehicles. . .

34. Page 140, the last sentence of the last paragraph is revised as follows:

As shown below in **Table 4.19-2**, the Project's estimated water consumption is approximately ~~33,031~~ 30,079 gpd, resulting in a net increase of approximately ~~3,962~~ 1,010 gpd compared to existing conditions.

35. Page 140, Table 4.19-2: Estimated Proposed Water Demand is revised as follows:

Table 4.19-2: Estimated Proposed Water Demand

Land Use	Square Footage (SF)	Average Generation Factor (gpd/1,000 SF)[1]	Total Water Demand (gpd)
Data Hall Center[2]	~~109,970~~ 108,400	30	~~3,299~~ 3,252
Office (Network)[3]	~~1,750~~ 1,835	240	~~420~~ 441
Office (Support)[3]	~~26,700~~ 38,379	240	~~6,408~~ 9,211
Office (Circulation)[3]	~~16,542~~ 27,358	240	~~3,970~~ 6,566
Ancillary (Elec.)[2]	~~23,976~~ 25,724	30	~~719~~ 772
Ancillary (Mech.)[2]	~~39,463~~ 32,520	30	~~1,184~~ 976
Substation (Service)	24,000	120	2,880
Landscaping~~[3]~~[5]	206,867	ETWU Method	~~14,151~~ 5,981
Total Proposed Water Demand			**~~33,031~~ 30,079**
Total Existing Water Demand to be Removed			29,069
Project Net Water Demand			**~~3,962~~ 1,010**

gpd = gallons per day, SF = square foot

1. Based on 120 percent of the sewer generation factors from the "Loading for each class of land use" from LACSD.
2. Assumes 'Warehouse' will be used for Data Hall Center, Mechanical Area, Electrical Area from LACSD. The Applicant's mechanical, electrical, and plumbing (MEP) engineer estimated the data hall center would have a baseline (using standard efficiency fixtures) water demand of approximately 75,340 gallons per year (gpy) (207 gpd). The design case (progressive fixtures) water demand would be approximately 45,180 gpy (124 gpd). Therefore, the estimate provided based on LACSD (3,299 gpd for the data hall center) is conservative. See also **Appendix M-2: Water Efficiency Memorandum.**
3. Assumes 'Office Building' will be used for Office areas.
4. Assumes 'Service Station' will be used for Electrical Substation.
5. Demand based on Estimated Total Water Use equation: (Eto*plant factor*landscaped area* 0.62)/irrigation efficiency. Utilizing CIMIS Reference Evapotranspiration Zones Map ET of ~~46.6~~ 55.1 in/yr, and a ~~conservative~~ plant factor of ~~0.7~~ 0.3 for all plants except for the London Plane Trees which have a plant factor of 0.5, and irrigation efficiency of 0.81 proposed condition.

Source: Fuscoe Engineering, Water and Sewer Infrastructure Report, 2024; Kimley-Horn, 2025.

36. Page 142, the last paragraph is revised as follows:

As shown in Table 4.19-4: Estimated Proposed Wastewater Generation, consistent with the proposed uses and LACSD's generation factors, the Project's projected wastewater generation is approximately ~~15,734~~ 20,081 gpd, representing a net increase in wastewater generation at the Project Site of approximately ~~3,302~~ 7,649 gpd.

37. Page 142, Table 4.19-4: Estimated Proposed Wastewater Generation is revised as follows:

Table 4.19-4: Estimated Proposed Wastewater Generation			
Land Use	**Square Footage (SF)**	**Average Generation Factor (gpd/1,000 SF)[1]**	**Total Wastewater Generation (gpd)**
Data Hall Center[2]	~~109,970~~ 108,400	25	~~2,749~~ 2,710
Office (Network)[3]	~~1,750~~ 1,835	200	~~350~~ 367
Office (Support)[3]	~~26,700~~ 38,379	200	~~5,340~~ 7,676
Office (Circulation)[3]	~~16,542~~ 27,358	200	~~3,308~~ 5,472
Ancillary (Elec.)[2]	~~23,976~~ 25,724	25	~~599~~ 643
Ancillary (Mech.)[2]	~~39,463~~ 32,520	25	~~987~~ 813
Substation (Service)	24,000	100	2,400
Total Proposed Wastewater Flow			**~~15,734~~ 20,081**
Total Existing Wastewater Flow to be Removed			12,432
Project Net Wastewater Flow			**~~3,302~~ 7,649**

gpd = gallons per day, SF = square foot
1. Based on 100 percent of the sewer generation factors from the "Loading for each class of land use" from LACSD.

38. Page 143, the first sentence of the first paragraph is revised as follows:

A flowrate of ~~15,734~~ 20,081 gpd is equivalent to ~~11~~ 14 gallons per minute (gpm).

39. Page 143, the last sentence of the second paragraph is revised as follows:

Furthermore, the Project's estimated wastewater generation of ~~3,302~~ 7,649 gpd or ~~0.004~~ 0.008 mgd comprises ~~less than 0.002~~ approximately 0.003 percent of the wastewater that is processed daily at the Warren Facility.

40. Page 144, the first paragraph is revised as follows:

Less Than Significant Impact. . . . The proposed increase in demand from the Project of ~~3,962~~ 1,010 gpd (~~4~~ 1.13 AFY) represents approximately ~~1~~ 0.3 percent of the total increase in demand from 2025 to 2045 in the UWMP.

41. Page 144, the second to last sentence of the last paragraph is revised as follows:

As shown in Table 4.19-5: Estimated Solid Waste Generation, C&D of the Project is estimated to generate approximately ~~10,127~~ 10,186 tons of C&D debris.

42. Page 145, Table 4.19-5: Estimated Solid Waste Generation is revised as follows:

Table 4.19-5: Estimated Solid Waste Generation				
Land Use	**Size**	**Waste Generation Rate**	**Waste Generated (tons)**	**Waste Generated (lbs)**
Demolition[1]				
Office	209.564 ksf	46 tons/ksf	9,640 tons	19,279,888 lbs
Construction[2]				
Data Center	~~218.4~~ 247.48	4,020 lb/ksf	~~439~~ 498 tons	~~877,968~~ 994,870

	ksf			lbs
Substation	24 ksf	4,020 lb/ksf	48 tons	96,480 lbs
Total Demolition and Construction Waste			*~~10,127~~ 10,186 tons*	*~~20,254,336~~ 20,371,238 lbs*
Operations[3]				
Data Center[4]	26 employees	13.82 lb/employees/day	0.18 tons	359 lbs
Total Operational Waste			*0.18 tpd*	*359 lbs/day*

ksf = thousand square feet; lbs = pounds; tpd = tons per day

1. The demolition waste generation rate of 46 tons/ksf is based on the CalEEMod User Guide Appendix A, page 13.
2. The construction waste generation rate of 4,020 lb/ksf is based on the U.S.EPA, Characterization of Building-Related Construction and Demolition Debris in the United States, Table A-2, June 1998.
3. Generation factors provided by the CalRecycle website, refer to Estimated Solid Waste Generation Rates, https://www2.calrecycle.ca.gov/WasteCharacterization/General/Rates. Accessed March 27, 2024.
4. Assumes "Warehouse" will be used for proposed data center.

Monterey Park, CA 91754

Dear Ms. Chow:

Second Response to 1977 Saturn Data Center Project

The Los Angeles County Sanitation Districts (Districts) received a Notice of Intent (NOI) to Adopt a Mitigated Negative Declaration (MND) for the subject project located in the City of Monterey Park on November 4, 2024. The proposed project is located within the jurisdictional boundaries of District No. 2. Previous comments submitted by the Districts in correspondence dated February 29, 2024 (copy enclosed), still apply to the subject project with the following comments: 1-1

1. **Section 4.19 Utilities and Service**, page 142 stated that "Any work that may affect services to the existing sewer lines or impacts to LACSD facilities or plant will be coordinated with the City's Public Works Department, Engineering Division." Please use the Geographic Information System (GIS) application at https://www.app.lacsd.org/ugutilities/ to obtain copies of as-built drawings of the District's facilities. When project plans that incorporate our facilities have been prepared, please submit copies to the Engineering Counter at engineeringcounter@lacsd.org for our review and comment. 1-2

2. A.K. Warren Water Resource Facility currently processes an average flow of 248.3 million gallons per day. 1-3

3. All other information concerning Districts' facilities and sewerage service contained in the document is current. 1-4

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2742, or phorsley@lacsd.org. 1-5

Very truly yours,

Patricia Horsley

Ms. Whitney Stephens
Stormwater Engineer
Fuscoe Engineering
15535 Sand Canyon, Suite 100
Irvine, CA 92618

Dear Ms. Stephens:

Will Serve Letter for 1977 Saturn Street

The Los Angeles County Sanitation Districts (Districts) received your will serve letter request for the subject project located in the City of Monterey Park on February 26, 2024. The proposed project is located within the jurisdictional boundary of District No. 2. We offer the following comments regarding sewerage service:

1. The wastewater flow originating from the proposed project will discharge to a local sewer line, which is not maintained by the Districts, for conveyance to the Districts' Garfield Avenue Trunk Sewer, located in Wilcox Avenue just south of Pomona Boulevard. The Districts' 12-inch diameter trunk sewer has a capacity of 1.8 million gallons per day (mgd) and conveyed a peak flow of 0.5 mgd when last measured in 2016.

2. The wastewater generated by the proposed project will be treated at the A.K. Warren Water Resource Facility (formerly known as the Joint Water Pollution Control Plant) located in the City of Carson, which has a capacity of 400 mgd and currently processes an average flow of 237 mgd.

3. The expected increase in average wastewater flow from the project, described in the application as a 220,000 square-foot data center building, is 3,302 gallons per day, after all structures on the project site are demolished. For a copy of the Districts' average wastewater generation factors, go to www.lacsd.org, under Services, then Wastewater Program and Permits and select Will Serve Program, and click on the Table 1, Loadings for Each Class of Land Use link.

4. The Districts are empowered by the California Health and Safety Code to charge a fee to connect facilities (directly or indirectly) to the Districts' Sewerage System or to increase the strength or quantity of wastewater discharged from connected facilities. This connection fee is used by the Districts for its capital facilities. Payment of a connection fee may be required before this project is permitted to discharge to the Districts' Sewerage System. For more information and a copy of the Connection Fee Information Sheet, go to www.lacsd.org, under Services, then Wastewater (Sewage) and select Rates & Fees. In determining the impact to the Sewerage System and applicable connection fees, the Districts will determine the user category (e.g. Condominium, Single Family Home, etc.) that best represents the actual or anticipated use of the parcel(s) or facilities on the parcel(s) in the development. For more specific information regarding the connection fee application procedure and fees, please contact the Districts' Wastewater Fee Public Counter at (562) 908-4288, extension 2727.

1-6

5. In order for the Districts to conform to the requirements of the Federal Clean Air Act (CAA), the capacities of the Districts' wastewater treatment facilities are based on the regional growth forecast adopted by the Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CAA. All expansions of Districts' facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The available capacity of the Districts' treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service, but is to advise the applicant that the Districts intend to provide this service up to the levels that are legally permitted and to inform the applicant of the currently existing capacity and any proposed expansion of the Districts' facilities.

1-6 cont.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2708 or at shirlywang@lacsd.org.

Very truly yours,

Re: Comments on Mitigated Negative Declaration for the 1977 Saturn Data Center Project, SCH No. 2024101397

Dear Ms. Chow:

Advocates for the Environment submits the comments in this letter regarding the Mitigated Negative Declaration (**MND**) for the 1977 Saturn Data Center Project (**Project**). The Project Site is located near the intersection of Saturn Street and Orange Avenue, in the City of Monterey Park (**City**). The existing uses of the 15.8-acre Project site would be demolished to construct a 218,400-square-foot data center with an equipment yard, 24,000-square-foot substation, parking, and landscaping. The Project includes diesel generators for emergency back-up.

Advocates for the Environment is a public interest law firm and advocacy organization with the mission to educate the public about the law as it pertains to the environment and provide legal services in support of environmental causes. We have reviewed the Mitigated Negative Declaration (**MND**) released in October 2024 and submit comments regarding the sufficiency of the MND's Greenhouse-Gas (**GHG**) analysis under the California Environmental Quality Act (**CEQA**).

2-1

The City Should Require the Project to be Net-Zero

Given the current regulatory context and technological advancements, a net-zero significance threshold is feasible and extensively supportable. GHG emissions from buildings, including indirect emissions from offsite generation of electricity, direct emissions produced onsite, and from construction with cement and steel, amounted to 21% of global GHG emissions in 2019. (IPCC Sixth Assessment Report, Climate Change 2022, WGIII, Mitigation of Climate Change, p. 9-4.) This is a considerable portion of global GHG emissions.

2-2

It is much more affordable to construct new building projects to be net-zero than to obtain the same level of GHG reductions by expensively retrofitting older buildings to comply with climate change regulations. Climate damages will keep increasing until we reach net zero GHG emissions, and there is a California state policy requiring the state to be net-zero by 2045. It therefore is economically unsound to construct new buildings that are not net-zero.

10211 Sunland Blvd., Shadow Hills, CA 91040 (818) 650-0030 X101 dw@aenv.org

Environmental groups have achieved tremendous outcomes by litigation under CEQA. Two of the largest mixed-use development projects in the history of California, Newhall Ranch (now FivePoint Valencia), and Centennial (part of Tejon Ranch) decided to move forward as net-zero communities after losing CEQA lawsuits to environmental groups. The ability for these large projects to become net-zero indicates that it is achievable, even for large-scale developments. The Applicant for this Project should do the same.

We urge the City to adopt net-zero as the GHG significance threshold for this project. This threshold is well-supported by plans for the reduction of GHG emissions in California, and particularly the CARB Climate Change Scoping Plans. The CARB 2017 Scoping Plan states that "achieving no net additional increase in GHG emissions, resulting in no contribution to GHG impacts, is an appropriate overall objective for new development." (CARB 2017 Scoping Plan, p. 101.) Additionally, the CARB 2022 Scoping Plan reaffirms the necessity of a net zero target by expressing: "it is clear that California must transition away from fossil fuels to zero-emission technologies with all possible speed … in order to meet our GHG and air quality targets." (CARB 2022 Scoping Plan, p. 184.) CARB further encourages a net-zero threshold in its strategies for local actions in Appendix D to the 2022 Scoping Plan. (CARB 2022 Scoping Plan, Appendix D p. 24-26.)

Moving this Project forward as a net-zero project would not only be the right thing for the City to do, but also would help protect the City and the Applicant from CEQA GHG litigation.

2-2 cont.

The MND's Discussion Concerning Cap-and-Trade is Misleading

The MND was misleading of the Project's GHG impact because it incorrectly claimed that the Project's GHG emissions are covered by cap-and-trade. The Project is not subject to cap-and-trade regulations. The City claimed that "GHG emissions associated with the electricity usage and mobile sources of most projects that are subject to CEQA are covered by the Cap-and-Trade program" because the program "was extended in 2015 to cover combustion of fossil fuels including transportation fuels used in California." (MND, p. 93.) However, this reasoning is flawed. Just because fossil fuels and transportation fuels are accounted for under the cap-and-trade program does not mean that the Project qualifies as a covered entity. There are specific category of entities which are required to comply with the cap-and-trade program, none of which would include this Project.[1] Therefore, the Project's emissions are not covered by cap-and-trade.

