◆ I16	ESE 1/10 - 1/3	(840 ft. / 0.159 mi.)	Local Lists of Hazardous waste / Contaminated Sites Local Lists of Registered Storage Tanks Other Ascertainable Records
	21 ft. Lower Elevation	361 ft. Above Sea Level	

Worksheet:

Impact on Target Property: VEC does not exist

Comments: The source is not within the area of concern, based on its distance, gradient and suspected chemical of concern (ASTM E 2600: 8.5.2 (1), 8.3.2).

Given the release to soil only, the cross-gradient location, the relative distance, and the regulatory closure, this facility does not appear to represent a significant potential threat to soil, soil vapor, and/or groundwater at the subject Site.

Conditions:

Petroleum Hydrocarbon Chemicals of Concern: YES

Groundwater Flow Gradient:

Hydrogeologically: YES

Crossgradient: YES

Violation Date:	10-20-2014
Citation:	22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description:	Failure to provide employees within the first six months after the date of their employment, or assignment to the facility, or to work unsupervised, or to a new position at a facility with hazardous waste training to ensure employees are competent in the following areas: hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed, emergency response and emergency equipment, and procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment. In addition, the owner/operator shall ensure facility personnel take part in an annual review of the initial training and training records training records on current personnel shall be kept until closure of the facility. Training records on former employees shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

SCE MONTEBELLO SERVICE CENTER, 1000 POTRERO GRANDE DR, MONTEREY PARK, CA 91770 (Continued)

Violation Notes:	Returned to compliance on 01/28/2015. OBSERVATION: The Owner/Operator failed to properly train personnel who handle hazardous waste. All employees shall be trained within six months of assignment and take part in an annual review of the initial training received. At a minimum, the training program shall be designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems, including where applicable: 1) procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment; 2) key parameters for automatic waste feed cut-off systems; 3) communications or alarm systems; 4) response to fires or explosions; 5) response to ground-water contamination incidents; and 6) shutdown of operations. The owner or operator shall maintain the following documents and records at the facility: 1) the job title for each position at the facility related to hazardous waste management, and [Truncated]

SCE - MESA SUBSTATION 700 E POTRERO GRANDE DR, MONTEREY PARK, CA, 91755		S104537935	
◆ 17	SSE 1/10 - 1/3	(972 ft. / 0.184 mi.)	Lists of state and tribal leaking storage tanks Other Ascertainable Records
	36 ft. Lower Elevation	346 ft. Above Sea Level	

Worksheet:

Impact on Target Property: VEC does not exist

Comments: The source is not within the area of concern, based on its distance, gradient and suspected chemical of concern (ASTM E 2600: 8.5.2 (1), 8.3.2).

Given the release to soil only, the cross-gradient location, the relative distance, and the regulatory closure, this facility does not appear to represent a significant potential threat to soil, soil vapor, and/or groundwater at the subject Site.

Conditions:

Petroleum Hydrocarbon Chemicals of Concern: YES

Groundwater Flow Gradient:

Hydrogeologically: YES

Crossgradient: YES

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Northgate Env. Management, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

PO # 2112.15

Project 1977 Saturn Street

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 3232-432A-8359

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Northgate Env. Management, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

It is of the greatest importance to have a complete history of the well. Use this form to report a full account of all important operations during the drilling and testing of the well or during re-drilling, altering of casing, plugging, or abandonment with the dates thereof. Be sure to include such items as hole size, formation test details, amounts of cement used, top and bottom of plugs, perforation details, sidetracked junk, bailing tests, shooting and initial production data.

Date	
6/29/67	Spudded at 7:00 P.M. - Santa Fe Drilling, Contractors Drilled 600' Preparing to run IES Log
6/30/67	Ran IES Log - Opened 10-5/8" hole to 13-3/4" to 610' Ran 16 joints of 9-5/8" 32.20#, H-40, new, seamless casing- Shoe at 610' Rigging up and running 9-5/8" casing.
7/1/67	Placed 50 cu.ft. of water ahead of cement. Cemented with 208 sacks of Class G cement, treated with 4% gel and followed with 130 sacks of Class G cement, treated with 2% $CaCl_2$, displaced with 260 cu.ft. of mud. Bumped plug - valve held Good cement returns - landed casing - tested flange weld to 2500 psi. Installing BOPE.
7/2/67	Drilling - Installed BOPE - Tested pipe and BOPE to 1200 psi- Drilled out shoe with 8/3/4" bit.
7/3/67 thru 7/5/67	Drilling
7/6/67	Drilling - Make up Dyna drill - Orient Dyna drill.
7/7/67	Drilling - Ran Dyna drill at 3728' with sealed bearing bit.
7/8/67 thru 7/19/67	Drilling
7/20/67	Drilling - Ran IES Log and Dipmeter to T.D.
7/21/67 thru 7/22/67	Plug #1 - Hung pipe at 3550'. Displaced 50 sacks of Class G cement treated with 2% $CaCl_2$ with 255 cu.ft. of mud. Placed 40 cu.ft. of H_2O ahead. Found top of plug at 3480'. Plug #2 - Hung pipe at 1,000'. Displaced 75 sacks of Class G cement treated with 3% $CaCl_2$ with 55 cu.ft. of mud. Placed 40 cu.ft. of H_2O ahead. Found top of cement at 800'. Plub #3 - Hung pipe at 638'. Displaced 60 sacks of Class G cement treated with 3% $CaCl_2$. Found top at 520'. Removed BOPE - Placed to 25' plug. Welded steel plate on top. Rig

South Pasadena, California — August 2, 1967
Agent for BRADFORD BISHOP, OPERATOR

DEAR SIR:

Your proposal to abandon Well No. "Monterey Park" 1 (037-20192),
Section 35, T. 1 S, R. 12 W, S.B. B. & M., ---------- Field, Los Angeles County,
dated July 20, 1967, received July 31, 1967, has been examined in conjunction with records filed in this office.
Present conditions as shown by the records and the proposal are as follows:

THE NOTICE STATES

"THE PRESENT CONDITION OF THE WELL IS:
1. Total Depth: 7920
2. Complete casing record, including plugs:
   30" of 16" conductor pipe cemented to surface
   610' of 9-5/8" casing cemented to surface
3. Last Produced never produced

ADDITIONAL DATA FOR DRY HOLE
4. Oil or Gas showings and results of tests: None
5. Stratigraphic markers and depths: None
6. Formation at bottom: Repetto
7. Base of fresh water sands: 3550 ft."

PROPOSAL
"THE PROPOSED WORK IS
Place cement plug at 3550'-3480'
Place cement plug at 640'-520'
Place 25' cement plug at top of surface casing"

DECISION
THE PROPOSAL, COVERING WORK ALREADY COMPLETED IN ACCORDANCE WITH PRIOR AGREEMENT, IS APPROVED.

Special Report on Operations Witnessed

No. T 167-663

Mr. Bradford Bishop
209 Fair Oaks Ave., Suite 407
South Pasadena, California 91030

Inglewood,
July 26, 1967 Calif.

~~Agent~~ for BRADFORD BISHOP, OPERATOR

DEAR SIR: (037-20192)

Operations at well No. "Monterey Park" 1 Sec. 35, T. 1 S, R. 12 W, S.B. B & M.
Field, in Los Angeles County, were witnessed
on July 21, 1967. Mr. L. Axtell, Engineer, representative of the supervisor was present
from 4:30 p.m. to 5:15 p.m. There were also present D. Shepard, Drilling Foreman

Present condition of well: 16" cem. 50'; 9-5/8" cem. 610'. TD 7920', plugged w/cem. 3550'-3480' & 640'-520'.
1000'-800' - See history

The operations were performed for the purpose of witnessing the plugging operations in the process of abandonment.

Mr. reported:

MR. R. ROTHERMEL, ENGINEER, WAS PRESENT AT THE WELL FROM 5:45 A.M. TO 6:45 A.M. ON JULY 21, 1967 AND MR. SHEPARD REPORTED:

1. An 8-3/4" hole was drilled from 610' to 7920'.
2. On July 21, 1967, 50 sacks of cement was pumped into the hole through 4-1/2" drill pipe hanging at 3550'.

THE ENGINEER NOTED THAT the cement plug at the reported depth of 3480' supported 1/2 of the weight of the drill pipe.

MR. L. AXTELL, ENGINEER, WAS PRESENT AT THE WELL FROM 4:30 P.M. TO 5:15 P.M. ON JULY 21, 1967 AND MR. SHEPARD REPORTED THAT on July 21, 1967, 60 sacks of cement was pumped into the hole through 4-1/2" drill pipe hanging at 640'.
THE ENGINEER NOTED THAT the cement plug at the reported depth of 520' supported 1/4 of the weight of the drill pipe.

THE PLUGGING OPERATIONS AS WITNESSED AND REPORTED ARE APPROVED.

Form 109-D (BOPE Memo)

B. O. P. E. MEMO No. T_____

Company BRADFORD BISHOP, OPERATOR Date 7/5 19 67

Operations at well No. "MONTEREY PARK" 1 (037-20192) Sec. 35 T. 1S R. 12W SB B&M.
Field L.A. County, were witnessed

on 7/3/67. Mr. L. AXTELL, representative of the supervisor was

present from 2:30 PM to 3:00 PM. There was also present V. STINNETT, DF

Present condition of well: 16" CEM 50'; 9 5/8" CEM 610', TD 2610' ± DRLG

Operations were performed for purpose of inspecting BOP equipment and installation.

Mr. STINNETT reported:

1. On JULY 1 1967, 9 5/8", 32 lb. casing was cemented in a 13 3/4" hole at 610' with 338 sacks/~~cu.ft.~~ of cement.
2. Cement returned/~~did not return~~ to the surface.
__. An additional _____ sacks/cu.ft. of cement was placed around the _____" casing from the surface.
3. The BLIND RAMS, the PIPE RAMS, and the BAG were each tested with a closed-in pressure of 1200 psi for 15 minutes, _____ psi for ____ minutes, and _____ psi for ____ minutes, respectively.
4. A 8 3/4" hole was being drilled ahead at 2610'±.

THE ENGINEER NOTED that the well was equipped with the following BOP equipment:

1. A SHAFFER manually and hydraulically operated double control gate for closing in the well with the drill pipe/~~tubing~~ out of the hole, and for closing around the 4 1/2" drill pipe/~~tubing~~.
2. A HYDRIL blow-out preventer for closing in the well with the drill pipe/~~tubing~~ out of the hole, and for closing around the 4 1/2" drill pipe/~~tubing~~.
__. A _____ manually and hydraulically operated control gate for closing in the well with the drill pipe/tubing out of the hole.
__. A _____ manually and hydraulically operated control gate for closing around the _____" drill pipe/tubing.
__. A _____ blow-out preventer for closing around the _____" drill pipe/tubing.
3. The controls for the above equipment were located outside the derrick and on the derrick floor.
4. A 2" mud fill-up line with a 2" high-pressure stopcock into the 9 5/8" casing below the above equipment.
5. A high-pressure STOPCOCK on the kelly/~~goose neck~~/~~stand pipe~~.
__. Remarks _____

THE BLOW-OUT PREVENTION EQUIPMENT AND INSTALLATION ARE APPROVED.

DEAR SIR:

Your proposal to dr111 Well No. "Monterey Park" 1 (037-20192),
Section 35, T. 1 S., R. 12 W., S.B. B. & M., -------- Field, Los Angeles County,
dated June 27, 1967, received June 28, 1967, has been examined in conjunction with records filed in this office.
Present conditions as shown by the records and the proposal are as follows:

THE NOTICE STATES

"Legal description of mineral-right lease, consisting of 100 acres, is as follows:
Portions of Sections 34 and 35, T1S, R12W, as shown on Plat attached hereto
Do mineral and surface leases coincide? Yes X No_____
Location of Well: 2150 feet North along west line of Sec. 35, 435 feet at right angles to said line from the southwest corner of section 35, T1S, T12W.
Elevation of ground above sea level 343 feet_____datum.
All depth measurements taken from top of KB which is 12 feet above ground."

PROPOSAL

"PROPOSED CASING PROGRAM

Size of Casing	Weight	Grade and Type	Top	Bottom	Cementing Depths
9-5/8	32.30	H-40	0	600	600 to surface
	15.50	J-55			
5-1/2	17.00	J-55	0	8000	-

Intended zone of completion: Miocene Estimated total depth 8000 ft.
It is understood that if changes in this plan become necessary we are to notify you immediately."

DECISION

THE PROPOSAL IS APPROVED PROVIDED:

1. Fluid consistent with good drilling practice shall be used, and the column of fluid maintained at all times to the surface, particularly while pulling the drill pipe.
2. Adequate blowout prevention equipment shall be installed and maintained in operating condition at all times.
3. THIS DIVISION SHALL BE NOTIFIED:
   a. To inspect the installed blowout prevention equipment before drilling below 1500'.
   b. To witness a test of the effectiveness of the 5-1/2" water shut-off above any zone to be produced.

EXECUTIVE SUMMARY

Ms. Trish Bars, GE Commercial Finance – Business Property Corporation, retained Bureau Veritas North America, Inc. (Bureau Veritas) to conduct a Phase I Environmental Site Assessment of Bank of the West located at 1977 Saturn Street, Monterey Park, Los Angeles County, California (the "subject property"). One of the objectives of the assessment was to provide an independent, professional opinion regarding *recognized environmental conditions*, as defined by ASTM, associated with the subject property. GE Commercial Finance requested this assessment in association with an acquisition.

This assessment was performed in accordance with GE Commercial Finance – Business Property Corporation *Scope of Work Guidelines for Environmental Due Diligence*. The scope of services provided by Bureau Veritas was authorized by electronic mail, dated May 10, 2007, and conducted under the conditions of Bureau Veritas' Preferred Provider Agreement for Phase I and Phase II Environmental Assessment Services with GE Capital Corporation, dated October 4, 1996. Details of the work performed, sources of information, and findings are presented in the report. Limitations of the assessment are described in Sections 1.2 and 1.3.

The subject property is a four-story 205,628-square foot office building with associated asphalt-paved parking located on approximately 15.83 acres of land in a commercial setting. The subject property building is currently used as a bank data service center with a cafeteria and kitchen on the fourth floor (serviced by Sodexho Management, Inc.). The building at the subject property was constructed during 1980. According to Ms. Mossman, Bank of the West has occupied the building since construction; however, due to several acquisitions, the bank has been listed under several business names. Ms. Mossman added that the building was Lloyd's Bank from 1980-1986, Sanwa Bank from 1986-2001 and United California Bank for approximately nine months. The planned short term use for the subject property is continued operation as a bank data service center.

The subject property was undeveloped from at least 1901 until at least 1980, when it was developed with the current irregular-shaped main building on the southern portion of the property. Building department records indicate the utility building north of the main building was constructed in 1990. The 1994 aerial photograph depicted the subject property with the main and utility buildings built in their current configurations. Adjoining properties remained unimproved land until 1956 when aerial photographs depicted the north adjoining property developed with a water tank on the eastern portion of the property and a second water tank was erected in its current configuration in the 2002 aerial photograph.

EXECUTIVE SUMMARY
(Continued)

Commercial development of the west adjoining property commenced at least 1981 and the south in at least 1989. The east adjoining property remained undeveloped but is currently partially used as a nursery.

This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property, except for the following:

- The subject property has three USTs (two 10,000-gallon and one 2,000-gallon diesel tanks). The two 10,000-gallon single-walled fiberglass tanks were installed in 1980. The 2,000-gallon steel double-walled fiberglass coating tank was installed in 1991. Old piping was removed in September 2006 and replaced with double-walled piping. At the time of piping removal, soil samples were collected beneath the piping and low concentrations of diesel (12 and 15 mg/kg) were detected. No further investigation was recommended. A Veeder Root Monitoring system is used to detect and log leaks in the tanks and pipes. In addition, monthly visual UST tank inspections are conducted. The 2,000-gallon UST and double-walled product lines last passed the Secondary Containment Testing conducted in October 2006. The 10,000-gallon tanks were last tightness tested in February 1997 (passed).

  Based on their age, the USTs at the subject property are considered to be a recognized environmental condition. Soil sampling in the vicinity of the USTs is recommended.

The following environmental condition, which is not considered to be a *recognized environmental condition*, was revealed during this assessment:

- On October 24, 1989, Diagnostic Engineering, Inc. (DEI) conducted a survey for ACM at the subject property. The survey consisted of a visual inspection of accessible areas, construction material sampling and air monitoring. Construction materials sampled that contained asbestos were the pipe run insulation (east roof hot water heater room), floor tile mastic (print shop) and roofing mastic (roof). An Operations and Maintenance Program is in place for the subject property.

1.0 INTRODUCTION

Ms. Trish Bars, GE Commercial Finance – Business Property Corporation, retained Bureau Veritas North American, Inc. (Bureau Veritas) to conduct a Phase I Environmental Site Assessment of Bank of the West located at 1977 Saturn Street in Monterey Park, Los Angeles County, California (the "subject property"). One of the objectives of the assessment was to provide an independent, professional opinion regarding *recognized environmental conditions*, as defined by ASTM, associated with the subject property. GE Commercial Finance requested this assessment in association with an acquisition.

1.1 PURPOSE

Good commercial and customary practice for conducting environmental site assessments has the goal of providing an independent, professional opinion regarding *recognized environmental conditions*, as defined by ASTM, associated with the subject property. The term *recognized environmental conditions* (RECs) is defined as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not RECs.

1.2 METHODOLOGY

This assessment was performed in accordance with GE Commercial Finance – Business Property Corporation *Scope of Work Guidelines for Environmental Due Diligence*. The scope of services provided by Bureau Veritas was authorized by electronic mail, dated May 10, 2007, and conducted under the conditions of Bureau Veritas' Preferred Provider Agreement for Phase I and Phase II Environmental Assessment Services with GE Capital Corporation, dated October 4, 1996. Any exceptions to these guidelines, and/or limitations of the assessment, are described in Section 1.3.

The assessment included the following components:

- A site walkthrough inspection of the property for visual evidence of potential environmental concerns including existing or potential soil and groundwater contamination, as evidenced by soil or pavement staining or discoloration, stressed vegetation; indications of waste dumping or burial, pits, ponds, or lagoons; containers of hazardous substances or petroleum products; electrical and hydraulic equipment that may contain polychlorinated biphenyls (PCBs), such as electrical transformers and hydraulic hoists; and underground and aboveground storage tanks.

- An investigation of historical use of the site by examining commercially available (EDR) aerial photographs, fire insurance maps, city directories, and/or historical topographic maps for evidence of prior land use that could have led to recognized environmental conditions.

- A review of commercially available (EDR) information on general geology and topography of the subject property, local groundwater conditions, and proximity to ecologically sensitive receptors, such as streams, that might be impacted by recognized environmental conditions and environmental issues.

- A site property line visual assessment of adjacent properties for evidence of potential offsite environmental conditions that may affect the subject property.

- A review of a commercial database summary of federal and state regulatory agency records (EDR) pertinent to the subject property and offsite facilities located within ASTM-specified search distances from the subject property.

- Evaluation of information gathered and development of this report

This assessment did not include sampling or analysis of soil, groundwater or other materials.

Ms. Mary Lun, Staff Environmental Consultant, from Bureau Veritas' Los Angeles Regional Office, conducted the site walkthrough portion of the assessment on May 17, 2007, accompanied by Ms. Trinidad Mossman, Bank of the West Property Manager, and Mr. Joe Rebelo, Bank of the West Chief Engineer. Ms. Mossman has been with Bank of the West for 26 years and has been associated with the subject property for 4 months. Mr. Rebelo has been associated with the subject property for 22 years. Photographs taken at the time of the assessment are included behind the *Photographs* Tab.

1.3 EXCEPTIONS AND LIMITING CONDITIONS OF ASSESSMENT

Information for the assessment was obtained from sources listed in Appendix A. This information, to the extent it was relied on to form our opinion, is assumed to be correct and complete. Bureau Veritas is not responsible for the quality or content of information from these sources.

Access was not provided to the following area of the subject property:

- Server room on the fourth level

No opinion regarding environmental conditions in areas that were not inspected can be formed. Lack of access to server room on the fourth level did not prevent an evaluation of the subject property with respect to recognized environmental conditions.

In accordance with GE Commercial Finance – Business Property Corporation *Scope of Work Guidelines for Environmental Due Diligence*, professional qualifications of staff working on this assessment have not been included in this report. Inclusion of professional qualifications is a requirement of ASTM E 1527-00.

The information and opinions rendered in this report are exclusively for use by GE Commercial Finance – Business Property Corporation. Bureau Veritas will not distribute or publish this report without consent except as required by law or court order. The information and opinions expressed in this report are given in response to a limited assignment and should be considered and implemented only in light of that assignment.

The information and opinions rendered in this report may also be used by Bank of the West, to the extent that Bureau Veritas' sole liability for any and all claims, damages, causes of actions, costs or fees shall not exceed $50,000 and shall arise only from Bureau Veritas' gross negligence. No other third party may rely on the report and is not afforded the status of a third party beneficiary unless expressly agreed to in writing by Bureau Veritas.

2.0 ENVIRONMENTAL ASSESSMENT FINDINGS

Property Name:	Bank of the West
Site Address:	1977 Saturn Street, Monterey Park, California
Owner:	Bank of the West

2.1 CURRENT SITE INFORMATION

Property Type:	Office building
Date of Site Inspection:	May 17, 2007
Property Size:	15.83 acres
Number and Size of Buildings Onsite:	One four-story building with 205,628 square feet of interior floor space
Construction Date:	1980
Current Site Usage:	The site is currently used as a bank data service center with a cafeteria on the fourth floor and associated asphalt-paved parking to the west, north and east.
Tenants:	Bank of the West and Sodexho Management, Inc. (cafeteria)
Areas Inspected:	Bureau Veritas inspected conference/workstation and office areas, computer/server rooms, restrooms, warehouse, electrical room, elevator room, kitchen, cafeteria, boiler room, chiller units, roof and dock area. Additionally, Bureau Veritas inspected the areas surrounding the building such as the utility room, electrical/gas bunker and the UST locations.

2.2 PRIOR USE INFORMATION

Summary of Prior Uses/Dates

According to aerial photographs, historical topographic maps, city directories and building department records, the subject property was undeveloped from at least 1901 until at least 1980, when it was developed with the current irregular-shaped main building on the southern portion of the property. Building department records indicate the utility building north of the main buildings was constructed in 1990. The 1994 aerial photograph depicted the subject property with the main and utility buildings built in their current configurations. Adjoining properties remained unimproved land until 1956 when aerial photographs depicted the north adjoining property developed with a water tank on the eastern portion of the property and a second water tank was erected in its current configuration in the 2002 aerial photograph. Commercial development of the west adjoining property commenced at least 1981 and the south in at least 1989. The east adjoining property remained undeveloped but is currently partially used as a nursery.

City Directory Review

City Directories were requested from EDR. A summary of the listings for the subject and adjoining properties is shown below.

Year	Subject Property	Adjoining Properties
1920-1956	Address Not Listed	Address Not Listed
1957	Address Not Listed	South Orange Avenue McConnell J O (1950)
1958	Address Not Listed	Address Not Listed

Aerial Photograph Review

Historical aerial photographs were provided for the period between 1928 and 2002. Photographs reviewed are summarized as follows:

Date	Scale	Comments
1928	500’	The subject and adjoining properties appeared to be unimproved land.
1938	555’	No apparent changes were observed from the 1928 aerial photograph.
1949	500’	No apparent changes were observed from the 1928 and 1938 aerial photographs.
1956	400’	The subject and east, west and south adjoining properties appeared unchanged from the 1928, 1938 and 1949 aerial photographs. The north adjoining property was observed developed with what appeared to be a water tank.
1968	480’	No apparent changes were observed from the 1956 aerial photograph; except the north adjoining property was observed developed with what appeared to be another water tank west of the water tank observed in the 1956 aerial photograph.
1976	666’	The subject, east and west adjoining properties appeared unchanged from the 1956 aerial photograph. The west water tank was no longer observed on the north adjoining property. The south adjoining property was observed with a partially developed Saturn Street, beyond which was undeveloped land.
1989	666’	The subject property was observed developed in its current configuration with a structure on the southern portion of the property with parking to the west, north and east. The north adjoining property appeared unchanged from the 1976 aerial photograph. The south and west adjoining properties were observed developed with buildings in their current configurations. The east adjoining property was observed developed with Orange Avenue, beyond which was unimproved land.
1994	666’	The subject property was observed developed with the utility building located north of the subject property building. The adjoining properties appeared unchanged from the 1989 aerial photograph.

Date	Scale	Comments
2002	666’	The subject, east, west and south adjoining properties appeared unchanged from the 1994 aerial photograph. The north adjoining property was observed developed in its current configuration with two water tanks.

Historical Topographic Map Review

Historical topographic maps were provided for the period between 1901 and 1994. The maps depicted the following:

Date	Series/Scale	Quadrangle	Comments
1901	60-min 1:250,000	Pasadena	Due to the small scale of the map, no observations can be made regarding the subject and adjoining properties.
1913	15-min 1:62,500	Pasadena	The subject and adjoining properties appeared to be unimproved land.
1915	15-min 1:62,500	Los Angeles	No apparent changes were observed from the 1913 topographic map.
1926	7.5-min 1:24,000	El Monte	No apparent changes were observed from the 1913 and 1915 topographic maps.
1953	7.5-min 1:24,000	Los Angeles and Vicinity East 2 of 4	No apparent changes were observed from the 1913, 1915 and 1926 topographic maps.
1966	7.5-min 1:24,000	El Monte	The subject, east and west adjoining properties were observed to be unimproved with an intermittent stream running through the properties. The north adjoining property was observed developed with a water tank. The south adjoining property appeared unchanged from the 1913, 1915, 1926 and 1953 topographic maps.
1972	7.5-min	El Monte	The subject, north, east and west adjoining properties appeared unchanged from the 1966

Date	Series/Scale	Quadrangle	Comments
	1:24,000		topographic maps. The south adjoining property was observed with a partially developed Saturn Street, beyond which was undeveloped land.
1981	7.5-min 1:24,000	El Monte	The subject, north, east and south adjoining properties appeared unchanged from the 1972 topographic map. The west adjoining property appeared developed with a rectangular-shaped structure in its current configuration. The intermittent stream was no longer observed running through the subject, east and west adjoining properties.
1994	7.5-min 1:24,000	El Monte	No apparent changes were observed from the 1981 topographic map.

Fire Insurance Map Review

Sanborn Fire Insurance Maps were requested from EDR. Fire insurance maps were not available according to EDR.

2.3 CITY/COUNTY FILE REVIEW/INTERVIEWS WITH LOCAL GOVERNMENT OFFICIALS

Agency: **City of Monterey Park Building & Planning Department**

Permits/Comments:

Date	Permits (Notes)
08/05/81	Building permit issued to Lloyd's Bank.
07/07/82	Building permit issued to Lloyd's Bank for loading dock renovations.
08/02/83	Electrical permit issued to Lloyd's Bank.
10/17/84	Building permit issued to Lloyd's Bank for adding interior partitions.
07/28/86	Electrical permit issued to Lloyd's Bank.
12/08/86	Electrical permit issued to Sanwa Bank.

Date	Permits (Notes)
11/18/87	Building permit issued to Sanwa Bank for 1,500-gallon grease interceptor.
02/18/88	Building plan check for industrial waste interceptor, photographic equipment and supplies.
12/20/90	Building plan check for 4,000-square foot one-story utility building.
03/24/94	Building permit issued to Sanwa Bank for tenant improvement.
12/03/95	Building and mechanical permits issued to Sanwa Bank.
04/19/99	Electrical permit issued to Sanwa Bank for electrical fixtures.
11/30/99	Certificate of Occupancy issued to Sanwa Bank for Sodexho Marriott Services for 1,683-square foot cafeteria/kitchen.
10/15/01	Mechanical permit issued to Sanwa Bank.
04/19/02	Certificate of Occupancy issued to Sanwa Bank for Sodexho Management, Inc. for 1,683-square foot cafeteria/kitchen.
11/07/03	Permit to re-roof with 1,000 squares of PVC.
06/09/05	Plumbing permit issued to Sanwa Bank.
08/10/06	Electrical permit issued to Sanwa Bank.

Agency: **Department of Health Services Public Health Investigation**

Permits/Comments: Records were requested from the Department of Health Services Public Health Investigation (DHSPHI) on May 11, 2007. On June 12, 2007, the DHSPHI responded that there are records on file for the subject property.

Date	Permits (Notes)
04/2003	Unified Program (UP) Contingency Plan
11/04/03	Annual Certification for Hazardous Materials

Date	Permits (Notes)
02/28/07	County of Los Angeles Fire Department Inspection Report Hazardous Materials – four cylinders (approximately 500 pounds) of Halon 1301, two 10,000-gallon and one 2,000-gallon tanks of diesel fuel, eleven 5-gallon containers of sodium hydroxide, one 55-gallon container of waste oil, 10,500 pounds of sulfuric acid and two 8-gallon cylinders of propane gas. Notices of Violations – no labeling on used oil container, no copy of waste manifest for used oil, inaccurate hazardous material inventory disclosure and expired consolidated permit.
03/30/07	Bank of the West submitted corrections of violations.

Agency: **Department of Toxic Substances Control**

Permits/Comments: Records were requested from the Department of Toxic Substances Control (DTSC) Glendale office on May 11, 2007. On May 25, 2007, The DTSC responded that there are no records on for the subject property.

Agency: **Los Angeles County Sanitation District**

Permits/Comments: Records were requested from the Los Angeles County Sanitation District (LACSD) on May 11, 2007. On May 14, 2007, the LACSD responded that there are no records for the subject property.

Agency: **Los Angeles Regional Water Quality Control Board**

Permits/Comments: Records were requested from the Los Angeles Regional Quality Control Board (LARWQCB) on May 11, 2007. On May 22, 2007, the LARWQCB responded that there are no records for the subject property.

Agency: **South Coast Air Quality Management District**

Permits/Comments: Bureau Veritas accessed the South Coast Air Quality Management District (SCAQMC) Facility Information Detail (FIND) website on May 11, 2007 to determine if there are records for the property. The FIND website indicated that there are no records for the subject property.

Agency: **Los Angeles County Fire Department**

Permits/Comments: Records were requested from the Los Angeles County Fire Department (LACFD) on May 11, 2007. On May 15, 2007, the LACFD responded that that the City of Monterey Park Fire Department would maintain records for the city.

Agency: **City of Monterey Park Fire Department**

Permits/Comments:

Date	Permits (Notes)
11/18/87	Building permit for 1,500-gallon grease interceptor.
08/18/88	Industrial Waste Disposal permit for 1,500-gallon grease interceptor.
01/01/91	Los Angeles County Department of Public Works (LACDPW) Hazardous Material UST report-monitoring system indicated leakage and needed re-certification of monitoring system.
08/22/91	Sanwa Bank letter to fire department regarding initial repair of damaged fuel line (damaged to single-walled copper fuel line for west UST).
04/15/94	Notice of Violation- provide and maintain (illuminated) exit signs and exit lighting.
09/18/96	After Action Report- response to hazardous incident of possible chlorine release. First engine arrived at 0947 hours and scene was secured at 1400 hours.
12/02/98	Closure of floor sink (film processing).
12/07/98	Industrial Wastewater Discharge permit.
03/23/03 05/16/03	Inspection records for alarm system.
12/08/04	Bank of the West- cleanup and pump grease trap.

Date	Permits (Notes)
05/10/05	Notice of Change- Sanwa Bank merged with Tokai Bank and became United California Bank; United California Bank merged with Bank of the West and became Bank of the West. Need to update business license and Certificate of Occupancy. Annual Inspection Notice for Sodexho- violation: need to strap and secure heat producing appliances (one 85-gallon and one 80-gallon gas water heaters were installed without permit sign off).
04/03/06	Annual Inspection Notice for Sodexho- violation and correction: service tags for automatic fire alarm system.
04/27/06	Annual Inspection Notice for Sodexho- violation corrected and closed.

Agency: **Los Angeles County Department of Public Works**

Permits/Comments:

Date	Permits (Notes)
02/17/88	Application for Industrial Waste Disposal Permit- wastewater producing operations include photo processing, two cooling towers and chiller bleed off/discharge.
08/18/88	Industrial Waste Disposal permit for 1,500-gallon grease interceptor.
03/24/93	Inspection- facility required to submit copies of manifests for silver recovery.
06/17/93	Letter from Sanwa Bank to LACDPW regarding moving forward to install trench and sump pump.
10/14/98	Notice of Non-Compliance- failure to submit Industrial Waste permit for closure of floor sink and required permit application fee.
10/15/98	Letter from Sanwa Bank to LACDPW that room is no longer being used for film processing; however, drain is still in use for condensation from air conditioning unit above computer room.
12/01/98	Certificates for USTs- one 2,000-gallon diesel and two 10,000-gallon diesel tanks.

Date	Permits (Notes)
12/07/98	LACDPW letter to City of Monterey Park Fire Marshal regarding closure authorization of Industrial Wastewater Discharge Permit for floor sink.
06/28/01	Annual Inspection- waste inspection fee paid by United California Bank.
11/2006	Report for UST Piping Removal & Replacement Activities (see Section 2.4 for more information).