2-3

CEQA Guidelines section 15064.4, subdivision (b)(3) allows a lead agency to consider a project's compliance with plans for the reduction of GHG emissions to determine the significance of GHG impact. Nonetheless, the lead agency is not supposed to analyze whether the suppliers of the project's electricity comply with the plans, but rather whether the project itself does. Thus, cap-and-

[1] See Cal. Code Regs. Tit. 17, § 95811.

trade is irrelevant to determining the Project's GHG significance because the Project is not a covered entity under the cap-and-trade program and it must account for electricity usage just as any other land use development project.

2-3 cont.

The GHG Significance Analysis was Inadequate

The MND adopted two significance thresholds based on the CEQA Guidelines Appendix G. Threshold (a) asks whether the Project would "generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment." (MND, p. 83.) Under this threshold, the City considered the Project's estimated operational GHG emissions of approximately 85,309 metric tons of carbon dioxide equivalent (**MTCO2e**) per year less than significant.

Threshold (b) asks whether the Project would "conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases." (MND, p. 83.) The City's conclusion that the Project would have a less than significant GHG impact under this threshold was based on the erroneous assumption that the Project's GHG emissions would be covered under the cap-and-trade program. Further, this significance conclusion is invalid because the MND's conclusion that the Project would be consistent with applicable plans is not supported by substantial evidence.

2-4

The City did not support its GHG significance determination with substantial evidence. The City only considered two applicable plans: The City of Monterey Park Climate Action Plan (**CAP**), and the 2022 Scoping Plan, both of which the Project would conflict with. In particular, none of the CAP provisions pertain to a data center which uses extremely large amounts of electricity. (See MND, pp. 84-89.) The same analysis that the City included to address the Project's compliance with the CAP would apply even if the Project's electricity were 100 times greater than it currently is, essentially screening out any data center from having significant GHG impact no matter what amount of electricity it uses. The City does not support this analysis by substantial evidence. Further, the City cannot rely on the assumption that GHG emissions will gradually ramp down in accordance with stricter GHG regulations, because the Project's emissions will remain in the five-figure range through 2035. (MND, p. 93, Table 8.4-4.)

Overall, the MND concluded that the Project's GHG emissions would be less than significant. Given the inadequacy of analysis under both thresholds, there is a fair argument for why the Project would have a significant GHG impact. Yet, significance under either of the two thresholds would require a finding of significant impact.

Consistency with Identified Applicable Plans

2-5

The MND's analysis was insufficient to determine that the Project would be consistent with applicable plans. The Project would be inconsistent with both the CAP and the 2022 Scoping Plan.

First, to provide a basis for its less-than-significant determination. the City concluded that the Project would not conflict with the CAP. However, the City did not provide substantial evidence for this determination. First, GHG policy has changed significantly in the last decade, rendering the 2012 CAP outdated.

But even assuming that that the CAP is an applicable plan, the City did not adequately demonstrate that the Project would not conflict with it. For example, the City claimed that several measures were inapplicable municipal measures that are "not Project specific" to justify circumventing certain CAP measures. In particular, the City failed to provide a consistency analysis for Land Use Measure 1 (Mixed Use Development), Land Use Measure 2 (Service Nodes), Transportation Measure 1.2 (Promote Use of Transit Network), and Transportation Measure 2.2 (Increase Walking and Biking), each stating the following assumption: "This is a municipal measure and not specifically applicable to the Project. Therefore, this measure is not applicable." (MND, pp. 84–89.)

Even though the CAP as a guiding policy document describes initiatives intended for the City to carry out, the Project could still be in conflict with those measures even if the lead agency is not responsible for achieving particular objectives on a project-level. For instance, the Project's construction or operations could potentially make it more difficult or counteract the City's objectives to achieve the CAP goals. The Project conflicts with Land Use Measure 1—which suggests that Monterey Park achieve a Vehicle Miles Travelled (**VMT**) reduction target by facilitating new mixed-use development near existing and planned transit corridors—because the Project would utilize space and resources for a new industrial development which is not a mixed-use development near a transit corridor and would actively increase VMT, counteracting the City's efforts under Land Use Measure 1. The City has not adequately demonstrated that the Project would comply with the CAP as it claims.

2-5 cont.

Second, although the City claimed that the Project would not "impede the State's progress towards carbon neutrality by 2045 under the 2022 Scoping Plan," the MND did not adequately address any of the 2022 Scoping Plan's goals within the context of the Project. (MND, pp. 89–90.) The 2022 Scoping Plan sets goals for 50% of all industrial energy demand to be electrified and statewide emissions be reduced to 85% below 1990 levels, both to be achieved before 2045 (2022 CARB Scoping Plan, p. 77). The 2022 CARB Scoping Plan also places particular emphasis on decarbonizing industrial facilities by "displacing fossil fuel use with a mix of electrification, solar thermal heat, biomethane, low- or zero-carbon hydrogen, and other low-carbon fuels to provide energy for heat and reduce combustion emissions" (2022 CARB Scoping Plan, p. 208). The Project is inconsistent with these goals because the facilities, including the energy used by the data center and substation would create an additional large source of emissions from non-renewable sources, contrary to the statewide electrification and decarbonization contemplated by the 2022 Scoping Plan.

2-6

And the Project's use of diesel-powered backup generators, which are projected to produce 2,062 MTCO2e/year indefinitely (MND, p. 92) is inconsistent with the 2022 Scoping Plan's goal of achieving carbon neutrality by 2045. 2-6 cont.

The MND Should Have Also Analyzed Other Applicable Plans

The City chose, as its second GHG threshold, whether the Project would "conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases." (MND, p. 83.) This language requires that the MND analyze the Project's consistency with *all* other applicable plans, not just the plans that the City prefers to analyze.

The Project must show consistency with long-term State GHG goals for the entirety of the Project's anticipated lifespan to comply with CEQA. In particular, the MND must also demonstrate consistency with Senate Bill 32, which requires statewide GHG emissions to be reduced to 40% below 1990 levels by 2030, and Executive Order B-55-18 (**EO B-55-18**) which requires the State of California to achieve carbon neutrality—net zero GHG emissions—by 2045. 2-7

The Project is inconsistent with both because it does not prohibit the use of gasoline, diesel, and natural gas, and burning such non-renewable fuels results in substantial GHG emissions. Further, the data center would use an immense amount of electricity, which generates high quantities of GHGs, preventing the Project from ever achieving carbon neutrality without offsets or a 100% clean energy source.

Additionally, the City should have demonstrated consistency with the 2017 Scoping Plan, which was developed to facilitate California's compliance with SB 32 and requires statewide GHG emissions to be reduced to 40% below 1990 levels by 2030. (Health & Safety Code § 38566.) The MND did not discuss how the Project is consistent with any of the goals, including the 2050 goal of 80% below 1990 levels. The 2017 Scoping Plan also sets out statewide goals for total GHG emissions targets of 6 MTCO2e/capita by 2030, and 2 MTCO2e/capita by 2050 (CARB Scoping Plan, p. 99). 2-8

With the Project's net operational GHG emissions at 85,309 MTCO2e annually, the Project's per-service population GHG emissions would be over 3,000 MTCO2e, nowhere near the 2030 target, let alone the 2050 target.[2] Thus, the Project's GHG impact is significant under the second threshold because it is inconsistent with applicable plans for the reduction of GHGs.

The City Should Have Required an EIR

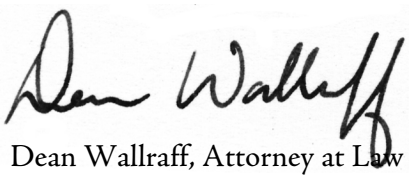
No mitigation measures were considered for GHGs due to the erroneous determination of less-than-significant impact. If the City had used appropriate significant thresholds and accurate analysis, 2-9

[2] $85{,}309\ MTCO2e \div 26\ employees = 3{,}281.1\ MTCO2e/service\ population$
Employee data obtained from the Population and Housing section of the MND. (MND, p. 127).

it would have concluded that the Project's GHG emissions are significant. Inconsistency with applicable plans for the reduction of GHG emissions supports a fair argument that the Project would have a significant environmental effect. Therefore, the City was mistaken in its choice to create an MND for a Project that would likely create such a considerable GHG impact and the City should have prepared an EIR and mitigate to the extent required by CEQA.

It is feasible to reduce the GHG emissions from the Project's electricity usage by opting into Southern California Edison's clean power option. The Project intends to utilize SCE's default energy mix which would include 33.2 percent of the electricity to be derived from renewable sources. Yet, there is nothing preventing the City from opting into the SCE's Green Rate Program which can allow the Project to purchase solar power for up to 100% of its energy usage.[3]

2-9 cont.



Conclusion

For the reasons given in this letter, the MND is not in conformance with CEQA requirements. Notably, the GHG significance analysis was inadequate, and the City should have concluded that the Project would contribute to a significant GHG impact. The MND fails as an informational document and is misleading to decision-makers and the public.

Please put Advocates for the Environment on the interest list to receive updates about the progress of this Project. We make this request under Public Resources Code, section 21092.2.

2-10

Sincerely,

Dean Wallraff, Attorney at Law
Executive Director, Advocates for the Environment

Re: Comments on 1977 Saturn Data Center Project Initial Study Mitigated Negative Declaration (SCH No. 2024101397)

Dear Ms. Chow and Ms. Serrano:

We are writing on behalf of Coalition for Responsible Equitable Economic Development Los Angeles ("CREED LA") to provide comments on the Initial Study / Mitigated Negative Declaration ("MND") prepared by the City of Monterey Park ("City") for the 1977 Saturn Data Center Project (SCH No. 2024101397) ("Project") proposed by SDCF Monterey Park, LLC ("Applicant").[1]

The Project proposes to construct a new 218,400-square-foot data center with an ancillary equipment yard, substation, parking, and landscaping.[2] An approximately 75,000-square-foot ancillary equipment yard would be located adjacent to the north side of the data center. The Project would include twelve four megawatts ("MW") back-up diesel generators to provide power in the event of an emergency. The Project would also include a 24,000-square-foot electrical substation. Project construction is anticipated to last approximately 24 months. The Project is proposed to be located at 1977 Saturn Street (APN No. 5265-026-054) in the City of Monterey Park, in Los Angeles County, California. Project construction is anticipated to occur over one phase, lasting approximately 24 months, beginning as early as September 2025 and ending as early as August 2027.

3-1

printed on recycled paper

These comments were prepared with the assistance of air quality, health risk, and GHG expert Dr. James Clark, Ph.D. and noise and vibration expert Ms. Deborah Jue. Comments and curriculum vitae of Dr. Clark are attached to this letter as Exhibit A.[3] Ms. Jue's comments and curriculum vitae are included as Exhibit B.[4] Exhibit A and B are fully incorporated herein and submitted to the City herewith. We reserve the right to supplement these comments at a later date and at any future proceedings related to this Project.[5]

3-1 cont.

I. STATEMENT OF INTEREST

CREED LA is an unincorporated association of individuals and labor organizations that may be adversely affected by the potential public and worker health and safety hazards, and the environmental and public service impacts of the Project. The coalition includes the Sheet Metal Workers Local 105, International Brotherhood of Electrical Workers Local 11, Southern California Pipe Trades District Council 16, and District Council of Iron Workers of the State of California, along with their members, their families, and other individuals who live and work in the City of Monterey Park. Accordingly, they would be directly affected by the Project's environmental and health and safety impacts.

3-2

Individual members of CREED LA and its member organizations include Monterey Park residents Matthew Ortiz, Jesse Estrada and Kristian Garcia. Individual members may also work on the Project itself. They would be first in line to be exposed to any health and safety hazards that exist onsite.

CREED LA seeks to ensure a sustainable construction industry over the long-term by supporting projects that have positive impacts for the community, and which minimize adverse environmental and public health impacts. CREED LA has an interest in enforcing environmental laws that encourage sustainable development and ensure a safe working environment for its members.

printed on recycled paper

Environmentally detrimental projects can jeopardize future jobs by making it more difficult and more expensive for business and industry to expand in the region, and by making the area less desirable for new businesses and new residents. Indeed, continued environmental degradation can, and has, caused construction moratoriums and other restrictions on growth that, in turn, reduce future employment opportunities.

3-2 cont.

II. LEGAL BACKGROUND

CEQA requires that lead agencies analyze any project with potentially significant environmental impacts in an EIR, except in limited circumstances.[6] The purpose of an EIR "is to inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made. Thus, the EIR protects not only the environment, but also informed self-government."[7] The EIR has been described as "an environmental 'alarm bell' whose purpose is to alert the public and its responsible official to environmental changes before they have reached ecological points of no return."[8]

3-3

A negative declaration may be prepared instead of an EIR when, after preparing an initial study, a lead agency determines that a project "would not have a significant effect on the environment."[9] Courts have held that if "no EIR has been prepared for a nonexempt project, but substantial evidence in the record supports a fair argument that the project may result in significant adverse impacts, the proper remedy is to order preparation of an EIR."[10]

The presumption in favor of preparing an EIR, rather than a negative declaration, is reflected in the "fair argument" standard. Under that standard, the lead agency "shall" prepare an EIR whenever substantial evidence in the whole record before the agency supports a fair argument that a project may have a significant effect on the environment.[11] The fair argument standard creates a "low

printed on recycled paper

threshold" of favoring environmental review through an EIR, rather than through a negative declaration.

"Substantial evidence" required to support a fair argument is defined as "enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached."[12] "[I]n marginal cases where it is not clear whether there is substantial evidence that a project may have a significant effect on the environment, the lead agency shall be guided by the following principle: If there is disagreement among expert opinion supported by facts over the significance of an effect on the environment, the Lead Agency shall treat the effect as significant and shall prepare an EIR."[13]

With respect to this Project, the MND fails to satisfy the basic purposes of CEQA. The MND fails to adequately disclose, investigate, and analyze the Project's potentially significant impacts, and fails to provide substantial evidence to conclude that impacts will be mitigated to a less than significant level. Because the MND lacks basic information regarding the Project's potentially significant impacts, the MND's conclusion that the Project will have a less than significant impact on the environment is unsupported.[14] The City failed to gather the relevant data to support its finding of no significant impacts, and substantial evidence shows that the Project may result in potentially significant impacts. As detailed herein and in the attached expert comments, substantial evidence supports a fair argument that the Project may result in significant and unmitigated impacts to air quality, public health, greenhouse gases, and from noise. The City must prepare an EIR that analyzes, discloses, and mitigates these impacts and which considers less environmentally damaging alternatives.

3-3 cont.

III. THE MND FAILS TO PROVIDE AN ADEQUATE DESCRIPTION OF THE ENVIRONMENTAL SETTING

3-4

The MND fails to adequately describe the environmental setting against which the Project's environmental impacts are to be measured for several critical aspects of the Project. This contravenes the fundamental purpose of the

Stanislaus (1995) 33 Cal.App.4th 144, 1501-51; *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.Appl.4th 1597, 1601-1602.

printed on recycled paper

environmental review process, which is to determine whether there is a potentially substantial, adverse change compared to the existing setting. [15] CEQA requires that a lead agency include a description of the physical environmental conditions, or "baseline," in the vicinity of the project as they exist at the time environmental review commences.[16] As the courts have repeatedly held, the impacts of a project must be measured against the "real conditions on the ground."[17] The description of the environmental setting constitutes the "baseline" physical conditions against which the lead agency assesses the significance of a project's impacts.[18] An Environmental Setting is required "to give the public and decision makers the most accurate and understandable picture practically possible of the project's likely near-term and long-term impacts.[19]

3-4 cont.

A. The MND Fails to Adequately Describe the Proximity to Sensitive Receptors

The MND provides that the "nearest sensitive receptors to the Project Site are multi-family residences located approximately 65 feet (approximately 20 meters) northwest of the Project Site."[20] The Health Risk Impact Assessment also relies on a 65 feet distance to nearby sensitive receptors to undergird its analysis.[21] However, substantial evidence demonstrates that sensitive receptors are closer than 65 feet from the Project site.[22] Based on the MND's Local Vicinity Map in Figure 2-2, the Project site directly abuts the residence at 2204 Iris Way, and may be as close as 20 feet northwest from the construction zone of the Project site.[23] Construction activities occurring along to the Project's northwest property line will result in significant noise, air quality, and health risk impacts more severe than analyzed in the MND.[24] The MND's reliance on the geographic center of the Project site to inform its analysis of distances to sensitive receptors is therefore misplaced and unsupported by substantial evidence. As discussed below, the MND's failure to

printed on recycled paper

analyze the Project's proximity to nearby sensitive receptors results in an inaccurate analysis of the Project's construction and operational noise impacts.[25] The City must prepare an EIR which accurately analyzes the Project's environmental setting with respect to nearby sensitive receptors for air quality, health risk, and noise impacts before the Project can lawfully be approved.

3-5 cont.

B. The MND Fails to Adequately Quantify the Existing Noise Environment

The MND fails to adequately quantify the existing noise environment, against which to measure the Project's operational and construction noise impacts. Deborah Jue's comments provide that the MND's reliance on the metric Leq instead of the median noise level, L50, is misplaced.[26] L50 is the median noise level, Leq is the Equivalent Continuous Sound Level, but these metrics are not the same. The Leq can be very similar to L50, but it is often several decibels higher.[27] Ms. Jue's comments demonstrate that MND Table 4.13-6 erroneously relies on Leq instead of L50, which results in a significant underestimation of the Project's operational noise impacts.[28]

3-6

Further, the MND noise analysis relies on ambient noise levels of 56 to 65 Leq because the MND provides that "[a]mbient daytime noise levels include the operations of the two generators closest to sensitive receptors for generator testing."[29] Ambient noise levels should be calculated utilizing the noise levels in the existing environment, the baseline, not including Project components such as the two generators closest to sensitive receptors. Since the generators are part of the Project, their operation should be compared to the existing ambient noise level, without the project. The MND's analysis of the environmental setting with respect to noise is therefore unsupported. The Project may result in potentially significant noise impacts as demonstrated herein.

printed on recycled paper

IV. AN EIR IS REQUIRED FOR THE PROJECT BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY HAVE SIGNIFICANT, UNMITIGATED AIR QUALITY IMPACTS

A negative declaration is improper, and an EIR must be prepared, whenever it can be fairly argued on the basis of substantial evidence that the project may have a significant environmental impact.[30] "[S]ignificant effect on the environment" is defined as "a substantial, or potentially substantial, adverse change in the environment."[31] An effect on the environment need not be "momentous" to meet the CEQA test for significance; it is enough that the impacts are "not trivial."[32] Substantial evidence, for purposes of the fair argument standard, includes "fact, a reasonable assumption predicated upon fact, or expert opinion supported by fact."[33]

3-7

Moreover, the failure to provide information required by CEQA is a failure to proceed in the manner required by CEQA.[34] Challenges to an agency's failure to proceed in the manner required by CEQA, such as the failure to address a subject required to be covered in an MND or to disclose information about a project's environmental effects or alternatives, are subject to a less deferential standard than challenges to an agency's factual conclusions.[35] Even when the substantial evidence standard is applicable to agency decisions to certify an MND and approve a project, reviewing courts will not 'uncritically rely on every study or analysis presented by a project proponent in support of its position. A clearly inadequate or unsupported study is entitled to no judicial deference.'"[36]

As discussed below, CREED LA's expert James Clark presented direct and substantial evidence raising a fair argument that the Project will have significant environmental impacts. An EIR must be prepared to further evaluate and mitigate the significant impacts to less than significant levels.

printed on recycled paper

A. Substantial Evidence Supports a Fair Argument that the Project May Result in Potentially Significant Impacts from the Backup Generators

The MND fails to analyze the Project's potentially significant environmental impacts from the use of backup generators. Twelve four-MW backup generators with a total generation capacity of up to 48 MW and the two redundant back-up generators would be located outdoors in an approximately 75,000-square-foot ancillary equipment yard, adjacent to the north side of the data center.[37] Dr. Clark's comments demonstrate that the Project results in significant air quality and health risk impacts associated with operation of the backup generators that are more severe than disclosed in the MND.[38] Dr. Clark determined that the MND only accounts for a total of 50 hours of testing for the generators.[39] But, each of the 14 generators is permitted to be tested for 50 hours per year, which accounts for a total of 700 hours per year. This results in significant emissions of diesel particulate matter ("DPM") which are not accounted for in the MND.[40] Without binding mitigation to limit the testing of the backup generators to 50 hours total per year, the air quality and health risk impacts associated with DPM and TAC emissions is significant and unmitigated.[41] 3-8

DPM is a toxic air contaminant (TAC) that is recognized by state and federal agencies as causing severe health risk because it contains toxic materials, unlike PM2.5 and PM10.[42] Diesel exhaust has been linked to a range of serious health problems including an increase in respiratory disease, lung damage, cancer, and premature death.[43] Fine DPM is deposited deep in the lungs in the smallest airways and can result in increased respiratory symptoms and disease; decreased lung function, particularly in children and individuals with asthma; alterations in lung tissue and respiratory tract defense mechanisms; and premature death.[44] Exposure to DPM increases the risk of lung cancer.[45] It also causes non-cancer effects including chronic bronchitis, inflammation of lung tissue, thickening of the

[37] MND, p. 5.

[43] *Id.*
[44] *Id.*
[45] *Id.*

printed on recycled paper

alveolar walls, immunological allergic reactions, and airway constriction.[46] Dr. Clark's comments provide substantial evidence that DPM emissions represent a significant health risk requiring additional analysis and mitigation in an EIR.

Under the fair argument standard, a lead agency "shall" prepare an EIR whenever substantial evidence in the whole record before the agency supports a fair argument that a project may have a significant effect on the environment.[47] The phrase "significant effect on the environment" is defined as "a substantial, or potentially substantial, adverse change in the environment."[48] Dr. James Clark finds a significant health risk from exposure to TAC emissions, which constitutes substantial evidence supporting a fair argument that health risk is significant and unmitigated.

3-8 cont.

An EIR must be prepared which quantifies the Project's emissions of toxic air contaminants ("TAC"), and compares them to the SCAQMD's quantitative cancer threshold of 10/million,[49] in order to adequately assess and disclose the Project's air quality impacts on human health.[50] Absent this analysis, the City lacks substantial evidence to conclude that the Project's health risk impacts are less than significant.

Furthermore, Dr. Clark remodeled the operational emissions of the Project and found that based on a generator size of 5,376 brake horsepower (which would generate 4-MW of power), and limiting the operation to a total of 4.2 hours per month for all 14-generators, the generators would emit up to 166 lbs. per day of

printed on recycled paper

NOx, exceeding the SCAQMD's significance threshold of 55 lbs. per day.[51] Dr. Clark's comments provide substantial evidence demonstrating that the Project results in a significant air quality impact requiring review and mitigation in an EIR, before the Project can be approved.

3-9 cont.

V. AN EIR IS REQUIRED FOR THE PROJECT BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY HAVE SIGNIFICANT, UNMITIGATED GHG IMPACTS

The MND concludes, absent substantial evidence, that the Project will result in less than significant GHG impacts.[52] The MND's GHG analysis memorandum does not include modeling files to support the GHG emissions calculations for the emergency generators. MND Table 5 provides that emergency generators will emit 2,062 metric tons of carbon dioxide equivalent ("$MTCO_2e$") but this estimate is unsupported. The CalEEMod modeling does not include emissions from the emergency generators and the City does not actually document how the 2,062 $MTCO_{2eq}$ value was derived.[53] The MND's conclusions regarding the Project's GHG impacts are therefore unsupported, and these impacts must be evaluated in an EIR for the Project.

3-10

Furthermore, Dr. Clark calculated that the Project will result in a more severe GHG impact than analyzed in the MND. Dr. Clark's comments demonstrate that the use of the General Office Building setting in the MND's CalEEMod air modeling underestimates the energy consumption rate and resulting GHG and air pollutant emissions from the Project.[54] The GHG emissions are more significant than analyzed in the MND and require mitigation in an EIR before the Project can be approved.[55]

[55] *Id.* at 9.

printed on recycled paper

VI. AN EIR IS REQUIRED FOR THE PROJECT BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY HAVE SIGNIFICANT, UNMITIGATED HAZARDS IMPACTS

There is substantial evidence in support of a fair argument that the Project will create significant and unmitigated risks to human health and the environment from the accidental release of soil contaminants. These impacts are not disclosed in the MND and require preparation of an EIR. The MND is further inadequate because it relies on impermissibly vague and deferred mitigation measures to purportedly lessen or avoid these impacts, in violation of CEQA. 3-11

A. The MND Fails to Disclose the Project's Potentially Significant Hazards Impacts

The MND provides that the "[t]he Project site is not identified on a compiled hazardous materials site list pursuant to California Government Code Section 65962.5."[56] However, the Project site is on the Cortese List due to groundwater contamination issues, and, for that reason, is also listed on SWRCB's GeoTracker website.[57] The Project site was contaminated via leaks from three diesel underground storage tanks ("UST"). As of June 28, 2022, the Los Angeles Regional Water Quality Control Board Site data indicate that there may be residual concentrations of pollutants in soil at this site that could pose an unacceptable risk as a result of future construction/redevelopment activities, and/or change to a more sensitive land use from commercial use.[58] The severity of this impact is not disclosed or mitigated in the MND. 3-12

A. The MND Fails to Adequately Mitigate the Project's Potentially Significant Hazards Impacts

The MND's conclusion that hazards impacts are mitigated to less than significant levels, is not supported by substantial evidence. The MND includes 3-13

printed on recycled paper

unenforceable, deferred, and impermissibly vague mitigation measures to purportedly reduce significant hazards impacts. Mitigation measures are conditions on the construction and operation of a project that are designed to lessen or avoid a project's environmental impacts.[59] If a project has the potential to have a significant effect on the environment, the lead agency must prepare an EIR that incorporates feasible mitigation measures to reduce impacts to less-than-significant levels.[60] It is the possibility of a significant effect, not a determination of the actual effect, which would be the subject of a negative declaration or an EIR.[61]

Here, the MND proposes to develop a Soil Management Plan ("SMP") to address potential soils with residual impacts remaining on the Project Site during future construction/redevelopment activities, pursuant to mitigation measure MM HAZ-1. CEQA requires disclosure of the severity of a project's impacts and the probability of their occurrence *before* a project can be approved.[62] In *Bozung v. Local Agency Formation Commission* ,the Supreme Court upheld "the principle that the environmental impact should be assessed as early as possible in government planning."[63] A study conducted after approval of a project will inevitably have a diminished influence on decisionmaking.[64] Even if the study is subject to administrative approval, it is analogous to the sort of post hoc rationalization of agency actions that has been repeatedly condemned in decisions construing CEQA.[65]

3-13 cont.

MM HAZ-1 results in improper deferral of required analysis until after project approval, and may therefore not sufficiently mitigate impacts to construction workers exposed to soil contamination before the site is properly characterized and cleaned. CEQA Guidelines § 15126.4(a)(1)(B) provide that formulation of mitigation measures shall not be deferred until some future time.[66] Deferral of the

printed on recycled paper

formulation of mitigation measures is only permissible when the agency adopts performance standards and conditions approval of the project on meeting those performance standards, or lists alternative means of mitigating the impacts, which must be disclosed and analyzed.[67] Here, the SMP lacks any performance standards, and would require additional analysis and potential formulation of unidentified remedial procedures at some later date. In order to comply with CEQA, the City must identify mitigation measures before Project approval, and include such measures in an EIR circulated for public review.

3-13 cont.

VII. AN EIR IS REQUIRED FOR THE PROJECT BECAUSE THERE IS SUBSTANTIAL EVIDENCE SUPPORTING A FAIR ARGUMENT THAT THE PROJECT MAY HAVE SIGNIFICANT, UNMITIGATED NOISE IMPACTS

Deborah Jue's comments provide substantial evidence that the Project results in significant operational noise impacts. Noise from the Project's generators was not evaluated, and the combined operation of all mechanical equipment could be 3 dBA or more than predicted in the MND.[68] Ms. Jue's comments also demonstrate that the mechanical equipment noise would exceed the City's noise limits during the nighttime hours at the residences to the west of the Project site.[69] Moreover, when accounting for the correct ambient noise level, Ms. Jue identified a significant operational noise impact during daytime hours as well.[70]

3-14

The MND also lacks support for its conclusions regarding operational noise impacts. It provides that "[p]ackaged HVAC rooftop units would provide cooling for the administrative and ancillary spaces."[71] The MND provides that the "heating, ventilation, and air conditioning ("HVAC") equipment would include 23 air cooled chillers with free cooling modules, each rated at 460-tons of capacity, in an N+1 redundancy configuration to support data hall operations." However, the MND fails to identify the source of the reference sound power levels used in its analysis of HVAC rooftop equipment and lacks sound power data for the generators.[72] Deborah Jue's comments provide that, absent documentation of the reference sound power levels for the rooftop equipment and generators, it is impossible to evaluate the

[72] Jue Comments, pgs. 2-3.

printed on recycled paper

MND's conclusions regarding operational noise impacts.[73] The MND's analysis of operational noise impacts is therefore not supported by substantial evidence. This information must be included in an EIR to accurately quantify and mitigate significant operational noise impacts.

3-15 cont.

Furthermore, given that the MND fails to accurately characterize the existing noise environment against which to measure the construction noise emissions and fails to accurately calculate the distance of construction equipment to sensitive receptors, construction noise impacts are underestimated in the MND. Deborah Jue's comments demonstrate that the Project would result in construction noise impacts so severe to neighboring sensitive receptors that the noise "would interfere with speech at neighboring properties."[74] Ms. Jue's calculations demonstrate that construction noise emission would be between 10 and 25 decibels higher than the ambient noise level.[75] The MND's conclusion that construction noise impacts are less than significant is therefore unsupported.