2.4 PREVIOUS REPORTS

During this assessment, Bureau Veritas reviewed the following previous report:

Report for UST Piping Removal and Replacement Activities for Project Located at Bank of the West, 1977 Saturn Street, Monterey Park, California 91755, Prepared by Petcon Technologies, Inc., November 2006

Bank of the West contracted Petcon to remove and replace underground storage tank piping at the subject property as well as to conduct soil sampling in areas near the USTs. Two 10,000-gallon diesel USTs are located adjacent to the northwest of the office building and one 2,000-gallon diesel UST is located adjacent to the west of the utility building. Petcon conducted the activities on September 19, 2006. Soil was excavated to expose the tanks and piping. Product and rinseate were removed from the site and transported to an offsite facility in Compton, California for treatment and disposal. Liquid waste (oily mixture only) was also transported offsite. The UST piping that was removed from the site was transported to a destruction and recycling facility in Santa Fe Springs, California and was replaced with new double-walled piping. A total of 13 soil samples were collected 2 feet beneath the UST piping at 20-foot intervals and at elbows and joints. Diesel was detected in only two samples (P-1-1 at 15 mg/kg and P-2-2 at 12 mg/kg). Volatile organic compounds, methanol and ethanol were not detected in any of the samples. Unsuitable soil for backfill was removed from the site and the remaining excavated soil was placed back and compacted. No further action was recommended for the subject property due to the lack of significant release of fluids from the tank piping.

During the site inspection, Bureau Veritas observed the locations of the USTs as well as the cut out in the asphalt-pavement where the UST piping was removed and replaced.

2.5 GENERAL OBSERVATIONS

At the time of the walkthrough, the areas associated with the subject property appeared to be in good condition. The subject property is a four-story 205,628-square foot office building with associated asphalt-paved parking located on approximately 15.83 acres of land in a commercial setting. The subject property building is currently used as a bank data service center with a cafeteria and kitchen (serviced by Sodexho Management, Inc.). The cafeteria and kitchen occupy approximately 1,683-square feet of interior floor space on the fourth level. The building at the subject property was constructed during 1980. Exterior building materials consisted of cement and glass. Interior building materials consisted of suspended acoustical ceiling panels, carpet, ceramic tile and drywall. Floors in the computer/server rooms on the second and fourth level were raised. Restrooms are located on all four levels of the building. One hydraulic elevator was observed in the central portion of the building. The warehouse, located on the northwestern portion of the subject property building, contains miscellaneous office furniture and supplies, janitorial supplies, the chief engineer's office and an area surrounded by a chain-linked fence enclosing twelve 49-pound containers of water treatment chemicals on a secondary containment unit for the cooling towers, multiple cans of water-based latex paint and four 1-gallon containers of compressor oil. A 4,000-square foot utility building was observed northeast of the building in the parking area. The utility building is divided into two rooms. The west room of the utility building contains three generators with a 55-gallon drum of emergency diesel located on a secondary containment unit. The east room of the utility building is the Uninterrupted Power System (UPS) room which contains multiple rows of batteries. Piles of wood pallets and old carpet were observed on the northwest corner of the parking lot.

2.6 INTERVIEWS

At the time of the site inspection, Ms. Trinidad Mossman, Bank of the West Property Manager, and Mr. Joe Rebelo, Bank of the West Chief Engineer, provided information regarding the subject property. Ms. Mossman has been with Bank of the West for 26 years and has been associated with the subject property for 4 months.

Ms. Mossman stated that Bank of the West has occupied the building since construction; however, due to several acquisitions, the bank has been listed under several business names. Ms. Mossman added that the building was Lloyd's Bank from 1980-1986, Sanwa Bank from 1986-2001 and United California Bank for approximately nine months. According to Ms. Mossman, the subject property was formerly owned by Mc Caslin Properties and was vacant land. Ms. Mossman was unaware of any environmental concerns or liens associated with the subject property.

Mr. Rebelo has been associated with the subject property for 22 years. According to Mr. Rebelo, the site currently has three diesel USTs for the generators in the utility building. The two single-walled fiberglass 10,000-gallon tanks were installed in 1980 and the double-walled steel 2,000-gallon tank was installed in 1991. Documentation provided by Mr. Rebelo indicated that the two 10,000-gallon tanks were last tightness tested in 1997. According to results of the test, the tank systems on the subject property passed.

Mr. Rebelo stated that interior renovations in the property have been continuous since construction of the building. The carpet and ceiling panels have been replaced throughout the years and the roof was replaced in 2003. Fireproofing was observed on the warehouse ceiling. Mr. Rebelo stated that the fireproofing material is cementitious. Mr. Rebelo added that photo processing of microfiche films was formerly conducted onsite approximately 15 years ago. Chemicals used in the process were filtered and stored in drums that were picked twice a week. The remaining water flowed into the floor sink. When photo processing ceased, the room became office space and the floor sink was used for condensation from the air conditioning unit from the above room. Fire Department records indicate that the floor sink was closed in December 1998. Mr. Rebelo added that there are a total of 17 dry transformers located throughout the building. Mr. Rebelo was unaware of any environmental concerns or liens associated with the subject property.

2.7 CURRENT SITE CONDITIONS

Stained Soil	**Yes**		**No**	**XX**
Distressed Vegetation	**Yes**		**No**	**XX**

Chemical/Hazardous Materials Storage **Yes** **XX** **No** _____

Comments (types, amount, location): A 55-gallon drum of emergency diesel is stored on a secondary containment unit in the generator utility room. Twelve 49-pound containers of water treatment chemicals stored on secondary containment units, four 1-gallon containers of compressor oil and multiple cans of water-based latex paint were all observed in a chain-linked enclosed area in the warehouse. Janitorial supplies were also observed stored in the warehouse. Batteries are stored in the UPS within the utility building. Photo processing chemicals were used onsite approximately 15 years ago. No evidence of spills was observed.

Sumps/Pits/Floor Drains **Yes** **XX** **No** _____

Comments (types, amount, location): Several floor drains were observed in the kitchen. The floor drains are connected to the 1,500-gallon grease interceptor located on the southern portion of the property south of the building. The grease interceptor is permitted with Los Angeles County and is pumped approximately twice a year by MC Nottingham, Inc. A floor sink was formerly present onsite when the facility was photo processing microfiche films. Chemicals used in the process were filtered and stored in drums that were picked twice a week. The remaining water flowed into the floor sink. When photo processing ceased, the room became office space and the floor sink was used for condensation from the air conditioning unit from the above room. Fire Department records indicate that the floor sink was closed in December 1998.

Leachfields/Septic Tank **Yes** _____ **No** **XX**

Comments (location, condition): The subject property has been connected to the municipal sewer since 1980.

Source of Fuel for Heating: Gas boiler.

Wells Yes ____ No XX

Waste Handling and Disposal:

Comments (types, amount, location): Hazardous and non-hazardous wastes are generated onsite. Hazardous waste consist of 25 gallons of compressor oil (permitted with Los Angeles County; permit #AR0024091; renewed every two years) which is stored on a secondary containment unit. Non-hazardous waste is in the form of general refuse (e.g., paper, household trash and cardboard). Athens Trash Service hauls the solid waste twice a month.

Potential PCB-Containing Equipment Yes XX No ____

Type	Ownership	Condition / Comments
Two concrete pad-mounted transformer	Southern California Edison owned	The transformers are located in the approximately 8-foot high concrete electrical/gas bunker on the southern portion of the property. The transformers are in good condition and no staining was observed.
Elevator equipment	Facility owned	The hydraulic elevator and equipment room are located in central portion of the building. The elevator is serviced monthly by AMTEC. Concrete flooring with no stains were observed.

Aboveground Storage Tanks (ASTs) Yes ____ No XX

Underground Storage Tanks (USTs) Yes XX No ____

Age	Contents	Volume	Comments (construction, location, condition)

Age	Contents	Volume	Comments (construction, location, condition)
1980	Diesel	10,000 gallons	Constructed of single-walled fiberglass and located adjacent to the north of the main building on the western portion. No secondary containment system for tanks (only for piping). Equipped with Veeder Root Monitoring system. The tank was last tightness tested in February 1997.
1980	Diesel	10,000 gallons	Constructed of single-walled fiberglass and located adjacent to the north of the main building on the western portion. No secondary containment system for tanks (only for piping). Equipped with Veeder Root Monitoring system. The tank was last tightness tested in February 1997.
1991	Diesel	2,000 gallons	Constructed of double-walled steel and fiberglass coating with secondary containment and is located west of the utility building. Equipped with Veeder Root Monitoring system.

Physical Setting

Estimated Depth to Groundwater: Approximately 120 to 130 feet below ground surface (bgs). Groundwater wells located approximately 1.6 miles west and 1.8 miles northeast of subject property.

Gradient Direction: South/Southwest

Geology: The main soil type found on and around the subject property is urban land. This soil type typically consists of closely built-up areas in cities. Buildings, streets and sidewalks cover almost the entire surface. The soil has been so altered by urban works that identification is not feasible (EDR, 2007).

According to the United States Geological Survey (USGS), El Monte, California Quadrangle 7.5-Minute Topographic Map, elevations at and around the subject property range from 380 to 400 feet above mean sea level (amsl). The regional topographic slope direction is southerly and southwesterly.

Suspect Asbestos-Containing Materials

The subject property was inspected for the presence of suspect asbestos containing materials (ACM) such as ceiling and roofing materials, and presumed asbestos containing materials (PACM) as defined by OSHA (29 CFR 1926.1101) which includes thermal system insulation and surfacing material, if building construction was prior to 1981. Asphalt and vinyl flooring material installed no later than 1980 must also be considered asbestos-containing unless proven otherwise.

The inspection consisted of noting observable materials (i.e., materials that are readily accessible and visible without dismantling elements of the structure, such as carpet, wallboard, or ceiling panels) which may contain asbestos, or are, by definition, presumed asbestos containing. The inspection was not intended to disclose all possible sources of suspect ACM or PACM; rather, it was designed to assess the presence of suspect ACM and PACM in the most significant (because of the quantity present, condition, and/or ease of accessibility) sources observed at the property. Suspect ACM and PACM observed at the subject property includes the following:

Material	Condition	Quantity SF/LF	Amount Damaged & Comments	Friable	Location
Fireproofing	Good	Approximately 2,000 sq. ft.	None	Yes	Warehouse
Acoustic ceiling panels	Good	Approximately 200,000 sq. ft.	New panels	Yes	Throughout building
Wallboard and joint compound	Fair	Approximately 150,000 sq. ft.	1%	Yes	Throughout building
Carpet mastic	Not observed	Approximately 100,000 sq. ft	New carpeting	No	Offices, hallways, conference and work rooms.

On October 24, 1989, Diagnostic Engineering, Inc. (DEI) conducted a survey for ACM at the subject property. The survey consisted of visual inspection of accessible areas, construction material sampling and air monitoring. Construction materials sampled that contained asbestos were the pipe run insulation (east roof hot water heater room), floor tile mastic (print shop) and roofing mastic (roof). Asbestos-containing construction materials generally do not pose a health concern unless disturbed and inhaled.

Monitoring of airborne fiber levels were within the range normally found in outside air. An Operations and Maintenance Program was developed for the site.

Drinking Water

Source:	City of Monterey Park
Source meets standards for lead and other metals:	Yes (City of Monterey Park 2005 Year Water Quality Table)

Comments: The subject property has been connected to municipal water since 1980.

Radon

Radon Zone: 2 **Source:** EDR, 2007

Comments: Zone 2 has predicted average screening concentrations ranging from 2 or more picoCuries of radon per liter of air (pCi/L) to less than or equal to 4 pCi/L. The USEPA action level is 4.0 pCi/L.

Wetlands (Indicators Noted):	**Yes**		**No**	**XX**
Air Emission Sources:	**Yes**		**No**	**XX**

2.8 ADJACENT SITE LAND USES

North	Single-family homes City of Monterey Park Public Works-Water Division (water tanks) 1980 Clover Drive Chuy's Nursery 1996 Orange Street	**Comments**	No concerns were noted on the north adjoining properties.
East	Nursery/Undeveloped land	**Comments**	No concerns were noted on the east adjoining property.
South	Volk Center 1980 Saturn Street Undeveloped land (currently under construction)	**Comments**	No concerns were noted on the south adjoining properties.
West	One-story building 2001 Saturn Street	**Comments**	No concerns were noted on the west adjoining property.

2.9 REGULATORY SEARCH (ADJACENT OR UPGRADIENT SITES WITHIN ¼ MILE OF SUBJECT PROPERTY)

The subject property was identified in the databases reviewed. The property was listed under the UST, RCRA-SQG, HAZNET, LACHMS, SWEEPS UST, ERNS, EMI and FINDS databases. The property was listed because it has three USTs onsite (two 10,000-gallon and one 2,000-gallon diesel tanks), formerly had photochemicals/photoprocessing waste, in 1990 had 19 tons of carbon monoxide emission and waste consisting of aged, surplus organics, inorganic solid waste, oil and mixed oil. No environmental cleanup liens appear to be on record against the subject property, based on the review of information available from the EDR report.

The database review identified a total of 30 sites within the specified search distances from the subject property. A complete listing of these sites is included in Appendix B. None of the sites present no environmental concern to the subject property because they only hold an operating permit (which does not imply a release), require no further action, or based upon Bureau Veritas' review, are too distant

and/or topographically downgradient or crossgradient relative to the subject property to reasonably affect it.

The computer database review identified the following facilities within ¼ mile from the subject property.

Facility	Database	Orientation from Subject Site (miles)	Environmental Concern/Reason
Union Bank Operations Center 1980 Saturn Street	SWEEPS UST, UST, LACHMS	South adjoining property	No, the site is located downgradient from the subject property.
Ross Name Plate Company 2 Red Plum Circle	RCRA-SQG, FINDS, CA FID UST, SWEEPS UST	1/8 mile southwest	No, the site is located downgradient from the subject property.
Alpha Photonics 2019 Saturn Street	FINDS, HAZNET, RCRA-LQQ	1/8 mile southwest	No, the site is located downgradient from the subject property.
SCE-Montebello Service Center/Operating Industries, Inc./ Monterey Park District Office 1000 Potrero Grande Drive	UST, ODI, CA FID UST, SWEEPS UST, HIST UST, LUST, CORTESE	1/8 mile southeast	No, the site is located downgradient from the subject property.
Resurrection Cemetery 966 Potrero Grande Drive	HIST UST	1/8 mile southwest	No, the site is located downgradient from the subject property.

Facility	Database	Orientation from Subject Site (miles)	Environmental Concern/Reason
Operating INDS, Inc./Getty Synthetic Fuels, Inc. 2550 Greenwood Avenue/ 900 Potrero Grande Drive	CERCLIS, FINDS, NPL, RCRA-LQG, RCRA-TSDF, RAATS, CORRACTS, CONSENT, ROD, USEC, USIC,SWF/LF, WMUDS/SWAT, CA BEP, HAZNET, ENVIROSTAR, HIST CAL SITES	1/8-¼ mile south	No, the site is located downgradient from the subject property.

3.0 FINDINGS, OPINIONS, CONCLUSIONS, AND RECOMMENDATIONS

We have performed a Phase I Environmental Site Assessment in conformance with GE Commercial Finance – Business Property Corporation *Scope of Work Guidelines for Environmental Due Diligence* and ASTM 1527-00 of Bank of the West located at 1977 Saturn Street, Monterey Park, California, the subject property. Any exceptions to or deletions from this practice are described in Section 1.3.

This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property, except for the following:

- The subject property has three USTs (two 10,000-gallon and one 2,000-gallon diesel tanks). The two 10,000-gallon single-walled fiberglass tanks were installed in 1980. The 2,000-gallon steel double-walled fiberglass coating tank was installed in 1991. Old piping was removed in September 2006 and replaced with double-walled piping. At the time of piping removal, soil samples were collected beneath the piping and low concentrations of diesel (12 and 15 mg/kg) were detected. No further investigation was recommended. A Veeder Root Monitoring system is used to detect and log leaks in the tanks and pipes. In addition, monthly visual UST tank inspections are conducted. The 2,000-gallon UST and double-walled product lines last passed the Secondary Containment Testing conducted in October 2006. The 10,000-gallon tanks were last tightness tested in February 1997 (passed).

Based on their age, the USTs at the subject property are considered to be a recognized environmental condition. Soil sampling in the vicinity of the USTs is recommended.

The following environmental condition, which is not considered to be a *recognized environmental condition*, was revealed during this assessment:

- On October 24, 1989, Diagnostic Engineering, Inc. (DEI) conducted a survey for ACM at the subject property. The survey consisted of a visual inspection of accessible areas, construction material sampling and air monitoring. Construction materials sampled that contained asbestos were the pipe run insulation (east roof hot water heater room), floor tile mastic (print shop) and roofing mastic (roof). An Operations and Maintenance Program is in place for the subject property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 01/25/2007 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
OPERATING INDS INC	***2550 GREENWOOD AVE***	***1/4 - 1/2 SE***	***0***	***12***

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/27/2007 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/14/2007 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
OPERATING INDS INC	***2550 GREENWOOD AVE***	***1/4 - 1/2 SE***	***0***	***12***

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/13/2006 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store , treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/13/2006 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

OPERATING INDS INC	*2550 GREENWOOD AVE*	*1/4 - 1/2 SE*	*0*	*12*

INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 01/24/2007 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

WMUDS/SWAT: The Waste Management Unit Database System is used for program tracking and inventory of waste management units. The source is the State Water Resources Control Board.

A review of the WMUDS/SWAT list, as provided by EDR, and dated 04/01/2000 has revealed that there is 1 WMUDS/SWAT site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
OPERATING INDUSTRIES, INC.	*900 POTRERO GRANDE DRIV*	*1/4 - 1/2 SSW*	*D18*	*48*

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, and dated 04/01/2001 has revealed that there are 2 Cortese sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 04/10/2007 has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 02/27/2007 has revealed that there is

EXECUTIVE SUMMARY

1 ENVIROSTOR site within approximately 1 mile of the target property.

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS Site Alias Name(s):
Alias Name: MONTEREY PARK LDFL
Alias Address: Not reported
CA
Alias Name: OII
Alias Address: Not reported
CA
Alias Name: OPERATING INDUSTRIES, INC., LANDFILL
Alias Address: 900 N POTRERO GRANDE DR
MONTEREY PARK, CA 91754
Site Description: The Operating Industries, Inc. (OII) Site is located at 900 Potrero Grande Drive in the City of Monterey Park, approximately 10 miles east of downtown Los Angeles. The landfill property covers 190 acres and is divided by California Highway 60. The45 acres to the north of the freeway are referred to as the North Parcel, and the 145 acres to the south of the freeway are called the

OPERATING INDS INC (Continued) **1000353881**

South Parcel. The neighboring City of Montebello borders the South Parcel and portions of the North Parcel. The landfill was constructed by filling a former quarry pit that was cut into the side and top of a portion of the Montebello Hills. The landfill was ultimately constructed to a height higher than the adjacent Montebello Hills. Elevations at the landfill range from approximately 380 feet above mean sea level at the North Parcel to 640 feet above mean sea level at the top deck of the South Parcel. The top of the South Parcel is about 150 to 250 feet above the surrounding natural grade. The South Parcel landfill side slopes are quite steep, ranging from about a 14 degree to a 27 degree angled slope.Older aerial photographs (pre-1960) show little residential or commercial development near the landfill. By 1968, residential development had moved closer to the landfill; and by the mid-1970s, considerable residential and commercial development had taken place adjacent to the landfill boundary. The area surrounding the OII Site is heavily developed with mixed general commercial/industrial and residential land use, with small pockets of open space. As reported in the 1990 census, the total population contained within the tracts surrounding the landfill is 35,101 persons. The total population of the Cities of Monterey Park and Montebello is 59,570 and 60,740 persons, respectively. There are two age groups within the overall population of particular sensitivity to environmental conditions: children under 5 years and adults 65 years or greater. The population of children under 5 years (2,307 persons) and adults 65 years or greater (4,047 persons) together comprises 6,354 persons, or approximately 18 percent of the population in the tracts surrounding the landfill. Also of importance are persons who are likely to spend a significant portion of time at home in the tracts surrounding the landfill. This number was estimated in the 1990 census to be 13,863 persons, or approximately 39 percent of the population in the tracts surrounding the landfill.There is no known use of groundwater within approximately 1.5 miles of the OII Site.--HISTORICAL WASTE DISPOSAL AND LANDFILL OPERATIONSPrior to 1946, the OII property was a sand and gravel quarry. Waste disposal operations at the landfill began on 14 acres in October 1948 by Monterey Park Disposal Company. In January 1952, Operating Industries, Inc. assumed ownership of the landfill; and, by 1958, the landfill had expanded to 218 acres. The size was later reduced to 190 acres when the State of California purchased 28 acres for construction of the Pomona Freeway. In October1954, the landfill was permitted for the disposal of liquids at the landfill. In March 1976, the disposal of liquids was limited to a 32-acre area in the western portion of the South Parcel. This order allowed Operating Industries, Inc. to mix liquids with solid refuse at a ratio of 10 gallons per cubic yard of refuse. In September 1976, this ratio was increased to 20 gallons per cubic yard.In 1982, leachate was observed seeping offsite. OII stopped accepting hazardous liquid waste in January 1983 and all liquid waste in April 1983. A leachate collection system was installed to collect leachate seeping from the landfill. Leachate generated at the landfill was collected and redisposed by combining it with incoming refuse that was mixed back onto the working face of the landfill. This practice continued until September 1984, when the California Department of Health Services classified leachate generated at the landfill as hazardous and prohibited redisposal, effective October 1984. At that time, OII began shipping all leachate offsite for treatment and disposal.Prior to 1984. OII, the landfill operator and owner, performed several landfill control measures. This included installation of the leachate collection system, development of an air-dike air injection system on the west side of the landfill to control subsurface gas migration, installation of gas extraction wells around the perimeter of the landfill, installation of a gas flaring station to burn landfill gas, site contouring, slope terracing and vegetation, and covering refuse with fill.OII's control of the environmental problems and maintenance of the control systems began to diminish significantly in late 1984. In this same

OPERATING INDS INC (Continued) **1000353881**

period, EPA began initial site investigations. On May 19, 1986, OII notified the state of its intent to discontinue all site control and monitoring activities except irrigation. By the end of May 1986, the OII Site was added to the NPL. EPA assumed responsibility for site activities on May 20, 1986.---LANDFILL DEVELOPMENT AND THICKNESSLandfilling operations began in 1948 by filling an existing natural canyon currently occupied by a portion of the Pomona Freeway and north-central portions of the South Parcel. Cut-and-cover filling operations began in the early 1950s. Additional areas were quarried and filled. From the 1950s through the 1970s, the waste disposal activities expanded to cover the current landfilled area. During this time, the height ofthe landfill was also increased several times, ultimately reaching the current elevation of approximately 640 feet above mean sea level. The thickness of solid waste in the South Parcel ranges from approximately 200 to 325 feet. The North Parcel contains approximately 11 acres of solid waste, ranging in thickness up to 55 feet. ---WASTE TYPES AND QUANTITIESA total estimated refuse volume of 38 million cubic yards weighing 22 to 31 million tons was disposed at the landfill over its operating life. More than three-fourths of the refuse was disposed before 1974, before records were maintained for truck counts and delivered weight. Liquids are excluded from these refuse mass calculations. Liquid wastes were disposed at the landfill throughout its history, until April 1983. More than 300 million gallons of liquids are recorded as having been disposed between 1976 and 1983. Liquid wastes were reportedly disposed at the landfill prior to 1976, but records were not kept by landfill operators. --HYDROGEOLOGIC INVESTIGATIONSEPA performed six major hydrogeologic investigations at the OII Site between 1975 and 1993, resulting in the installation of 75 groundwater monitoring wells. Activities conducted as part of these investigations include: drilling and monitoring well installation, formation testing, surface and subsurface soil sampling, groundwater sampling and analysis, and aquifer testing. -- GEOLOGIC AND GEOTECHNICAL EVALUATIONSEPA performed several geologic and geotechnical investigations that provide additional information regarding the subsurface conditions at or near the OII Site.--AIR QUALITY INVESTIGATIONSEPA conducted two air quality investigations as part of the Remedial Investigation for the OII Site. One investigation focused on ambient air in the vicinity of the landfill, and the other investigation focused on air quality in the homes surrounding the landfill. Ambient air sampling was conducted for one year, from September 1989 to September 1990. The in-home air monitoring was conducted between November 1992 and July 1993.--SURFACE WATER SAMPLINGSurface water in the form of runoff from the landfill is sampled routinely as part of the site control and monitoring activities at the landfill. In addition, EPA collected two surface water runoff samples from the North Parcel in 1987 as part of a field reconnaissance to identify surface drainage features. Routine surface water sampling began in February 1990 and continues through the present.EPA collected leachate samples from leachate seeps in Iguala Park after heavy rains in January 1993. The OII Landfill Work Defendants performed a survey of onsite landfill seeps after the 1992/1993 rainy season to prioritize seepageareas for potential remediation prior to installation of the landfill cover. Since 1983, EPA has periodically collected and analyzed leachate to characterize its chemical composition and source areas. Since 1990, the OII Landfill Work Defendants have performed several leachate sampling events associated with evaluations of leachate quantity and quality for the leachate treatment plant.--LANDFILL GAS INVESTIGATIONSEPA has collected a large amount of landfill gas data at the OII Site since the mid-1970s. -Landfill Gas Probes and Wells.OII installed landfill gas monitoring probes along the west, south, and east borders of the South Parcel in 1976 and 1981 and around the North Parcel in 1981. OII installed perimeter gas extraction wells in various phases from 1982 through 1984. -Air Dike Wells.OII installed an air dike system in

OPERATING INDS INC (Continued) **1000353881**

native material along the south and west borders of the landfill to control landfill-generated methane gas emissions beyond the landfill boundary. EPA installed 26 wells in 1981 to create the air dike. Additional wells and monitoring probes were installed in October 1982. EPA constructed eight gas migration test wells to a maximum depth of 101 feet as part of a testing program for the existing air dike system. -South and North Parcel Landfill Gas Monitoring Wells.EPA installed 15 landfill gas monitoring wells along the western and southern boundaries of the South Parcel in 1987 and 1988. EPA installed 13 landfill gasmonitoring wells on the North Parcel in June/July 1987.----------
----------SUMMARY OF EPA ACTIONS AT THE OII SITEEPA has performed a variety of emergency actions in response to environmental problems at the landfill, including erosion control improvements, installation of a toe buttress for slope stability, surface runoff and drainage improvements, rehabilitation of the main flare station, site security, placement of vented water meter box covers in the areas surrounding the landfill, and installation of control systems in nearby affected residences. EPA formally began the Remedial Investigation/Feasibility Study at the OII Site in 1986, although field investigations had been initiated in 1984. -SUMMARY OF ENFORCEMENT ACTIVITIES-Prior to EPA involvement, various state and local agencies reported that OII frequently violated waste disposal regulations during the operations at thelandfill between 1952 and 1984. There are approximately 3,950 potentially responsible parties at the OII Site. Since 1984, EPA has sent combined general notice and CERCLA 104(e) letters to potentially responsible parties that generated approximately 87 percent (by volume) of the manifested liquid waste for which EPA has records. -OII SITE CONSENT DECREES AND ADMINSTRATIVE ORDERSFive Consent Decrees have been successfully negotiated with various potentially responsible party groups for performance and funding of various portions of the site cleanup. In addition to the Consent Decrees, site cleanup work has been performed under a Unilateral Administrative Order that EPA issued to three of the previously nonsettling potentially responsible parties. The order required these PRPs to participate in the collection and treatment/disposal of wastes associated with the OII Site in cooperation with the PRPs performing work at the site under the Consent Decrees. These three parties subsequently joined the Fifth Partial Consent Decree.-HIGHLIGHTS OF COMMUNITY PARTICIPATIONThe Proposed Plan for this remedy, in the form of a fact sheet, was distributed to approximately 3,000 parties on EPA's mailing list for the OII Site. The Proposed Plan, together with the Feasibility Study Report and the Draft Remedial Investigation Report, were also made available in the site vicinity at local libraries. Notice of public meeting, availability of the Proposed Plan, and the announcement of a 30-day public comment period were published in the Los Angeles Times newspaper, San Gabriel edition, and the Monterey Park Progress and Montebello News newspapers. EPA held a public meeting on June 12, 1996, near the site to discuss its cleanup plan. EPA extended the public comment period in response to a request from members of the public. A public notice mailed to the entire EPA mailing list extended the original 30-day public comment period to 60 days. EPA received several sets of written comments during the public comment period. EPA has also held frequent meeting with the public, the state, and local agencies to discuss ongoing activities at the landfill. In addition to the Proposed Plan fact sheet for this remedy, EPA has issued numerous fact sheets between 1985 and 1996 describing investigation and cleanup activities at the OII site.OPERATING IND FORMERLY OPERATED A 190-ACRE LDFL IN MONTEREY PARK,CA FR 1948-84.OPERATOR DSP'D OF HAZARDOUS LIQUID WASTESON 32 ACRE PORTION OF SITE. California - Hazardous Waste Tracking System - Datamart

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at proposal October 15, 1984): Operating Industries, Inc., operated a landfill on 190 acres in the City of Monterey Park, Los Angeles County, California. The 45-acre northern section was separated in the 1960s from the southern 145-acre section by the Pomona Freeway. EPA has evidence that the original landfill included at least a portion of both sections.
From l948 to l983, solid and liquid wastes, some ha ardous, were disposed of at the site. Leachate generated by the landfill contains vinyl chloride, ben ene-type compounds, tetrachloroethylene, heavy metals, and other contaminants, according to testing by the Los Angeles County Sanitation District LACSD), the California Department of Health Services CDHS), and the company. In July l983, the South Coast Air Quality Management District

OPERATING INDS INC (Continued) **1000353881**

SCAQMD) detected vinyl chloride above ambient standards in air at and around the landfill, which is adjacent to a large residential area. SCAQMD, CDHS,and the Los Angeles County Department of Health Services have taken enforcement actions against the facility. About 23,000 people use wells within 3 miles of the site as a source of drinking water. The company acquired Interim Status when it filed Part A of a permit application under Subtitle C of the Resource Conservation and Recovery Act RCRA). The company submitted a draft plan for closing the landfill under RCRA, but CDHS, in conjunction with other State agencies and EPA, determined that the plan had numerous deficiencies, most notably the failure to 1) provide financial assurance requirements for closure and 2) develop an adequate plan for monitoring ground water and for collecting and disposing of leachate. The company has not submitted complete and adequate closure and postclosure documents. Status February 1986): EPA collected gas samples in November 1984 from 16 subsurface probes in an adjacent housing development. Some samplesconfirmedthe presence of methane and vinyl chloride in subsurface soils. Interior home samples collected in November 1984 had low levels of methane and nondetectable levels of vinyl chloride. Elevated levels of methane and vinyl chloride werealso detected in a home adjacent to the landfill in October 1985. EPA installed six monitoring wells around the landfill in 1984-85. Quarterly samples collected since March 1985 contain organic chemicals and trace metals. In July 1985, EPA started planning for a comprehensive remedial investigation to determine the nature and extent of the problems associated with the landfill. When the investigation is complete, various alternatives to remedy the problems will be evaluated in a feasibility study. Interim measures are planned to stabili e and control the landfill, including slope stabili ation and upgrading of existing gas leachate collection systems. EPA trucked leachate to an off-site treatment facility from October 1985 to February 1986, when the State took over. Status June 10, 1986): This site is placed on the NPL because the potentially responsible party declined to initiate work, and CERCLA-funded remedial activities are underway.Thus, the site meets one of the requirements of EPA s policy for placing RCRA-related sites on the NPL.

California - Hazardous Waste Tracking System - Datamart

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste Discharge System ID:	4B190332001
Solid Waste Information ID:	19-AM-0001

OPERATING INDUSTRIES, INC. (Continued) **S100833436**

CA BOND EXP. PLAN:

Reponsible Party:	NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	EPA, with State participation, is negotiating with the PRP's for PRP financing of the site RI/FS. For purposes of this document, DHS is assuming that final remediation activities will be jointly funded by EPA and DHS.
Site Description:	The site is an inactive Class II landfill bounded by Highway 60 on the north and residential areas of the City of Montebello on the south and west.
Hazardous Waste Desc:	The site was permitted by the RWQCB in 1976 to receive liquid wastes. Wastes include lead compounds, chrome oxide, pigment sludge, refinery slop oil, emulsion solids, leaded tank bottoms, waste water from paint manufacturing, and caustic cleaning waste.
Threat To Public Health & Env:	Landfill gases including vinyl chloride and methane continue to migrate offsite and has been detected in residential water meter boxes and offsite probes and inside one home adjacent to the site. Leachate containing hazardous substances has been detected in monitoring wells in the center of the landfill. An unknown quantity of leachate has accumulated and poses a threat since it may migrate and thus threatens surface and ground water.
Site Activity Status:	An interagency committee consisting of 15 federal, State and local agencies is coordinating efforts to properly mitigate and close this site. The State agencies have filed suit to order Operating Industries, Inc., to undertake specific characterization and remedial actions. A preliminary injunction has been issued. Operating Industries, Inc., failed to provide proper financial assurances for closure and post-closure, claiming that funds are not available. Transportation offsite of leachate collected by the perimeter drain system was paid for by Operating Industries, Inc., until October, 1985. This task has since been paid for by EPA and DHS with emergency funds, at a cost of approximately $50,000 per month. EPA is conducting an RI/FS with review and oversight by DHS and other State agencies. In addition, the EPA ROD for an operable unit to control gas migration from the landfill was signed in September, 1988.

Comments: The Fifth Partial Consent Degree (CD5) is negotiatied by EPA and the State with a group of potentially responsible parties (PRPs), composed of prior nonsettlers and recently noticed major parties.This design plan approves the capping of the landfill with an additional four feet of monocover using the existing cap as a two foot foundation layer. The cap design also includes the establishment of native vegetation for monocover performance as wFinal cover for the entire South Parcel is completed.30 Design - Final Cover -- The final cap will consist of a four foot thick monocover with a native vegetative cover. The existing cap will act as a foundation for the monocover.The leachate treatment plant (included as Leachate Manage ment Operable Unit) is built on the north parcel of the site and consists of influent storage and equalization, biological reactors, chemical precipitation, sand filtration carbon absorption,Approval of the Final Design for the Landfill Gas Treatment System (LFGTS).The amended Gas Migration Control ROD at the site addresses the landfill gas (LFG) migration control and landfill cover. The major component of this amendment is the addition of landfill cover to the previously selected gas migration control remedy.The sixth partial Consent

OPERATING INDUSTRIES LANDFILL (Continued) **S106023105**

Decree requires GSF Energy (Air Products) to pay cleanup costs. DTSC can request reimbursement of unpaid past costs and future response costs.Landfill Gas Treatment system began operations replacing the flares. The LFGTS is capable of 99.99 Destruction & Removal Efficiency (DRE).ell as aesthetics.The major components of the Gas Migration Control ROD include: 1) landfill cover designed to reduce surface gas emissions and odors, prevent oxygen intrusion into the refuse, prevent surface water infiltration, provide erosion control, and improveeffluent storage and discharge, foul air system, storm water holding system and sludge disposal system. The plant started operation on September 13, 1994 and the first discharge into the sewer system occurred on November 9, 1994.site aesthetics; perimeter LFG extraction wells with placement focused on minimizing off site LFG migration; LFG extraction wells on the top deck of the landfill with placement focused on maximizing source control of LFG; shallow and deep slope wells with placement focused on reducing surface emissions and controlling intermediate to deep subsurface migration at the perimeter; integrated above-grade LFG headers and condensate sumps; LFG monitoring wells at the site boundary; upgraded thermal destruction facility for landfill gas; and pumps in appropriate gas wells with above-grade collection sumps to dewater saturated zones. The amended gas control remedial action will be integrated with the two additional operable units, Site Controland Monitoring, and Leachate Management, now being implemented.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/27/2006

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Last EDR Contact: 03/21/2007
Next Scheduled EDR Contact: 06/18/2007
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA: Resource Conservation and Recovery Act Information

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 01/29/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

Data Release Frequency: No Update Planned

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 04/03/2007

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Historical Auto Stations: EDR Proprietary Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2004
Date Data Arrived at EDR: 02/17/2006
Date Made Active in Reports: 04/07/2006

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

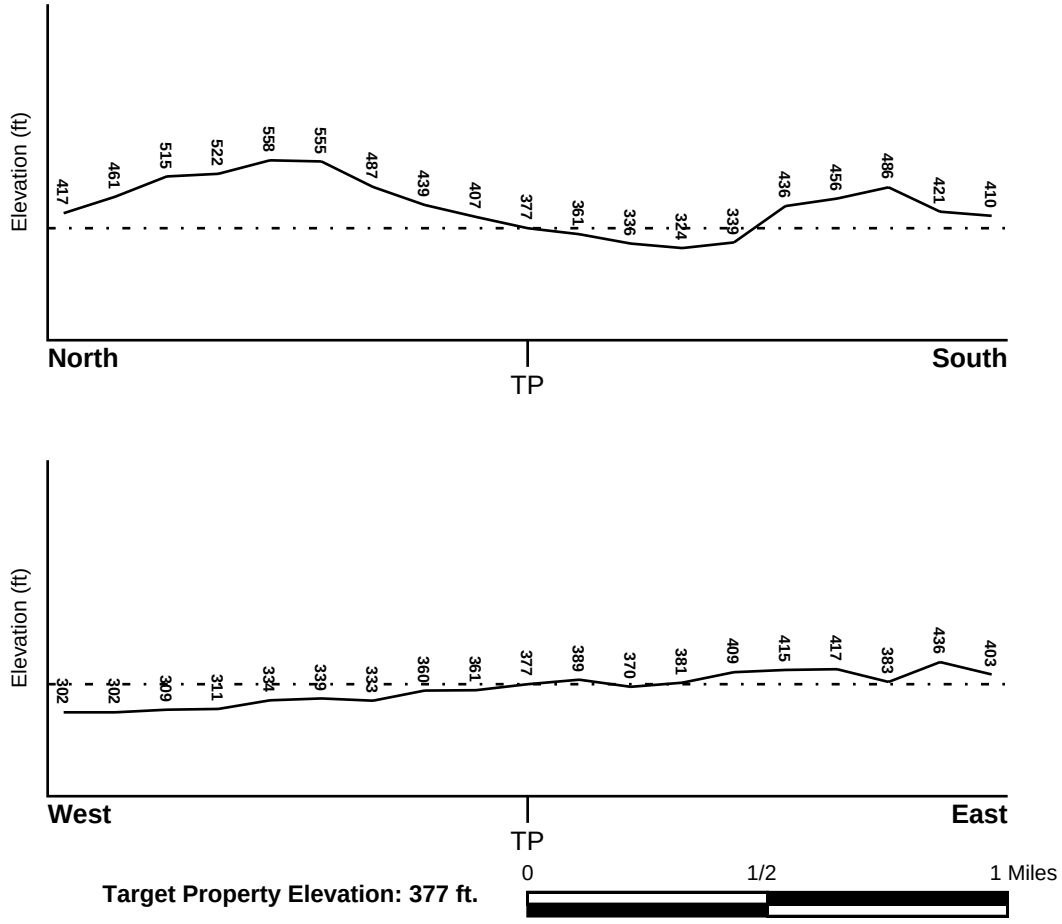
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 0650470000A

Additional Panels in search area: 0650430850B
0601410001B

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
EL MONTE	Not Available

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Tertiary
Series:	Pliocene
Code:	Tp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Bellevue, Washington 98004

Bureau Veritas Project No. 33107-007245

Subject: Limited Subsurface Investigation Report
for Two 10,000-gallon Diesel USTs
at 1977 Saturn Street, Monterey Park, California

Dear Ms. Bars:

Bureau Veritas North America, Inc. (Bureau Veritas) prepared this Limited Subsurface Investigation Report (Report) for the investigation activities conducted in the vicinity of two 10,000-gallon diesel Underground Storage Tanks (USTs) located at 1977 Saturn Street in Monterrey Park, Los Angeles County, California (the Site). The activities were conducted to assess possible diesel impacted soil in the vicinity of the USTs at the Site.

INTRODUCTION

In May 2007, Ms. Trish Bars, GE Commercial Finance – Business Property Corporation, retained Bureau Veritas to conduct a Phase I Environmental Site Assessment of Bank of the West located at the Site. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Site, except for the following:

- The Site has three USTs (two 10,000-gallon and one 2,000-gallon diesel tanks). The two 10,000-gallon single-walled fiberglass tanks were installed in 1980. The 2,000-gallon steel double-walled fiberglass coating tank was installed in 1991. The 10,000-gallon tanks were last tightness tested in February 1997. Old piping was removed in September 2006 and replaced with double-walled piping. At the time of piping removal, soil samples were collected beneath the piping and low concentrations of diesel (12 and 15 mg/kg) were detected. No further investigation was recommended.

  A Veeder Root Monitoring system was installed to detect and log leaks in the tanks and pipes at the Site. In addition, monthly visual UST tank inspections are conducted. The USTs passed the most recent Secondary Containment Testing conducted in October 2006. However, because the two 10,000-gallon tanks are over ten years old and the last tightness test was conducted in 1997, additional soil sampling around the tanks and tightness testing are recommended.

www.us.bureauveritas.com

At the request of the client, Bureau Veritas conducted a Limited Subsurface Investigation to determine if any diesel product was released from the USTs.

SCOPE OF WORK

The following discussion details the results of Bureau Veritas' scope of work at the Site.

To assess if diesel impacted soil exists in the vicinity of the two 10,000 gallon USTs, Bureau Veritas conducted a limited subsurface investigation in June 2007 consisting of drilling five soil borings in the four corners of the two 10,000 gallon diesel USTs. One soil boring (BVSB-5) was eliminated due to refusal at 8 feet bgs and only four borings successfully completed.

GEOPHYSICAL SURVEY

On June 6, 2007 Bureau Veritas notified Underground Service Alert (USA) to identify buried utilities at the Site. Bureau Veritas retained Subsurface Surveys & Associates, Inc. of Carlsbad, California (SSS) to provide a geophysical survey on June 11, 2007. The purpose of the geophysical survey was to identify the location of the two USTs and identify any subsurface anomalies that may be encountered during drilling activities. An electromagnetic (EM), analog magnetic and ground penetrating radar (GPR) geophysical survey was conducted on accessible areas of the Site. A copy of the geophysical survey report is provided in Attachment A.

SOIL SAMPLING

On June 11, 2007, Bureau Veritas conducted the subsurface investigation to collect soil samples at the Site. Kehoe Testing & Engineering (KTE) of Huntington Beach, California provided a truck-mounted Geoprobe™ 6600 to perform the task.

The Geoprobe™ was used to drill borings BVSB1 through BVSB-5. Soils were continuously screened every four feet from a Macro-Core sampler to a total depth of 18 ft bgs. Groundwater was not encountered during drilling. Soil samples were collected to 18 ft bgs.

The soil samples were collected in 2-inch by 6-inch brass rings. After the sample rings were removed from the sampler, the middle sample ring was immediately sealed with Teflon® film and capped with a plastic cap. All samples were immediately labeled, stored in a cooler with ice, and recorded on a chain-of-custody. The top and bottom rings

collected at each sample interval were used to record the soil lithology. Refusal was reached at all boring locations due to dense sands and clay and weathered granite. A complete soil description is described in the soil boring logs in Attachment B. Figure 2 shows the location of soil borings BVSB-1 through BVSB-5.

Diesel staining was observed in soil at approximately 14 feet below grade surface (bgs) in BVSB-1. According to Mr. Joe Robelo, Chief Engineer, an approximately five gallon quantity of diesel fuel was released during a re-piping modification project in 1991 in the area of BVSB-1. According to Mr. Robelo, the contractor cleaned up the release. No further information on this incident is available at this time.

BVSB-5, located between the USTs and the building foundation, encountered refusal at 8 feet bgs. Weathered granite rock was encountered throughout the depth of the boring therefore, no soil samples were collected from BVSB-5.

ANALYTICAL RESULTS

The soil samples were submitted to American Scientific Laboratories, LLC of Los Angeles, a California State Certified laboratory. All soil samples were analyzed for Total Petroleum hydrocarbons (TPH) Diesel Range Organics (DRO) and Oil Range Organics (ORO) using USEPA Method 8015M.

No TPH OROs were detected at concentrations above the laboratory detection limits in any of the soil samples collected from Boring BVSB-1 through BVSB-4.

No TPH DROs were detected at concentrations above the laboratory detection limits in the soil samples collected from the BVSB-2 through BVSB-4. However, BVSB-1 - 14.5’-15’ and BVSB-1 - 17.5’-18’ contained concentrations of TPH DRO of 658 mg/kg and 238 mg/kg, respectively.

The soil analytical results are summarized in Tables 1. Copies of the laboratory reports and chain-of-custody records for the soil samples are provided in Attachment C.

CONCLUSIONS AND RECOMMENDATIONS

Based upon the analytical results of the soil samples collected at the Site, Bureau Veritas formulated the following conclusions:

- The analytical results of soil samples collected during the UST investigation at the Site indicate that TPH DROs are only present in BVSB-1 - 14.5'15' and BVSB-1 - 17.5'-18'. TPH DROs were detected in these samples at concentrations of 658 mg/kg and 238 mg/kg, respectively. No other soil borings contained any detectable concentrations of TPH.

Typically regulatory agencies in Southern California use 1,000 mg/kg as cleanup criteria for TPH in the diesel and oil range. Therefore, based on our assessment of soil in the UST area, no further investigation is recommended at the Site.

Should you have questions regarding this report, please contact Brad Mullner at 714.431.4100 or Trevor Donaghu at 925.426.2625.

Sincerely,
Bureau Veritas North America, Inc.

Re: Geophysical Investigation, 1977 Saturn St, Monterey Park, California, UST Search.

This report is to present the results of our geophysical survey carried out over portions of property located at 1977 Saturn Street in Monterey Park, California (Fig. 1) on June 11, 2007. The purpose of the survey was to locate and delineate, insofar as possible, two active underground fuel storage tanks (UST) and associated vent and product lines. A secondary objective was to clear 5 proposed boreholes for any detectable lines, conduits, or utilities.

A combination of electromagnetic induction (EM), gradient magnetometer, and ground penetrating radar (GPR), were applied to the search. A utility locator with line tracing capabilities was also brought to the field and used where risers existed onto which a signal could be impressed and traced.

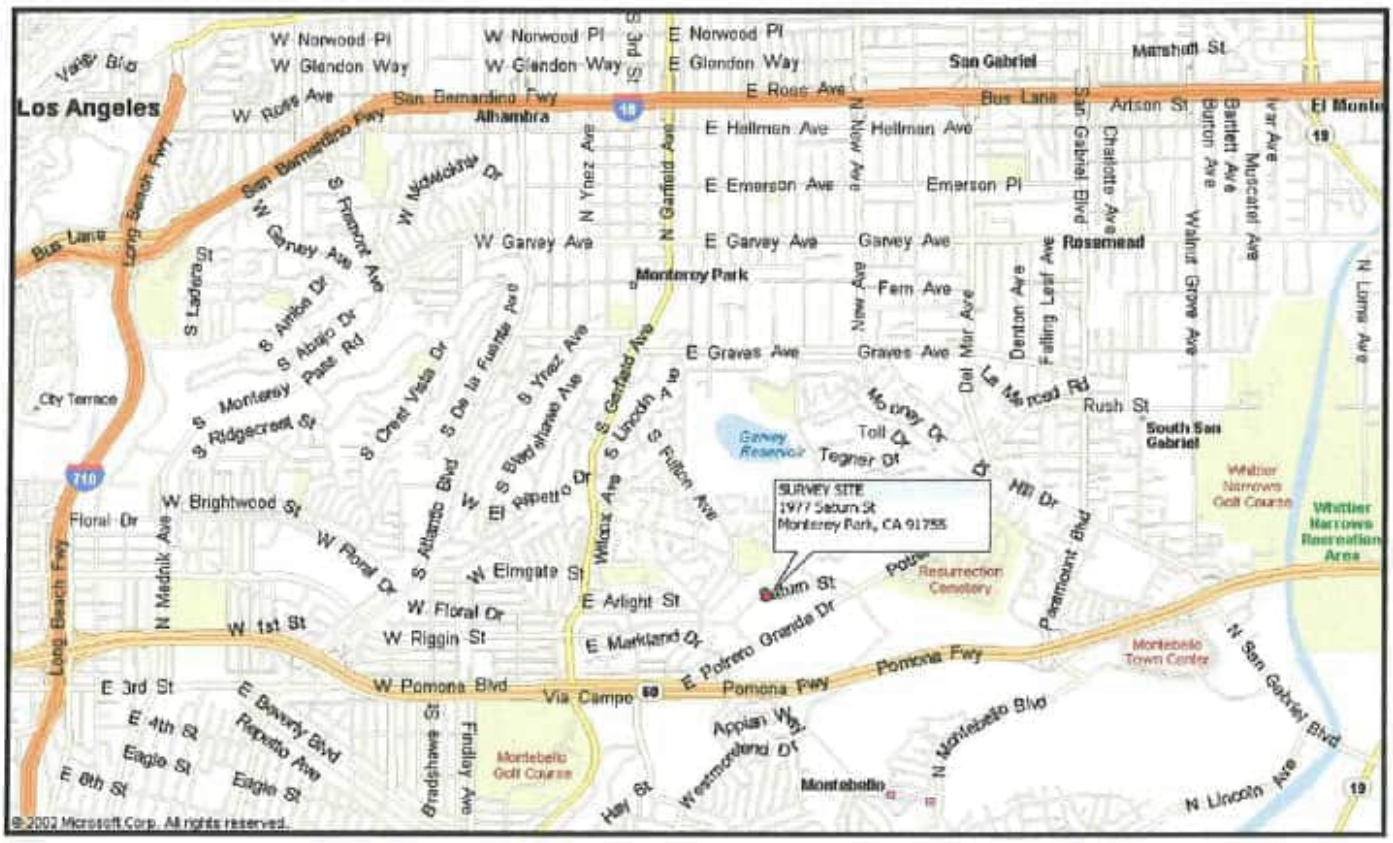

Figure 1

Multiple methods were utilized because each instrument senses different material properties of the ground and buried objects. At any given site the situation (geology and cultural) may be such that one or more of the instruments may record excessive "noise", the ground may not provide sufficient contrasts, or there may be overlapping anomalies for a given instrument to be effective. Summarily stated, there are generally instrumental limits and interpretational impediments.

Survey Design – The site to be surveyed was indicated in the field by the client and included a raised reinforced concrete pad surrounded by an asphalt parking lot on three sides and landscaping with shrubbery on the fourth. In situations such as this, particularly with the presence of reinforced concrete, the best use of time is achieved by systematically "cross-traversing" with the instruments while monitoring them continuously to determine which responses are significant and due to true subsurface targets, and which are due to other interfering features and must be ignored. Where applicable, the GPR and cesium were traversed systematically over the area in organized directions where space allowed, and in this area the only significant obstruction was the adjacent shrubbery. Over adjacent non-reinforced areas the EM devices were also used to confirm various anomalies. The delineation of the UST's and the detecting of the five proposed boreholes were both surveyed in this fashion.

A Geonics model EM61 and a Fischer M-Scope was used for the EM sampling. A Sensors & Software Noggin Gpr and Penetrating Radar unit produced the radar images. The gradient magnetometer was a Schonstedt GA-52, and a Radiodetection RD4000 Pipe utility locator rounded out the tools applied.

Brief Description of the Geophysical Methods Applied – The M-scope TW-6 devices energize the ground by producing an alternating primary magnetic field with an current in the transmitting coil. If conducting materials are within the area of influence of the primary field, then eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents. The strength of the secondary field is a function of the conductivity of the object, say a pipe, tank or cluster of drums, its size, and its depth and position relative to the instrument's two coils. Conductive objects, to a depth of approximately 10 feet are sensed. Also the devices are somewhat focused, that is, they are more sensitive to conductors below (and also by the instrument) than to conductors off to the side.

The EM61 instrument is a high resolution, time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed, primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at relatively long time intervals (measured in milliseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a super-sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets. Conductive objects to a depth of approximately 11 feet can be detected.

The gradient magnetometer has two flux gate magnetic field sensors that are passed closely to and over the ground. When not in close proximity to a magnetic object, that is, only in the earth's field, the instrument emits a sound signal at a low frequency. When the instrument passes over a buried ferrous or steel object, or other local source of a high magnetic gradient, the frequency of the emitted sound increases.

The frequency is a function of the gradient between the two sensors.

The line locator is used to passively detect energized high voltage electric lines and electrical conduit (50-60 Hz). VLF signals (15-25 kHz), as well as to actively trace other utilities. Where risers are present, the utility locator transmitter can be connected directly to the object, and a signal (9.5-82 kHz) is sent traveling along the conductive pathway. Otherwise, the transmitter can be used to impress an input signal on the utility by induction. In either case, the receiver unit is tuned to the input signal, and is used to actively trace the signal along the pipe's surface projection.

The GPR instrument beams energy into the ground from its transducer antenna in the form of electromagnetic waves. A portion of this energy is reflected back at the subsurface boundary or subsurface across which there is an electrical contrast. The instrument produces a continuous record of the reflected energy as the antenna is traversed across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The radar wave travels at a velocity unique to the material properties of the ground being investigated, and when these velocities are known, the two-way travel times can be converted to depth. The depth penetration and in turn the resolution produced are a function of ground electrical conductivity and dielectric constant.

Interpretation and Conclusions - Interpretation took place in real time as the survey progressed, and accordingly, the findings of our investigation were reported to the client at the conclusion of the survey, painted on the ground cover at the survey site, and documented with photographs of our findings (Figs. 2-5).

The limits of the USTs were delineated using orange spray chalk. Both are situated side-by-side with their long axis oriented northeast-southwest as shown in all photographs. Their northwestern-most ends appear to extend past the concrete pad and into the asphalt parking lot, and their southeastern-most ends abut against shrubbery.

The vent lines, marked in yellow spray chalk, approach from the southwest towards the tank pit's south corner (Fig. 5). The product and vapor return lines appear to gather at the tanks' northwest end and continue northwest in a single 2 foot wide corridor (Fig. 4). Portions of product line also appear to extend past the USTs' northeast ends as shown in Figures 2 and 3, before gathering at the northwest end. The far limits of all product and vapor return conduits are also depicted with yellow spray chalk where they appear to extend past the USTs.

The backfilled excavation in which the USTs are buried was also observed with GPR and was marked out with white spray chalk.

A southwest-northeast oriented irrigation water line, marked in blue, and an electric line, marked in red, were found running past the southeast ends of the USTs within the adjoining landscaping. The precise location of the electric line is somewhat uncertain, however, since it is located in an area where waist-high shrubbery exists. Nevertheless, the electric line appears to be quite small, running parallel with the irrigation water line, and possibly associated with the sprinkler control system.

Lastly, five proposed boreholes were located approximate to the tank pit's corner and additionally cleared. They were marked out in white and a yellow "SSS" indicating that each had been checked by company personnel. Note that the fifth borehole was located in the shrubbery southeast of both the USTs and the

water and electric lines, and its location is indicated in Figure 3.

SubSurface Surveys and Associates' professional personnel are trained and experienced and have completed thousands of projects since the company's inception in 1988. It is our policy to work diligently to bring this training and experience to bear to acquire quality data sets, which in turn, can provide clues useful in formulating our interpretations. Still, non-uniqueness of interpretations, methodological limitations, and non-target interferences are prevailing problems. SubSurface Surveys and Associates make no guarantee either expressed or implied regarding the accuracy of the interpretations presented. And, in no event will Subsurface Surveys and Associates be liable for any direct, indirect, special, incidental, or consequential damages resulting from data sets, interpretations and opinions presented herewith.

All data acquired in these surveys are in confidential file in this office, and are available for review by your staff, or by us at your request, at any time. We appreciate the opportunity to participate in this project. Please call, if there are questions.

Leighton Consulting, Inc. (Leighton Consulting) is pleased to present this report summarizing a Phase I Environmental Site Assessment for the Subject Property.

Leighton Consulting has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. Leighton Consulting has developed and performed the all appropriate inquiries in conformance with the standards and practices prescribed in ASTM International (ASTM) E1527-13.

If you have any questions regarding this report, please do not hesitate to contact me. We appreciate the opportunity to be of service.

Respectfully submitted,

LEIGHTON CONSULTING, INC.

EXECUTIVE SUMMARY

Leighton Consulting, Inc. (Leighton Consulting) performed a Phase I Environmental Site Assessment (ESA) of 1977 Saturn Street, Assessor Parcel Numbers (APNs) 5265-026-054, Monterey Park, Los Angeles County, California 91755 (referred to as the "Site" or "Subject Property"), as shown on the Site Location Map, Figure 1. The purpose of this ESA was to identify, to the extent feasible pursuant to the processes prescribed in ASTM International (ASTM) E1527-13, recognized environmental conditions (RECs) in connection with the Subject Property. Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report. The scope of work for this Phase I ESA included a records review, site reconnaissance, interviews, and report preparation.

The Site is approximately 15.83 acres in size and appears to have been vacant, undeveloped land from the late 1920s to the construction of the present day office building in 1980. The facility has been used as a banking operations and office center since 1980 through the present. Two 10,000-gallon diesel underground storage tanks (USTs) were installed in 1981. A utility building that houses a generator room with three 55-gallon day-tank ASTs and a 2,000-gallon diesel UST was constructed in 1991. The USTs feed the emergency generator system and no dispensing activities occur at the Site. A subsurface environmental assessment was conducted by the Los Angeles County Department of Public Works (LACDPW) to assess potential releases from the onsite USTs and significant soil contamination was not identified (LACDPW, 2014). Based on the results, LACDPW found no evidence suggesting a fuel release from the USTs and concluded that site was not impacted in the areas assessed. No further assessment was recommended.

Hazardous materials observed in up to 55-gallon drum-sized containers include compressed oil, oil pit sludge and water, waste diesel/water mix, and chemicals for the cooling equipment located on the roof. The hazardous materials are stored in the generator room, Level A storage room, and the roof. Batteries used in support for the data center were observed in the utility building. The hazardous materials observed appeared to be stored appropriately and leaking was not identified. There was a former print shop and photo room located within the office building and there was an industrial wastewater discharge permit to the sewer that was closed in December of 1998. A commercial grease interceptor installed at the facility appears to be associated with the kitchen area.

One plugged and abandoned oil well, API 03720192, is identified on the California Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) map in the southwest portion of the Site (Figure 3). The well, identified as Bradford Bishop "Monterey Park" 1 was reportedly drilled in July 1967 to a total depth of 7,920 feet bgs and was subsequently abandoned in late July 1967. The well never produced petroleum hydrocarbons. The precise well location was not able to be determined utilizing historical records and the well appears to be possibly located onsite or offsite to the south (App. J, DOGGR Records Section). Direct field investigation methods would be needed to further assess the well location.

Groundwater is expected to be in excess of approximately 60 feet bgs based on groundwater encountered monitoring wells in the surrounding vicinity. The groundwater flow in the Site vicinity is anticipated to be southwest based on the surface topography.

The adjacent property to the south appears to have been a gravel quarry through the 1940s and 1950s. The remaining adjacent properties appear to have been primarily mixed vacant land and residential-use through the 1970s, and primarily commercial- and light industrial-use from the late 1970s through the present. Surrounding properties that appeared likely to adversely affect the Site were not identified during the EDR® Radius Report review.

This assessment has not identified RECs in connection with the property. Although not considered RECs, Leighton Consulting identified the following environmental conditions and recommends the ensuing actions:

- One plugged and abandoned oil well, API 03720192, may be located in the southwest portion of the Site and was abandoned in 1967 (Figure 3). The well never produced petroleum hydrocarbons. Leighton Consulting recommends direct field investigation to assess the location of the former oil well prior to new construction in this portion of the Site. If an oil well is identified at the Site, DOGGR should be contacted to evaluate requirements for investigation and possible re-abandonment to current regulatory standards before any improvements commence at the Site.

- There are three diesel USTs present at the Site that are used for the backup generator system. Release of fuel was not identified during this Phase I ESA or during a subsurface soil investigation conducted by LACDPW (LACDPW, 2014). A Fueling System Assessment was conducted and the tanks appeared to be in fair condition. However, recommendations to rectify some code deficiencies are

provided under separate cover (Leighton Consulting, 2014). If the USTs are not going to be used for proposed future operations, Leighton Consulting recommends removing the USTs according to applicable regulatory guidelines and observing for evidence of releases beneath the tanks and piping.

- There was previously a small onsite print shop and photo room with an industrial waste permit to discharge the waste to the sewer. Inappropriate discharge or leaks were not reported; however, Leighton Consulting recommends observing for evidence of potential releases beneath the sewer lines if the building and associated utilities are demolished.

- ACMs, LBP, and universal waste are located within the onsite structures. The locations, estimated quantity, and recommendations for their handling, if disturbed during renovation or demolition activities, are reported under a separate cover (Health Science Associates, 2014).

In general, observations should be made during any future Site development for areas of possible contamination such as, but not limited to, the presence of underground facilities, buried debris, waste drums, tanks, staining soil or odorous soils. Should such materials be encountered, further investigation and analysis may be necessary at that time.

1.0 INTRODUCTION

1.1 Authorization

Leighton Consulting, Inc. (Leighton Consulting) performed a Phase I Environmental Site Assessment (ESA) at 1977 Saturn Street, Assessor's Parcel Number (APN) 5265-026-054, located in Monterey Park, Los Angeles County, California (referred to as the "Site" or "Subject Property" – Figure 1, Site Location Map). References are included in Appendix A and Site Photos are included in Appendix B.

1.2 Purpose

The purpose of the Phase I ESA is to identify, to the extent feasible and pursuant to the processes prescribed in ASTM International (ASTM) E1527-13, recognized environmental conditions (RECs), historical RECs (HRECs), or controlled RECs (CRECs) in connection with the subject property.

RECs are defined, according to ASTM E1527-13 as: *the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment*. De minimis conditions are not RECs (ASTM 1527-13, 2013).

HRECs are defined, according to ASTM E1527-13 as: *a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls*.

CRECs are defined, according to ASTM E1527-13 as: *a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls*.

1.3 Scope of Work

The scope of work was performed in accordance with Leighton Consulting's proposals and included the following tasks:

- A reconnaissance-level visit of the Subject Property for evidence of release(s) of hazardous materials and petroleum products and to assess the potential for onsite releases of hazardous materials and petroleum products;
- Records Review (including review of previous environmental reports, selected governmental databases, and historical review);
- Interviews; and
- Preparation of a report presenting our findings.

1.4 Significant Assumptions

Leighton Consulting assumes that the information provided by the Client, regulatory database provider, and regulatory agencies is true and reliable.

1.5 Limitations and Exceptions

Site-specific activities performed by Leighton Consulting and information collected regarding these activities are summarized in the following sections. The findings of this ESA are presented in Section 7.0. Opinions, and conclusions drawn by Leighton Consulting, based on the information collected as part of the ESA, are presented in Sections 8.0 and 9.0, respectively.

This Phase I ESA was conducted in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions.

The observations and conclusions presented in this report are professional opinions based on the scope of activities, work schedule, and information obtained through the ESA described herein. Opinions presented herein apply to the conditions of the Subject Property existing at the time of our study and cannot necessarily be taken to apply to conditions or changes of the Subject Property that we are not aware of or have not had the opportunity to evaluate. It must be

recognized that conclusions drawn from these data are limited to the amount, type, distribution, and integrity of the information collected at the time of the investigation, the methods utilized to collect and evaluate the data, and that a full and complete evaluation of environmental risks cannot be made. Although Leighton Consulting has taken steps to obtain true copies of available information, we make no representation or warranty with respect to the accuracy or completeness of this information.

This practice does not address whether requirements in addition to all appropriate inquiry have been met in order to qualify for the landowner liability protections including the continuing obligation not to impede the integrity and effectiveness of activity and use limitations, or the duty to take reasonable steps to prevent releases, or the duty to comply with legally required release reporting obligations. Users should also be aware that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on the Subject Properties that are not addressed in this practice and that may pose risks of civil and/or criminal sanctions for non-compliance.

1.6 Special Terms and Conditions

The scope of work for this Phase I ESA did not include non-scope considerations, such as, but not limited to, those listed in Section 13 of ASTM 1527-13. This scope of work did not include items such as testing of electrical equipment for the presence of polychlorinated biphenyls (PCBs) or collection of other environmental samples, such as, water, soil, building materials, or paint; assessment of natural hazards such as naturally occurring asbestos, radon gas, methane gas, or mold; assessment of the potential presence of radionuclides, biological agents, or lead in drinking water; assessment of indoor air quality; or assessment of nonchemical hazards such as the potential for damage from earthquakes or floods, or the presence of endangered species or wildlife habitats. It should be noted; however, that Leighton Consulting oversaw an asbestos, lead, and hazardous materials survey at the Site in October 2014 (Health Science Associates, 2014). This Phase I ESA also did not include an extensive assessment of the environmental compliance status of the Subject Property or of businesses operating at the Subject Property, or a health-based risk assessment.

1.7 User Reliance

This report is for the exclusive use of the County of Los Angeles, including, but not limited to, the LACDPW and the Chief Executive Office. Use of this report by any other party shall be at such party's sole risk.

1.8 Important Information About Geoenvironmental Reports

The Client is referred to Appendix K regarding important information provided by the ASFE on geoenvironmental studies and reports.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The Los Angeles County Assessor's Office designates the Site as APN 5265-026-054, located at 1977 Saturn Street, Monterey Park, Los Angeles County, California. The APN map indicates that the parcel is approximately 15.83 acres in size, including an approximate 1.22 acre storm drain easement. The Site and adjacent properties are depicted on Figure 2, Site Plan. A legal description for the Site is located in the Environmental Lien Search included in Appendix C.

2.2 Site and Vicinity General Characteristics

The Site vicinity is primarily comprised of a commercial/light industrial business park, a public park, residential property, and vacant (formerly agricultural) land. a Southern California Edison Transfer Station and former landfill property is located south of Portrero Grande Drive.

2.3 Current and Proposed Use of the Site

At the time of the Site inspection, the facility was occupied by Bank of the West and was used as an office and operations center. The proposed Site use is office-space.

2.4 Descriptions of Structures, Roads, and Other Improvements on the Site

The Site is approximately 15.83 acres in size and is occupied by an office building and a utility building that houses generator, switchgear, and battery rooms. The office building consists of two joined buildings that are two-stories each. Levels A and C are the first floor and second floor of the western building, respectively, and Levels B and D are the first and second floors of the eastern building, respectively. The property is surrounded by a fence and a guard shack located at the west and east property entrances. A grassy landscaped area is located west and south of the office structure and the remainder of the Site is an asphalt-paved parking lot (Figure 2, Site Plan).

The Site has a total of three diesel USTs (two (2) 10,000-gallon USTs and one (1) 2,000-gallon UST) that feed the emergency generator system. There are no fuel dispensing activities at this facility.

2.5 Current Uses of Adjoining Properties

The Site is bordered to the north by a vegetated hillside, part of which is used for nursery purposes. Two large water tanks are located at the top of the hillside, followed by La Loma Park and residential property. The Site is bordered to the south by Saturn Street followed by Volt Center (1980 Saturn Street). The Site is bordered to the west by a commercial office structure (no business name noted, 2001 Saturn Street). The Site is bordered to the east by South Orange Avenue followed by a vacant embankment that leads to an undeveloped property that is terraced and may have formerly been used for agricultural purposes (Figure 2, Site Plan).