CEQA caselaw provides that the magnitude of noise increase over ambient levels must be addressed to determine the significance of change in noise levels.[76] The MND fails to adequately analyze impacts from noise and fails as an informational document. In *King and Gardiner Farms LLC. v. County of Kern* (2020) 45 Cal.App.5th 814, 893, determined that the use of an absolute noise level as the threshold of significance violated CEQA.[77] The court in *Keep Our Mountains Quiet* (2015) 236 Cal.App.4th 714, lead agency should consider both the increase in noise level and the absolute noise level associated with a project.[78] Here, the City's failure to consider the impact of a substantial increase in noise over ambient levels violates CEQA. The increase in noise to sensitive receptors necessitates further analysis in an EIR.

3-16

Substantial evidence in Ms. Jue's comments demonstrates significant construction and operational noise impacts from the Project on neighboring sensitive receptors. An EIR must be prepared which accurately analyzes and mitigates the Project's significant noise impacts.

VIII. THE CITY LACKS SUBSTANTIAL EVIDENCE TO APPROVE THE PROJECT'S LAND USE PERMITS

The Project requires the following entitlements:

- Approval of CUPs for a project on a lot size over one acre, and mechanical equipment exceeding height, if needed;
- Design Review;
- Approval of a Development Agreement, due to the Project's large scale development, and activation of the BRDZ pursuant to the MPMC;
- Tree removal;
- SCAQMD Authority to Construct/Permit to Operate; and
- Permits to Construct SCE Facilities.

3-17

A. The City Cannot Make the Necessary Findings to Approve the Conditional Use Permit

Approval of a Conditional Use Permit ("CUP") requires investigation and determination by the Planning Commission subject to appeal to the City Council.[79] Pursuant to Municipal Code Section 21.32.020(B), in order to grant a CUP, the Planning Agency must find, based upon substantial evidence:

a. That the site is adequate in size, shape and topography for the proposed use including, without limitation, any required yards, walls, fences, parking and loading facilities, landscaping, setbacks, and other development standards required in this code;
b. That the site has sufficient access to streets and highways, adequate in width and pavement type to carry the quantity and quality of traffic generated by the proposed use;
c. That the proposed use is consistent with the General Plan, any applicable specific plan, and applicable law;
d. That the proposed use will not create unusual noise, traffic, or other conditions that may be objectionable, detrimental, or incompatible with surrounding properties or other permitted uses in the City;
e. That the proposed use will not have an adverse effect on the public health, safety and general welfare; and

3-18

[79] City of Monterey Park, California, Planning Commission, available at: https://www.montereypark.ca.gov/649/Planning-Commission.

printed on recycled paper

f. That the use applied for at the location set forth in the application is properly one authorized by conditional use permit pursuant to this code.

As demonstrated herein, and in the expert consultant reports attached hereto, the Project results in a significant adverse effect on the public health, safety, and general welfare due to the Project's significant air quality, health risk, and noise impacts. An EIR must be prepared which adequately analyzes and mitigates the Project's significant environmental impacts before the Project's entitlements can be approved.

3-18 cont.

B. The City Cannot Make the Necessary Findings to Approve the Design Review

In order to approve a design review application, the Applicant must show, to the satisfaction of the City Planner, the following:

(A) The architecture and mass of new buildings and structures and modifications of existing buildings and structures are compatible and in keeping with the character of the neighborhood and not detrimental to the general welfare of the neighborhood in which they are located. [80]

3-19

As demonstrated herein, and in the expert consultant reports attached hereto, the proximity of the Project to sensitive receptors will result in significant unmitigated noise, air quality, and health risk impacts that are detrimental to the general welfare of the neighborhood in which it is located, in violation of the municipal code. An EIR must be prepared which adequately analyzes and mitigates the Project's significant environmental impacts before the Project's entitlements can be approved.

IX. CONCLUSION

For the reasons discussed above, the MND for the Project is wholly inadequate under CEQA. An EIR must be circulated to provide legally adequate analysis of, and mitigation for, all of the Project's potentially significant impacts.

3-20

[80] Monterey Park Municipal Code § 21.36.060.

printed on recycled paper

Until an EIR has been prepared and circulated for public review, as described herein, the City may not lawfully approve the Project.

Adams Broadwell Joseph & Cardozo
601 Gateway Boulevard, Suite 100
South San Francisco, CA 94080

Attn: Ms. Kelilah Federman

Subject: Comment Letter on Initial Study/Mitigated Negative Declaration (IS/MND) For 1977 Saturn Data Center Project, City of Monterey Park, CA.

Dear Ms. Federman:

At the request of Adams Broadwell Joseph & Cardozo (ABJC), Clark and Associates (Clark) has reviewed materials related to the IS/MND for the above referenced project.

Clark's review of the materials in no way constitutes a validation of the conclusions or materials contained within the project record. If we do not comment on a specific item this does not constitute acceptance of the item.

Project Description

3-21

The Project would demolish the existing site improvements and construct a new 218,400-square-foot data center with an ancillary equipment yard, substation, parking, and landscaping. The Data Center would include approximately 109,970 square feet of data hall space and approximately 91,889 square feet of support space (collectively, the "Project"). The proposed data center building would be one story and 36 feet in height (46.5 feet to top of mechanical equipment platform screening). An approximately 75,000-square-foot ancillary equipment yard would be located adjacent to the north side of the data center. The Project would include fourteen (14) four-megawatt (4-MW) back-up

diesel generators to provide power in the event of an emergency.

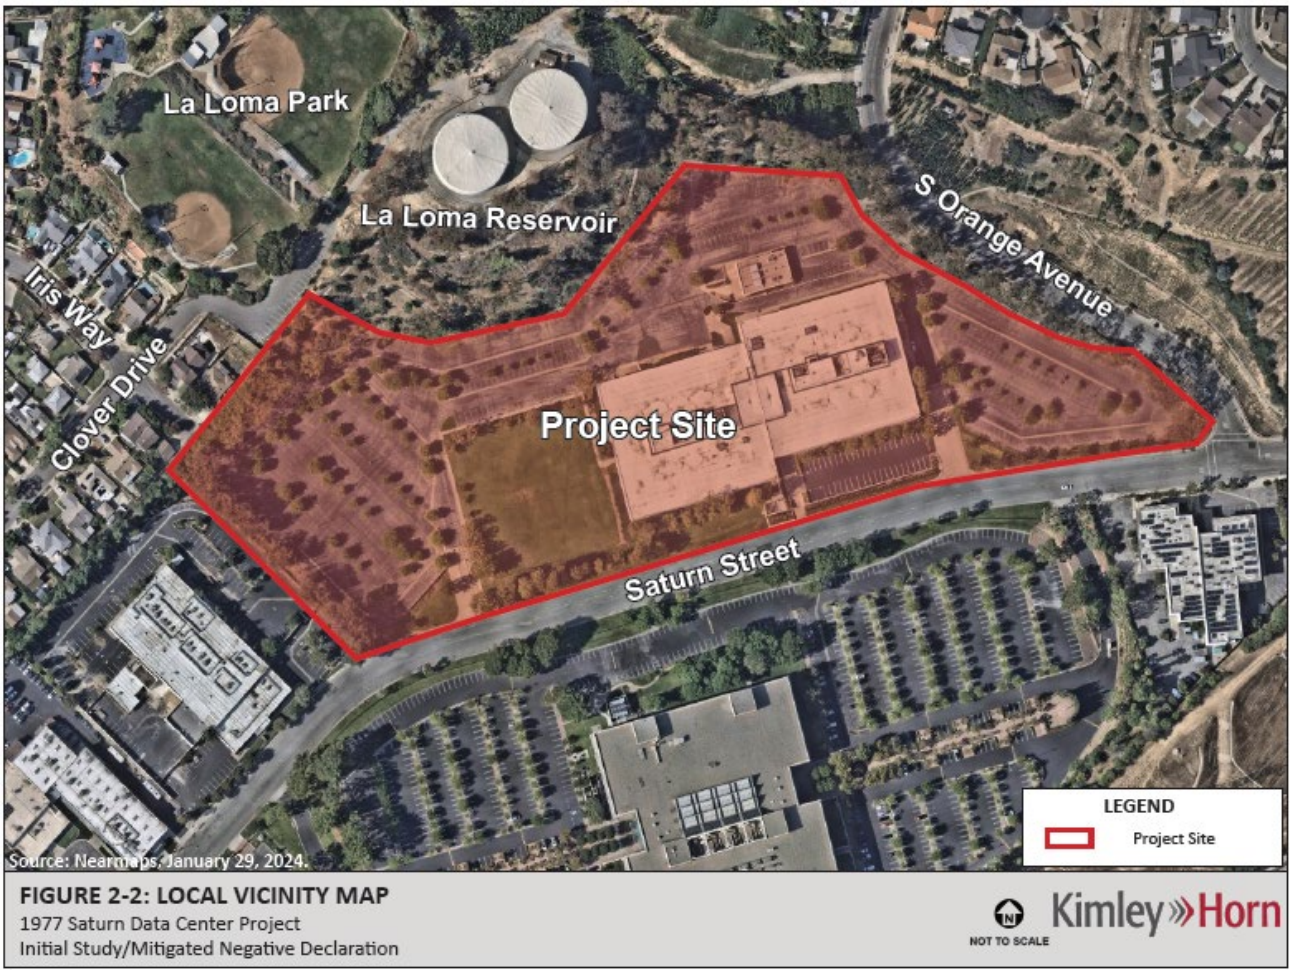

Figure 1: Project Site

The Project would also include a 24,000-square-foot electrical substation, appurtenant to the function of the data center. Project construction is anticipated to occur over one phase, lasting approximately 24 months, beginning as early as September 2025 and ending as early as August 2027.

3-21 cont.

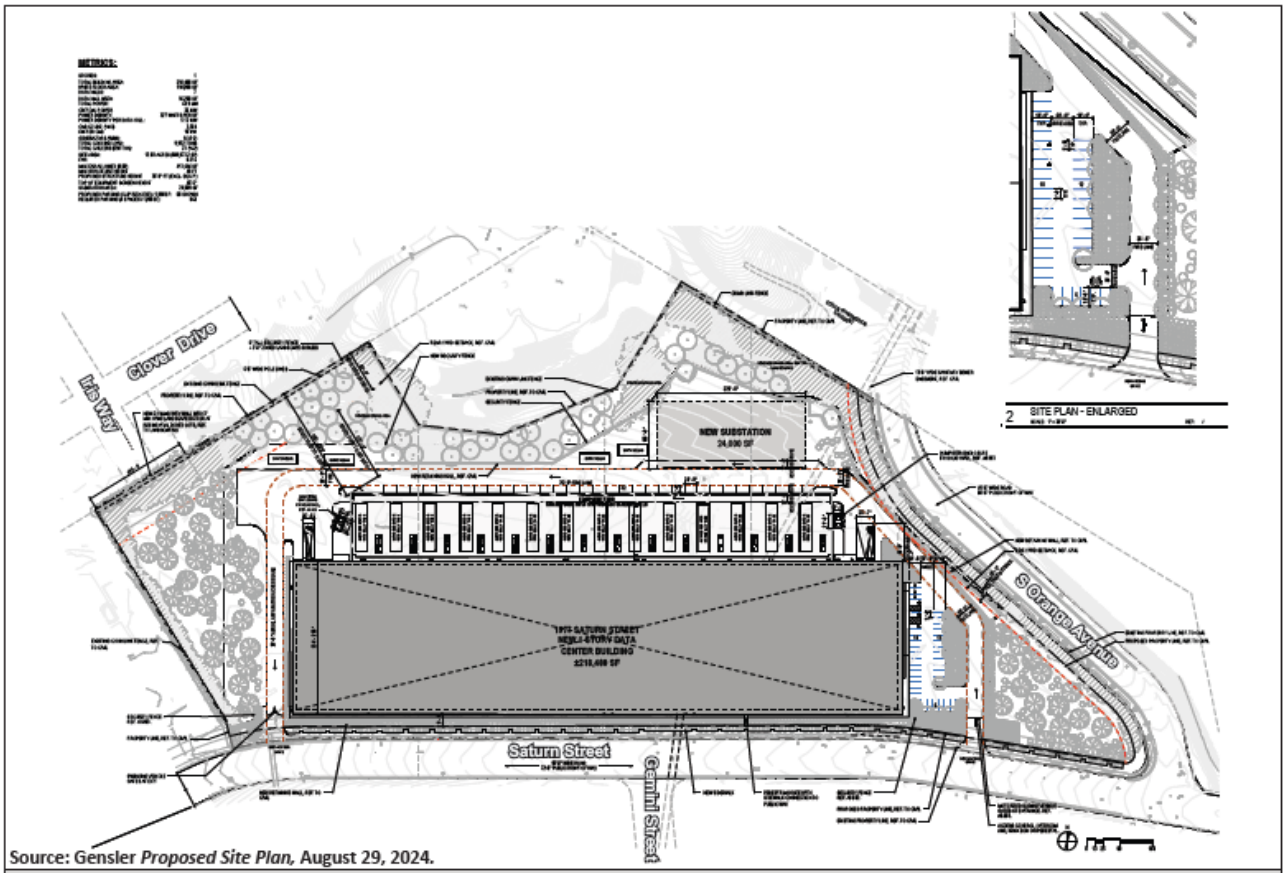

Figure 2: Conceptual Site Plan

Grading for the proposed improvements would require cut and fill to create building pads. The Project Site is bordered on the north by hillside that would remain undisturbed where the proposed design permits, as a general guideline using the existing parking lot limits and the limit of grading. There is currently only one area where there is cut into the hillside to accommodate the future substation. The proposed data center building takes up majority of the buildable land on the Project Site and spans nearly the entire frontage of Saturn Street. Project construction is anticipated to occur in the following sequence:

- Demolition of existing structures,
- Site grading and construction preparation,
- Building construction,
- Utility work,

3-21 cont.

- Paving,
- Interior construction and build-out,
- Installation of equipment and infrastructure, and
- Final inspections, testing, and commissioning.

Project Site preparation for the Project would require cutting and removal of approximately 500,000 square feet of concrete and approximately 65,000 cubic yards of soil export.

The backup generators are designed to start up quickly and run only as demand requires. All generators would be located outdoors in the equipment yard and would be surrounded by an acoustic screen wall. Generators would be placed in sound-attenuating enclosures. The generators would be laid out in one row and reach a height of approximately 20 feet to top of generator enclosure, and up to 40 feet to top of exhaust stack. Each generator would be provided with a 7,000-gallon sub-base fuel storage tank, equating to 24 hours of runtime in emergency conditions. 3-21 cont.

The heating, ventilation, and air conditioning ("HVAC") equipment would include 23 air cooled chillers with free cooling modules, each rated at 460-tons of capacity, in an N+1 redundancy configuration to support data hall operations.

The IS/MND claims that as formulated the Project would result in air quality impacts that are less than significant while failing to consider at least one major source of pollution on-site (the back-up generators). This conclusion is not supported by the data contained within the IS/MND and the City must fully evaluate the air quality impacts in an environmental impact report (EIR).