3.0 USER PROVIDED INFORMATION

The user of this Phase I ESA is identified as the Client, County of Los Angeles, Department of Public Works and the Chief Executive Office. A User interview form was completed by Mr. Gregory Sena with the LACDPW (Appendix D).

3.1 Title Records

Title records were not provided by the client; however, Leighton Consulting obtained a 60-year Chain-of-Title Report prepared by NETR for the Site, and it is summarized in Section 4.4.6 (Appendix C).

3.2 Environmental Liens or Activity and Use Limitations

An Environmental Lien Search Report prepared by NETR and dated November 26, 2014 was reviewed and environmental liens or other activity and use limitations were not identified (Appendix C).

3.3 Specialized Knowledge

Specialized knowledge or experience regarding the Subject Property was not reported.

3.4 Commonly Known or Reasonably Ascertainable Information

Commonly known or reasonably ascertainable information was not reported, with the exception of being aware of the presence of diesel USTs onsite and a previous fuel line release. The property was reported to be vacant land prior to development of the present structure.

3.5 Valuation Reduction for Environmental Issues

Valuation reduction for environmental issues was not reported.

3.6 Owner, Property Manager, and/or Occupant Information

The property owner was reported to be GE Capital and the occupant was reported to be Bank of the West.

3.7 Reason for Performing Phase I ESA

The purpose of the Phase I ESA is for due diligence activities relating to the proposed redevelopment at the Site, and to identify, to the extent feasible and pursuant to the processes prescribed in ASTM International E1527-13, RECs in connection with the Subject Property.

3.8 Other

LACDPW performed a subsurface environmental assessment on October 4 and 5, 2014 (LACDPW, 2014). LACDPW assessed the subsurface conditions around the existing emergency generator USTs for possible soil contamination. Two borings were drilled nearby the dual-10,000-gallon diesel USTs (east and west) and one boring was drilled north of the 2,000-gallon diesel UST.

Soils were collected at 5-foot intervals and tested by a State-certified laboratory for total petroleum hydrocarbons as diesel and oil by EPA Method 8015M and volatile organic compounds including fuel oxygenates by EPA Method 8260B. Drilling derived wastes were tested for the same constituents and also Title 22 Metals by EPA Method 6010B/7471A. Groundwater was not sampled. The analytical results did not indicate detectable concentrations of any tested constituent above the laboratory method detection limit from the soil samples collected and tested from the soil borings. However, oil-range hydrocarbons were detected at a nominal concentration (5.27J milligrams per kilogram) from the derived wastes while metal concentrations were nominal.

Based on the results, LACDPW found no evidence suggesting soil contamination and concluded that site was not impacted in the areas assessed. No further assessment was recommended.

4.0 RECORDS REVIEW

4.1 Physical Setting Source(s)

Leighton Consulting reviewed pertinent maps and readily available literature for information on the physiography and hydrogeology of the Subject Property. A summary of this information is presented in the following subsections.

4.1.1 Topography

Topographic map coverage was provided in the Environmental Data Resources (EDR®) Historical Topographic Map Report dated November 20, 2014 (Appendix E). Based on the United States Geological Survey (USGS) "El Monte, CA" 1981 Quadrangle included in the EDR® Topographic Map Report, the Site elevation ranges from approximately 420 feet above mean sea level (MSL) in the eastern portion of the Site to 350 feet toward the west. The general topography of the Site and surrounding vicinity slopes towards the southwest.

4.1.2 Surface Water

Surface water was not observed on the Site. Garvey Reservoir is located approximately 0.5 miles to the north and the Rio Hondo River is located approximately two miles to the east of the Site. The Rio Hondo flows south merging with the San Gabriel River at the Whittier Narrows Flood Control Basin located approximately 2.3 miles southeast of the property.

4.1.3 Geology and Soils

The Site is located in the southwestern portion of the San Gabriel Basin which is a relatively deep basin consisting of alluvial sedimentary deposits associated with meandering fluvial environments (CDWR, 1961). The Montebello Hills are located approximately 0.5 miles south. The area is underlain by alluvium of Recent age. The alluvium consists primarily of fine-to-coarse grained sands and silty sands interbedded with layers of gravely sands, sandy silt, or sandy clay.

4.1.4 Hydrogeology

The Site is located within the Central Subbasin, a large section of the California's Coastal Plain groundwater basin, situated in the southern portion of the Los Angeles River drainage. Based on a review of the State Water Resources Control Board (SWRCB) online Geotracker database, groundwater monitoring events have been conducted at a Shell gas station located approximately 0.4 miles to the southwest of the Site (430 Portrero Grande). Monitoring of five wells showed that groundwater was encountered at elevations ranging from 220 to 226 feet above MSL (approximately 68 to 74 feet below ground surface [bgs]) with flow to the south with an average gradient of 0.090 foot per foot (ft/ft) (WGR, 2005).

The LACDPW Hydrologic Records Division was consulted for depth to groundwater in nearby water supply wells. No active municipal wells are located within a mile of the site. The nearest active well, 2915D, is located approximately two miles to the east of the Site and groundwater was encountered at an elevation of 165.6 feet MSL (64.8 feet bgs) in October 2012.

The actual groundwater depth and flow direction beneath the site is unknown. Based on groundwater encountered in the surrounding vicinity, groundwater is expected to be in excess of approximately 60 feet bgs. Based on the surface topography the groundwater flow in the Site vicinity is anticipated to be southwest.

4.1.5 Floodplain

The Site inspection did not reveal existing wetlands or any conditions, such as reeds in standing water that would indicate the presence of a wetland. The Site was not depicted within the 100- or 500-year flood zone on the EDR® Radius Report included in Appendix F.

4.1.6 Oil and Gas Fields

Leighton Consulting reviewed the California Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) online mapping system on November 26, 2014. The Site is located in Township 1 South, Range 12 West, Sections 35, San Bernardino Baseline and Meridian.

According to the map, one plugged and abandoned exploration oil/gas well, API 03720192, is located in the southwest corner of the grassy field west of the building. According to the records reviewed on the DOGGR website, Bradford Bishop "Monterey Park" 1 was drilled in July 1967 to a total depth of 7,920 feet bgs and was subsequently abandoned in late July 1967. The well never produced petroleum hydrocarbons and the site does lie within the limits of an oil/gas field. The well records are included in Appendix J.

A map identifying the well location was included in the DOGGR records and it was depicted as lying 2,150 feet north of Township 1 South and 435 feet east of Range 12 West. Utilizing these measurements on the DOGGR map and a topographic map, the well appears to be located within or to the south of Saturn Street (maps are included in DOGGR records in Appendix J). The location of the well appears to be too close to accurately identify it as being onsite of offsite. Direct field investigation would be required to further assess the location of the abandoned oil well. DOGGR requires investigation of former wells to assess if they are leaking and if re-abandonment will be required prior to new development near the well.

4.2 Standard Environmental Record Sources

A search of selected government databases was conducted by Leighton Consulting using the EDR® Radius Report, dated November 20, 2014. Details of the database search along with descriptions of each database researched are provided in the EDR® Radius Report (Appendix F). The report meets the government records search requirements of ASTM E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. The database listings were reviewed within the specified radii established by the ASTM E1527-13.

4.2.1 Subject Property

The Subject Property was identified in the EDR® Radius Report on the UST, RCRA-SQG, SWEEPS UST, LOS ANGELES CO. HMS, ERNS, HAZNET, EMI, and FINDS databases.

The subject property has three registered USTs. The subject property is also a small quantity generator of hazardous materials. Violations were not found.

On July 29, 1991 an alarm associated with the USTs sounded and diesel fuel was reported in the inspection well. According to the ERNS report, further investigation was needed before cleanup activities.

The subject property was also identified on the HAZNET listing which tracks the transportation disposal of hazardous waste offsite. From 1993 to 2013 the facility has documented the transportation and disposal of materials such as photochemicals/photoprocessing waste, other inorganic solid waste, unspecified alkaline solution, off-specification, aged or surplus organics, waste oil and mixed oil, liquids with pH less than or equal to 2 with metals, and tank bottom waste.

The subject property reported the release of 1 ton/year of nitrogen oxides in 1990. In 1995, there were no emissions of gases.

4.2.2 Offsite

Federal NPL List: The Environmental Protection Agency's (EPA) National Priorities List (NPL) of uncontrolled or abandoned hazardous waste sites was reviewed for sites within a mile radius of the subject property. To appear on the NPL, sites must have met or surpassed a predetermined hazard ranking system score, been chosen as a State's top priority site, pose a significant health or environmental threat, or be a site where the EPA has determined that remedial action is more cost effective than removal action. The database search identified one NPL site within a 1.0 mile radius of the subject property.

New Cure, Inc./Operating Industries, Inc., 2550 Greenwood Avenue (also listed as 900 Portrero Grande Drive under other databases), Monterey Park, is located to the south and southeast of the Site. This facility is typically referred to as the Operating Industries, Inc. (OII) Landfill. The overview map of the EDR Radius Report shows the NPL area outlined in red and covers several hundred acres, the nearest boundary of which is approximately 750 feet to the southeast of the Site. The NPL area

appears represent the groundwater compliance line for the OII Landfill monitoring program.

The New Cure and Operating Industries facilities are also listed on the CERCLIS, CORRACTS, RCRA-TSDF, RCRA-LQG, US ENG CONTROLS, CONSENT, ROD, RAATS, PRP, HIST-Cal-Sites, ODI, CA BOND ESP Plan, SWF/LF, Envirostor, Cortese, HIST Cortese, LDS, ENV, and HWP databases (database descriptions are included starting on Page GR-1 of the EDR® Radius Report). The databases were reviewed to assess for hazardous materials, releases, and the property status.

The facility is a closed solid waste disposal site that is Federal Superfund site. The OII Landfill is divided by the Pomona Freeway into a North Parcel (45 acres) and a South Parcel (145 acres). The North Parcel is located approximately 2,000 feet to the southeast of the Site and the South Parcel is located approximately 2,300 feet to the south of the Site. Most waste accepted by the landfill was received by the South Parcel. Approximately 10 acres along the western side of the North Parcel were used as a landfill and typically received construction and debris waste (USEPA website)

The Envirostor database and website summarizes the property as follows: OII is an inactive Class II landfill surrounded by residential areas on the south and west borders. From 1948 to 1952, the OII site was operated as a municipal landfill by the City of Monterey Park. In January 1952, the site became a privately owned landfill under the ownership of OII. The site was permitted by the RWQCB in 1976, to receive various nonhazardous and hazardous liquid wastes, including lead compounds, chrome oxide, pigment sludge, refinery wastes, waste water from paint manufacturing, and caustic cleaning waste. It was not until 1984 that OII stopped accepting waste. The pathways of contamination are through inhalation of land fill gases and direct contact of leachate entering the ground water. Possible receptors are the residents near the facility and the potential impact of the contaminated groundwater on drinking water supplies. The Department took over the site when the owner and operator failed to continue with the site closure activities. In May 1986, the landfill was listed on the NPL and EPA became the lead agency. EPA initiated a remedial investigation to define the extent of environmental problems. A

hydrogeologic investigation to study the groundwater was performed in September of 1989. In May of 1989, a Partial Consent Decree was entered in the Federal Court between EPA and over 100 PRPs. The PRPs agreed to undertake the site control and monitoring, and construct a leachate treatment system, as well as conducting several site improvements. Site work pursuant to the Consent Decree began in November 1989, when daily operation, including operation and maintenance/monitoring of the existing gas and leachate control system, and erosion and drainage control were assumed by the settling PRPs'. The Envirostor status is listed as “Certified – Operation and Maintenance” as of August 2, 2012. The Land Disposal Site (LDS) is listed as “Completed – Case Closed” by the Regional Watery Quality Control Board (RWQCB) on August 3, 2011. A more detailed summary of historical operations and investigations is provided in the CERCLIS database for the landfill. Because OII is hydraulically down-gradient and subject to regulatory actions and involvement, this facility is not expected to significantly impact the Site.

Delisted NPL List: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) established the criteria the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425 (e), sites may be deleted from the NPL where no further response is appropriate. The database search did not identify delisted NPL facilities located within a 1.0 mile radius of the subject property.

ENVIROSTOR: The DTSC’s Envirostor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (NPL); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. Envirostor provides similar information to the information that was available in Cal Sites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites. The database identified two facilities within a 1.0 mile radius of the subject property.

1. Operating Industries, Inc., 900 Portrero Grande Drive, Monterey Park. See the previous NPL listing for New Cure, Inc./Operating Industries, Inc. for additional information.

2. Alpha Photonics/Lyle Optpelectronics, 2019 Saturn Street, Monterey Park, located approximately 250 feet to the southwest of the Site. The property is also listed on the LA Co. Site Mitigation, Los Angeles Co. HMS, RCRA-SQG, and FINDS databases. The facility is listed as "abated" and "closed" in the LA Co. Site Mitigation and HMS databases, respectively. On the Envirostor database lists the facility as "tiered permit" and the status as "refer: other agency". The RCRA-SQG wastes included ignitable hazardous waste, spent halogenated solvents, and spent non-halogenated solvents. No violations were noted. Additional information was not provided in the EDR® Radius Report or the Envirostor website. Evidence of a release was not identified in the databases reviewed; therefore, this facility is expected to have a low potential to adversely impact the Site.

Historical (HIST) Calsites Database: The DTSC HIST Calsites database contains potential or confirmed hazardous substance release properties. This database is no longer updated and has been replaced by ENVIROSTOR. The database search did not identify any state site facilities within a 1.0 mile radius of the subject property that were not previously discussed in the ENVIROSTOR section.

Federal CERCLIS List: The EPA's Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) listings were reviewed to evaluate if sites within ½ mile of the subject property are listed for investigation. The CERCLIS database identifies hazardous waste sites that require investigation and possible remedial action to mitigate potential negative impacts on human health or the environment. The database search identified one CERCLIS facility within a 0.5 mile radius of the subject property, New Cure, Inc. (See the Federal NPL list for more information).

CERCLIS No Further Remedial Action Planned (CERCLIS-NFRAP): As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination

was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites. The database search did not identify CERCLIS-NFRAP facilities within a 0.5 mile radius of the subject property.

Federal RCRA List: The current Resource Conservation Recovery Act (RCRA) Notifiers List was reviewed to evaluate if RCRA treatment, storage, or disposal sites (TSDs) are located within a 0.5 mile radius of the subject property. It should be noted, however, that inclusion in the RCRA database is not indicative of a release or waste storage/handling violation. Rather, it indicates that the generator is following manifest and reporting procedures. The database search identified one RCRA TSD facility located within a 0.5 mile radius of the subject property, New Cure, Inc. (See the Federal NPL list for more information).

The RCRA Corrective Action Sites (CORRACTS) List is maintained for sites, which are undergoing "a corrective action." A corrective action order is issued when there has been a release of hazardous waste constituents into the environment from a RCRA facility. The database search identified one RCRA Corrective Action sites within a 1.0 mile radius of the subject property, New Cure, Inc. (See the Federal NPL list for more information).

The RCRA regulated hazardous waste generator notifiers list was reviewed to evaluate if RCRA generator facilities are adjoining the subject property. The database search did not identify a large quantity generator (LQG) or small quantity generator (SQG) facility adjacent to the subject property.

Solid Waste Landfill Facilities (SWF/LF): This database, provided by the Department of Consumer and Regulatory Affairs, consists of open, as well as closed and inactive solid waste disposal facilities and transfer stations.

The database search did not identify a SWF/LF site within a 0.5 mile radius of the subject property.

Leaking Underground Storage Tank (LUST) Sites: The EPA maintains lists of information pertaining to reported LUSTs in the state. The database search identified 5 LUST listings within a 0.50 mile radius of the subject property. Four of the LUST cases appear to have been issued regulatory closure and based on their proximity to the Site and the regulatory closure, are expected to have a low potential to adversely affect the Site. The active LUST facility is discussed below:

1. Southern California Edison – Montebello Service Center, 1000 Portrero Grande Drive East, located approximately 0.1 miles to the east of the Site. The facility is reported to have a release of gasoline and oil to soil. The status is listed as "Open – Site Assessment" as of December 18, 2012. Based on the media affected listed as "soil" and the expected hydraulic cross-gradient location from the Site, this facility is expected to have a low potential to adversely affect the Site.

Underground Storage Tank (UST) Sites: The California State Water Resources Control Board (SWRCB) UST inventory list was reviewed to evaluate if USTs are located adjacent to the Site. It should be noted that a listing in the UST databases does not necessarily mean that a leak has occurred. The database search did not identify UST facilities located directly adjacent to the subject property border.

CA FID, HIST UST, and SWEEPS: The Facility Inventory Database (FID), Historical UST Registered Database (HIST UST), and the Statewide Environmental Evaluation and Planning System (SWEEPS) contain active and inactive UST locations. The database search did not identify UST locations directly adjacent to the subject property border.

VCP: The Voluntary Cleanup Program Properties list contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have requested that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs. The database search did not identify a VCP site on properties within a 0.5 mile radius of the subject property.

SLIC: This is the California Regional Water Quality Control Board (RWQCB) Spills, Leaks, Investigations and Cleanup (SLIC) list. The database search did not identify a SLIC case within a 0.5 mile radius of the subject property.

Drycleaners: A review of the Drycleaners list did not identify dry cleaning facilities with an EPA ID number located within a 0.25 mile radius of the subject property.

EDR Historical Cleaners: A review of the EDR Historical Cleaners list did not identify a historical cleaner facility located within a 0.25 mile radius of the subject property.

EDR Historical Auto Stations: A review of the EDR Historical Auto Stations list did not identify any historical auto stations located within a 0.25 mile radius of the subject property.

EDR Manufactured Gas Plants (MGP): A review of the EDR Manufactured Gas Plants list did not identify a MGP located within a 1.0 mile radius of the subject property.

INDIAN RESERV: The INDIAN RESERV list identifies Indian administered lands of the United States that have an area equal to or greater than 640-acres. The database search did not identify INDIAN RESERV properties within a 1.0 mile radius of the subject property.

INDIAN LUST: The INDIAN LUST database lists LUST locations on Indian Land. The database search did not identify INDIAN LUST facilities within a 0.5 mile radius of the subject property.

INDIAN UST: The INDIAN UST database lists UST locations on Indian Land. The database search did not identify INDIAN UST facilities on the subject property or on properties adjacent to the subject property.

Unmapped Listings: One property was listed within EDR® report as “unmapped listings” (Orphan Summary). Unmapped listings are properties without a complete street address and therefore cannot be located on a map. The facility was identified as a landfill, Monterey Park

City Dump, located at South Orange Drive and County. This facility does not appear to be located near the Site and is considered unlikely to have the potential to adversely impact the Site.

4.2.3 Vapor Encroachment

Properties with reported releases within the ASTM 1527-13 search area are discussed previously in Section 4.2.2 and no sites were identified that appeared likely to adversely affect the Site due to chemical migration; therefore, there appears to be a low potential for vapor encroachment.

4.3 Additional Environmental Record Sources

4.3.1 Regulatory Agency Consultations

Leighton requested regulatory records from the agencies listed below for the Site address of 1977 Saturn Street, Monterey Park, California. The regulatory agency responses that were received are included in Appendix J.

National Pipeline Mapping System (NMPS)

On November 20, 2014, the online National Pipeline Mapping System (NMPS) was reviewed and evidence of gas and hazardous liquid pipelines was not identified in the vicinity of the Site.

Department of Toxic Substance Control (DTSC)

On November 20, 2014, a file request was sent via facsimile to the DTSC requesting records for the Subject Property. On November 21, 2014, the DTSC-Cypress office responded via mail that there were no records for the addresses requested. On November 25, 2014, the DTSC-Chatsworth office responded via mail that there were no records for the addresses requested.

Southern California Air Quality Management District (SCAQMD)

On November 20, 2014, Leighton reviewed the SCAQMD's Facility Information Detail System (FINDS) online database for files pertaining to the Subject Property. No files pertaining to the Subject Property were identified in the FINDS database.

Los Angeles Regional Water Quality Control Board (LA-RWQCB)

On November 20, 2014, a file review request was sent via electronic mail (email) to the LA-RWQCB. A response was received on December 1, 2014 via email stating no records were available for the Site. In addition, on November 20, 2014, GeoTracker, an online California data warehouse maintained by the RWQCB, which tracks regulatory data concerning underground fuel tanks, fuel pipelines, and public drinking water supplies, was reviewed for permitted USTs and LUST or SLIC cases for the Site. No releases were reported onsite; however, the property was noted to be a permitted UST facility. UST records are maintained for Monterey Park by LACDPW.

Los Angeles County Department of Public Works (LACDPW)

On November 20, 2014, a file review request was forwarded to the LACDPW Environmental Programs Division requesting records for the Site. On November 26, 2014, the LACDPW Environmental Programs Division responded via facsimile that there were two files identified for the Site. The available records were reviewed on December 2, 2014. There was an industrial waste file for the Site; however, additional information was not available. There was also a UST file that included Monitoring System Certification forms, Owner Statements, Secondary Containment Testing forms, and UST Monitoring Plans for Bank of the West dated between 2007 through 2013. USTs onsite include two 10,000-gallon diesel USTs, a 2,000-gallon diesel UST, and three diesel day tank ASTs. The two 10,000-gallons USTs are located to the north of the western building beneath a concrete pad, and the 2,000-gallon UST is located to the west of the generator building beneath a concrete pad.

Monterey Park Fire Department

On November 20, 2014, a file review request was forwarded via email to the Monterey Park Fire Department requesting records for the Site. On December 1, 2014, the Monterey Park Fire Department responded via facsimile that there were records for the Site. The records were for Sanwa Bank and are summarized in the following table:

Date	
08/01/1991	Form letter from LACDPW, Hazardous materials underground storage - unauthorized discharge of hazardous material. It was noted that the monitoring system indicated leakage and that a site investigation must be performed, as well as recertification of the monitoring system.
08/22/1991	Letter to LACDPW – Temporary repair activities, UST fuel line excavation. A single-walled copper fuel line for the west UST was discovered to be damaged following the use of the UST on July 28, 1991. The damaged line was uncovered and at the time of the letter there was an excavation pit. The temporary repair was done in order to reduce the potential for an accident at the excavation pit. A contractor was obtained to perform the repair which would include capping the damaged fuel line and backfilling the excavation pit with clean stockpiled soil. Following the temporary repair a report was to be submitted to LACDPW regarding the nature of the release incident, the mitigation measures performed, and a permit application to remove the damaged fuel line and replace it with a double-walled fuel line meeting the fire code standards. It was also noted that additional site assessment measures, if any, would be conducted if requested by LACDPW (see paragraph following table for tank status information).
10/12/1991	Security building rounds notice; Utility Building Plan 10/15/91.
12/02/1998	Application for closure of industrial wastewater discharge permit no. 9805; floor sink on Level B.
12/07/1998	Industrial wastewater discharge permit no. 9805 closure authorization.

A letter dated August 22, 1991 indicated that there had been damage to a single-walled fuel dispensing line; however, records regarding this upgrade were not identified in the LACDPW file review. Leighton Consulting conducted a Fueling System Assessment and according to the documents and information reviewed onsite, the tanks consist of two 10,000-gallon Owens Corning single-wall steel USTs, installed in 1981 and one 2,000-gallon Modern Welding double-wall steel UST installed in 1991. An onsite report reviewed by Leighton Consulting stated that the tanks and associated piping were upgraded in 2006 to bring them into compliance with the current regulatory requirements. The tanks appeared to be in fair condition and leaks were not identified during the fueling system assessment, although there were some code deficiencies and recommendations were provided to achieve code compliance (Leighton Consulting, 2014).

State of California Radon Survey

The California Department of Health Services (DHS) maintains an online database of California indoor radon levels sorted by zip code. According to this database 5 radon tests have been conducted within the Site zip code of 91755. From these 5 tests, 0 tests detected radon above the EPA action level of 4 picoCuries per liter (pCi/L) (CDHS, 2010).

In addition, the EDR® Radius Report indicates that Los Angeles County is located in EPA Radon Zone 2. According to the EPA, buildings in Zone 2 typically have radon levels greater than or equal to 2 pCi/L and less than or equal to 4 pCi/L.

Based on the information stated above, the potential for elevated levels of naturally occurring radon at the Subject Property appears to be low.

4.3.2 Previous Environmental Assessment Reports

Leighton Consulting did not review any previous environmental assessment reports as part of this project.

4.4 Historical Use Information on the Property

Leighton Consulting reviewed selected historical information on the Subject Property. These references were reviewed for evidence of activities which would suggest the potential presence of hazardous substances at the Site and to evaluate the potential for the Site to be impacted by offsite sources of contamination. The following paragraphs are a chronological summary of the review.

4.4.1 Aerial Photographs

Historical aerial photographs were reviewed using the EDR® Aerial Photo Decade Package, dated November 21, 2014, for information regarding past Site uses, and are included in Appendix G.

The Site and adjacent properties appears to be vacant, undeveloped land with an unpaved road and a drainage channel transecting through the Site in the 1928, 1938, and 1948 aerial photographs.

In the 1952 aerial photograph, the Site and adjacent properties to the north and east are still vacant, undeveloped land. To the northwest, residential homes have been constructed. To the south is vacant land; however the ground surface is disturbed and the natural vegetation is no longer observed.

In the 1964 aerial photograph, the only significant changes observed is the addition of a water tank to the north of the subject property. In addition, residential track homes have been constructed to the northeast of the subject property.

In the 1997 aerial photograph the Site continues to be vacant land; however dirt roads cross the subject site. Adjacent to the northwest and northeast are residential homes. Adjacent to the north is one water tank. Adjacent to the southwest is vacant land, followed by industrial buildings. Adjacent to the south is vacant, disturbed land and to the southeast is a nursery.

In the 1979 aerial photograph, the Site and adjacent property to the south is being graded for future development. The only other significant change

on the adjacent properties is a commercial/industrial building now developed to the west of the Site.

In the 1981 aerial photograph, the current office building is present onsite (however, the utility building was not yet present). Saturn Street is present to the south and Orange Avenue is present to the east. The adjacent property to the south remains vacant disturbed land.

In the 1989 aerial photograph, the Site and adjacent properties remain relatively unchanged with the exception of the development of the property to the south with a large commercial/office or light industrial structure and parking lots.

In 1994, the only significant change is the addition of a small rectangular structure (the utility building) located north of the main structure. Adjacent properties were unchanged.

In the 2002, 2005, 2009, 2010, and 2012 aerial photographs, the Site appears in the present day configuration. The surrounding properties remained relatively unchanged with the exception that two water tanks are now observed to the north of the subject site.

4.4.2 Sanborn Maps

Sanborn Maps, or fire insurance maps, are detailed city plans showing building footprints, construction details, use of structure, street address, etc. The maps were designed to assist fire insurance agents in determining the degree of hazard associated with a particular property. Sanborn Maps were produced from approximately 1867 to the present for commercial, industrial, and residential sections of approximately 12,000 cities and towns in the United States. According to the EDR® Sanborn Map Report, dated November 20, 2014, and included in Appendix H, Sanborn Map coverage was not available for the Site.

4.4.3 Historical Topographic Maps

Historical topographic maps, provided in the EDR® Historical Topographic Map Report dated November 20, 2014, were reviewed for information

regarding past Site uses. Topographic map coverage of the Site and surrounding properties is provided by the "Pasadena" Quadrangle (1896), "Los Angeles" Quadrangle (1900), "Southern Ca Sheet 1" Quadrangle (1901), and "El Monte" Quadrangle (1953 and 1966). The Site location has been approximated on each historical topographic map (Appendix E).

In the 1896, 1900, 1901, and 1926 historical topographic maps, the site and surrounding areas appeared to be occupied by undeveloped, unincorporated land.

In the 1953 topographic map, there are no structures, tanks or wells depicted on the subject property. The residential tract has been developed to the northwest. To the south of the subject site is labeled "Quarry". Adjacent properties to the north, east, and west were vacant.

In the 1966, 1972, 1981, and 1994 topographic maps, there are no structures, tanks or wells depicted on the subject property. A drainage channel transects through the eastern portion of the Site. The residential tract is depicted to the northeast to the northwest. To the south of the subject site is labeled "Gravel Pit" in the 1966 topographic map, and is vacant in the later maps. Adjacent to the north is a water tank. Adjacent properties to the east and west were vacant, with the exception of a commercial structure to the west in the 1981 map. It should be noted that although the Site is depicted as vacant in the 1981 and 1994 topographic maps, the onsite office building was constructed in 1980 and the utility building was constructed in 1991.

4.4.4 Historical City Directories

City Directories have been published for cities and towns across the US since the 1700s. The directories recorded the name of the resident or business that operated for each street address listed. While city directory coverage is usually comprehensive for major cities, it may be sporadic for rural areas and small towns. The purpose of the City Directory, dated November 21, 2014, research was to attempt to determine the businesses that were historically located onsite (Appendix I).

The Site was identified in the 2008 and 2013 directories as Bank of the West. Marriott International Inc. and Sodexho Corp were also listed at the Site address in 2008, although there is not any other evidence that these entities operated at the Site.

4.4.5 Property Tax Files

Property tax files were not reviewed as they were not reasonably ascertainable.

4.4.6 Recorded Land Title Records

A Historical Chain of Title was prepared for the Site parcel on November 26, 2014. A review of the title records did not identify evidence of hazardous materials utilized onsite. Chain deed information reveals the names of property owners for the Subject Property since 1944 and is included in Appendix C. According to the NETR Environmental Lien Search Report dated November 26, 2014 environmental liens and activity and use limitations were not identified for the Site (Appendix C).

4.4.7 Building Department, Zoning and/or Land Use Records

Building permits were reviewed at the City of Monterey Park Department of Building and Safety on December 1, 2014. Building permit records were available ranging from 1979 through the present. Notes regarding the records reviewed are included in Appendix J. According to the permits, the present commercial structure was completed in 1980 and the present utility building was completed in 1991. The Site was occupied by Lloyd's Bank from initial construction through 1986, by Sanwa Bank from 1986 through 2001, and Bank of the West from 2001 through 2014.

A permit dated August 31, 2006 for the replacement of the generator diesel line appeared to have expired prior to completion of the final inspection. Leighton Consulting conducted a Fueling System Assessment and Bank of the West provided a tank upgrade report indicating that the tanks and associated piping were upgraded in 2006 to bring them into compliance with the current regulatory requirements (Leighton, 2014).

There were also permits for a print shop (2001), a photo room on Level B (2000), a commercial 1,500-gallon grease interceptor (1991, presumed for the kitchen), a photographic lab (1988 and 1982), a cooling tower (1980), and sprinklers above a fuel oil line (1980).

There was also a letter report for compaction of fill beneath the office structure. The report stated that the structure would be supported on drilled piles and that the fill was compacted to 95%. Additional information was not provided.

According to Mr. Jon Traw, Building Official, the City of Monterey Park does not have specific city regulations regarding building on or near abandoned oil wells.

4.4.8 Other Historical Sources

Additional resources were not researched as a part of this assessment.

4.4.9 Prior Assessment Usage

Prior assessments were not reviewed as part of this assessment.

4.4.10 Summary of Historical Land Use

The Site appears to have been vacant, undeveloped land from the late 1920s to the construction of the present day office building in 1980. The facility has been used as a banking operations and office center since 1980 through the present. Two 10,000-gallon diesel USTs were installed in 1981 and a 2,000-gallon diesel UST was installed at the same time as the Utility Building in 1991 in support of three generators. The adjacent property to the south appears to have been a gravel quarry through the 1940s and 1950s. The remaining adjacent properties appear to have been primarily mixed vacant land and residential-use through the 1970s, and primarily commercial and industrial from the late 1970s through the present.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

On September 16, 2014, Mr. Lucas Wallin from Health Science Associates and Ms. Meredith Church, a registered Professional Geologist with Leighton Consulting, conducted a Site inspection with the assistance of Mr. Joe Revelo, Chief Engineer for the Bank of the West facility. Ms. Meredith Church also inspected the surrounding vicinity on December 1, 2014. The Site inspection consisted of the observation of the site layout, potential hazardous building materials, and existing Site conditions. Photographs of the Site are presented in Appendix B and their view directions are noted on Figure 2.

5.2 General Site Setting

The Site is approximately 15.83 acres in size and is occupied by an office building and a utility building that houses generator, switchgear, and battery rooms. At the time of the Site inspection, the facility was occupied by Bank of the West and was used as an office and operations center. The office building consists of two joined buildings that are each two-stories. Levels A and C are the first floor and second floor of the western building, respectively, and Levels B and D are the first and second floors of the eastern building, respectively. The property is surrounded by a fence and guard shacks are located at the west and east property entrances. A grassy landscaped area is located west and south of the office structure and the remainder of the Site is an asphalt-paved parking lot (Figure 2, Site Plan).

The Site vicinity is primarily comprised of a commercial/light industrial business park, a public park, residential property, and vacant (formerly agricultural) land. A Southern California Edison Transfer Station and former landfill property are located south of Portrero Grande Drive.

5.3 Exterior and Interior Observations

5.3.1 Hazardous Substances, Drums, and Other Chemical Containers

Hazardous materials were observed to be stored in the generator room in 5-gallon buckets up to 55-gallon drum-sized containers and included

compressed oil, oil pit sludge and water, waste diesel/water mix (Photo Nos. 4 and 6). Batteries used in support for the data center were observed in the utility building (Photo No. 7). Chemicals for the cooling equipment, including oxidizers and cooling water scale and corrosion inhibitor, were observed in buckets in a storage room (Level A) and on the roof (the cooling equipment is also located on the roof) (Photo Nos. 11, 15, and 16). Janitorial and general maintenance supplies were observed in retail packaging in the janitor's room located on Level A (Photo No. 9). The hazardous materials observed appeared to be stored appropriately and leaking was not identified.

5.3.2 Underground Storage Tanks (USTs) and Aboveground Storage Tanks (ASTs)

Evidence of two 10,000-gallon and one 2,000-gallon diesel USTs was observed at the Site (Photo Nos. 1, 2, and 12). The USTs feed the emergency generator system and no fuel dispensing activities occur at the Site. There were also three 50-gallon diesel day tank ASTs and three generators located within the generator room of the utility building (Photo Nos. 4 and 5). Evidence of additional USTs or ASTs was not observed.

Leighton Consulting conducted a Fueling System Assessment and according to the documents and information reviewed onsite, the tanks consist of two 10,000-gallon Owens Corning single-wall steel USTs, installed in 1981 and one 2,000-gallon Modern Welding double-wall steel UST installed in 1991. The tanks and associated piping were upgraded in 2006 to bring them into compliance with the current regulatory requirements. The tanks appeared to be in fair condition and leaks were not identified, although there were some code deficiencies and recommendations were provided to achieve code compliance (Leighton Consulting, 2014).

5.3.3 Polychlorinated Biphenyls (PCBs)

PCBs were once used as industrial chemicals whose high stability contributed to both their commercial usefulness and their long-term deleterious environmental and health effects. PCBs can be present in coolants or lubricating oils used in older electrical transformers, hydraulic

systems, and other similar equipment. In 1979, the USEPA generally prohibited the domestic manufacture of PCBs in electrical capacitors, electrical transformers, vacuum pumps, hydraulic pumps, and gas turbines.

One hydraulic elevator is located in the building (Photo No. 8). Mr. Revelo indicated that he was not aware of any mechanical issues or leaking hydraulic fluid associated with the elevator. Several dry-type transformers that do not contain hydraulic fluid were observed at the Site. Evidence of leaking fluid from potential PCB-containing equipment was not observed.

5.3.4 Waste Disposal

Solid waste (non-hazardous) was observed to be disposed of in onsite dumpsters. Staining was not observed in the vicinity of the dumpsters.

5.3.5 Dumping

Evidence of onsite dumping was not observed at the Site.

5.3.6 Pits, Ponds, Lagoons, Septic Systems, Wastewater, Drains, Cisterns, and Sumps

Evidence of pits, ponds, lagoons, septic systems, wastewater, cisterns, and sumps was not observed at the Site. Small floor drains were observed in the bathrooms and kitchen.

5.3.7 Pesticide Use

Evidence of pesticide use was not observed onsite.

5.3.8 Staining and Discolored Soils

Evidence of staining and discolored soils was not observed on the Site.

5.3.9 Stressed Vegetation

Stressed vegetation was not observed onsite.

5.3.10 Unusual Odors

Unusual odors were not detected onsite.

5.3.11 Onsite Wells

Evidence of wells was not observed at the Site.

5.3.12 Other Observations

Potential asbestos-containing materials (ACMs) and lead-based paint (LBP) were observed at the Site. A survey for these materials, including universal waste, was conducted by Health Science Associates on October 4 and 5, 2014. ACMs, LBP, and universal waste were identified during the survey and the locations, estimated quantity, and recommendations for their handling are reported under a separate cover (Health Science Associates, 2014).

6.0 INTERVIEWS

Leighton Consulting conducted interviews with persons having knowledge of current or past Site usage. Interviews were conducted either orally or in the form of a written questionnaire.

6.1 Interview with Owner

The property owner is "Studebaker-Cerritos Project, LLC, a California Limited Liability Company". The owner did not provide an Owner Interview Form to Leighton Consulting for review. A representative from the facility was interviewed, see Section 6.3 for additional information.

6.2 Interview with Site/Property Manager

See Section 6.3.

6.3 Interviews with Occupants

Mr. Joe Revelo, Chief Engineer for the property for approximately 30 years, provided information and access to the site. Areas that contained hazardous materials were made available during a site walk, and are summarized in Section 5.0. Mr. Revelo was not aware of any releases of hazardous materials at the Site.

6.4 Interviews with Local Government Officials

Interviews with Local Government Officials were not conducted other than those noted in Section 3.0.

6.5 Interviews with Others

No other persons were interviewed regarding the Subject Property.

7.0 FINDINGS

Leighton Consulting performed a Phase I ESA of property located at 1977 Saturn Street, Assessor's Parcel Number (APN) 5265-026-054, located in Monterey Park, Los Angeles County, California (Figure 1).

7.1 Onsite

The Site is approximately 15.83 acres in size and appears to have been vacant, undeveloped land from the late 1920s to the construction of the present day office building in 1980. The facility has been used as a banking operations and office center since 1980 through the present. Two 10,000-gallon diesel UST were installed in 1981. A utility building that housed a generator room with three 55-gallon day tank ASTs and a 2,000-gallon diesel UST were installed in 1991. The USTs feed the emergency generator system and no dispensing activities occur at the Site.

Damage to the single-walled copper diesel fuel line for the west UST was identified in 1991. The damaged line was uncovered and a temporary repair was completed. UST monitoring system indicated leakage. A release of fuel was not reported in the documents reviewed. Leighton Consulting conducted a Fueling System Assessment and according to the documents and information reviewed onsite, the tanks and associated piping were upgraded in 2006 to bring them into compliance with the current regulatory requirements (Leighton Consulting, 2014). The tanks appeared to be in fair condition and leaks were not identified, although there were some code deficiencies and recommendations were provided to achieve code compliance (Leighton Consulting, 2014).

A subsurface environmental assessment was conducted by LACDPW to assess potential releases from the onsite USTs and significant soil contamination was not identified (LACDPW, 2014). Based on the results, LACDPW found no evidence suggesting a fuel release from the USTs and concluded that site was not impacted in the areas assessed. No further assessment was recommended.

Hazardous materials observed in up to 55-gallon drum-sized containers included compressed oil, oil pit sludge and water, waste diesel/water mix, and chemicals for the cooling equipment located on the roof. The hazardous materials were stored in the generator room, Level A storage room, and the roof. Batteries used in support for the data center were observed in the utility building. The

hazardous materials observed appeared to be stored appropriately and leaking was not identified.

Permits indicate that there was a print shop and photo room previously located within the office building and there was an industrial wastewater discharge permit to the sewer that was closed in December of 1998. There was also a commercial grease interceptor installed at the facility that appears to be associated with the kitchen area.

One plugged and abandoned oil well, API 03720192, is identified on the DOGGR map in the southwest corner of the grassy field west of the building (Figure 3). The well, identified as Bradford Bishop "Monterey Park" 1 was reportedly drilled in July 1967 to a total depth of 7,920 feet bgs and was subsequently abandoned in late July 1967. The well never produced petroleum hydrocarbons. The precise well location was not able to be determined utilizing historical records and the well appears to be possibly located onsite or offsite to the south (App. J, DOGGR Records Section).

Groundwater is expected to be in excess of approximately 60 feet bgs based on groundwater wells in the surrounding vicinity. The groundwater flow in the Site vicinity is anticipated to be southwest based on the surface topography.

7.2 Offsite

The adjacent property to the south appears to have been a quarry and gravel pit through the 1940s and 1950s. The remaining adjacent properties appear to have been primarily mixed vacant land and residential-use through the 1970s, and primarily commercial and light industrial from the late 1970s through the present.

South of Portrero Grande Drive exist a Southern California Edison Transfer Station followed by the former OII Landfill which is on the Federal Superfund/NPL list. The nearest limit of the closed landfill appears to be approximately 2000 feet southeast of the Site. The nearest edge of the NPL area indicating the groundwater compliance line for the OII Landfill monitoring program is approximately 750 feet south of the Site. Because OII is hydraulically down-gradient and subject to regulatory actions and involvement, this facility is not expected to significantly impact the Site.

Additional surrounding properties that appeared likely to adversely affect the Site were not identified on the EDR® Radius Report.

7.3 Data Gaps

ASTM E 1527-13 requires review of standard historical sources (SHS) at approximate five-year intervals from at least 1940 to the present, or the earliest development of the site. The availability of extensive historical information varies significantly between locations and it is common to have gaps in the data for one or more of the periods where historical property uses are unknown or uncertain. There is also a potential for unidentified uses to have occurred between data points, or prior to the earliest acquired data.

The earliest data acquired for the Subject Property regarding past property usage was from 1928. Certain rooms were not inspected due to banking security reasons; however, areas that could have potentially contained hazardous chemicals or materials were made available during the site walk. Therefore this data gap is not expected to alter the conclusions or recommendations.

8.0 OPINION

8.1 Onsite

A damaged diesel fuel line was identified in 1991; however, a release to soil was not noted in the documents reviewed and based on the repair documented under LACDPW oversight and the subsequent fuel line upgrades in 2006, this incident is not considered a REC. A subsurface environmental assessment was conducted by LACDPW to assess potential releases from the 10,000-gallon and 2,000-gallon USTs and fuel lines and significant soil contamination was not identified (LACDPW, 2014). Based on this information, the USTs are not considered to be RECs. Although evidence of a release (REC) was not identified, Leighton Consulting conducted a Fueling System Assessment and noted some code deficiencies and recommendations were provided to achieve code compliance (Leighton Consulting, 2014). If the USTs are not going to be used for future proposed operations, Leighton Consulting recommends removing the USTs according to applicable regulatory guidelines and observing for evidence of releases beneath the tanks and piping.

A survey for asbestos, lead, and universal waste was conducted and these materials were identified at specific locations onsite (HSA, 2014). Although not considered a REC, Leighton Consulting recommends that the hazardous materials identified in the report should be handled appropriately prior to renovation or demolition activities that may disturb these materials.

Records indicate that banking operations formerly included a small onsite print shop and photo room with an industrial waste permit to discharge the waste to the sewer. Based on the small-scale operation that appeared to be conducted at the facility and the appropriate discharge to the sewer system, the activity is not considered a REC; however, if the building and associated utilities are demolished in the future Leighton Consulting recommends observing for evidence of releases beneath the sewer utility lines.

The DOGGR oil well map plots an oil well (API 03720192) near the southwest border of the Site (Figure 3). The accuracy of the well location is generally close; however, the actual location may vary (estimated approximately ±200 feet) and a geophysical survey and/or direct exploration is needed to assess the well location. An oil well map reviewed in the DOGGR records appear to indicate that the well is

on, or very near, the southwestern property border (Appendix J). It is Leighton Consulting's opinion that the location of this well should be further investigated prior to any new building construction in this area.

8.2 Offsite

A search of selected government databases was conducted by Leighton Consulting using the EDR® Radius Report, dated November 20, 2014. It is Leighton Consulting's opinion that facilities were not identified on the EDR® Radius Report that appeared to represent a potential source of migration of hazardous substances to the Site.

9.0 CONCLUSIONS AND RECOMMENDATIONS

Leighton Consulting performed a Phase I ESA for the Site in conformance with the scope and limitations of ASTM Practice E1527-13. Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report. This assessment has revealed no evidence of RECs, HRECs, or CRECs in connection with the property.

Although not considered RECs, Leighton Consulting identified the environmental conditions and recommends the following actions:

- One plugged and abandoned oil well, API 03720192, is identified on the DOGGR map in the southwest portion of the Site (Figure 3). The well was abandoned in 1967 and never produced petroleum hydrocarbons. Leighton Consulting recommends a geophysical survey to assess the location of the former oil well prior to new construction in this portion of the Site. If an oil well is identified at the Site, DOGGR should be contacted to evaluate current requirements for investigation and possible re-abandonment before any improvements commence at the Site.

- There are three diesel USTs present at the Site that are used for the backup generator system. Release of fuel was not identified during this Phase I ESA or during a subsurface soil investigation conducted by LACDPW (LACDPW, 2014). A Fueling System Assessment was conducted and the tanks appeared to be in fair condition. However, recommendations to rectify some code deficiencies are provided under separate cover (Leighton Consulting, 2014). If the USTs are not going to be used for proposed future operations, Leighton Consulting recommends removing the USTs according to applicable regulatory guidelines and observing for evidence of releases beneath the tanks and piping.

- There was previously a small onsite print shop and photo room with an industrial waste permit to discharge the waste to the sewer. Inappropriate discharge or leaks were not reported; however, Leighton Consulting recommends observing for evidence of potential releases beneath the sewer lines if the building and associated utilities are demolished.

- ACMs, LBP, and universal waste are located within the onsite structures. The locations, estimated quantity, and recommendations for their handling, if disturbed during renovation or demolition activities, are reported under a separate cover (Health Science Associates, 2014).

In general, observations should be made during any future Site development for areas of possible contamination such as, but not limited to, the presence of underground facilities, buried debris, buried wells, waste drums, tanks, staining soil or odorous soils. Should such materials be encountered, further investigation and analysis may be necessary at that time.

10.0 DEVIATIONS

Leighton Consulting did not deviate from or alter the scope of work, as defined in Section 1.3 of this report, in any way.

11.0 ADDITIONAL SERVICES

Leighton Consulting did not perform any work outside the scope of work as defined in Section 1.3 of this report.

12.0 QUALIFICATIONS

12.1 Corporate

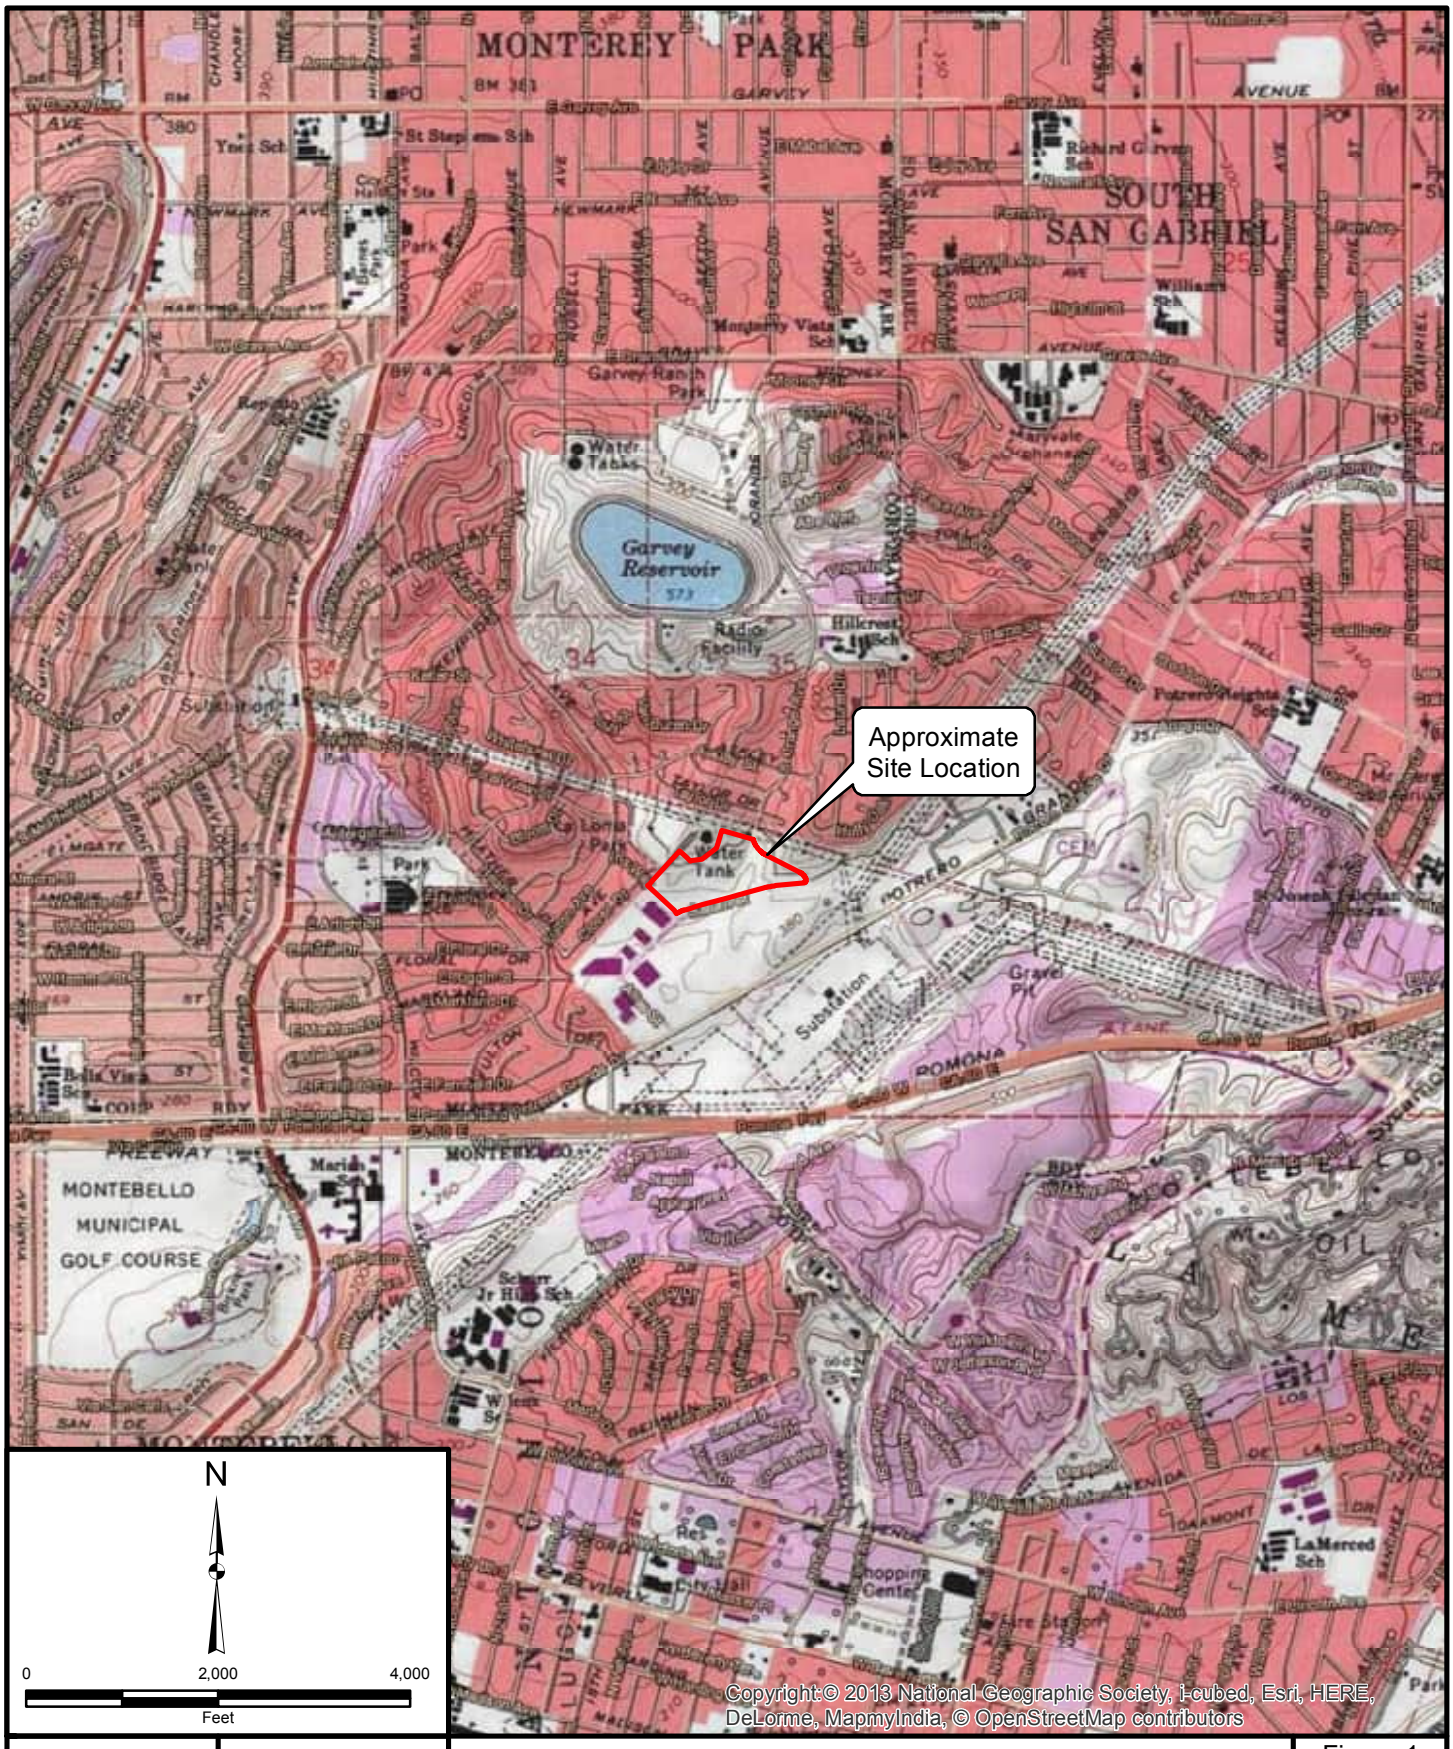
Leighton Consulting, Inc. is a California corporation, providing geotechnical and environmental consulting services throughout California. We are solely a consulting firm without interests in real property other than our eight offices in Southern California. We provide professional environmental consulting services including application of science and engineering to environmental compliance, hazardous materials/waste assessment and cleanup, and management of hazardous, solid and industrial waste. Phase I Environmental Site Assessments are a part of this practice area and have been conducted by us.

12.2 Individual

The qualifications of the Project Manager and the other Leighton Consulting environmental professionals involved in this Phase I ESA meet the Leighton Consulting corporate requirements for performing Phase I ESAs as specified by ASTM 1527-13. In addition, Ms. Meredith Church is a Professional Geologist.

12.3 Environmental Professional Statement

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental professional as defined by §312.10 of 40 CFR Part 312.



I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

ENVIRONMENTAL LIEN REPORT

The NETR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' office, registries of deed, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved and description); and
- provide a copy of the deed or cite documents reviewed;

Thank you for your business
Please contact NETR at 480-967-6752
with any questions or comments

CORPORATION GRANT DEED

BANK OF THE WEST, a California corporation, successor by merger to Lloyds Bank California, a California banking corporation (hereinafter called "**Grantor**"), for and in consideration of the sum of Ten Dollars ($10.00) and other valuable consideration paid to Grantor by **1977 SATURN LLC**, a Delaware limited liability company (hereinafter called "**Grantee**"), the receipt and sufficiency of which are hereby acknowledged, has GRANTED, BARGAINED, SOLD, ALIENED, REMISED, RELEASED, CONVEYED and CONFIRMED, and does hereby GRANT, BARGAIN, SELL, ALIEN, REMISE, RELEASE, CONVEY, and CONFIRM to Grantee, the real property described in ***Exhibit A*** attached hereto and made a part hereof (the "Land"), together with all buildings and other improvements situated thereon, all fixtures and other property affixed thereto (collectively, the "Improvements") and all right, title and interest of Grantor in and to adjacent streets, alleys and rights-of-way, and all tenements, hereditaments, and appurtenances.

Without limitation of the generality of the foregoing, by this deed, Grantor hereby conveys to Grantee all of Grantor's right, title and interest in and to (i) the Improvements, which Improvements were owned by Grantor, as lessee under that certain lease dated July 1, 1979, a short form of which was recorded July 16, 1979 as Instrument No. 79-771036, and (ii) to the Land, which Land was acquired by Grantor pursuant to deed recorded December 16, 1985 as Instrument No. 85-145623-9. Upon the conveyance of the Land to Grantor pursuant to such deed, fee title to and ownership of the Land and Improvements were merged.

[REMAINDER OF THIS PAGE INTENTIONALLY LEFT BLANK]

5265-026-054

APPENDIX D

Leighton

Phase I ESA Users Questionnaire

Project Name: 1977 Saturn Street

Complete and Correct Address(es) of the Property and APN(s):

1977 Saturn Street, Monterey Park California 91766

User Company Name:	**User Name/Title:**
LACoDPW	Gregory Sena FG

User Phone/Email: (626) 458-7626 / gsena@dpw.lacounty.gov

Interviewee Name and Relationship to Project:

Gregory Sena / Project Manager

Site Owner: GE Capital

Reason Phase I is required:

Property Acquisition

Type of property:

Commercial - Building Complex and Parking Lot

Type of property transaction (e.g., Sale, purchase, exchange):

Due Diligence for Property Acquisition

Any scope of services beyond the ASTM Practice E 1527:

Building Material Survey and Subsurface Soil Assessment

All Parties that will rely on the Phase I report:

County DPW and CEO

Name and Contact Information for Site Contact:

N/A

Any special terms or conditions:

N/A

Any other pertinent knowledge or experience with the property (e.g., prior reports, documents, correspondence concerning the environmental conditions of the property):

Files from Public Works Environmental Programs Division - Forwarded.

(1). Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Did a search of recorded land title records (or judicial records where appropriate identify any environmental liens filed or recorded against the property under federal, tribal, state or local law? Yes | ✓ No

If Yes, Describe:

(2). Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law? Yes | ✓ No

If Yes, Describe:

(3). Specialized knowledge or experience of the person seeking to qualify for the Landowners Liability Protections (LLP) (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the property or the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes | ✓ No

If Yes, Describe:

(4). Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 DRF 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

✓ Yes | No

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? Yes | ✓ No

If Yes, Describe:

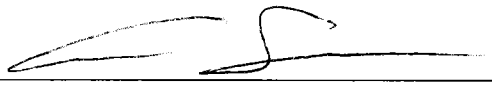
(5). Commonly known or reasonable ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the property that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as user,

(a.) Do you know the past uses of the property? ✓ Yes | No

(b.) Do you know of specific chemicals that are present or once were present at the property? ✓ Yes | No

(c.) Do you know of spills or other chemical releases that have taken place at the property? ✓ Yes | No



(d.) Do you know of any environmental cleanups that have taken place at the property? ✓ Yes | No

If Yes, Describe: Vacant Land Prior. Diesel Fuel USTs and fuel line release in the past.

(6). The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the *property*, are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property?* Yes | ✓ No

If Yes, Describe:

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

1977 SATURN STREET
LOS ANGELES County, CA 91755

COORDINATES

Latitude (North):	34.0400000 - 34° 2' 24.00''
Longitude (West):	118.1134000 - 118° 6' 48.24''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	397223.4
UTM Y (Meters):	3766955.5
Elevation:	361 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 09/29/2014 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NEW CURE, INC./OPERATING INDUS	***2550 GREENWOOD AVENUE***	***SSE 1/8 - 1/4 (0.161 mi.)***	***0***	***13***

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

NEW CURE, INC./OPERATING INDUS	***2550 GREENWOOD AVENUE***	***SSE 1/8 - 1/4 (0.161 mi.)***	***0***	***13***

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/10/2014 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NEW CURE, INC./OPERATING INDUS	***2550 GREENWOOD AVENUE***	***SSE 1/8 - 1/4 (0.161 mi.)***	***0***	***13***

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/10/2014 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NEW CURE, INC./OPERATING INDUS	***2550 GREENWOOD AVENUE***	***SSE 1/8 - 1/4 (0.161 mi.)***	***0***	***13***

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/10/2014 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/10/2014 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/05/2014 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 09/15/2014 has revealed that there are 5 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 09/17/2014 has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at proposal October 15, 1984): Operating Industries, Inc., operated a landfill on 190 acres in the City of Monterey Park, Los Angeles County, California. The 45-acre northern section was separated in the 1960s from the southern 145-acre section by the Pomona Freeway. EPA has evidence that the original landfill included at least a portion of both sections. From l948 to l983, solid and liquid wastes, some ha ardous, were disposed of at the site. Leachate generated by the landfill contains vinyl chloride, ben ene-type compounds, tetrachloroethylene, heavy metals, and other contaminants, according to testing by the Los Angeles County Sanitation District LACSD), the California Department of Health Services CDHS), and the company. In July l983, the South Coast Air Quality Management District SCAQMD) detected vinyl chloride above ambient standards in air at and around the landfill, which is adjacent to a large residential area. SCAQMD, CDHS,and the Los Angeles County Department of Health Services have taken enforcement actions against the facility. About 23,000 people use wells within 3 miles of the site as a source of drinking water. The company acquired Interim Status when it filed Part A of a permit application under Subtitle C of the Resource Conservation and Recovery Act RCRA). The company submitted a draft plan for closing the landfill under RCRA, but CDHS, in conjunction with other State agencies and EPA, determined that the plan had numerous deficiencies, most notably the failure to 1) provide financial assurance requirements for closure and 2) develop an adequate plan for monitoring ground water and for collecting and disposing of leachate. The company has not submitted complete and adequate closure and postclosure documents. Status February 1986): EPA collected gas samples in November 1984 from 16 subsurface probes in an adjacent housing development. Some samplesconfirmedthe presence of methane and vinyl chloride in subsurface soils. Interior home samples collected in November 1984 had low levels of methane and nondetectable levels of vinyl chloride. Elevated levels of methane and vinyl chloride werealso detected in a home adjacent to the landfill in October 1985. EPA installed six monitoring wells around the landfill in 1984-85. Quarterly samples collected since March 1985 contain organic chemicals and trace metals. In July 1985, EPA started planning for a comprehensive remedial investigation to determine the nature and extent of the problems associated with the landfill. When the investigation is complete, various alternatives to remedy the problems will be evaluated in a feasibility study. Interim measures are planned to stabili e and control the landfill, including slope stabili ation and upgrading of existing gas leachate collection systems. EPA trucked leachate to an off-site treatment facility from October 1985 to February 1986, when the State took over. Status June 10, 1986): This site is placed on the NPL because the potentially responsible party declined to initiate work, and CERCLA-funded remedial activities are underway.Thus, the site meets one of the requirements of EPA s policy for placing RCRA-related sites on the NPL.

Site Description: --HISTORICAL WASTE DISPOSAL AND LANDFILL OPERATIONS Prior to 1946, the OII property was a sand and gravel quarry. Waste disposal operations at the landfill began on 14 acres in October 1948 by Monterey Park Disposal Company. In January 1952, Operating Industries, Inc. assumed ownership of the landfill; and, by 1958, the landfill had expanded to 218 acres. The size was later reduced to 190 acres when the State of California purchased 28 acres for construction of the Pomona Freeway. In October 1954, the landfill was permitted for the disposal of liquids at the landfill. In March 1976, the disposal of liquids was limited to a 32-acre area in the western portion of the South Parcel. This order allowed Operating Industries, Inc. to mix liquids with solid refuse at a ratio of 10 gallons per cubic yard of refuse. In September 1976, this ratio was increased to 20 gallons per cubic yard. In 1982, leachate was observed seeping offsite. OII stopped accepting hazardous liquid waste in January 1983 and all liquid waste in April 1983. A leachate collection system was installed to collect leachate seeping from the landfill. Leachate generated at the landfill was collected and redisposed by combining it with incoming refuse that was mixed back onto the working face of the landfill. This practice continued until September 1984, when the California Department of Health Services classified leachate generated at the landfill as hazardous and prohibited redisposal, effective October 1984. At that time, OII began shipping all leachate offsite for treatment and disposal. Prior to 1984.