Specific Comments:

1. **The Claims Regarding Greenhouse Gas (GHG) Emissions Are Not Supported In The Appendices To The Air Quality Analysis And The GHG Analysis**

According to the IS/MND the operational or long-term emissions would occur over the life of the proposed Project. GHG emissions would result from area sources (consumer products, landscape maintenance equipment, and painting), vehicular traffic, and diesel fuel associated with the emergency generators. Operational GHG emissions would also result from indirect sources, such as off-site 3-22

generation of electrical power, the energy required to convey water to, and wastewater from the Project, the emissions associated with solid waste generated from the Project, and any fugitive refrigerants from air conditioning or refrigerators.

In the GHG analysis memorandum[1] it is stated that the Project electricity usage would be mainly from the operation of the data center. The stated purpose of a data center is to house computer servers, which require electricity and cooling 24 hours a day to operate. Based on data received from the Applicant, the Project during peak load conditions would have a demand of 49,999 kilowatts per hour (KW/h). The analysis assumes 24/7 operations (8,760 hours per year) which would result in a maximum electrical usage of 437,991 megawatt hours (MWh) per year, including CalEEMod default assumptions for lighting for surface parking. The modeling also conservatively assumed the 14 gen-sets, which are each capable of generating 4 megawatts (MW) of power, would be used for up to 50 hours per year per generator for testing and maintenance. The generators would utilize diesel fuel releasing diesel particulate matter (DPM), a known human carcinogen. The Air Quality Analysis (Appendix A-1 to IS/MND) states that the proposed Project would include up to 12 4-MW stationary emergency diesel generators upon loss of grid power.[2] The other two generators would be on stand-by in case of failure for one of the 12 assigned to the system. The Air Quality Analysis and GHG Analysis of the Project both rely on the CalEEMOD model to calculate emissions, and model outputs are included as attachments to the Air Quality and GHG analyses. A review of the CalEEMOD analyses outputs for the operational phase of the Project reveals that the analyses do not include the emergency generators. The failure to include the testing and maintenance for the 14 generators onsite means that the TAC emissions and NO_x emissions were not included in the operational analysis of the Project. Using the same input values for the construction and operational phases, but now including the 14 emergency generators, I have used the CalEEMOD model to calculate the operational emissions of the complete Project (attached to this letter). Based on a generator size of 5,376 brake horsepower (which would generate 4-MW of power), and limiting the operation to a total of 4.2 hours per month for all 14-generators, the model demonstrates that the generators would emit up to 166 lbs per day of NOx, exceeding the SCAQMD's significance threshold of 55 lbs per day.

3-22 cont.

3-23

[1] Appendix G to IS/MND. Pg 31
[2] Appendix A-1 to IS/MND pg 20

Table 5: Operational Greenhouse Gas Emissions Opening Year	
Emissions Source	**$MTCO_2e$ per Year[1]**
Amortized Construction Emissions	41
Area Source	5
Emergency Generators[2]	2,062
Mobile	80
Waste	70
Water and Wastewater	27
Refrigeration	0.1
Energy[3]	83,020
Total Emissions	85,305
1. Total values are from CalEEMod and may not add up due to rounding. 2. Emergency backup generator emissions calculated assuming 50 hours per year per generator (14 generators). 3. The servers in the data center were estimated to require approximately 50 MW of power per hour, and operations were conservatively estimated to be 8,760 hours per year. Total MW per year would be 437,991. Total CO_2e in tons per year would be 83,020. The Project does not include natural gas heaters or water heaters.	
Source: CalEEMod version 2022.1. Refer to **Attachment A** for model outputs.	

3-23 cont.

According to Table 5 from the GHG analysis, the emergency generators would generate 2,062 metric tons of carbon dioxide equivalent ($MTCO_{2eq}$) per year. While Table 5 attributes 2,062 $MTCO_2eq$ to emergency generators, this estimate is unsupported. The CalEEMod modeling provided in the IS/MND does not include emissions from the emergency generators and the City does not actually document how the 2,062 $MTCO_{2eq}$ value was derived. As I demonstrated in my own model, the generators will contribute significantly to the total pollutant emissions from the Project and this must be clearly detailed in an EIR for the Project.

2. The Operational Air Quality Analysis Fails To Consider The Direct Impacts Of Cooling The System While In Operation.

3-24

The operational air quality emissions estimate fails to include critical stationary sources required to cool the data center. As stated above, according to the IS/MND the heating, ventilation, and air conditioning ("HVAC") equipment would include 23 air cooled chillers with free cooling modules, each rated at 460-tons of capacity, in an N+1 redundancy configuration to support data hall operations. Figure 3 of the Air Quality Analysis shows that the cooling system will be rated for 550 tons. The CalEEMOD

analysis for operational emissions lists general office building under the refrigeration and air conditioning equipment. The GHG and Air Quality analyses assess the impacts of the Project based on the consumption of 50-MW per hour of energy and does not include a specific analysis of the amount of energy (and resulting pollution emissions) that would be required to maintain the cooling system for the data center. The model used in the CalEEMOD analysis assumed that the energy used to cool the data center would be equivalent to a typical air conditioning system for an office building. A recent paper by Zhu et al (2023) showed that refrigeration systems in Data Centers consume 35% of the energy utilized onsite. Based on the work from Zhu it is clear that the total energy need to maintain the 50 MW of energy required to operate the data center would have to be increased by 17.5 MW to cover the energy required to cool the data center (0.35 * 50 MW = 17.5 MW for cooling) The General Office Building setting in CalEEMOD clearly underestimates that energy consumption rate and resulting GHG and air pollutant emissions from the Project. The City must address this flaw in an EIR of the Project.

3-24 cont.

3. The IS/MND Fails To Model The Diesel Particulate Matter (DPM) Concentration From The Emergency Generators Onsite To The Closest Sensitive Receptor To The Site

According to the HRA prepared for the IS/MND, operational emissions from the Project would result from mobile sources (i.e., motor vehicle use) and area sources (such as the use of landscape maintenance equipment, consumer products, and architectural coatings). Toxic air contaminants (TACs) that would be emitted from those sources include benzene, 1,4-butadiene, acrolein, and diesel exhaust.

Diesel exhaust contains nearly 40 toxic substances, including TACs and may pose a serious public health risk for residents in the vicinity of the facility. TACs are airborne substances that are capable of causing short-term (acute) and/or long-term (chronic or carcinogenic, i.e., cancer causing) adverse human health effects (i.e., injury or illness). TACs include both organic and inorganic chemical substances. The current California list of TACs includes approximately 200 compounds, including particulate emissions from diesel-fueled engines.

3-25

Diesel exhaust has been linked to a range of serious health problems including an increase in respiratory disease, lung damage, cancer, and premature death. Fine DPM is deposited deep in the lungs in the smallest airways and can result in increased respiratory symptoms and disease; decreased lung function, particularly in children and individuals with asthma; alterations in lung tissue and respiratory

tract defense mechanisms; and premature death. Exposure to DPM increases the risk of lung cancer. It also causes non-cancer effects including chronic bronchitis, inflammation of lung tissue, thickening of the alveolar walls, immunological allergic reactions, and airway constriction. DPM is a TAC that is recognized by state and federal agencies as causing severe health risk because it contains toxic materials, unlike PM2.5 and PM10.

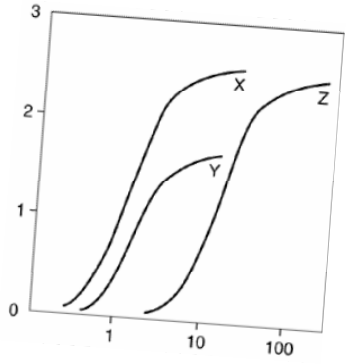
This *a priori* assumption regarding the sources of TACs in the HRA ignores a significant source of diesel particulate matter (DPM) emanating from the Project Site, the 14 emergency generators that will be present onsite. The failure to consider the DPM emissions from the generators is a major flaw in the air quality and health risk analyses.[3]

The Health Risk Analysis[4] for the IS/MND states that the Applicant will obtain Permits to Operate (PTO) from the SCAQMD prior to installation or operation of the emergency generators, which verifies that the generators meet the applicable Best Available Control Technology (BACT) requirements and comply with SCAQMD Rule 1470 (Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines) and Rule 1401 (New Source Review of Toxic Air Contaminants), which would minimize TAC emissions.

3-25 cont.

Based on the Air Quality Analysis it was assumed that the testing and maintenance of the generators would be limited under the terms of SCAQMD operating permits to be obtained by the Applicant, to operate for a maximum of 4.2 hours each month[5] or approximately 18 minutes per month per generator. Permits from SCAQMD under Rule 1470 normally limit testing of each generator to 50 hours per year (in this case testing could be assumed to take up to 700 hours per year (14 generators * 50 hours per year)). 700 hours per year of diesel emergency generator operation would result in a significant air quality and health risk impacts from exposure to TAC emissions to nearby sensitive receptors.

If the City is proposing to limit the total testing of generators to 50 hours per year combined for all generators it must enter into a binding agreement with SCAQMD to ensure compliance with that requirement and include such limitations as a binding mitigation measure. The MND's assumptions regarding diesel emissions from generators and the resulting conclusions regarding health risk are not supported by substantial evidence. The City must re-analyze the Project impacts and present them in an EIR for the Project Site.



[3] ibid
[4] Appendix B to IS/MND pg 12
[5] Appendix A-1 to IS/MND pg 21

Conclusion

The facts identified and referenced in this comment letter lead me to conclude that the Project could result in significant unmitigated impacts if the air quality, GHG and health risk analyses are not corrected. 3-26

James J. J. Clark, Ph.D.

Principal Toxicologist

Toxicology/Exposure Assessment Modeling

Risk Assessment/Analysis/Dispersion Modeling

Education:

Ph.D., Environmental Health Science, University of California, 1995

M.S., Environmental Health Science, University of California, 1993

B.S., Biophysical and Biochemical Sciences, University of Houston, 1987

Professional Experience:

Dr. Clark is a well recognized toxicologist, air modeler, and health scientist. He has 20 years of experience in researching the effects of environmental contaminants on human health including environmental fate and transport modeling (SCREEN3, AEROMOD, ISCST3, Johnson-Ettinger Vapor Intrusion Modeling); exposure assessment modeling (partitioning of contaminants in the environment as well as PBPK modeling); conducting and managing human health risk assessments for regulatory compliance and risk-based clean-up levels; and toxicological and medical literature research.

Significant projects performed by Dr. Clark include the following:

LITIGATION SUPPORT

Case: James Harold Caygle, et al, v. Drummond Company, Inc. Circuit Court for the Tenth Judicial Circuit, Jefferson County, Alabama. Civil Action. CV-2009

Client: Environmental Litgation Group, Birmingham, Alabama

Dr. Clark performed an air quality assessment of emissions from a coke factory located in Tarrant, Alabama. The assessment reviewed include a comprehensive review of air quality standards, measured concentrations of pollutants from factory, an inspection of the facility and detailed assessment of the impacts on the community. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Rose Roper V. Nissan North America, et al. Superior Court of the State Of California for the County Of Los Angeles – Central Civil West. Civil Action. NC041739

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to multiple chemicals, including benzene, who later developed a respiratory distress. A review of the individual's medical and occupational history was performed to prepare an exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to respiratory irritants. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: O'Neil V. Sherwin Williams, et al. United States District Court Central District of California

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to petroleum distillates who later developed a bladder cancer. A review of the individual's medical and occupational history was performed to prepare a quantitative exposure assessment. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Summary judgment for defendants.

Case: Moore V., Shell Oil Company, et al. Superior Court of the State Of California for the County Of Los Angeles

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to chemicals while benzene who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a quantitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Raymond Saltonstall V. Fuller O'Brien, KILZ, and Zinsser, et al. United States District Court Central District of California

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to benzene who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a quantitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Richard Boyer and Elizabeth Boyer, husband and wife, V. DESCO Corporation, et al. Circuit Court of Brooke County, West Virginia. Civil Action Number 04-C-7G.

Client: Frankovitch, Anetakis, Colantonio & Simon, Morgantown, West Virginia.

Dr. Clark performed a toxicological assessment of a family exposed to chlorinated solvents released from the defendant's facility into local drinking water supplies. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to chlorinated solvents. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: JoAnne R. Cook, V. DESCO Corporation, et al. Circuit Court of Brooke County, West Virginia. Civil Action Number 04-C-9R

Client: Frankovitch, Anetakis, Colantonio & Simon, Morgantown, West Virginia.

Dr. Clark performed a toxicological assessment of an individual exposed to chlorinated solvents released from the defendant's facility into local drinking water supplies. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to chlorinated solvents. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Patrick Allen And Susan Allen, husband and wife, and Andrew Allen, a minor, V. DESCO Corporation, et al. Circuit Court of Brooke County, West Virginia. Civil Action Number 04-C-W

Client: Frankovitch, Anetakis, Colantonio & Simon, Morgantown, West Virginia.

Dr. Clark performed a toxicological assessment of a family exposed to chlorinated solvents released from the defendant's facility into local drinking water supplies. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to chlorinated solvents. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Michael Fahey, Susan Fahey V. Atlantic Richfield Company, et al. United States District Court Central District of California Civil Action Number CV-06 7109 JCL.

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to refined petroleum hydrocarbons who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Constance Acevedo, et al., V. California Spray-Chemical Company, et al., Superior Court of the State Of California, County Of Santa Cruz. Case No. CV 146344

Dr. Clark performed a comprehensive exposure assessment of community members exposed to toxic metals from a former lead arsenate manufacturing facility. The former manufacturing site had undergone a DTSC mandated removal action/remediation for the presence of the toxic metals at the site. Opinions were presented regarding the elevated levels of arsenic and lead (in attic dust and soils) found throughout the community and the potential for harm to the plaintiffs in question.

Case Result: Settlement in favor of defendant.

Case: Michael Nawrocki V. The Coastal Corporation, Kurk Fuel Company, Pautler Oil Service, State of New York Supreme Court, County of Erie, Index Number I2001-11247

Client: Richard G. Berger Attorney At Law, Buffalo, New York

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to refined petroleum hydrocarbons who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the

known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Judgement in favor of defendant.

SELECTED AIR MODELING RESEARCH/PROJECTS

Client – Confidential

Dr. Clark performed a comprehensive evaluation of criteria pollutants, air toxins, and particulate matter emissions from a carbon black production facility to determine the impacts on the surrounding communities. The results of the dispersion model will be used to estimate acute and chronic exposure concentrations to multiple contaminants and will be incorporated into a comprehensive risk evaluation.

Client – Confidential

Dr. Clark performed a comprehensive evaluation of air toxins and particulate matter emissions from a railroad tie manufacturing facility to determine the impacts on the surrounding communities. The results of the dispersion model have been used to estimate acute and chronic exposure concentrations to multiple contaminants and have been incorporated into a comprehensive risk evaluation.

Client – Los Angeles Alliance for a New Economy (LAANE), Los Angeles, California

Dr. Clark is advising the LAANE on air quality issues related to current flight operations at the Los Angeles International Airport (LAX) operated by the Los Angeles World Airport (LAWA) Authority. He is working with the LAANE and LAX staff to develop a comprehensive strategy for meeting local community concerns over emissions from flight operations and to engage federal agencies on the issue of local impacts of community airports.