NEW CURE, INC./OPERATING INDUSTIRES, INC/ (Continued) **1000353881**

OII, the landfill operator and owner, performed several landfill control measures. This included installation of the leachate collection system, development of an air-dike air injection system on the west side of the landfill to control subsurface gas migration, installation of gas extraction wells around the perimeter of the landfill, installation of a gas flaring station to burn landfill gas, site contouring, slope terracing and vegetation, and covering refuse with fill. OII's control of the environmental problems and maintenance of the control systems began to diminish significantly in late 1984. In this same period, EPA began initial site investigations. On May 19, 1986, OII notified the state of its intent to discontinue all site control and monitoring activities except irrigation. By the end of May 1986, the OII Site was added to the NPL. EPA assumed responsibility for site activities on May 20, 1986. ---LANDFILL DEVELOPMENT AND THICKNESS Landfilling operations began in 1948 by filling an existing natural canyon currently occupied by a portion of the Pomona Freeway and north-central portions of the South Parcel. Cut-and-cover filling operations began in the early 1950s. Additional areas were quarried and filled. From the 1950s through the 1970s, the waste disposal activities expanded to cover the current landfilled area. During this time, the height of the landfill was also increased several times, ultimately reaching the current elevation of approximately 640 feet above mean sea level. The thickness of solid waste in the South Parcel ranges from approximately 200 to 325 feet. The North Parcel contains approximately 11 acres of solid waste, ranging in thickness up to 55 feet. ---WASTE TYPES AND QUANTITIES A total estimated refuse volume of 38 million cubic yards weighing 22 to 31 million tons was disposed at the landfill over its operating life. More than three-fourths of the refuse was disposed before 1974, before records were maintained for truck counts and delivered weight. Liquids are excluded from these refuse mass calculations. Liquid wastes were disposed at the landfill throughout its history, until April 1983. More than 300 million gallons of liquids are recorded as having been disposed between 1976 and 1983. Liquid wastes were reportedly disposed at the landfill prior to 1976, but records were not kept by landfill operators. --HYDROGEOLOGIC INVESTIGATIONS EPA performed six major hydrogeologic investigations at the OII Site between 1975 and 1993, resulting in the installation of 75 groundwater monitoring wells. Activities conducted as part of these investigations include: drilling and monitoring well installation, formation testing, surface and subsurface soil sampling, groundwater sampling and analysis, and aquifer testing. --GEOLOGIC AND GEOTECHNICAL EVALUATIONS EPA performed several geologic and geotechnical investigations that provide additional information regarding the subsurface conditions at or near the OII Site. --AIR QUALITY INVESTIGATIONS EPA conducted two air quality investigations as part of the Remedial Investigation for the OII Site. One investigation focused on ambient air in the vicinity of the landfill, and the other investigation focused on air quality in the homes surrounding the landfill. Ambient air sampling was conducted for one year, from September 1989 to September 1990. The in-home air monitoring was conducted between November 1992 and July 1993. --SURFACE WATER SAMPLING Surface water in the form of runoff from the landfill is sampled routinely as part of the site control and monitoring activities at the landfill. In addition, EPA collected two surface water runoff samples from the North Parcel in 1987 as part of a field reconnaissance to identify surface drainage features. Routine surface water sampling began in February 1990 and continues through the present. EPA collected leachate samples from leachate seeps in Iguala Park after heavy rains in January 1993. The OII Landfill Work Defendants performed a survey of onsite landfill seeps after the 1992/1993 rainy season to prioritize seepage areas for potential remediation prior to installation of the landfill cover. Since 1983, EPA has periodically collected and analyzed leachate to characterize its chemical composition and source

NEW CURE, INC./OPERATING INDUSTIRES, INC/ (Continued) **1000353881**

areas. Since 1990, the OII Landfill Work Defendants have performed several leachate sampling events associated with evaluations of leachate quantity and quality for the leachate treatment plant. --LANDFILL GAS INVESTIGATIONS EPA has collected a large amount of landfill gas data at the OII Site since the mid-1970s. -Landfill Gas Probes and Wells. OII installed landfill gas monitoring probes along the west, south, and east borders of the South Parcel in 1976 and 1981 and around the North Parcel in 1981. OII installed perimeter gas extraction wells in various phases from 1982 through 1984. -Air Dike Wells. OII installed an air dike system in native material along the south and west borders of the landfill to control landfill-generated methane gas emissions beyond the landfill boundary. EPA installed 26 wells in 1981 to create the air dike. Additional wells and monitoring probes were installed in October 1982. EPA constructed eight gas migration test wells to a maximum depth of 101 feet as part of a testing program for the existing air dike system. -South and North Parcel Landfill Gas Monitoring Wells. EPA installed 15 landfill gas monitoring wells along the western and southern boundaries of the South Parcel in 1987 and 1988. EPA installed 13 landfill gas monitoring wells on the North Parcel in June/July 1987. ---------- ---------- --SUMMARY OF EPA ACTIONS AT THE OII SITE EPA has performed a variety of emergency actions in response to environmental problems at the landfill, including erosion control improvements, installation of a toe buttress for slope stability, surface runoff and drainage improvements, rehabilitation of the main flare station, site security, placement of vented water meter box covers in the areas surrounding the landfill, and installation of control systems in nearby affected residences. EPA formally began the Remedial Investigation/Feasibility Study at the OII Site in 1986, although field investigations had been initiated in 1984. -SUMMARY OF ENFORCEMENT ACTIVITIES -Prior to EPA involvement, various state and local agencies reported that OII frequently violated waste disposal regulations during the operations at the landfill between 1952 and 1984. There are approximately 3,950 potentially responsible parties at the OII Site. Since 1984, EPA has sent combined general notice and CERCLA 104(e) letters to potentially responsible parties that generated approximately 87 percent (by volume) of the manifested liquid waste for which EPA has records. -OII SITE CONSENT DECREES AND ADMINSTRATIVE ORDERS Five Consent Decrees have been successfully negotiated with various potentially responsible party groups for performance and funding of various portions of the site cleanup. In addition to the Consent Decrees, site cleanup work has been performed under a Unilateral Administrative Order that EPA issued to three of the previously nonsettling potentially responsible parties. The order required these PRPs to participate in the collection and treatment/disposal of wastes associated with the OII Site in cooperation with the PRPs performing work at the site under the Consent Decrees. These three parties subsequently joined the Fifth Partial Consent Decree. -HIGHLIGHTS OF COMMUNITY PARTICIPATION The Proposed Plan for this remedy, in the form of a fact sheet, was distributed to approximately 3,000 parties on EPA's mailing list for the OII Site. The Proposed Plan, together with the Feasibility Study Report and the Draft Remedial Investigation Report, were also made available in the site vicinity at local libraries. Notice of public meeting, availability of the Proposed Plan, and the announcement of a 30-day public comment period were published in the Los Angeles Times newspaper, San Gabriel edition, and the Monterey Park Progress and Montebello News newspapers. EPA held a public meeting on June 12, 1996, near the site to discuss its cleanup plan. EPA extended the public comment period in response to a request from members of the public. A public notice mailed to the entire EPA mailing list extended the original 30-day public comment period to 60 days. EPA received several sets of written comments during the public comment

NEW CURE, INC./OPERATING INDUSTIRES, INC/ (Continued) **1000353881**

period. EPA has also held frequent meeting with the public, the state, and local agencies to discuss ongoing activities at the landfill. In addition to the Proposed Plan fact sheet for this remedy, EPA has issued numerous fact sheets between 1985 and 1996 describing investigation and cleanup activities at the OII site. The Operating Industries, Inc. (OII) site is located approximately 10 miles east of Los Angeles in Monterey Park, California. The OII site consists of a 190 acre landfill which was operated from 1948 to 1984, and was used for disposal of municipal and industrial waste. The landfill contains hazardous waste and hazardous substances, and was listed on the National Priorities List in May, 1986. The Pomona Freeway divides the site into a 45-acre northern parcel and a 145-acre southern parcel. The top of the south parcel of the landfill is about 150 to 250 feet above the ground surface and the bottom of the landfill is about 200 feet below ground surface. Elevation of the upper surface of the south parcel of the landfill is about 620 to 640 feet above Mean Sea Level (MSL). The OII site is presently owned by the former operators, Operating Industries, Inc. The EPA has been conducting site control and monitoring (SCM) activities at the site since OII ceased performing these activities in May, 1986. In addition, EPA has conducted a number of emergency actions to mitigate potential threats to public health and the environment. The site has become more stabilized as a result of the SCM activities and the emergency actions. The City of Monterey Park has a population of 54,338 (1980 Census). The City of Montebello, which borders the southern parcel of the landfill, has a population of 52,929 (1980 Census). Several residents of Montebello are situated in homes immediately adjacent to the boundaries of the landfill. Within a three mile radius of the site, there are approximately 53,000 residences. The perimeter of the southern parcel of the landfill is fenced. Entrance is restricted and 24-hour security is provided. Several businesses are currently operating on the northern 45-acre parcel. These businesses have a lease arrangement with the operators. Landfill operations at the site began in 1948. From 1948 to 1952, the site was used to dispose of municipal garbage by the City of Monterey Park. Prior to 1948, the site and surrounding areas were quarried for sands and gravels. In January 1952, the site became a privately owned landfill under the ownership of OII. From 1952 to 1984, the site was operated as a landfill for municipal and industrial liquid and solid wastes. In 1974, the Ponoma Freeway was constructed. The freeway split the landfill into a north and south parcel. In June 1975, waste disposal operations were curtailed in the northern parcel. Operations were then limited to the area south of the freeway. On October 6, 1954, the Regional Water Quality Control Board (RWQCB) first permitted disposal of liquids at OII (Monterey Disposal Company Dump at that time). Some of these liquids, and some liquid industrial wastes disposed prior to the Board's permit, are considered to be hazardous by current Federal and State statutes and regulations. In 1975, a 32-acre area in the western part of the southern parcel was established as the area of liquid waste disposal and permitted to accept Class II-l wastes. Waste disposal operations ceased in October 1984. The OII site was placed on the California Hazardous Waste Priority List in January 1984. The OII site was proposed for the Federal National Priority List (NPL) of uncontrolled hazardous waste sites in October 1984 and was finalized on the NPL in May 1986. In 1974, Getty Synthetic Fuels, Inc. (GSF) entered into a contractual relationship with OII for the extraction of gas from the landfill for processing and sale to Southern California Gas Company. GSF's gas extraction system went into operation in 1979. In March, 1986, GSF ceased its gas processing activities and applied to the South Coast Air Quality Management District (SCAQMD) for a permit to construct an electrical generating plant. At that time, GSF began to flare the extracted gas in an incinerator until final permits for construction of the electrification plant were issued. GSF also applied for a permit from the City of Monterey Park

NEW CURE, INC./OPERATING INDUSTIRES, INC/ (Continued) **1000353881**

for discharge of treated effluent to the sewer. In January, 1986 the City of Monterey Park denied GSF's permit. As a result, GSF decided to abandon their extraction operations at the OII landfill as of March 1, 1987. EPA took over operation of the GSF system in June, 1987. Over its 36-year life span, the OII landfill has accepted the following types of wastes: Residential and commercial refuse; water-insoluble, non-decomposable inert solids; liquid wastes; various hazardous wastes including wastewater treatment sludge from production of chrome oxide green pigment; and slop oil emulsion solids and tank bottom sludges (leaded) from petroleum refining operations. Both landfill gas and leachate are generated by the OII site. From April 1983 to October 1984, about 25,000 gallons of leachate per day was collected by OII's leachate collection system and disposed of by mixing with the incoming solid waste. Since then, collected leachate has been stored on-site in Baker tanks, and transported to a permitted off-site treatment facility. The leachate generated at the OII site is a hazardous waste as defined by Resource Conservation and Recovery Act (RCRA) 261.3 regulations, and contains hazardous organic constituents, such as vinyl chloride, trichloroethylene, benzene and toluene. Land uses around the landfill began to undergo significant changes in 1974. These changes included construction of the Pomona Freeway (1974), and increased residential development within Montebello City limits to the southwest (1975) and south (1976) of the facility. A residential area is directly adjacent to portions of the southern and western boundaries of the landfill. In response to a number of site problems identified by State and Federal regulatory agencies, partial control measure performed on-site by the owner in prior years include: - Installation of a leachate collection system. - Development of an air-dike air injection system on the west side of the site to control subsurface gas migration. - Installation of gas extraction wells around the perimeter (except for the air-dike area) of the site and a gas flaring station. - Site contouring, slope terracing, and vegetation. - Covering refuse with additional fill. The partial control measures instituted by the owner were insufficient to maintain site integrity and the EPA, therefore, instituted emergency response actions in order to protect public health, welfare and the environment. Emergency actions performed to date by EPA include: - Slope stability and erosion control improvements, including construction of a toe buttress. - Surface runoff and drainage improvements. - Rehabilitation of the main flare station. - Site security. - Placement of vented water meter box covers off-site. The owner/operator's ability to control the environmental problems and maintain the control systems began to diminish significantly in late 1984 when it notified EPA and the California Department of Health Services (DOHS) that it could no longer afford to truck leachate offsite for treatment. EPA conducted the leachate trucking and treatment for several months, and then DOHS assumed responsibility for this activity, while OII continued to attempt to operate and maintain remaining on-site control systems. On May 19, 1986, OII notified the State that they intended to discontinue all site control and monitoring activities on the site except irrigation. The EPA therefore assumed these activities on May 20, 1986. SCM activities then continued to be performed by EPA, with the State DOHS providing leachate trucking and treatment, and OII providing on-site irrigation. On December 15, 1986, the State transferred responsibility for leachate trucking and treatment to the EPA. The EPA has also requested that OII allow EPA to assume full responsibility for irrigation of the site, since EPA believes that OII has not properly conducted the activity. Operable Unit 02: Interim actions have been undertaken at the landfill to control and prevent leachate seeps from occurring. In 1980, both the South Coast Air Quality Management District, and the California Waste Management Board ordered OII to construct a leachate collection system. A leachate collection system was installed in the early 1980's by OII to control surface seepage that was

NEW CURE, INC./OPERATING INDUSTIRES, INC/ (Continued) **1000353881**

occurring on- and off-site. The system consists of shallow gravel trenches which passively collect leachate to prevent surface seepage, unlined gravel sumps, and underground collection tanks. Wells were installed by OII and EPA above the Iguala Park area to intercept leachate that was appearing as surface seepage down-slope in Iguala Park. There are five areas on the site in which leachate collection systems are located. Under the Site Control and Monitoring Remedial Action EPA will be implementing improvements and repairs to the existing shallow collection system. The present OII leachate collection system is a poorly designed system in various states of disrepair. These improvements should increase the efficiency of the collection system and consequently increase the volume of leachate collected. Surface seepage of leachate occurs at the site periodically due to failure of the existing collection system. Leachate seepage occurred in the southwest corner of the site in August, 1987. This supports EPA's contention that improvements to the collection system will lead to increased volumes of leachate collection due to improved system efficiency. Leachate was collected by OII at a rate of 25,000 to 30,000 gallons per day during the period from April 1983, to October 1984, when the leachate was being re-disposed into the landfill. Collection rates showed an initial steep decline after October 1984, which may reflect the cessation of leachate re-disposal. Deterioration of the collection system may also be reflected in the decline. Since the initial decline following to cessation of leachate re-disposal leachate collection rates have stabilized. Collection rates vary throughout the year but average approximately 4 to 6 thousand gallons per day. Several factors contribute to the continued leachate production at the site: - Metabolic liquids produced by decomposition of the waste mass; - Liquid infiltration through the surface of the site; - Liquids squeezed out of pore spaces as the landfill settles; - Approximately 300,000,000 gallons of manifested liquids were deposited since 1977, and additional large volumes were deposited historically. EPA estimates that volumes of leachate and hazardous liquids collected at OII will increase to approximately 10,000 gallons during the interim period before implementation of the final remedy for the site. This volume increase will be due primarily to improvements to the existing collection system (described above) and to improvements to collect condensate which is currently being recirculated through the landfill. A Record of Decision addressing Operable Unit 02 was completed in November 1987. Operable Unit 04: There are seven major environmental control systems and activities at the OII site that require operation, maintenance, inspection, and monitoring on a continuous basis: 1. Gas Extraction and Air Dike System 2. Leachate Collection System 3. Irrigation System 4. Access Road System 5. Stormwater Drainage System 6. Site Security 7. Slope Repair and Erosion Control A Record of Decision addressing Operable Unit 04 was completed in July of 1987. Operable Unit 3: Facilities have been constructed on the landfill to monitor and provide limited control of the offsite migration of landfill gas (LFG) and leachate from the landfill. A commercial gas recovery facility, referred to as the interior gas extraction system, was constructed by GSF Energy, Inc., in the interior area of the landfill. These systems are described in the following sections. Landfill Gas Monitoring Probes Sixteen LFG monitoring probes were installed by OII onsite along the west, south, and east borders of the south parcel of the landfill in 1976. In December 1981, 15 probes were added and the total 31 probes allowed LFG monitoring along the entire perimeter of the south parcel. In addition, 15 LFG monitoring probes were installed in the north parcel. Thirty-five perimeter probes were installed in July and August 1981 along the west and southwest boundaries to monitor the effectiveness of the air dike system. Perimeter Gas Extraction System The perimeter gas extraction system was installed by OII in five major phases on the south parcel to partially control offsite migration of LFG. Phase I (the air dike injection

NEW CURE, INC./OPERATING INDUSTIRES, INC/ (Continued) **1000353881**

system), installed in 1981, consists of approximately 31 wells on the west border. This air dike injection system introduces air under pressure into the ground at the landfill perimeter to induce a positive pressure gradient and air flow as a barrier to LFG migration away from the landfill. Phases II/III/IV of the system, consisting of LFG extraction wells along the southern and eastern borders, were installed in 1982, and 1983. After the wells were installed, gas was collected using a portable blower and flare system. In 1983, a permanent blower and flare station (now known as the auxiliary flare) was installed in the southwest corner of the landfill, and the wells were connected with a header system. By July 1983, both the auxiliary flare and portable system were in operation. Phase V wells were connected in May 1984. The rim well system on the southeast slopes was also added in 1984. This system collects landfill gas from an upper bench of the landfill near the southern perimeter. The wells are relatively shallow, and extract LFG from the above-ground portion of the landfill. The rim wells are connected to the perimeter gas extraction system and, therefore, operate independently of the nearby interior gas extraction system. A new flare station (now known as the main flare) in the northwest corner of the landfill was added in 1984 Interior Gas Extraction System GSF (then called NRG NuFuels, Inc.) signed a contract with OII in August 1974 to develop a LFG recovery system for commercial purposes at the OII Landfill site. The GSF gas collection system and plant began recovering methane for sale to Southern California Gas Company in October 1979. After deciding that continued resource recovery operations at OII were no longer economically viable, GSF relinquished ownership of all subsurface facilities to OII per their contract and notified the EPA that they intended to dismantle their aboveground facilities by March 1, 1987. In April 1987, GSF, the EPA, and the South Coast Air Quality Management District (SCAQMD) completed negotiations for the purchase of GSF surface facilities using OII trust fund monies held by the SCAQMD. Extraction and flaring of LFG continued from February to May 1987 under temporary agreement between GSF, the SCAQMD, and the EPA. At present, LFG extraction and flaring are operated by the EPA. EPA is currently performing operation and maintenance of the existing leachate collection system, the existing perimeter gas extraction system, and the existing interior gas extraction system. The system operation and maintenance includes daily monitoring of LFG probes (onsite and offsite, including water meter boxes), conducting scheduled maintenance of blower/flare stations and compressor equipment, and maintaining site security. In addition, the EPA is conducting a remedial investigation/feasibility study (RI/FS) to determine the nature and extent of contamination resulting from the site and to assess potential remedial actions. In 1981 a cease and Desist Order (L.A. County DOHS) was issued to OII for operating the landfill without an approved plan for control of landfill gas. In 1983 a Supplemental Notice and Order (L.A. County DOHS) was issued reiterating the Order requirements, requiring installation of gas probes, wells, daily monitoring of gas systems, and reporting to L.A. County DOHS, California Waste Management Board (CWMB), and SCAQMD. In 1984 a Remedial Action Order LA001 (CA DOHS) required leachate management, site characterization, landfill gas control, and closure plans. That same year a Notice of Violation to OII (CA DOHS) provided notification of noncompliance with the Remedial Action Order. OII was proposed for the National Priorities List in 1984. A ROD addressing Operable Unit 03 (OU03) was completed in September 1988. The original OU03 gas ROD contains a chronology of site enforcement activities through 1988. EPA has undertaken the following enforcement activities since September 1988: May 1989 - A Partial Consent Decree (CD) between the United States, the State of California, and approximately 120 Potentially Responsible Parties (PRPs) was entered in the District Court for the Central District of California, United States, et al v. Chevron Chemical, et al. The Partial Consent Decree resolved

NEW CURE, INC./OPERATING INDUSTIRES, INC/ (Continued) **1000353881**

claims for some State and Federal past costs, EPA oversight costs, and the implementation of the first two operable units, Site Control and Monitoring and Leachate Management. July 1989 - EPA sent General Notice letters to approximately 91 additional PRPs representing an additional five percent by volume of the manifested liquid wastes. The generators noticed to date represent approximately 85% by volume of the manifested liquid waste. March 1990 - EPA extended an offer to the 91 PRPs noticed in July 1989 and to previous non-settlers for settlement of the same issues as the first CD (past costs to June 1, 1988, liability for the first two operable units, and EPA oversight cost for the two Operable Units). The offer closed August 3, 1990. The settlement will result in a Second Partial Consent Decree. A ROD Amendment addressing Operable Unit 3 was completed in September 1990.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste code: 731
Waste name: 731

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Waste code: D040

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedy Constructed: Operating Properly & Successfully
Completed Date: 04/21/2000
Comments: Final cover for the entire South Parcel is completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 03/09/1998
Comments: This design plan approves the capping of the landfill with an additional four feet of monocover using the existing cap as a two foot foundation layer. The cap design also includes the establishment of native vegetation for monocover performance as well as aesthetics.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 07/23/1997
Comments: 30% Design - Final Cover -- The final cap will consist of a four foot thick monocover with a native vegetative cover. The existing cap will act as a foundation for the monocover.

Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/30/1994
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan
Completed Date: 09/28/1990
Comments: The amended Gas Migration Control ROD at the site addresses the landfill gas (LFG) migration control and landfill cover. The major component of this amendment is the addition of landfill cover to the previously selected gas migration control remedy. The major components of the Gas Migration Control ROD include: 1) landfill cover designed to reduce surface gas emissions and odors, prevent oxygen intrusion into the refuse, prevent surface water infiltration, provide erosion control, and improve site aesthetics; perimeter LFG extraction wells with placement focused on minimizing off site LFG migration; LFG extraction wells on the top deck of the landfill with placement focused on maximizing source control of LFG; shallow and deep slope wells with placement focused on reducing surface emissions and controlling intermediate to deep subsurface migration at the perimeter; integrated above-grade LFG headers and condensate sumps; LFG monitoring wells at the site boundary; upgraded thermal destruction facility for landfill gas; and pumps in appropriate gas wells with above-grade collection sumps to dewater saturated zones. The amended gas control remedial action will be integrated with the two additional operable units, Site Control and Monitoring, and Leachate Management, now being implemented.

Background Info:	Operating Industries, Inc. (OII) is an inactive Class II landfill surrounded by residential areas on the south and west borders. From 1948 to 1952, the OII site was operated as a municipal landfill by the City of Monterey Park. In January 1952, the site became a privately owned landfill under the ownership of OII. The site was permitted by the RWQCB in 1976, to receive various nonhazardous and hazardous liquid wastes, including lead compounds, chrome oxide, pigment sludge, refinery wastes, waste water from paint manufacturing, and caustic cleaning waste. It was not until 1984 that OII stopped accepting waste. The pathways of contamination are through inhalation of land fill gases and direct contact of leachate entering the ground water. Possible receptors are the residents near the facility and the potential impact of the contaminated groundwater on drinking water supplies. The Department took over the site when the owner and operator failed to continue with the site closure activities. In May 1986, the landfill was listed on the NPL and EPA became the lead agency. EPA initiated a remedial investigation to define the extent of environmental problems. A hydrogeologic investigation to study the groundwater was performed in September of 1989. In May of 1989, a Partial Consent Decree was entered in the Federal Court between EPA and over 100 PRPs. The PRPs agreed to undertake the site control and monitoring, and construct a leachate treatment system, as well as conducting several site improvements. Site work pursuant to the Consent Decree began in November 1989, when daily operation, including operation and maintenance/monitoring of the existing gas and leachate control system, and erosion and drainage control were assumed by the settling PRPs'.

CA BOND EXP. PLAN:
Reponsible Party: NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: EPA, with State participation, is negotiating with the PRP's for PRP financing of the site RI/FS. For purposes of this document, DHS is assuming that final remediation activities will be jointly funded by EPA and DHS.
Site Description: The site is an inactive Class II landfill bounded by Highway 60 on the north and residential areas of the City of Montebello on the south and west.
Hazardous Waste Desc: The site was permitted by the RWQCB in 1976 to receive liquid wastes. Wastes include lead compounds, chrome oxide, pigment sludge, refinery slop oil, emulsion solids, leaded tank bottoms, waste water from paint manufacturing, and caustic cleaning waste.
Threat To Public Health & Env: Landfill gases including vinyl chloride and methane continue to migrate offsite and has been detected in residential water meter boxes and offsite probes and inside one home adjacent to the site. Leachate containing hazardous substances has been detected in monitoring wells in the center of the landfill. An unknown quantity of leachate has accumulated and poses a threat since it may migrate

OPERATING INDUSTRIES, INC. (Continued) **S100833436**

and thus threatens surface and ground water.

Site Activity Status: An interagency committee consisting of 15 federal, State and local agencies is coordinating efforts to properly mitigate and close this site. The State agencies have filed suit to order Operating Industries, Inc., to undertake specific characterization and remedial actions. A preliminary injunction has been issued. Operating Industries, Inc., failed to provide proper financial assurances for closure and post-closure, claiming that funds are not available. Transportation offsite of leachate collected by the perimeter drain system was paid for by Operating Industries, Inc., until October, 1985. This task has since been paid for by EPA and DHS with emergency funds, at a cost of approximately $50,000 per month. EPA is conducting an RI/FS with review and oversight by DHS and other State agencies. In addition, the EPA ROD for an operable unit to control gas migration from the landfill was signed in September, 1988.

WMUDS/SWAT:

Edit Date:	19950126
Complexity:	Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.
Primary Waste:	SLDWST
Primary Waste Type:	Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 07/25/2014
Date Data Arrived at EDR: 09/09/2014

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013
Date Made Active in Reports: 10/03/2013

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

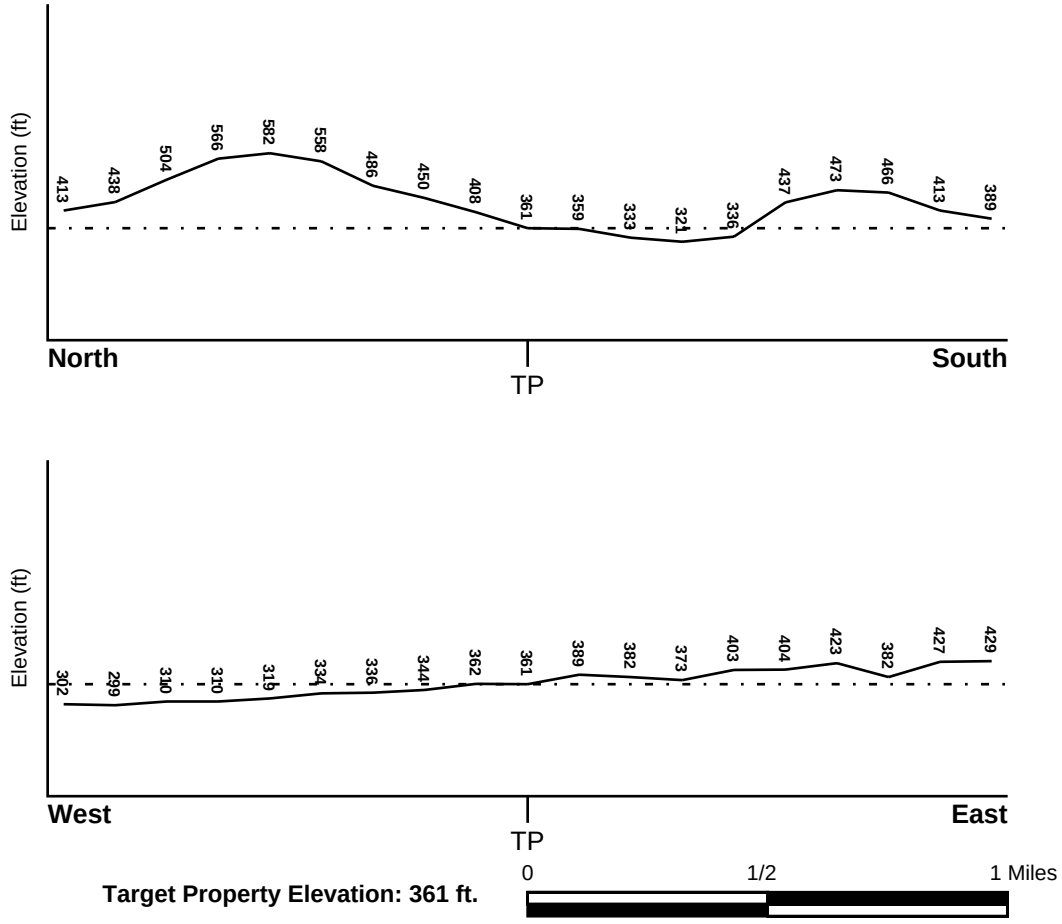
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06037C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
EL MONTE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Tertiary
Series:	Pliocene
Code:	Tp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TABLE OF CONTENTS

The EDR-Site Report™ is a comprehensive presentation of government filings on a facility identified in a search of federal, state and local environmental databases. The report is divided into three sections:

Section 1: Facility Summary . . . . . Page 3

Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.

Section 2: Facility Detail Reports . . . . . Page 4

All available detailed information from databases where sites are identified.

Section 3: Databases and Update Information. . . . . Page 5

Name, source, update dates, contact phone number and description of each of the databases for this report.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

SECTION 1: FACILITY SUMMARY

FACILITY AREA	FACILITY 1 1977 SATURN ST. MONTEREY, CA 91754 EDR ID #91228779
WASTE MANAGEMENT Facility generates hazardous waste (RCRA)	NO
Facility treats, stores, or disposes of hazardous waste on-site (RCRA/TSDF)	NO
Facility has received Notices of Violations (RCRA/VIOL)	NO
Facility has been subject to RCRA administrative actions (RAATS)	NO
Facility has been subject to corrective actions (CORRACTS)	NO
Facility handles PCBs (PADS)	NO
Facility uses radioactive materials (MLTS)	NO
Facility manages registered aboveground storage tanks (AST)	NO
Facility manages registered underground storage tanks (UST)	NO
Facility has reported leaking underground storage tank incidents (LUST)	NO
Facility has reported emergency releases to the soil (ERNS)	**YES - p4**
Facility has reported hazardous material incidents to DOT (HMIRS)	NO
WASTE DISPOSAL Facility is a Superfund Site (NPL)	NO
Facility has a known or suspect abandoned, inactive or uncontrolled hazardous waste site (CERCLIS)	NO
Facility has a reported Superfund Lien on it (LIENS)	NO
Facility is listed as a state hazardous waste site (SHWS)	NO
Facility has disposed of solid waste on-site (SWF/LF)	NO
MULTIMEDIA Facility uses toxic chemicals and has notified EPA under SARA Title III, Section 313 (TRIS)	NO
Facility produces pesticides and has notified EPA under Section 7 of FIFRA (SSTS)	NO
Facility manufactures or imports toxic chemicals on the TSCA list (TSCA)	NO
Facility has inspections under FIFRA, TSCA or EPCRA (FTTS)	NO
Facility is listed in EPA's index system (FINDS)	NO
Facility is listed in other database records (OTHER)	NO
POTENTIAL SUPERFUND LIABILITY Facility has a list of potentially responsible parties PRP	NO
TOTAL (YES)	1

SECTION 3: DATABASES AND UPDATE DATES

To maintain currency of the following federal, state and local databases, EDR contacts the appropriate government agency on a monthly or quarterly basis as required.

Elapsed ASTM days: Provides confirmation that this report meets or exceeds the 90-day updating requirement of the ASTM standard.

DATABASES FOUND IN THIS REPORT

CA HAZNET: Facility and Manifest Data
Source: California Environmental Protection Agency
Telephone: 916-255-1136
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

Date of Government Version: 12/31/2013
Database Release Frequency: Annually

Date of Last EDR Contact: 10/15/2014
Date of Next Scheduled Update: 01/26/2015

www.edrnet.com

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. EDR Inquiry # 4140292.3

Contact: Meredith Church

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Leighton Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Site Name: 1977 Saturn Street
Address: 1977 Saturn Street
City, State, Zip: Monterey Park, CA 91755

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

Dear Ms. Church:

The Department of Toxic Substances Control has received your letter to review records under the Public Records Act.

After a thorough review of our files we have found that no such records exist at this office pertaining to the site/faciliy referenced above.

We would like to inform you about EnviroStor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accesses at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available at each DTSC Regional File Room Office for use by community members to view EnviroStor.

If you have any questions or would like further information regarding your request, please contact me at (714) 484-5337.

Sincerely,

Julie Johnson

RE: 1977 SATURN ST., MONTEREY PARK, CA 91755

I, the undersigned, being the Custodian or the Keeper of Records, certify that a thorough search for the records you requested was carried out under my direction and control.

This search revealed no records.

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, another name, or under another classification. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

If you have any questions regarding your request, please contact our office at (323) 890-7806.

Sincerely,

Thomas Nguyen, Deputy Health Officer

Appendix VI

(Copies of Monitoring System Certification form and UST Monitoring Plot Plan available at http://www.waterboards.ca.gov.)

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

☐ Shear Valve(s).	☐ Shear Valve(s).
☐ Dispenser Containment Float(s) and Chain(s).	☐ Dispenser Containment Float(s) and Chain(s).

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. **Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; (check all that apply):** ☑ System set-up ☐ Alarm history report

Technician Name (print): Rich Ruston Signature: _____

Certification No: A30050 License No: 517336

Testing Company Name: Orange County Tank Testing Phone No.: (714) 778-0300

Testing Company Address: 225 N. Loara Street, Anaheim, CA 92801 Date of Testing/Servicing: 10/15/2010

967636

D. Results of Testing/Servicing

Software Version Installed: 9.0

Complete the following checklist:

☑ Yes	☐ No*	Is the audible alarm operational?
☑ Yes	☐ No*	Is the visual alarm operational?
☑ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☑ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☑ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☐ Yes	☐ No* ☑ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☐ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☐ Yes; ☐ No.
☐ Yes	☐ No* ☑ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? _____ %
☐ Yes*	☑ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☑ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☑ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☑ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments:

F. In-Tank Gauging / SIR Equipment:

☐ Check this box if tank gauging is used only for inventory control.
☐ Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

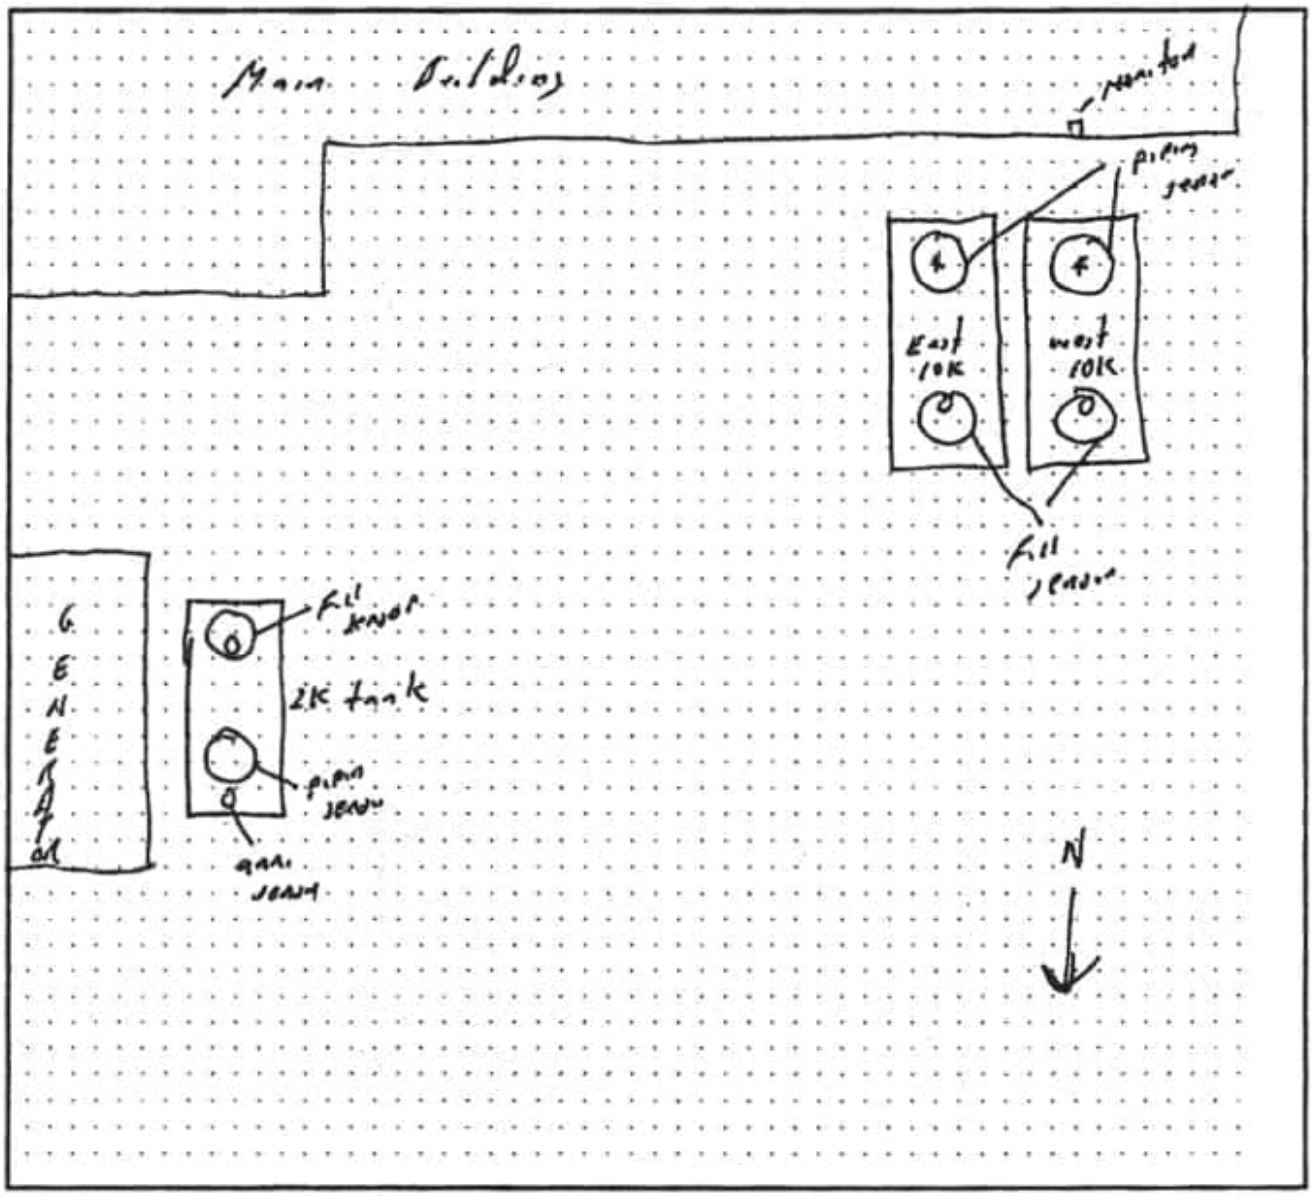
☑ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☑ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☑ Yes	☐ No*	Was accuracy of system product level readings tested?
☑ Yes	☐ No*	Was accuracy of system water level readings tested?
☑ Yes	☐ No*	Were all probes reinstalled properly?
☑ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In the Section H, below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD): ☑ Check this box if LLDs are not installed.

Complete the following checklist:

☐ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☐ 3 g.p.h.; ☐ 0.1 g.p.h ; ☐ 0.2 g.p.h.
☐ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☐ Yes	☐ No*	Was the testing apparatus properly calibrated?
☐ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?



*** In the Section H, below, describe how and when these deficiencies were or will be corrected.**

H. Comments:

Double wall piping Suction System.

UST Monitoring Site Plan

Site Address: 1977 Safeway

Date map was drawn: 10/24/07

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

SWRCB, January 2006

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name: Bank Of The West	Date of Testing: 10/15/2010
Facility Address: 1977 Saturn St.	
Facility Contact: Joe	Phone: 323-727-3636
Date Local Agency Was Notified of Testing:	
Name of Local Agency Inspector *(if present during testing)*: RICHARD PAYNE	

2. TESTING CONTRACTOR INFORMATION

Company Name: ORANGE COUNTY TANK TESTING
Technician Conducting Test: Rich Ruston
Credentials [1]: ☐ CSLB Contractor ☑ ICC Service Tech. ☐ SWRCB Tank Tester ☐ Other *(Specify)*
License Number(s): 517336 5246183-UT

3. SPILL BUCKET TESTING INFORMATION

Test Method Used: ☑ Hydrostatic ☐ Vacuum ☐ Other

Test Equipment Used: VISUAL — Equipment Resolution:

A LEAK WITHIN THE SECONDARY CONTAINMENT OF THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS ☐ a. YES ☐ b. NO 490-64b

VII. PERIODIC SYSTEM TESTING

☐ 1. **ELD TESTING**: THIS FACILITY HAS BEEN NOTIFIED BY THE STATE WATER RESOURCES CONTROL BOARD THAT ENHANCED LEAK DETECTION (ELD) MUST BE PERFORMED. PERIODIC ELD IS PERFORMED EVERY 36 MONTHS AS REQUIRED. (23 CCR §2644.1) 490-65

☒ 2. **SECONDARY CONTAINMENT COMPONENTS ARE TESTED EVERY 36 MONTHS.** 490-66

☒ 3. **SPILL BUCKETS ARE TESTED ANNUALLY.** 490-67

VIII. RECORDKEEPING

The following monitoring/maintenance records are kept for this facility:

☒ Alarm logs 490-68a ☐ Visual Inspection Records 490-68b ☒ Tank integrity testing results 490-68c
☐ SIR testing results (and supporting documentation records). 490-68d ☒ Tank gauging results (and supporting documentation records). 490-68e
☒ ATG Testing results (and supporting documentation records). 490-68f ☐ Corrosion Protection 60-day logs 490-68g
☒ Equipment maintenance and calibration records. 490-68h

IX. TRAINING

☒ Personnel with UST monitoring responsibilities are familiar with all of the following documents relevant to their job duties. 490-69a

REFERENCE DOCUMENTS MAINTAINED AT FACILITY (Check all that apply)

☒ THIS UNDERGROUND STORAGE TANK MONITORING PLAN (Required) 490-69b
☒ OPERATING MANUALS FOR ELECTRONIC MONITORING EQUIPMENT (Required) 490-69c
☐ CALIFORNIA UNDERGROUND STORAGE TANK REGULATIONS 490-69d
☐ CALIFORNIA UNDERGROUND STORAGE TANK LAW 490-69e
☐ STATE WATER RESOURCES CONTROL BOARD (SWRCB) PUBLICATION: "HANDBOOK FOR TANK OWNERS - MANUAL AND STATISTICAL INVENTORY RECONCILIATION" 490-69f
☐ SWRCB PUBLICATION: "UNDERSTANDING AUTOMATIC TANK GAUGING SYSTEMS" 490-69g
☐ OTHER (Specify): M69h, M69i

☒ This facility has a "Designated UST Operator" who has passed the California UST System Operator Exam administered by the International Code Council (ICC). The "Designated UST Operator" will train facility employees in the proper operation and maintenance of the UST systems annually, and within 30 days of hire. This training will include, but is not limited to, the following:

- Operation of the UST systems in a manner consistent with the facility's best management practices
- The facility employee's role with regard to the monitoring equipment as specified in this UST Monitoring Plan
- The facility employee's role with regard to spills and overfills as specified in the UST Response Plan
- Names of contact person(s) for emergencies and monitoring alarms. 490-70

X. COMMENTS/ADDITIONAL INFORMATION

Provide additional comments here or indicate how many pages with additional information on specific monitoring procedures are attached to this plan. 490-71

MONITOR RESPONSE PLANS LOCATED AT VEEDERROOT TLS350

XI. PERSONNEL RESPONSIBILITIES

The UST Owner/Operator is responsible for ensuring that: 1) the daily/routine UST monitoring activities and maintenance of UST leak detection equipment covered by this plan occurs, 2) all conditions that indicate a possible release are investigated, and 3) all monitoring records are maintained properly.
The following person(s) are responsible for performing the monitoring and equipment maintenance:

NAME JOE ROBELO 490-73 490-72 TITLE CHIEF ENGINEER

NAME LUIS FAVELA 490-75 490-74 TITLE

The Designated Operator shall perform a monthly visual inspection of the facility, provide a report to the owner/operator, and inform the owner/operator of any conditions that need follow-up action.

XII. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

APPLICANT SIGNATURE 490-76: x Trinidad Mossman
DATE: 490-77: x 12-23-10

REPRESENTING: ☐ 1. Tank Owner/Operator ☐ 2. Facility Owner/Operator ☒ 3. Authorized Representative of Owner

APPLICANT NAME (print) 490-78: x TRINIDAD MOSSMAN
APPLICANT TITLE 490-79: x AVP, FACILITIES MGR

(Agency Use Only) This plan has been reviewed and: ☐ Approved ☐ Approved With Conditions

Local Agency Signature: _____ Date: _____
Comments or Special Conditions:

UST Monitoring Plan – Page 2 Instructions

Complete a separate UST Monitoring Plan for each UST monitoring system at the facility. This form must be submitted with your initial UST Operating Permit Application and within 30 days of changes in the information it contains. Please note that your local agency may require you to obtain approval prior to installing or modifying monitoring equipment. (Note: Numbering of these instructions follows the data element numbers on the form.)

490-54a. MONITORING OF THE UNDER DISPENSER CONTAINMENT- Indicate the method used for UDC monitoring.
490-54b. SPECIFY-If 99 "Other" is checked, describe other method used.
If VI-1-1, VI-1-2 or VI-1-3 or VI-1-99 is checked, complete 490-55 to 490-64b.
490-55. PANEL MANUFACTURER –Enter the name of the manufacturer of the monitoring system control panel (console). If there is no control panel (e.g., only an electrical relay box is installed) leave this space blank.
490-56. MODEL # - Enter the model number for the monitoring system control panel (console). If there is no control panel (e.g., only an electrical relay box is installed) leave this
space blank.
490-57. LEAK SENSOR MANUFACTURER – Enter the name of the manufacturer of the sensor(s).
490-58. MODEL #(S) – Enter the model number of the sensor(s) installed. If additional space is needed, use Section X.
490-59. DETECTION OF A LEAK INTO THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS. Indicate Yes or No
490-60. UDC LEAK ALARM TRIGGERS PUMP SHUTDOWN - Indicate Yes or No
490-61. FAILURE/DISCONNECTION OF UDC MONITORING SYSTEM TRIGGERS AUTOMATIC PUMP SHUTDOWN - Indicate Yes or No
490-62. UDC MONITORING STOPS THE FLOW OF PRODUCT AT THE DISPENSER - Indicate Yes or No.
490-63. UDC CONSTRUCTION - Indicate if the construction of the UDC is single-walled, or double-walled.
490-64a. DOUBLE-WALLED INTERSTITIAL SPACE MONITORING - Indicate what is used to monitor the interstitial space.
490-64b. LEAK WITHIN THE SECONDARY CONTAIMENT OF UDC TRIGGERS AUDIBLE AND VISUAL ALARMS - Indicate Yes or No
490-65. VII-1 ELD TESTING - Check the box if you have been notified by the State Water Resources Control Board (SWRCB) that the UST(s) covered by this plan is/are subject to Enhanced Leak Detection Requirements (i.e., UST has any single-wall component and is located within 1,000 feet of a public drinking water well).
490-66. TESTING OF SECONDARY CONTAINMENT COMPONENTS EVERY 36 MONTHS - Check the box if you have secondary containment that requires testing.
190-67. SPILL BUCKET TESTING - Check the box if you have spill buckets.
490-68a-h. VIII RECORDKEEPING -Indicate which monitoring and equipment maintenance records are maintained for this facility.
490-69a IX TRAINING STATEMENT - Check the box to verify that the statement is true.
REFERENCE DOCUMENTS MAINTAINED AT FACILITY – Check the appropriate boxes to describe reference documents maintained at the facility. Note that the first two items on the list must be kept at the facility.
490-69b. MONITORING PLAN: Indicate that this plan is kept as a reference document.
490-69c. OPERATING MANUALS FOR ELECTRONIC EQUIPMENT: Indicate that this plan is kept as a reference document.
490-69d. CA UST REGULATIONS - Indicate that this is kept as a reference document.
490-69e. CA UST LAW - Indicate that this is kept as a reference document.
490-69f. STATE WATER RESOURCES CONTROL BOARD (SWRCB) PUBLICATION - "HANDBOOK FOR TANK OWNERS - MANUAL AND STATISTICAL INVENTORY RECONCILIATION - Indicate that this is kept as a reference document.
490-69g. SWRCB PUBLICATION: "UNDERSTANDING AUTOMATIC TANK GAUGING SYSTEMS": Indicate that this is kept as a reference document.
490-69h. OTHER - Indicate that other reference documents are kept.
490-69i. SPECIFY-If "OTHER" is checked, enter a brief description of the other document(s) maintained at the facility. If additional space is needed, see Section X.
490-70. DESIGNATED OPERATOR TRAINING - Check this box to verify that this statement is true.
490-71. COMMENTS/ADDITIONAL INFORMATION – Make additional comments or you may attach and identify the number of additional pages of information to describe any additional UST system monitoring-related information (e.g., additional information required by your local agency). Attach any monitoring logs that you will be using for the monitoring of your tank system.
490-72. NAME – Enter the name of the person who routinely conducts the monitoring and equipment maintenance under this plan.
490-73. TITLE - Enter the title of the person.
490-74. NAME – Enter the name of the second person, if applicable, who routinely conducts the monitoring and equipment maintenance under this plan.
490-75. TITLE - Enter the title of the second person.
OWNER/OPERATOR SIGNATURE – The tank owner/operator, facility owner/operator, or an authorized representative of the owner shall sign in the space provided. This signature certifies that the signer believes that all information submitted is true, accurate, and complete, and that the training program specified in Section IX has been implemented.
490-76. REPRESENTING – Check the appropriate box to indicate whether the signer is the UST owner/operator, the UST facility owner/operator, or an authorized representative of the owner.
490-77. DATE – Enter the date the plan was signed.
490-78. APPLICANT NAME – Print or type the name of the person signing the plan.
490-79. APPLICANT TITLE – Enter the title of the person signing the plan.

UDC INTERSTITIAL SPACE IS MONITORED BY: ☐ 1. LIQUID ☐ 2. PRESSURE ☐ 3. VACUUM

A LEAK WITHIN THE SECONDARY CONTAINMENT OF THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS ☐ a. YES ☐ b. NO 490-64b

VII. PERIODIC SYSTEM TESTING

☐ 1. **ELD TESTING**: THIS FACILITY HAS BEEN NOTIFIED BY THE STATE WATER RESOURCES CONTROL BOARD THAT ENHANCED LEAK DETECTION (ELD) MUST BE PERFORMED. PERIODIC ELD IS PERFORMED EVERY 36 MONTHS AS REQUIRED. (23 CCR §2644.1) 490-65

☒ 2. **SECONDARY CONTAINMENT COMPONENTS ARE TESTED EVERY 36 MONTHS.** 490-66

☒ 3. **SPILL BUCKETS ARE TESTED ANNUALLY.** 490-67

VIII. RECORDKEEPING

The following monitoring/maintenance records are kept for this facility:
☒ Alarm logs 490-68a ☐ Visual Inspection Records 490-68b ☒ Tank integrity testing results 490-68c
☐ SIR testing results (and supporting documentation records). 490-68d ☒ Tank gauging results (and supporting documentation records). 490-68e
☒ ATG Testing results (and supporting documentation records). 490-68f ☐ Corrosion Protection 60-day logs 490-68g
☒ Equipment maintenance and calibration records. 490-68h

IX. TRAINING

☒ Personnel with UST monitoring responsibilities are familiar with all of the following documents relevant to their job duties. 490-69a

REFERENCE DOCUMENTS MAINTAINED AT FACILITY (Check all that apply)
- ☒ THIS UNDERGROUND STORAGE TANK MONITORING PLAN (Required) 490-69b
- ☒ OPERATING MANUALS FOR ELECTRONIC MONITORING EQUIPMENT (Required) 490-69c
- ☐ CALIFORNIA UNDERGROUND STORAGE TANK REGULATIONS 490-69d
- ☐ CALIFORNIA UNDERGROUND STORAGE TANK LAW 490-69e
- ☐ STATE WATER RESOURCES CONTROL BOARD (SWRCB) PUBLICATION: "HANDBOOK FOR TANK OWNERS - MANUAL AND STATISTICAL INVENTORY RECONCILIATION" 490-69f
- ☐ SWRCB PUBLICATION: "UNDERSTANDING AUTOMATIC TANK GAUGING SYSTEMS" 490-69g
- ☐ OTHER (Specify): M69h, M69i

☒ This facility has a "Designated UST Operator" who has passed the California UST System Operator Exam administered by the International Code Council (ICC). The "Designated UST Operator" will train facility employees in the proper operation and maintenance of the UST systems annually, and within 30 days of hire. This training will include, but is not limited to, the following:
- Operation of the UST systems in a manner consistent with the facility's best management practices
- The facility employee's role with regard to the monitoring equipment as specified in this UST Monitoring Plan
- The facility employee's role with regard to spills and overfills as specified in the UST Response Plan
- Names of contact person(s) for emergencies and monitoring alarms. 490-70

X. COMMENTS/ADDITIONAL INFORMATION

Provide additional comments here or indicate how many pages with additional information on specific monitoring procedures are attached to this plan. 490-71
MONITOR RESPONSE PLANS LOCATED AT VEEDERROOT TLS350

XI. PERSONNEL RESPONSIBILITIES

The UST Owner/Operator is responsible for ensuring that: 1) the daily/routine UST monitoring activities and maintenance of UST leak detection equipment covered by this plan occurs, 2) all conditions that indicate a possible release are investigated, and 3) all monitoring records are maintained properly.
The following person(s) are responsible for performing the monitoring and equipment maintenance:

NAME JOE ROBELO 490-72 TITLE CHIEF ENGINEER
490-73

NAME LUIS FAVELA 490-74 TITLE
490-75

The Designated Operator shall perform a monthly visual inspection of the facility, provide a report to the owner/operator, and inform the owner/operator of any conditions that need follow-up action.

XII. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

APPLICANT SIGNATURE 490-76 x Trinidad Mossman REPRESENTING: ☐ 1. Tank Owner/Operator ☐ 2. Facility Owner/Operator ☒ 3. Authorized Representative of Owner	DATE: 490-77 x 12-23-10
APPLICANT NAME (print): 490-78 x TRINIDAD MOSSMAN	APPLICANT TITLE: 490-79 x AVP, FACILITIES MGR

(Agency Use Only) This plan has been reviewed and: ☐ Approved ☐ Approved With Conditions

Comments or Special Conditions:

UST Monitoring Plan – Page 2 Instructions

Complete a separate UST Monitoring Plan for each UST monitoring system at the facility. This form must be submitted with your initial UST Operating Permit Application and within 30 days of changes in the information it contains. Please note that your local agency may require you to obtain approval prior to installing or modifying monitoring equipment. (Note: Numbering of these instructions follows the data element numbers on the form.)

490-54a. MONITORING OF THE UNDER DISPENSER CONTAINMENT- Indicate the method used for UDC monitoring.
490-54b. SPECIFY-If 99 "Other" is checked, describe other method used.
If VI-1-1, VI-1-2 or VI-1-3 or VI-1-99 is checked, complete 490-55 to 490-64b.
490-55. PANEL MANUFACTURER –Enter the name of the manufacturer of the monitoring system control panel (console). If there is no control panel (e.g., only an electrical relay box is installed) leave this space blank.
490-56. MODEL # - Enter the model number for the monitoring system control panel (console). If there is no control panel (e.g., only an electrical relay box is installed) leave this
space blank.
490-57. LEAK SENSOR MANUFACTURER – Enter the name of the manufacturer of the sensor(s).
490-58. MODEL #(S) – Enter the model number of the sensor(s) installed. If additional space is needed, use Section X.
490-59. DETECTION OF A LEAK INTO THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS. Indicate Yes or No
490-60. UDC LEAK ALARM TRIGGERS PUMP SHUTDOWN - Indicate Yes or No
490-61. FAILURE/DISCONNECTION OF UDC MONITORING SYSTEM TRIGGERS AUTOMATIC PUMP SHUTDOWN - Indicate Yes or No
490-62. UDC MONITORING STOPS THE FLOW OF PRODUCT AT THE DISPENSER - Indicate Yes or No.
490-63. UDC CONSTRUCTION - Indicate if the construction of the UDC is single-walled, or double-walled.
490-64a. DOUBLE-WALLED INTERSTITIAL SPACE MONITORING - Indicate what is used to monitor the interstitial space.
490-64b. LEAK WITHIN THE SECONDARY CONTAIMENT OF UDC TRIGGERS AUDIBLE AND VISUAL ALARMS - Indicate Yes or No
490-65. VII-1 ELD TESTING - Check the box if you have been notified by the State Water Resources Control Board (SWRCB) that the UST(s) covered by this plan is/are subject to Enhanced Leak Detection Requirements (i.e., UST has any single-wall component and is located within 1,000 feet of a public drinking water well).
490-66. TESTING OF SECONDARY CONTAINMENT COMPONENTS EVERY 36 MONTHS - Check the box if you have secondary containment that requires testing.
190-67. SPILL BUCKET TESTING - Check the box if you have spill buckets.
490-68a-h. VIII RECORDKEEPING -Indicate which monitoring and equipment maintenance records are maintained for this facility.
490-69a IX TRAINING STATEMENT - Check the box to verify that the statement is true.
REFERENCE DOCUMENTS MAINTAINED AT FACILITY – Check the appropriate boxes to describe reference documents maintained at the facility. Note that the first two items on the list must be kept at the facility.
490-69b. MONITORING PLAN: Indicate that this plan is kept as a reference document.
490-69c. OPERATING MANUALS FOR ELECTRONIC EQUIPMENT: Indicate that this plan is kept as a reference document.
490-69d CA UST REGULATIONS - Indicate that this is kept as a reference document.
490-69e CA UST LAW - Indicate that this is kept as a reference document.
490-69f STATE WATER RESOURCES CONTROL BOARD (SWRCB) PUBLICATION - "HANDBOOK FOR TANK OWNERS - MANUAL AND STATISTICAL INVENTORY RECONCILIATION - Indicate that this is kept as a reference document.
490-69g SWRCB PUBLICATION: "UNDERSTANDING AUTOMATIC TANK GAUGING SYSTEMS": Indicate that this is kept as a reference document.
490-69h OTHER - Indicate that other reference documents are kept.
490-69i. SPECIFY-If "OTHER" is checked, enter a brief description of the other document(s) maintained at the facility. If additional space is needed, see Section X.
490-70. DESIGNATED OPERATOR TRAINING - Check this box to verify that this statement is true.
490-71. COMMENTS/ADDITIONAL INFORMATION – Make additional comments or you may attach and identify the number of additional pages of information to describe any additional UST system monitoring-related information (e.g., additional information required by your local agency). Attach any monitoring logs that you will be using for the monitoring of your tank system.
490-72. NAME – Enter the name of the person who routinely conducts the monitoring and equipment maintenance under this plan.
490-73. TITLE - Enter the title of the person.
490-74. NAME – Enter the name of the second person, if applicable, who routinely conducts the monitoring and equipment maintenance under this plan.
490-75. TITLE - Enter the title of the second person.
OWNER/OPERATOR SIGNATURE – The tank owner/operator, facility owner/operator, or an authorized representative of the owner shall sign in the space provided. This signature certifies that the signer believes that all information submitted is true, accurate, and complete, and that the training program specified in Section IX has been implemented.
490-76. REPRESENTING -- Check the appropriate box to indicate whether the signer is the UST owner/operator, the UST facility owner/operator, or an authorized representative of the owner.
490-77. DATE – Enter the date the plan was signed.
490-78. APPLICANT NAME – Print or type the name of the person signing the plan.
490-79. APPLICANT TITLE – Enter the title of the person signing the plan.

UNIFIED PROGRAM CONSOLIDATED FORM

UNDERGROUND STORAGE TANKS

RESPONSE PLAN – PAGE 1

(one page per site)

TYPE OF ACTION ☑ 1. NEW PLAN ☐ 2. CHANGE OF INFORMATION R01

I. FACILITY INFORMATION

FACILITY ID # *(Agency Use Only)* 3 0 – – –

FACILITY NAME BANK OF THE WEST R02

FACILITY SITE ADDRESS 1977 SATURN AVE R03 | CITY MONTEREY PARK R04

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan.

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within a time consistent with the ability of the secondary containment system to contain the hazardous material, but not greater than 30 calendar days, or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material may be reused until it becomes too saturated to be effective. It will then be managed properly. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container.
- Facility personnel will determine whether or not any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, and supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: (Complete only if applicable)

EQUIPMENT	LOCATION	AVAILABILITY
R10	R20	R30
R11	R21	R31
R12	R22	R32
R13	R23	R33
R14	R24	R34
R15	R25	R35

IV. RESPONSIBLE PERSONS

THE FOLLOWING PERSON(S) IS/ARE RESPONSIBLE FOR AUTHORIZING ANY WORK NECESSARY UNDER THIS RESPONSE PLAN:

NAME x TRINIDAD MOSSMAN R40	TITLE x AVP, FACILITIES MANAGER R50
NAME x JOE REBELO R41	TITLE x CHIEF ENGINEER R51
NAME R42	TITLE R52
NAME R43	TITLE R53

V. INDIRECT HAZARD DETERMINATION

This information is required only when the presence of the hazardous substance can not be determined directly by the monitoring method used (e.g., where liquid level measurements in a tank annular space or secondary piping are used as the basis for leak determination).

THE FOLLOWING STEPS WILL BE TAKEN TO DETERMINE THE PRESENCE OR ABSENCE OF HAZARDOUS SUBSTANCE IN THE SECONDARY CONTAINMENT IF MONITORING INDICATES A POSSIBLE UNAUTHORIZED RELEASE:

UNIFIED PROGRAM CONSOLIDATED FORM

UNDERGROUND STORAGE TANKS RESPONSE PLAN – PAGE 2

(one page per site)

VI. LEAK INTERCEPTION AND DETECTION SYSTEM

This information is required only for motor vehicle fuel UST systems constructed per the Alternate Construction Requirements of 23 CCR §2633, and only if the Leak Interception and Detection System (LIDS) does not meet the volumetric requirements of 23 CCR §2631(d)(1) through (5) (i.e., when accounting for rainfall and backfill material, the secondary containment volume is less than 100% of primary tank volume for a single UST; or in the case of multiple USTs in shared secondary containment, 150% of the largest primary tank volume or 10% of aggregate primary tank volume, whichever is greater).

ATTACH AN ADDITIONAL PAGE TO THIS PLAN CONTAINING THE FOLLOWING INFORMATION:

- The volume of the LIDS in relation to the volume of the primary container;
- The amount of time the LIDS shall provide containment related to the time between detection of an unauthorized release and cleanup of the leaked substance;
- The depth from the bottom of the LIDS to the highest anticipated level of groundwater;
- The nature of the unsaturated soils under the LIDS and their ability to absorb contaminants or to allow movement of contaminants;
- The methods and scheduling for removal of all hazardous substances which may have been discharged from primary containment and are located in the unsaturated soils between the primary containment and groundwater, including the LIDS sump.

VII. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released;
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released;
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions;
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred;
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results.

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site (or off-site at a readily available location, if approved by the local agency) for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

A. General Information

Facility Name: Bank Of The West Bldg. No.

Site Address: 1977 Saturn St. City: Monterey Park Zip: 91755

Facility Contact Person: Joe Robles Contact Phone No.: (323) -727-3636

Make/Model of Monitoring System: Veeder-Root TLS350 Date of Testing/Servicing: 10/11/2013

B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. **Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; (check all that apply):** ☑ System set-up ☑ Alarm history report

Technician Name (print): Rich Ruston Signature:

Certification No: 5246183-UT A32050 License No: 517336

Testing Company Name: Orange County Tank Testing Phone No.: (714) 776-0300

Testing Company Address: 225 N. Loara Street, Anaheim, CA 92801 Date of Testing/Servicing: 10/11/2013

D. Results of Testing/Servicing

Software Version Installed: 9.00

Complete the following checklist:

✓ Yes	☐ No*	Is the audible alarm operational?
✓ Yes	☐ No*	Is the visual alarm operational?
✓ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
✓ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ✓ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☐ Yes	☐ No* ✓ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes, which sensors initiate positive shut-down? *(Check all that apply)* ☐ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☐ Yes; ☐ No.
☐ Yes	☐ No* ✓ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? ____ %
☐ Yes*	✓ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	✓ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
✓ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
✓ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments:

F. In-Tank Gauging / SIR Equipment:

☐ Check this box if tank gauging is used only for inventory control.
☐ Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

✓ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
✓ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
✓ Yes	☐ No*	Was accuracy of system product level readings tested?
✓ Yes	☐ No*	Was accuracy of system water level readings tested?
✓ Yes	☐ No*	Were all probes reinstalled properly?
✓ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In the Section H, below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD): ✓ Check this box if LLDs are not installed.