Client – City of Santa Monica, Santa Monica, California

Dr. Clark is advising the City of Santa Monica on air quality issues related to current flight operations at the facility. He is working with the City staff to develop a comprehensive strategy for meeting local community concerns over emissions from flight operations and to engage federal agencies on the issue of local impacts of community airports.

Client: Omnitrans, San Bernardino, California

Dr. Clark managed a public health survey of three communities near transit fueling facilities in San Bernardino and Montclair California in compliance with California Senate Bill 1927. The survey included an epidemiological survey of the effected communities, emission surveys of local businesses, dispersion modeling to determine potential emission concentrations within the communities, and a comprehensive risk assessment of each community. The results of the study were presented to the Governor as mandated by Senate Bill 1927.

Client: Confidential, San Francisco, California

Summarized cancer types associated with exposure to metals and smoking. Researched the specific types of cancers associated with exposure to metals and smoking. Provided causation analysis of the association between cancer types and exposure for use by non-public health professionals.

Client: Confidential, Minneapolis, Minnesota

Prepared human health risk assessment of workers exposed to VOCs from neighboring petroleum storage/transport facility. Reviewed the systems in place for distribution of petroleum hydrocarbons to identify chemicals of concern (COCs), prepared comprehensive toxicological summaries of COCs, and quantified potential risks from carcinogens and non-carcinogens to receptors at or adjacent to site. This evaluation was used in the support of litigation.

Client – United Kingdom Environmental Agency

Dr. Clark is part of team that performed comprehensive evaluation of soil vapor intrusion of VOCs from former landfill adjacent residences for the United Kingdom's Environment

Agency. The evaluation included collection of liquid and soil vapor samples at site, modeling of vapor migration using the Johnson Ettinger Vapor Intrusion model, and calculation of site-specific health based vapor thresholds for chlorinated solvents, aromatic hydrocarbons, and semi-volatile organic compounds. The evaluation also included a detailed evaluation of the use, chemical characteristics, fate and transport, and toxicology of chemicals of concern (COC). The results of the evaluation have been used as a briefing tool for public health professionals.

EMERGING/PERSISTENT CONTAMINANT RESEARCH/PROJECTS

Client: Ameren Services, St. Louis, Missouri

Managed the preparation of a comprehensive human health risk assessment of workers and residents at or near an NPL site in Missouri. The former operations at the Property included the servicing and repair of electrical transformers, which resulted in soils and groundwater beneath the Property and adjacent land becoming impacted with PCB and chlorinated solvent compounds. The results were submitted to U.S. EPA for evaluation and will be used in the final ROD.

Client: City of Santa Clarita, Santa Clarita, California

Dr. Clark is managing the oversight of the characterization, remediation and development activities of a former 1,000 acre munitions manufacturing facility for the City of Santa Clarita. The site is impacted with a number of contaminants including perchlorate, unexploded ordinance, and volatile organic compounds (VOCs). The site is currently under a number of regulatory consent orders, including an Immanent and Substantial Endangerment Order. Dr. Clark is assisting the impacted municipality with the development of remediation strategies, interaction with the responsible parties and stakeholders, as well as interfacing with the regulatory agency responsible for oversight of the site cleanup.

Client: Confidential, Los Angeles, California

Prepared comprehensive evaluation of perchlorate in environment. Dr. Clark evaluated the production, use, chemical characteristics, fate and transport, toxicology, and remediation of perchlorate. Perchlorates form the basis of solid rocket fuels and have recently been detected in water supplies in the United States. The results of this research

were presented to the USEPA, National GroundWater, and ultimately published in a recent book entitled *Perchlorate in the Environment.*

Client – Confidential, Los Angeles, California

Dr. Clark is performing a comprehensive review of the potential for pharmaceuticals and their by-products to impact groundwater and surface water supplies. This evaluation will include a review if available data on the history of pharmaceutical production in the United States; the chemical characteristics of various pharmaceuticals; environmental fate and transport; uptake by xenobiotics; the potential effects of pharmaceuticals on water treatment systems; and the potential threat to public health. The results of the evaluation may be used as a briefing tool for non-public health professionals.

PUBLIC HEALTH/TOXICOLOGY

Client: Brayton Purcell, Novato, California

Dr. Clark performed a toxicological assessment of residents exposed to methyl-tertiary butyl ether (MTBE) from leaking underground storage tanks (LUSTs) adjacent to the subject property. The symptomology of residents and guests of the subject property were evaluated against the known outcomes in published literature to exposure to MTBE. The study found that residents had been exposed to MTBE in their drinking water; that concentrations of MTBE detected at the site were above regulatory guidelines; and, that the symptoms and outcomes expressed by residents and guests were consistent with symptoms and outcomes documented in published literature.

Client: Confidential, San Francisco, California

Identified and analyzed fifty years of epidemiological literature on workplace exposures to heavy metals. This research resulted in a summary of the types of cancer and non-cancer diseases associated with occupational exposure to chromium as well as the mortality and morbidity rates.

Client: Confidential, San Francisco, California

Summarized major public health research in United States. Identified major public health research efforts within United States over last twenty years. Results were used as a briefing tool for non-public health professionals.

Client: Confidential, San Francisco, California

Quantified the potential multi-pathway dose received by humans from a pesticide applied indoors. Part of team that developed exposure model and evaluated exposure concentrations in a comprehensive report on the plausible range of doses received by a specific person. This evaluation was used in the support of litigation.

Client: Covanta Energy, Westwood, California

Evaluated health risk from metals in biosolids applied as soil amendment on agricultural lands. The biosolids were created at a forest waste cogeneration facility using 96% whole tree wood chips and 4 percent green waste. Mass loading calculations were used to estimate Cr(VI) concentrations in agricultural soils based on a maximum loading rate of 40 tons of biomass per acre of agricultural soil. The results of the study were used by the Regulatory agency to determine that the application of biosolids did not constitute a health risk to workers applying the biosolids or to residences near the agricultural lands.

Client – United Kingdom Environmental Agency

Oversaw a comprehensive toxicological evaluation of methyl-*tertiary* butyl ether (M*t*BE) for the United Kingdom's Environment Agency. The evaluation included available data on the production, use, chemical characteristics, fate and transport, toxicology, and remediation of M*t*BE. The results of the evaluation have been used as a briefing tool for public health professionals.

Client – Confidential, Los Angeles, California

Prepared comprehensive evaluation of *tertiary* butyl alcohol (TBA) in municipal drinking water system. TBA is the primary breakdown product of M*t*BE, and is suspected to be the primary cause of M*t*BE toxicity. This evaluation will include available information on the production, use, chemical characteristics, fate and transport in the environment, absorption, distribution, routes of detoxification, metabolites, carcinogenic potential, and remediation of TBA. The results of the evaluation were used as a briefing tool for non-public health professionals.

Client – Confidential, Los Angeles, California

Prepared comprehensive evaluation of methyl *tertiary* butyl ether (MTBE) in municipal drinking water system. MTBE is a chemical added to gasoline to increase the octane

rating and to meet Federally mandated emission criteria. The evaluation included available data on the production, use, chemical characteristics, fate and transport, toxicology, and remediation of MTBE. The results of the evaluation have been were used as a briefing tool for non-public health professionals.

Client – Ministry of Environment, Lands & Parks, British Columbia

Dr. Clark assisted in the development of water quality guidelines for methyl tertiary-butyl ether (MTBE) to protect water uses in British Columbia (BC). The water uses to be considered includes freshwater and marine life, wildlife, industrial, and agricultural (e.g., irrigation and livestock watering) water uses. Guidelines from other jurisdictions for the protection of drinking water, recreation and aesthetics were to be identified.

Client: Confidential, Los Angeles, California

Prepared physiologically based pharmacokinetic (PBPK) assessment of lead risk of receptors at middle school built over former industrial facility. This evaluation is being used to determine cleanup goals and will be basis for regulatory closure of site.

Client: Kaiser Venture Incorporated, Fontana, California

Prepared PBPK assessment of lead risk of receptors at a 1,100-acre former steel mill. This evaluation was used as the basis for granting closure of the site by lead regulatory agency.

RISK ASSESSMENTS/REMEDIAL INVESTIGATIONS

Client: Confidential, Atlanta, Georgia

Researched potential exposure and health risks to community members potentially exposed to creosote, polycyclic aromatic hydrocarbons, pentachlorophenol, and dioxin compounds used at a former wood treatment facility. Prepared a comprehensive toxicological summary of the chemicals of concern, including the chemical characteristics, absorption, distribution, and carcinogenic potential. Prepared risk characterization of the carcinogenic and non-carcinogenic chemicals based on the exposure assessment to quantify the potential risk to members of the surrounding community. This evaluation was used to help settle class-action tort.

Client: Confidential, Escondido, California

Prepared comprehensive Preliminary Endangerment Assessment (PEA) of dense non-aqueous liquid phase hydrocarbon (chlorinated solvents) contamination at a former printed circuit board manufacturing facility. This evaluation was used for litigation support and may be used as the basis for reaching closure of the site with the lead regulatory agency.

Client: Confidential, San Francisco, California

Summarized epidemiological evidence for connective tissue and autoimmune diseases for product liability litigation. Identified epidemiological research efforts on the health effects of medical prostheses. This research was used in a meta-analysis of the health effects and as a briefing tool for non-public health professionals.

Client: Confidential, Bogotá, Columbia

Prepared comprehensive evaluation of the potential health risks associated with the redevelopment of a 13.7 hectares plastic manufacturing facility in Bogotá, Colombia The risk assessment was used as the basis for the remedial goals and closure of the site.

Client: Confidential, Los Angeles, California

Prepared comprehensive human health risk assessment of students, staff, and residents potentially exposed to heavy metals (principally cadmium) and VOCs from soil and soil vapor at 12-acre former crude oilfield and municipal landfill. The site is currently used as a middle school housing approximately 3,000 children. The evaluation determined that the site was safe for the current and future uses and was used as the basis for regulatory closure of site.

Client: Confidential, Los Angeles, California

Managed remedial investigation (RI) of heavy metals and volatile organic chemicals (VOCs) for a 15-acre former manufacturing facility. The RI investigation of the site included over 800 different sampling locations and the collection of soil, soil gas, and groundwater samples. The site is currently used as a year round school housing approximately 3,000 children. The Remedial Investigation was performed in a manner

that did not interrupt school activities and met the time restrictions placed on the project by the overseeing regulatory agency. The RI Report identified the off-site source of metals that impacted groundwater beneath the site and the sources of VOCs in soil gas and groundwater. The RI included a numerical model of vapor intrusion into the buildings at the site from the vadose zone to determine exposure concentrations and an air dispersion model of VOCs from the proposed soil vapor treatment system. The Feasibility Study for the Site is currently being drafted and may be used as the basis for granting closure of the site by DTSC.

Client: Confidential, Los Angeles, California

Prepared comprehensive human health risk assessment of students, staff, and residents potentially exposed to heavy metals (principally lead), VOCs, SVOCs, and PCBs from soil, soil vapor, and groundwater at 15-acre former manufacturing facility. The site is currently used as a year round school housing approximately 3,000 children. The evaluation determined that the site was safe for the current and future uses and will be basis for regulatory closure of site.

Client: Confidential, Los Angeles, California

Prepared comprehensive evaluation of VOC vapor intrusion into classrooms of middle school that was former 15-acre industrial facility. Using the Johnson-Ettinger Vapor Intrusion model, the evaluation determined acceptable soil gas concentrations at the site that did not pose health threat to students, staff, and residents. This evaluation is being used to determine cleanup goals and will be basis for regulatory closure of site.

Client –Dominguez Energy, Carson, California

Prepared comprehensive evaluation of the potential health risks associated with the redevelopment of 6-acre portion of a 500-acre oil and natural gas production facility in Carson, California. The risk assessment was used as the basis for closure of the site.

Kaiser Ventures Incorporated, Fontana, California

Prepared health risk assessment of semi-volatile organic chemicals and metals for a fifty-year old wastewater treatment facility used at a 1,100-acre former steel mill. This evaluation was used as the basis for granting closure of the site by lead regulatory agency.

ANR Freight - Los Angeles, California

Prepared a comprehensive Preliminary Endangerment Assessment (PEA) of petroleum hydrocarbon and metal contamination of a former freight depot. This evaluation was as the basis for reaching closure of the site with lead regulatory agency.

Kaiser Ventures Incorporated, Fontana, California

Prepared comprehensive health risk assessment of semi-volatile organic chemicals and metals for 23-acre parcel of a 1,100-acre former steel mill. The health risk assessment was used to determine clean up goals and as the basis for granting closure of the site by lead regulatory agency. Air dispersion modeling using ISCST3 was performed to determine downwind exposure point concentrations at sensitive receptors within a 1 kilometer radius of the site. The results of the health risk assessment were presented at a public meeting sponsored by the Department of Toxic Substances Control (DTSC) in the community potentially affected by the site.

Unocal Corporation - Los Angeles, California

Prepared comprehensive assessment of petroleum hydrocarbons and metals for a former petroleum service station located next to sensitive population center (elementary school). The assessment used a probabilistic approach to estimate risks to the community and was used as the basis for granting closure of the site by lead regulatory agency.

Client: Confidential, Los Angeles, California

Managed oversight of remedial investigation most contaminated heavy metal site in California. Lead concentrations in soil excess of 68,000,000 parts per billion (ppb) have been measured at the site. This State Superfund Site was a former hard chrome plating operation that operated for approximately 40-years.

Client: Confidential, San Francisco, California

Coordinator of regional monitoring program to determine background concentrations of metals in air. Acted as liaison with SCAQMD and CARB to perform co-location sampling and comparison of accepted regulatory method with ASTM methodology.

Client: Confidential, San Francisco, California

Analyzed historical air monitoring data for South Coast Air Basin in Southern California and potential health risks related to ambient concentrations of carcinogenic metals and volatile organic compounds. Identified and reviewed the available literature and calculated risks from toxins in South Coast Air Basin.

IT Corporation, North Carolina

Prepared comprehensive evaluation of potential exposure of workers to air-borne VOCs at hazardous waste storage facility under SUPERFUND cleanup decree. Assessment used in developing health based clean-up levels.

EXHIBIT B

WILSON IHRIG
ACOUSTICS, NOISE & VIBRATION

CALIFORNIA
WASHINGTON
NEW YORK

WI #24-001.61

December 2, 2024

Richard M. Franco, Esquire
Adams Broadwell Joseph & Cardozo
601 Gateway Boulevard, Suite 1000
South San Francisco, California 94080

SUBJECT: 1977 Saturn Data Center Project Mitigated Negative Declaration, Comments on the Noise and Vibration Analysis

Dear Mr. Franco,

Per your request, I have reviewed the subject matter documents for the 1977 Saturn Data Center Project (Project) Mitigated Negative Declaration (MND) in Monterey Park, California. The MND includes a Noise and Vibration Analysis Memorandum as Appendix J (Noise Memo). The project would demolish existing structures and construct a one story building.

Wilson Ihrig, Acoustical Consultants, has practiced exclusively in the field of acoustics since 1966. During our 58 years of operation, we have prepared hundreds of noise studies for Environmental Impact Reports and Statements. We have one of the largest technical laboratories in the acoustical consulting industry. We also utilize industry-standard acoustical programs such as Roadway Construction Noise Model (RCNM), SoundPLAN, and CADNA. In short, we are well qualified to prepare environmental noise studies and review studies prepared by others.

3-28

Adverse Effects of Noise[1]

Noise-Induced Hearing Loss. If a person is repeatedly exposed to loud noises, he or she may experience noise-induced hearing impairment or loss. In the United States, both the Occupational Health and Safety Administration (OSHA) and the National Institute for Occupational Safety and Health (NIOSH) promote standards and regulations to protect the hearing of people exposed to high levels of industrial noise.

3-29

Speech Interference. Another common problem associated with noise is speech interference. In addition to the obvious issues that may arise from misunderstandings, speech interference also leads to problems with concentration fatigue, irritation, decreased working capacity, and automatic stress reactions. For complete speech intelligibility, the sound level of the speech should be 15 to 18 dBA higher than the background noise. Typical indoor speech levels are 45 to 50 dBA at 1 meter, so any

[1] More information on these and other adverse effects of noise may be found in *Guidelines for Community Noise*, eds B Berglund, T Lindvall, and D Schwela, World Health Organization, Geneva, Switzerland, 1999. (https://www.who.int/docstore/peh/noise/Comnoise-1.pdf)

noise above 30 dBA begins to interfere with speech intelligibility. The common reaction to higher background noise levels is to raise one's voice. If this is required persistently for long periods of time, stress reactions and irritation will likely result.

Sleep Disturbance. Noise can disturb sleep by making it more difficult to fall asleep, by waking someone after they are asleep, or by altering their sleep stage, e.g., reducing the amount of rapid eye movement (REM) sleep. Noise exposure for people who are sleeping has also been linked to increased blood pressure, increased heart rate, increase in body movements, and other physiological effects. Not surprisingly, people whose sleep is disturbed by noise often experience secondary effects such as increased fatigue, depressed mood, and decreased work performance.

Cardiovascular and Physiological Effects. Human's bodily reactions to noise are rooted in the "fight or flight" response that evolved when many noises signaled imminent danger. These include increased blood pressure, elevated heart rate, and vasoconstriction. Prolonged exposure to acute noises can result in permanent effects such as hypertension and heart disease.

Impaired Cognitive Performance. Studies have established that noise exposure impairs people's abilities to perform complex tasks (tasks that require attention to detail or analytical processes), and it makes reading, paying attention, solving problems, and memorizing more difficult. Therefore, there are standards for classroom background noise levels, which is why offices and libraries are designed to provide quiet work environments. One societal change brought about by the COVID-19 pandemic is that many people now routinely work and learn from home, and this has given rise to more noise complaints from loud daytime activities such as construction work.

3-29 cont.

Errors and Omissions

The MND and Noise Memo contain several errors and omits several items. Several of these items are explored in more detail following this list:

1. The MND does not identify the noise metrics used for the existing noise data. The Noise Memo describes several different metrics, and it not clear which ones are being used to present the existing noise in Table 4.13-2. In order to use this data to adjust the City's noise ordinance for the measured noise level, this should be the **L_{50}, or median noise** level, however Table 4.13-6 references these values as L_{eq}, and the construction noise analysis uses L_{eq}. L_{50} and L_{eq} are not the same metric; the L_{eq} can be very similar to L_{50}, but it is often several decibels higher. Using the proper median value would result in significant impacts.

2. For the purposes of CEQA, the MND must provide an analysis of potentially significant impacts. Therefore, the existing noise in Table 4.13-2 must show the range of the median noise level (L_{50}) derived on an hourly basis during daytime and nighttime periods, and the minimum values must be used to evaluate potentially significant impacts.

3-30

3. The noise analysis neglects to take into account the tonal penalty that the City applies to noise equipment (such as chillers and generators). This is an error, and the noise limits shown in Table 4.13-6 must reflect a lower noise limit reduced by 5 dBA. As described below, using the correct noise limit would result in significant noise impacts.

3-31

4. The Noise Memo does not provide evidence to document the source of the Project's rooftop equipment noise emission levels. The MND states that 23 rooftop chillers and 14 emergency

3-32

generators will be utilized (p. 10). The Noise Memo does not identify the source of the reference sound power levels used in its analysis for HVAC rooftop equipment and it lacks sound power data for the generators. The failure to identify the HVAC and generator sound power data makes it impossible to evaluate the Noise Memo's conclusions regarding operational noise impacts. The MND's conclusions that the project will not cause significant noise impact is therefore not supported by substantial evidence. 3-32 cont.

5. The construction noise analysis erroneously relies on FTA guidance criteria without taking into account the existing noise environment. The FTA guidance states, "Project construction noise criteria should account for the existing noise environment, the absolute noise levels during construction activities, the duration of the construction, and the adjacent land use." 3-33

For the purposes of CEQA, the closest distances must be used to identify potentially significant noise impacts.

Item #3 Mechanical Equipment Noise Levels Would Be Significant

Table 4.13-6 contains two errors: 1) the Ambient noise level referenced must be the median noise level, L50, not the Leq, 2) the noise limit must be lowered by 5 dBA as noted above. Furthermore, for the purposes of CEQA and an MND analysis, the ambient median noise levels referenced should be reflective of the lowest values in the daytime and nighttime periods.

As shown, with these errors, the mechanical equipment noise would exceed the noise limits during the nighttime hours at the residences to the west, and at the northeastern residences the noise limits would be exceeded during the daytime and nighttime hours. See Figure 1. Since the L50 is less than the Leq, the actual quiet range of the median levels should be even lower than shown in the MND Table 4.13-6, which could result in significant noise impacts for daytime hours. 3-34

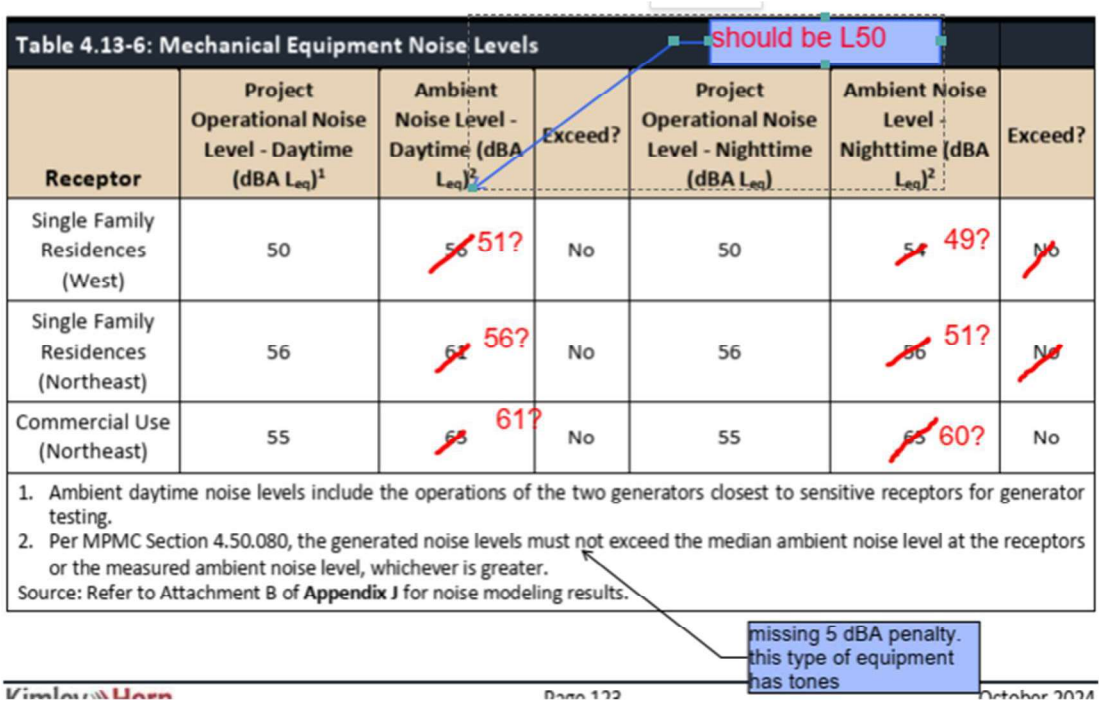

Table 4.13-6: Mechanical Equipment Noise Levels

Receptor	Project Operational Noise Level - Daytime (dBA L_{eq})[1]	Ambient Noise Level - Daytime (dBA L_{eq})[2]	Exceed?	Project Operational Noise Level - Nighttime (dBA L_{eq})	Ambient Noise Level - Nighttime (dBA L_{eq})[2]	Exceed?
Single Family Residences (West)	50	~~56~~ 51?	No	50	~~54~~ 49?	~~No~~
Single Family Residences (Northeast)	56	~~61~~ 56?	No	56	~~56~~ 51?	~~No~~
Commercial Use (Northeast)	55	~~65~~ 61?	No	55	~~65~~ 60?	No

1. Ambient daytime noise levels include the operations of the two generators closest to sensitive receptors for generator testing.
2. Per MPMC Section 4.50.080, the generated noise levels must not exceed the median ambient noise level at the receptors or the measured ambient noise level, whichever is greater.

Source: Refer to Attachment B of **Appendix J** for noise modeling results.

Figure 1 Markup of Table 4.13-6 from MND – MND Omits Generator Noise

Item #4 Generator Mechanical Equipment Noise Levels Would Be Significant

The results Table 4.13-6 cannot be verified since the source power levels for the chillers and RTUs are not provided in the Noise Memo. Furthermore, the noise from generators was not evaluated citing an "emergency" exemption. However, given the challenges with the California power grid and wildfire in recent years, a power outage could occur at the Project site that would not be considered a local "emergency". Therefore, for purposes of CEQA the noise from 12 simultaneously operating generators must be included. The sound from the generators could be the same or higher than the chillers and RTUs, and the combined operation of all mechanical equipment could be 3 dBA or more than shown in Table 4.13-6 (replicated above in Figure 1). Generators can be provided with sound reducing enclosures, and these must be included as mitigation.

3-35

Item #5 Construction Noise Impacts Would Be Significant

If the ambient L_{eq} are what is shown in Table 4.13-2, based on the discussions above, the ambient noise levels at residential areas ranges from 55 to 60 dBA, and the FTA 80 dBA noise threshold for residential shown in Table 4.13-5 would be 20 to 25 dBA higher than the ambient. This would be experienced as noise that is more than four times the existing environment, and it would be a significant impact. Allowing construction noise to exceed the ambient by more than 10 dBA would interfere with speech at neighboring properties. For purposes of CEQA and the MND, the construction analysis must also consider the construction noise from activities near the property line; the noise from these activities would be higher than those shown in Table 4.13-5 which were calculated at distances from the "main activity center". The Noise Memo provides that Sensitive Receptors in single family residences are 65 feet west of the Project site (Table 3). But, based on review of the MND's Figure 2-2 Local Vicinity Map, it is clear that the Project site directly abuts the residence at 2204 Iris Way, and may be as close as 20 feet from the construction zone on the Project site. Construction noise closer to the property line will result in significant noise impacts to nearby sensitive receptors, which will be more severe than analyzed in the MND. These significant impacts would require mitigation, such as sound walls and a construction noise plan. It is possible that some of these potentially significant impacts could not be mitigated below the level of significance, in which case an EIR must be provided.

3-36

Conclusions

The noise analysis for MND contains substantial omissions and errors. Correcting these issues would identify that Project would generate additional significant noise impacts and warrant an Environmental Impact Report (EIR) that includes mitigation measures to manage the anticipated impacts and full disclosure of any impacts that would remain significant.

ACOUSTICS, NOISE & VIBRATION

DEBORAH JUE

Principal

Since joining Wilson Ihrig in 1990, Ms. Jue has been involved in with many projects from environmental assessments and entitlements, through design development, construction documents and construction administration support. As an acoustical consultant, she has provided noise measurement, analysis and recommendations to control noise and vibration both at the interior of the project and at the neighboring properties. She has authored many reports concerning compliance with the requirements of California Noise Insulation Standards, Title 24, local Noise Elements, environmental assessments and Federal noise criteria, and is well aware of the additional design and construction technique requirements to achieve industry standards. Ms. Jue has authored or provided input for many environmental documents and technical studies in accordance with NEPA and California's CEQA regulations, most of them related to surface transportation, and she gives presentations to public officials when necessary to explain construction noise problems, noise mitigation goals, and noise control methods. She can develop construction noise and vibration criteria to address vibration damage potential to nearby buildings and sensitive structures, and vibration annoyance or disruption potential for occupants of nearby buildings.

VIA EMAIL

City of Monterey Park
Beth Chow, AICP, Planning Manager
320 West Newmark Avenue
Monterey Park, CA 91754
Email: bchow@montereypark.ca.gov

Dear Ms. Chow:

MITIGATED NEGATIVE DECLARATION (MND)
1977 SATURN DATA CENTER PROJECT
SCH: NO. 2024101397

The Department of Conservation's Geologic Energy Management Division (Division) has reviewed the above-referenced project for impacts with Division jurisdictional authority. The Division supervises the drilling, maintenance, and plugging and abandonment of oil, gas, and geothermal wells in California. The Division offers the following comments for your consideration. 4-1

The project area is in Los Angeles County and lies outside any designated oil field. However, based on the Division's online "Well Finder" application, an abandoned well, the "Monterey Park" 1 (API #03720192), is located within the footprint of the proposed new 1-story data center building. The Division's Construction Site Well Review Program should be contacted to review the status of this well. Division information can be found at: www.conservation.ca.gov. Individual well records are also available on the Division's web site, or by emailing CalGEMSouthern@conservation.ca.gov. 4-2

The scope and content of information that is germane to the Division's responsibility are contained in Section 3000 et seq. of the Public Resources Code, and administrative regulations under Title 14, Division 2, Chapters 2, 3 and 4 of the California Code of Regulations.

If any wells, including any plugged, abandoned or unrecorded wells, are damaged or uncovered during excavation or grading, remedial plugging operations may be required. If such damage or discovery occurs, the Division's district office must be contacted to obtain information on the requirements and approval to perform remedial operations. 4-3

The possibility for future problems from oil and gas wells that have been plugged and abandoned, or reabandoned, to the Division's current specifications are remote. However, the Division recommends that a diligent effort be made to avoid building over any plugged and abandoned well.

4-3 cont.

Questions regarding the Division's Construction Site Well Review Program can be addressed to the local Division's office in Long Beach by emailing CalGEMSouthern@conservation.ca.gov or by calling (562) 637-4400.

Sincerely,

Curtis M. Welty, PG
Associate Oil and Gas Engineer

Notice of Availability of a Draft Initial Study/Mitigated Negative Declaration for the 1977 Saturn Data Center Project (Proposed Project) (SCH No. 2024101397)

South Coast Air Quality Management District (South Coast AQMD) staff appreciate the opportunity to review the above-mentioned document. The City of Monterey Park is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. To provide context, South Coast AQMD staff has provided a brief summary of the project information and prepared the following comments which are organized by topic of concern. 5-1

Summary of Proposed Project Information in the MND

Based on the Draft Initial Study/Mitigated Negative Declaration (IS/MND), the Proposed Project consists of demolishing an existing site and constructing a new 218,400 square-foot data center with a new ancillary equipment yard, new electrical substation, parking, and landscaping. The ancillary equipment yard would be approximately 75,000 square feet and located adjacent to the data center's north side. The Proposed Project would include 14 new emergency diesel generators/engines to provide backup power in the event of an emergency. The Proposed Project would also include a new 24,000 square-foot electrical substation to provide electricity to the data center.[1] Based on a review of aerial photographs, South Coast AQMD staff found that the nearest sensitive receptor (e.g., residential development) is located 65 feet west of the Proposed Project.[2] Construction is anticipated to occur over one phase, lasting approximately 24 months, beginning as early as September 2025 and ending as early as August 2027.[3] The site of the Proposed Project encompasses 15.8 acres and is located at 1977 Saturn Street.[4] 5-2

South Coast AQMD Comments

Recommend Revisions to the CEQA Regional and Localized Operational Air Quality Impacts Analysis 5-3

According to the Draft IS/MND, the Proposed Project includes 14 new emergency diesel engines, each with a capacity of four megawatts (MW) which is equivalent to approximately 5,364

[1] IS/MND, Page 11.
[2] *Ibid*, Page 46.
[3] *Ibid*, Page 21.
[4] *Ibid*, Page 11.

horsepower (hp), to be located on the north side of the site. The operational emissions, both regional and localized, have been evaluated and calculated using the California Emissions Estimator Model (CalEEMod), as detailed in Appendix A-1: *Air Quality Analysis Memorandum*. The Lead Agency concludes that the Proposed Project's operational emissions are less than the South Coast AQMD air quality significance thresholds for both regional and localized emissions.

However, the emissions calculations do not include operational emissions from the 14 new 5,364 hp emergency diesel engines, which would require air permits from South Coast AQMD. The omission of these operational emissions from the calculations is a major flaw in the analysis because the conclusion of less than significant air quality impacts is relying on underestimated emissions from all criteria pollutants. This is especially concerning considering the Proposed Project's proximity to residential neighborhoods. 5-3 cont.

To ensure a comprehensive analysis of the Proposed Project's regional and localized air quality impacts on the surrounding area, it is recommended that the Lead Agency:

- Include the calculated emissions from the 14 new 5,364 hp emergency diesel engines. Permits for emergency engines are typically limited to up to 50 hours per year for maintenance and testing and no more than 200 hours per year of total operation (this includes emergency use). Therefore, the CEQA document should calculate the emissions from the operation of all 14 emergency engines for 200 hours per year or if a lower number of hours of operation is used, South Coast AQMD staff would have to include a condition in the permit limiting the hours of operation to what was assumed in the CEQA document. Please also note that depending on the engine tier, the Proposed Project might trigger Title V requirements, as described later. 5-4
- Re-run CalEEMod to incorporate these emissions and reassess the total operational emissions.
- Utilize an appropriate air quality dispersion model, such as AERMOD, to evaluate localized air quality impacts to the 1-hour NOx federal and state ambient air quality standards (AAQS) from the operation of all 14 new 5,364 hp emergency diesel engines. Since the engines are not restricted to when they will be operated for maintenance and testing, the CEQA document should analyze the impacts from all 14 new 5,364 hp emergency diesel engines concurrently operating during a one-hour duration and compare the results to the AAQS. 5-5

These updated calculations, along with their associated impact analyses, should be discussed and included in a revised CEQA document to provide a transparent and complete assessment of the Proposed Project's air quality impacts. 5-6

Recommend Revisions to Greenhouse Gas Analysis

According to Section 4.8, *Greenhouse Gas Emissions*, the Draft IS/MND concluded a less than significant impact on greenhouse gases (GHG). However, Table 4.8-3 – *Operational Greenhouse Gas Emissions Opening Year* indicates that the total GHG emissions from the Proposed Project would be 85,309 MTCO2e per year, which significantly exceeds South Coast AQMD's air quality significance threshold for GHGs emissions of 10,000 MTCO2e per year. As such, the GHG emission impacts of the Proposed Project should be concluded as significant. If the Proposed 5-7

Project results in significant environmental impacts that cannot be mitigated to a "less than significant" level through feasible mitigation measures, a more comprehensive environmental review, such as an Environmental Impact Report (EIR), will be required. The EIR must also include an analysis of alternative project options that could potentially reduce the environmental impacts. The Lead Agency is recommended to address this issue and revise the CEQA document accordingly.

5-7 cont.

Health Risk Assessment (HRA) during Project Operation

Similarly, the Draft IS/MND for the Proposed Project does not include a comprehensive assessment of the health risks associated with operating 14 new 5,364 hp emergency diesel engines. This omission of a health risk analysis from the calculations is another major flaw in the analysis because the majority of toxic air contaminants (TACs) emissions, primarily as diesel particulate matter (DPM) which is an air toxic and a carcinogen, will be emitted by these 5,364 hp engines. Additionally, the site of the Proposed Project is adjacent to multiple residential neighborhoods, with the nearest sensitive receptor located within 65 feet north of the Proposed Project site. As a result, the potential cancer risk associated with these 14 new 5,364 hp emergency diesel engines from the Proposed Project remains unknown and undisclosed.[5]

Based on the project description for the 14 new 5,364 hp emergency diesel engines, South Coast AQMD staff conducted a preliminary evaluation to estimate the potential cancer risk (CR). Using the Health Risk Assessment Tool and AERMOD-Ready Meteorological Data Files for South Coast AQMD permit applications and CEQA analyses[6], the estimated CR from one new 5,364 hp emergency diesel engine could be as high as 134 in one million, which significantly exceeds the South Coast AQMD CR threshold of 10 in one million.[7]

5-8

This calculation is based on the following assumptions:

- The diesel generator is equipped with a U.S. EPA-certified Tier 2 non-road diesel engine.[8]
- Particulate matter (PM) emission rate of 0.15 grams per brake horsepower-hour (g/bhp-hr) for diesel engines rated at ≥560 kilowatts (kW).
- Emergency diesel engine capacity: 4-MW (equivalent to 5,364 hp)
- Operation: up to 200 hours per year.
- Distance to the nearest sensitive receptor: 65 feet.

When the CR is estimated for all 14 new 5,364 hp emergency diesel engines, the total CR will be 1,876 in one million, far exceeding South Coast AQMD's air quality significance threshold of 10 in one million for TAC impacts. This substantial cancer risk highlights the potential to create significant adverse impacts from the 14 new 5,364 hp emergency diesel engines to the surrounding community, with the nearest residential receptors bearing the largest burden of that exposure.

[5] South Coast AQMD's guidance for performing a mobile source health risk assessment is available at: https://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis

[6] South Coast AQMD's Health Risk Assessment Tool and AERMOD-Ready Meteorological Data Files. https://www.aqmd.gov/assets/aermet/AERMET_files_And_HRA_Tool.html

[7] South Coast AQMD Air Quality Significance Thresholds. https://www.aqmd.gov/docs/default-source/ceqa/handbook/south-coast-aqmd-air-quality-significance-thresholds.pdf

[8] EPA Emission Standards for Nonroad Engines and Vehicles. https://www.epa.gov/emission-standards-reference-guide/epa-emission-standards-nonroad-engines-and-vehicles

However, if the Proposed Project utilizes Tier 4 Final engines in lieu of Tier 2 engines, the PM emission rate would decrease by about an order of magnitude to 0.02 g/bhp-hr, reducing the total CR to approximately 17.9 per one million. Even if Tier 4 Final engines are utilized, the total CR would remain significant because it would exceed the South Coast AQMD CR threshold of 10 in one million, but the CR impacts would occur at a lesser extent than if Tier 2 engines are utilized. This demonstrates the importance of adopting advanced, cleaner engine technologies during the design phase to reduce air quality impacts and protect public health, especially those of the residents who are located 65 feet away.

Therefore, the Lead Agency is strongly recommended to conduct an operational phase HRA that evaluates the impact of the 14 new 5,364 hp emergency diesel engines. This assessment is critical for determining the potential cancer risks to offsite sensitive receptors and workers and for comparing these risks to South Coast AQMD's Air Quality Significance Thresholds for TACs. The analysis should also disclose the potential chronic health risks associated with the Proposed Project's operation for residents and workers outside the Proposed Project's boundary in the revised CEQA document.

5-8 cont.

Title V Permit Requirements

Title V is a federal program designed to standardize air quality permits and the permitting process for major sources of emissions across the country. Title V requirements are implemented by the South Coast AQMD through its Regulation XXX – Title V Permits.[11] Title V only applies to major sources, which the U.S. EPA defines as facilities that emit or have the potential to emit (PTE) any criteria pollutant or hazardous air pollutant (HAP) at levels equal to or greater than the Major Source Thresholds (MST) found in Table 2 of South Coast AQMD's Rule 3001 – *Applicability*. For the South Coast Air Basin, which is where the Proposed Project is located, the MST is 10 tons per year for NOx.[9]

The U.S. EPA nonroad Tier 2 diesel engine emission limit for NOx + (Non-Methane Hydrocarbon) NMHC is 4.8 g/bhp-hr. Typically, NMHC accounts for 5% of this total (0.24 g/bhp-hr), leaving NOx emissions at 4.56 g/bhp-hr. Assuming NOx emissions are 4.56 g/bhp-hr and each 5,364 hp emergency diesel engine would be permitted to operate up to 50 hours per year for maintenance and testing, the 14 new emergency engines would emit 19 tons of NOx per year, which exceeds the MST. Therefore, the Proposed Project/facility would require an initial Title V permit application and be subject to Title V as well as South Coast AQMD Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards .[13] As part of the Title V permitting requirements, the facility will be required to install equipment that meets the Lowest Achievable Emissions Rate (LAER) at the time the permit is issued, which is currently a Tier 4 Final engine.

5-9

Therefore, the Lead Agency is recommended to revise the CEQA document to include a discussion of the Title V applicability requirements or apply additional feasible mitigation measures to ensure that the NOx emissions remain less than the MST.

[9] South Coast AQMD. Rule 3001 available at https://www.aqmd.gov/docs/default-source/rule-book/reg-xxx/rule-3001-applicability.pdf

Use of South Coast AQMD's Mass Rate Localized Significance Threshold (LST) Look-Up Table to Analyze the Proposed Project's Localized Air Quality Impact is not Consistent with Guidance for the LST Methodology

Based on the Project Description in MND, the Proposed Project covers approximately 15.8 acres.[10] The Lead Agency uses South Coast AQMD's Mass Rate LST Look-up Table for five acres as a screening tool to determine if the Proposed Project's operational daily emissions of NOx, CO, PM10 and PM2.5 could result in a significant impact to local air quality.[11] However, South Coast AQMD staff developed the LST methodology specifically for proposed projects that are less than or equal to five acres.[12] For projects exceeding five acres in size or projects that fall into specific categories outlined in Table 3-2 of the LST methodology, the Lead Agency is recommended to conduct project-specific dispersion modeling to accurately assess localized air quality impacts. Since the Proposed Project site is larger than five acres in size, includes numerous large combustion sources, and may potentially be subject to Title V requirements, the LST lookup tables are not applicable. Therefore, the Lead Agency is recommended to: 1) perform project-specific air dispersion modeling for the Proposed Project's operational phase emissions to determine localized air quality impacts; and 2) include the results in the revised CEQA document. 5-10

South Coast AQMD Air Permits and Role as a Responsible Agency

Since implementation of the Proposed Project would require the use of new stationary sources, including but not limited to emergency generators, air permits from South Coast AQMD will be required. The revised CEQA document should include a discussion about the South Coast AQMD rules that may potentially apply to the Proposed Project. In addition to Regulation XXX and Rule 317.1, those rules may include, for example, Rule 201 – Permit to Construct,[13] Rule 203 – Permit to Operate,[14] Rule 401 – Visible Emissions,[15] Rule 402 – Nuisance,[16] Rule 403 – Fugitive Dust,[17] Rule 1110.2 – Emissions from Gaseous and Liquid Fueled Engines,[18] Rule 1166 – VOC Contaminated Soil Excavation,[19] Regulation XIII – New Source Review,[20] Rule 1401 – Air 5-11

[19] South Coast AQMD. Rule 1166 available at https://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1166.pdf
[20] South Coast AQMD. Regulation XIII available at https://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/regulation-xiii

Toxics,[21] Rule 1466 – Control of Particulate Emissions from Soils with Toxic Air Contaminants,[22] Rule 1470 – Requirements for Stationary Diesel Fueled Internal Combustion and Other Compression Ignition Engines,[23] Rule 1472 – Requirements for Facilities with Multiple Stationary Emergency Standby Diesel-Fueled Internal Combustion Engines, and etc.[30] It is important to note that when air permits from South Coast AQMD are required, the role of South Coast AQMD would change from a Commenting Agency to a Responsible Agency under CEQA. In addition, if South Coast AQMD is a Responsible Agency, per CEQA Guidelines Section 15086, the Lead Agency is required to consult with South Coast AQMD.

5-11 cont.

CEQA Guidelines Section 15096 sets forth specific procedures for a Responsible Agency, including making a decision on the adequacy of the CEQA document for use as part of the process for conducting a review of the Proposed Project and issuing discretionary approvals. Moreover, it is important to note that if a Responsible Agency determines that a CEQA document is not adequate to rely upon for its discretionary approvals, the Responsible Agency must take further actions listed in CEQA Guideline Section 15096(e), which could have the effect of delaying the implementation of the Proposed Project. In its role as CEQA Responsible Agency, the South Coast AQMD is obligated to ensure that the CEQA document prepared for this Proposed Project contains a sufficient project description and analysis to be relied upon in order to issue any discretionary approvals that may be needed for air permits. South Coast AQMD staff is concerned that the project description and analysis in its current form in the MND is inadequate to be relied upon for this purpose.

5-12

For these reasons, the Final CEQA document should be revised to include a discussion about any and all new stationary and portable equipment requiring South Coast AQMD air permits, provide the evaluation of their air quality and greenhouse gas impacts, and identify South Coast AQMD as a Responsible Agency for the Proposed Project as this information will be relied upon as the basis for the permit conditions and emission limits for the air permit(s). Please contact South Coast AQMD's Engineering and Permitting staff at (909) 396-3385 for questions regarding what types of equipment would require air permits. For more general information on permits, please visit South Coast AQMD's webpage at https://www.aqmd.gov/home/permits.

5-13

Conclusion

Staff recommends that the Lead Agency revise the CEQA analysis to address the aforementioned comments by including emissions from the 14 new emergency engines and estimating the health risks to provide the necessary evidence to support the conclusions reached. If the requested information and analysis are not included in the Revised or Final MND or other type of CEQA document, the Lead Agency should provide reasons for not doing so. Pursuant to California Public Resources Code Section 21092.5(b) and CEQA Guidelines Section 15074, prior to approving the Proposed Project, the Lead Agency shall consider the MND for adoption together with any comments received during the public review process and notify each public agency when any

5-14