Complete the following checklist:

☐ Yes	☐ No* ☐ N/A	For equipment start up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☐ 3 g.p.h.; ☐ 0.1 g.p.h.; ☐ 0.2 g.p.h.
☐ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☐ Yes	☐ No*	Was the testing apparatus properly calibrated?
☐ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In the Section H, below, describe how and when these deficiencies were or will be corrected.**

H. Comments:

Double Wall Suction System for Emergency Generators

SWRCB, January 2006

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name: Bank Of The West	Date of Testing: 10/11/2013
Facility Address: 1977 Saturn St.	
Facility Contact: Joe	Phone: 323-727-3636
Date Local Agency Was Notified of Testing:	
Name of Local Agency Inspector *(if present during testing)*:	

2. TESTING CONTRACTOR INFORMATION

Company Name: ORANGE COUNTY TANK TESTING
Technician Conducting Test: Rich Ruston
Credentials [1]: ☑ CSLB Contractor ☑ ICC Service Tech. ☐ SWRCB Tank Tester ☐ Other *(Specify)*
License Number(s): 517336 624183-UC

3. SPILL BUCKET TESTING INFORMATION

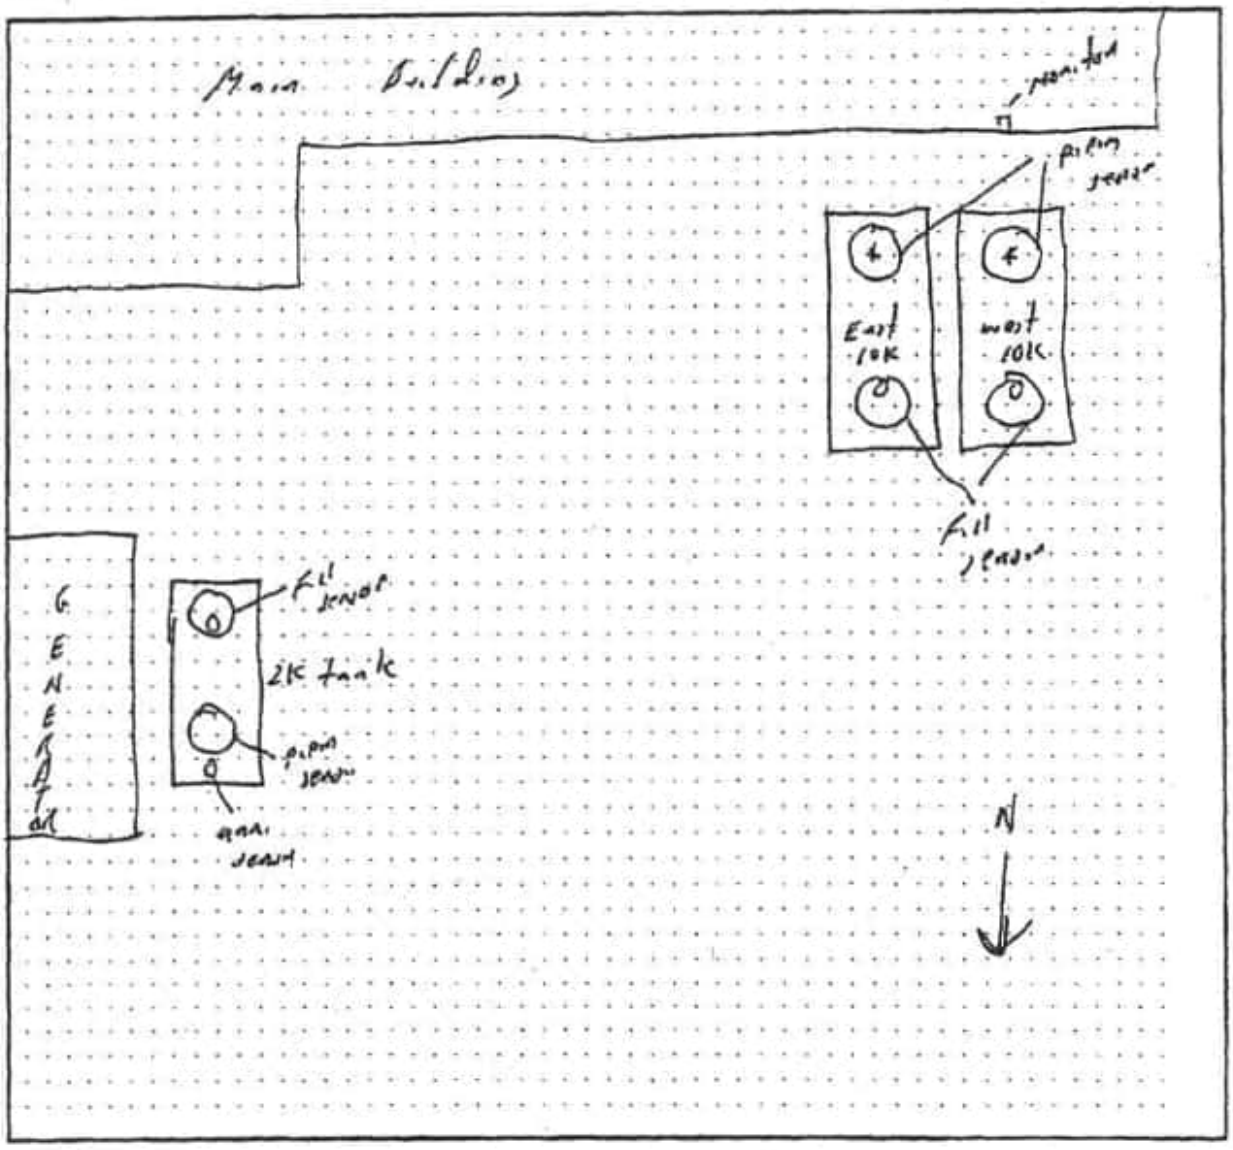
Test Method Used: ☑ Hydrostatic ☐ Vacuum ☐ Other

Test Equipment Used: Visual — Equipment Resolution:

Identify Spill Bucket: *(By Tank Number, Stored Product, etc.)*	1 W. Diesel	2 E. Diesel	3 ZK Diesel	4
Bucket Installation Type:	☐ Direct Bury ☑ Contained in Sump	☐ Direct Bury ☑ Contained in Sump	☐ Direct Bury ☑ Contained in Sump	☐ Direct Bury ☐ Contained in Sump
Bucket Diameter:	12"	12"	12"	
Bucket Depth:	14"	14"	13"	
Wait time between applying vacuum/water and start of test:	15 MIN.	15 MIN.	15 MIN.	15 MIN.
Test Start Time (T_I):	9:00	9:00	9:00	
Initial Reading (R_I):	13.5"	12.5"	11.75"	
Test End Time (T_F):	10:00	10:00	10:00	
Final Reading (R_F):	13.5"	12.5"	11.75"	
Test Duration ($T_F - T_I$):	1HR.	1HR.	1HR.	
Change in Reading ($R_F - R_I$):	-.00	-.00	-.00	
Pass/Fail Threshold or Criteria:	±.00	±.00	±.00	
Test Result:	☑ Pass ☐ Fail	☑ Pass ☐ Fail	☑ Pass ☐ Fail	☐ Pass ☐ Fail

Comments - *(include information on repairs made prior to testing, and recommended follow-up for failed tests)*

CERTIFICATION OF TECHNICIAN RESPONSIBLE FOR CONDUCTING THIS TESTING



I hereby certify that all the information contained in this report is true, accurate, and in full compliance with legal requirements.

Technician's Signature: _____ Date: 10/11/13

[1] State laws and regulations do not currently require testing to be performed by a qualified contractor. However, local requirement may be more stringent.

UST Monitoring Site Plan

Site Address: 1977 Safeway

Date map was drawn: 10/24/07

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

STORAGE TANK CERTIFICATE OF INSURANCE TO DEMONSTRATE FINANCIAL RESPONSIBILITY STATE OF CALIFORNIA

Facility Name and Address:
Monterey Park Service Center (Data Center) located at 1977 Saturn Street in Monterey Park, CA 91755

Insurer Name and Address:
ACE American Insurance Company c/o ACE Environmental Risk, P.O. Box 1000, 436 Walnut Street WA07A, Philadelphia, PA 19106

Policy Number: UST G27168747 001

RECEIVED
NOV 06 2013
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAM

Policy Period:
From 12:01am December 5, 2012 to 12:01am December 5, 2013

Insured Name and Address:
Bank of the West located at 2527 Camino Ramon, NC-B07-2E-I in San Ramon, CA 94583

I. The Insurer, as identified above, hereby certifies that it has issued liability insurance covering the following Underground Storage Tanks:

Facility	Identification No.	Number of Tanks
Monterey Park Service Center (Data Center)	N/A	3

for taking corrective action and/or compensating third parties for bodily injury and property damage caused by either sudden accidental releases or non-sudden accidental releases or accidental releases in accordance with and subject to the limits of liability, exclusions, conditions, and other terms of the Policy arising from operating the underground storage tanks identified above.

The Limits of Liability are:

a. $1,000,000 Each Occurrence

b. $2,000,000 Annual Aggregate

exclusive of legal defense costs, which are subject to a separate limit under the policy. This coverage is provided under policy number UST G27168747 001. The effective date of said policy is December 5, 2012.

II. The Insurer further certifies the following with respect to the insurance described in Paragraph I:

A. Bankruptcy or insolvency of the insured shall not relieve the Insurer of its obligations under the Policy to which this certificate applies.

B. The Insurer is liable for the payment of amounts within any deductible applicable to the Policy to the provider of corrective action or a damaged third-party, with a right of reimbursement by the insured for any such payment made by the Insurer. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95-280.102.

C. Whenever requested by a Director of an implementing agency, the Insurer agrees to furnish to the Director a signed duplicate original of the Policy and all endorsements.

ACE USA, Copyright 2007

D. Cancellation or any other termination of the insurance by the Insurer, except for non-payment of premium or misrepresentation by the insured, will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured. Cancellation for non-payment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of 10 days after a copy of such written notice is received by the Insured.

E. The insurance covers claims otherwise covered by the Policy that are reported to the Insurer within six months of the effective date of cancellation or non-renewal of the Policy except where the new or renewed Policy has the same Retroactive Date or a Retroactive Date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the Policy Retroactive Date, if applicable, and prior to such renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the Policy.

I hereby certify that the wording of this instrument is identical to the wording in 40 CFR 280.97 (b) (2) and that the Insurer is eligible to provide insurance as an excess or surplus lines insurer in one or more states.

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California
Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

A. General Information

Facility Name: BANK OF THE WEST Bldg. No.:

Site Address: 1977 SATURN City: MONTEREY PARK Zip: 91755

Facility Contact Person: JOE REBELO Contact Phone No.: (323) 727-3636

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. Certification

- I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report *(check all that apply)*: ☑ System set-up ☑ Alarm history report

Software Version Installed: 9.0

Complete the following checklist:

☑ Yes	☐ No*	Is the audible alarm operational?
☑ Yes	☐ No*	Is the visual alarm operational?
☑ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☑ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☑ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☐ Yes	☐ No* ☑ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☐ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☐ Yes; ☐ No.
☐ Yes	☐ No* ☑ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? _____%
☐ Yes*	☑ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☑ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☑ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☑ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments: OVERFILL BUCKETS TESTED WITH SB989 TEST ON THIS DATE.

F. In-Tank Gauging / SIR Equipment:

☐ Check this box if tank gauging is used only for inventory control.
☐ Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

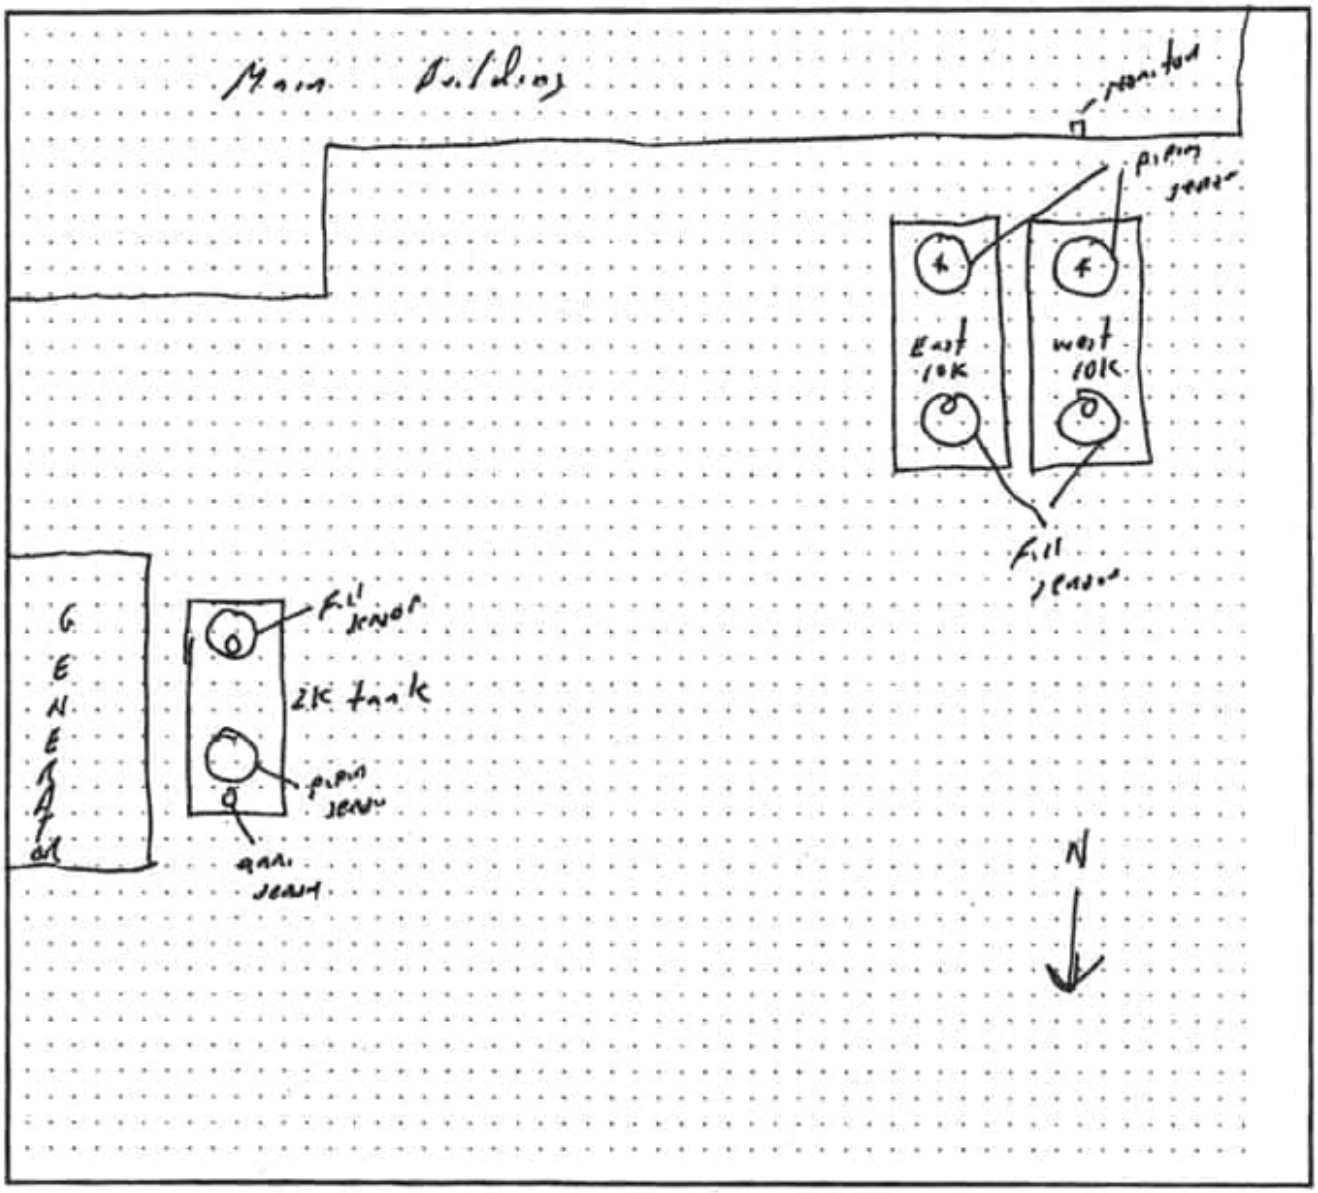
☑ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☑ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☑ Yes	☐ No*	Was accuracy of system product level readings tested?
☑ Yes	☐ No*	Was accuracy of system water level readings tested?
☑ Yes	☐ No*	Were all probes reinstalled properly?
☑ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

☑ Check this box if LLDs are not installed.

Complete the following checklist:



☐ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☐ 3 g.p.h.; ☐ 0.1 g.p.h.; ☐ 0.2 g.p.h.
☐ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☐ Yes	☐ No*	Was the testing apparatus properly calibrated?
☐ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

* In the Section H, below, describe how and when these deficiencies were or will be corrected.

H. Comments:

UST Monitoring Site Plan

Site Address: 1977 Safeway

Date map was drawn: 12/24/07

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Attn: Sb989 Inspector

Re: SB989 Secondary Containment Testing at:
Bank Of The West
1977 Saturn Street
Monterey Park, CA 91755

Mr. Inspector

Please see the attached secondary containment testing results for the above referenced location. Los Angeles County Department of Public Works, Environmental Programs Division was notified for testing on 10/16/2009.

If you have any questions regarding the attached, or need additional information, please don't hesitate to contact me at (310) 679-9991.

Cordially,

Jorge Chavez
Petcon Technologies, Inc.

Secondary Containment Testing Report Form

This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name:	BANK OF THE WEST	Date of Testing:	10/16/2009
Facility Address:	1977 SATURN STREET, MONTEREY PARK CA 91755		
Facility Contact:	JOE	Phone:	323-727-3985
Date Local Agency Was Notified of Testing:	10/13/2009		
Name of Local Agency Inspector *(if present during testing)*:			

2. TESTING CONTRACTOR INFORMATION

Company Name:	PETCON TECHNOLOGIES, INC.		
Technician Conducting Test:	FERNANDO MARTINEZ		
Credentials:	☑ CSLB Licensed Contractor	☐ SWRCB Licensed Tank Tester

DEPARTMENT OF PUBLIC WORKS

Appendix VI

(Copies of Monitoring System Certification form and UST Monitoring Plot Plan available at http://www.waterboards.ca.gov.)

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

A. General Information

Facility Name: Bank Of The West Bldg. No.:

Site Address: 1977 Saturn St City: Monterey Park Zip: 91755

Facility Contact Person: Joe Rubelo Contact Phone No.: (323) -727-3636

Make/Model of Monitoring System: VEEDERROOT TLS350 Date of Testing/Servicing: 10/12/2012

B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

Tank ID: #1 EAST Diesel	Tank ID: 2.5 Diesel
☑ In-Tank Gauging Probe. Model: MAG 1	☐ In-Tank Gauging Probe. Model:
☐ Annular Space or Vault Sensor. Model:	☑ Annular Space or Vault Sensor. Model: 794380-349
☑ Piping Sump / Trench Sensor(s). Model: 794380-357	☑ Piping Sump / Trench Sensor(s). Model: 794380-208
☑ Fill Sump Sensor(s). Model: 794380-208	☑ Fill Sump Sensor(s). Model: 794380-208
☐ Mechanical Line Leak Detector. Model:	☐ Mechanical Line Leak Detector. Model:
☐ Electronic Line Leak Detector. Model:	☐ Electronic Line Leak Detector. Model:
☑ Tank/Overfill / High-Level Sensor. Model: Flapper Valve	☐ Tank/Overfill / High-Level Sensor. Model:
☐ Other (specify equipment type and model in Section E on Page 2).	☐ Other (specify equipment type and model in Section E on Page 2).
Tank ID: #2 WEST Diesel	Tank ID:
☑ In-Tank Gauging Probe. Model: MAG 1	☐ In-Tank Gauging Probe. Model:
☐ Annular Space or Vault Sensor. Model:	☐ Annular Space or Vault Sensor. Model:
☑ Piping Sump / Trench Sensor(s). Model: 794380-357	☐ Piping Sump / Trench Sensor(s). Model:
☑ Fill Sump Sensor(s). Model: 794380-208	☐ Fill Sump Sensor(s). Model:
☐ Mechanical Line Leak Detector. Model:	☐ Mechanical Line Leak Detector. Model:
☐ Electronic Line Leak Detector. Model:	☐ Electronic Line Leak Detector. Model:
☑ Tank/Overfill / High-Level Sensor. Model: Flapper Valve	☐ Tank/Overfill / High-Level Sensor. Model:
☐ Other (specify equipment type and model in Section E on Page 2).	☐ Other (specify equipment type and model in Section E on Page 2).
Dispenser ID: DAY TANK 1-3	Dispenser ID:
☑ Dispenser Containment Sensor(s). Model: Float Sensor	☐ Dispenser Containment Sensor(s). Model:
☑ Shear Valve(s).	☐ Shear Valve(s).
☐ Dispenser Containment Float(s) and Chain(s).	☐ Dispenser Containment Float(s) and Chain(s).
Dispenser ID:	Dispenser ID:
☐ Dispenser Containment Sensor(s). Model:	☐ Dispenser Containment Sensor(s). Model:
☐ Shear Valve(s).	☐ Shear Valve(s).
☐ Dispenser Containment Float(s) and Chain(s).	☐ Dispenser Containment Float(s) and Chain(s).
Dispenser ID:	Dispenser ID:
☐ Dispenser Containment Sensor(s). Model:	☐ Dispenser Containment Sensor(s). Model:
☐ Shear Valve(s).	☐ Shear Valve(s).
☐ Dispenser Containment Float(s) and Chain(s).	☐ Dispenser Containment Float(s) and Chain(s).

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. **Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; (check all that apply):** ☐ System set-up ☑ Alarm history report

Technician Name (print): Rich Ruston Signature:

Certification No: 5246183-vt License No: 517336

Testing Company Name: Orange County Tank Testing Phone No.: (714) 776-0300

Testing Company Address: 225 N. Loara Street, Anaheim, CA 92801 Date of Testing/Servicing: 10/12/2012

D. Results of Testing/Servicing

Software Version Installed: 9.00

Complete the following checklist:

✔ Yes	☐ No*	Is the audible alarm operational?
✔ Yes	☐ No*	Is the visual alarm operational?
✔ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
✔ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ✔ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☐ Yes	☐ No* ✔ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☐ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☐ Yes; ☐ No.
☐ Yes	☐ No* ✔ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? _____ %
☐ Yes*	✔ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
✔ Yes*	☐ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ✔ Water. If yes, describe causes in Section E, below.
✔ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
✔ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments:

* Small Amount of Liquid Found in 2K Diesel Tank. Removed At Time of Inspection.

* Overfill Probes Tested with SIR93 Test on This Date

F. In-Tank Gauging / SIR Equipment:

☐ Check this box if tank gauging is used only for inventory control.
☐ Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

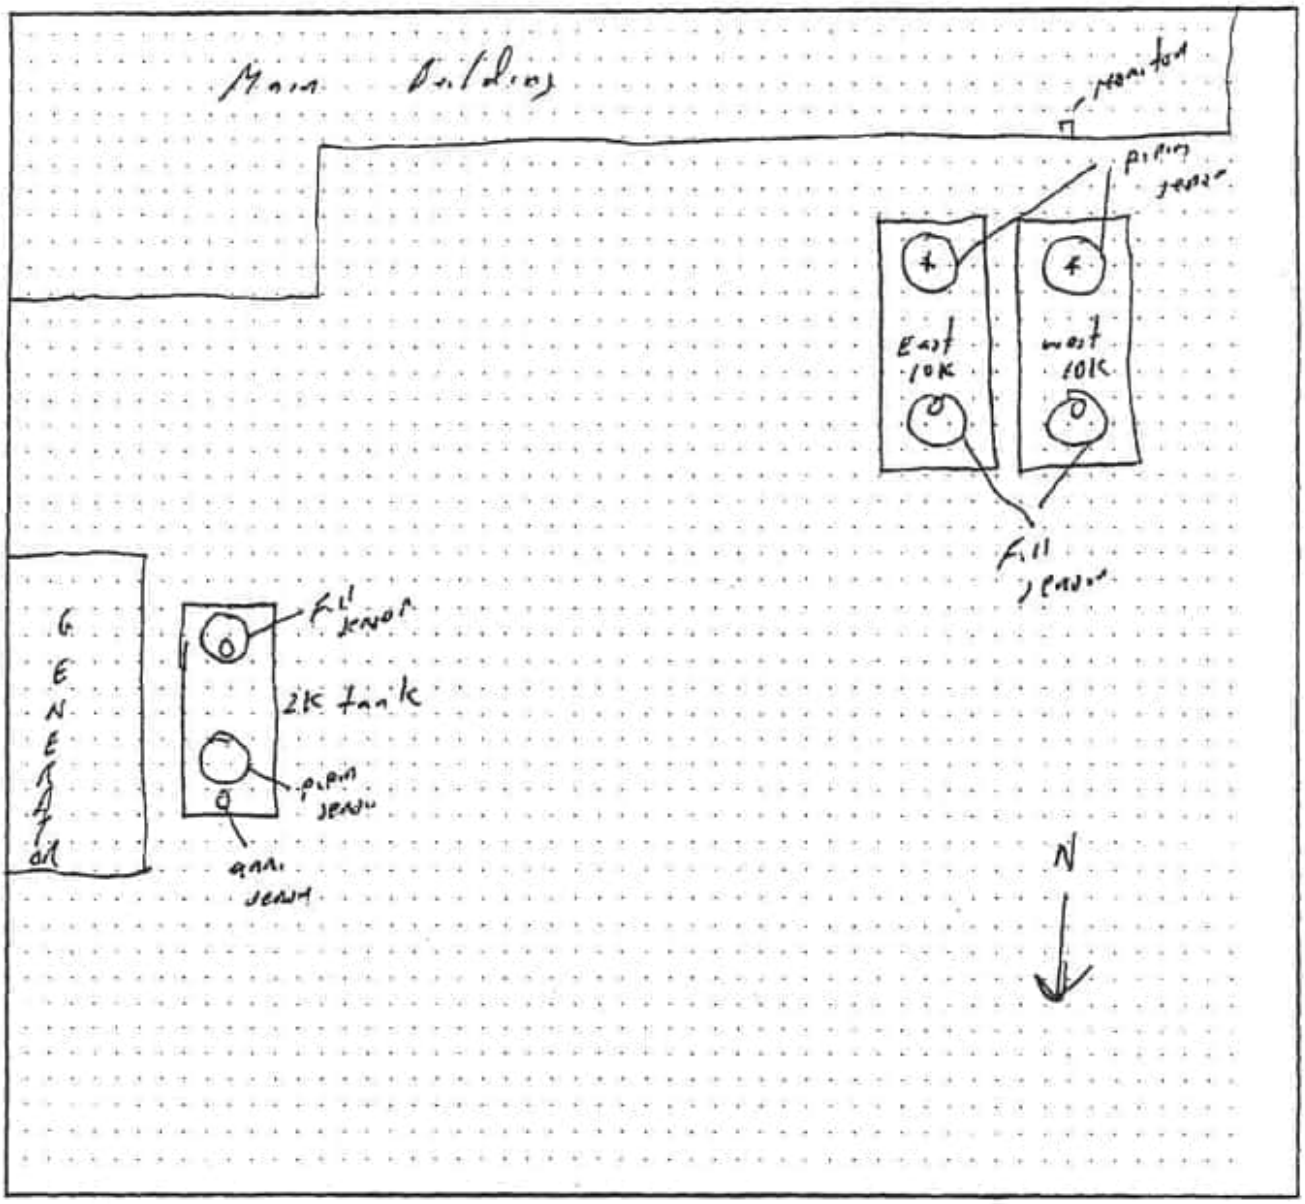
✓ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
✓ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
✓ Yes	☐ No*	Was accuracy of system product level readings tested?
✓ Yes	☐ No*	Was accuracy of system water level readings tested?
✓ Yes	☐ No*	Were all probes reinstalled properly?
✓ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In the Section H, below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD): ✓ Check this box if LLDs are not installed.

Complete the following checklist:

☐ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☐ 3 g.p.h.; ☐ 0.1 g.p.h.; ☐ 0.2 g.p.h.
☐ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☐ Yes	☐ No*	Was the testing apparatus properly calibrated?
☐ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☐ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?



*** In the Section H, below, describe how and when these deficiencies were or will be corrected.**

H. Comments:

Double Wall Suction System.

UST Monitoring Site Plan

Site Address: 1977 Saturn

Date map was drawn: 10/24/07

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors, and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

006994 - 007311 C732050

Owner Statements of Designated Underground Storage Tank (UST) Operator and Understanding of and Compliance with UST Requirements

Facility Name: Bank of The West	Facility ID #:
Facility Address: 1977 Saturn Ave Monterey Park, CA	Reason for Submitting this Form *(Check One)* X Change of Designated Operator Update Certificate Expiration Date
Facility Phone #:	

Designated UST Operator(s) for this Facility

PRIMARY

Designated Operator's Name: MARTIN SCHWARTZ	Relation to UST Facility *(Check One)*
Business Name ORANGE COUNTY TANK TESTING INC.	☐ Owner ☐ Operator ☐ Employee
Designated Operator's Phone # 714-776-0300	☐ Service Technician X Third-Party
International Code Council Certification #: 5311570-UC	Expiration Date: 10-26-14

ALTERNATE 1 *(Optional)*

Designated Operator's Name: RICHARD RUSTON	Relation to UST Facility *(Check One)*
Business Name *(If different from above): OCTT*	☐ Owner ☐ Operator ☐ Employee
Designated Operator's Phone #: 7140776-0300	☐ Service Technician X Third-Party
International Code Council Certification #: 5246183-UC	Expiration Date: 10-22-2014

ALTERNATE 2 *(Optional)*

Designated Operator's Name: TONY JONES	Relation to UST Facility *(Check One)*
Business Name *(If different from above): OCTT*	☐ Owner ☐ Operator ☐ Employee
Designated Operator's Phone #: 714-776-0300	☐ Service Technician X Third-Party
International Code Council Certification #: 5252936-UC	Expiration Date: 1-06-13

I certify that, for the facility indicated at the top of this page, the individual(s) listed above will serve as Designated UST Operator(s). The individual(s) will conduct and document monthly facility inspections and annual facility employee training, in accordance with California Code of Regulations, title 23, section 2715(c) - (f).

Furthermore, I understand and am in compliance with the requirements (statutes, regulations, and local ordinances) applicable to underground storage tanks.

NAME OF TANK OWNER (Please Print): TRINIDAD STELLA

SIGNATURE OF TANK OWNER: Trinidad Stella

DATE: 11-20-12 **OWNER'S PHONE #:** 323 727 3017

NOTE: 1) SUBMIT THIS COMPLETED FORM TO THE LOCAL AGENCY (NOT THE STATE WATER RESOURCES CONTROL BOARD) BY JANUARY 1, 2005. THE LOCAL AGENCY LIST IS AVAILABLE AT: www.waterboards.ca.gov/ust/contacts/cupa_agys.html.

2) NOTIFY THE LOCAL AGENCY OF ANY CHANGES TO THIS INFORMATION WITHIN 30 DAYS OF THE CHANGE.

November 2004

Secondary Containment Testing Report Form

This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name:	Bank of the West	Date of Testing:	10/12/12

Appendix VI

(Copies of Monitoring System Certification form and UST Monitoring Plot Plan available at http://www.waterboards.ca.gov.)

MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

A General Information

Facility Name: Bank Of The West Bldg. No.:

Site Address: 1977 Saturn St. City: Monterey Park Zip: 91755

Facility Contact Person: Joe Contact Phone No.: (323) -727-3636

Make/Model of Monitoring System: Veeder-Root TLS 350 Date of Testing/Servicing: 10/7/2011

B Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

Tank ID: #1 Diesel East	**Tank ID:** #3 2K Diesel
■ In-Tank Gauging Probe. Model: MAG1	□ In-Tank Gauging Probe. Model:
□ Annular Space or Vault Sensor. Model:	■ Annular Space or Vault Sensor. Model: 794580-344
■ Piping Sump / Trench Sensor(s). Model: 794380-268	■ Piping Sump / Trench Sensor(s). Model: 794380-208
■ Fill Sump Sensor(s). Model: 794380-208	■ Fill Sump Sensor(s). Model: 794380-208
□ Mechanical Line Leak Detector. Model:	□ Mechanical Line Leak Detector. Model:
□ Electronic Line Leak Detector. Model:	□ Electronic Line Leak Detector. Model:
■ Tank/Overfill / High-Level Sensor. Model: Flapper Valve	□ Tank/Overfill / High-Level Sensor. Model:
□ Other (specify equipment type and model in Section E on Page 2).	□ Other (specify equipment type and model in Section E on Page 2).
Tank ID: #2 Diesel West	**Tank ID:**
■ In-Tank Gauging Probe. Model: MAG 1	□ In-Tank Gauging Probe. Model:
□ Annular Space or Vault Sensor. Model:	□ Annular Space or Vault Sensor. Model:
■ Piping Sump / Trench Sensor(s). Model: 794380-351	□ Piping Sump / Trench Sensor(s). Model:
■ Fill Sump Sensor(s). Model: 794380-208	□ Fill Sump Sensor(s). Model:

□ Shear Valve(s).	□ Shear Valve(s).
□ Dispenser Containment Float(s) and Chain(s).	□ Dispenser Containment Float(s) and Chain(s).

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C 695033

C. **Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; (check all that apply):** ■ **System set-up** ■ **Alarm history report**

Technician Name (print): Rich Ruston Signature:

Certification No.: 5246183-vt A90050 License No.: 517336

Testing Company Name: Orange County Tank Testing Phone No.: (714) 776-0300

Testing Company Address: 225 N. Loara Street, Anaheim, CA 92801 Date of Testing/Servicing: 10/7/2011

D. Results of Testing/Servicing

Software Version Installed: 9.0

Complete the following checklist:

✓ Yes	No*	Is the audible alarm operational?
✓ Yes	No*	Is the visual alarm operational?
✓ Yes	No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
✓ Yes	No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
Yes	No* ✓ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
Yes	No* ✓ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* Sump/Trench Sensors; Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? Yes; No.
Yes	No* ✓ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? _____ %
Yes*	✓ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
✓ Yes*	No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* Product; Water. If yes, describe causes in Section E, below.
✓ Yes	No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
✓ Yes	No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments:

Small Amount of Water Removed at time of Inspection.

F. In-Tank Gauging / SIR Equipment:

Check this box if tank gauging is used only for inventory control.
Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

✓ Yes	No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
✓ Yes	No*	Were all tank gauging probes visually inspected for damage and residue buildup?
✓ Yes	No*	Was accuracy of system product level readings tested?
✓ Yes	No*	Was accuracy of system water level readings tested?

UST Monitoring Site Plan

Site Address: 1977 Saturn

Date map was drawn: 12/4/07

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Monterey Park, CA 91754

Attention Mr. Fred Adams

HAZARDOUS MATERIALS UNDERGROUND STORAGE
UNAUTHORIZED DISCHARGE OF HAZARDOUS MATERIAL
FACILITY AT: 1977 SATURN STREET, MONTEREY PARK
TANK/PIPING NUMBER OR IDENTIFICATION: _____

It has come to the attention of this Department that an unauthorized discharge of hazardous material may have occurred at the above facility. Due to the threat of this discharge reaching the water table and creating a serious groundwater problem, a site investigation must be performed. The investigation is required because of the following:

[ ] Tank integrity test failure.
[ ] Piping integrity test failure.
[ ] Soil or groundwater analysis results indicates significant contamination.
[ ] Inventory reconciliation discrepancy.
[X] Monitoring system indicates leakage.
[X] Other Re-certification of the monitoring system is also required from a technician certified by the manufacturer.

Pursuant to Chapter 11.76 of the Los Angeles County Code, you are required to provide this office with a written report by September 15, 1991 containing the following information:

A. Past contents of the subject tank(s).
B. Estimated quantity of discharged material.
C. A hydrogeological report containing boring locations and logs, a definition of local geology and depth to groundwater.
D. Soil and/or groundwater analysis results reported on laboratory letterhead.
E. Chain of custody documentation for all samples obtained.
F. Vertical and lateral extent of hazardous material migration.
G. Cleanup and mitigation measures, or demonstration to a satisfactory degree that no hazards due to leaks exist.
H. Repairs to piping or tank(s) and retest results of piping or tank(s) failed initial integrity test.

The written report must be prepared under the supervision of and signed by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils.

Soil samples shall be obtained at depths of 5, 10, 15, 20, 30, and 40 feet below grade for tanks, and/or at appropriate locations and depths along any appurtenant piping. The number and location of borings shall be sufficient in quantity and nature to accurately define the extent of contamination.

All soil samples shall be analyzed by a California Department of Health Services certified laboratory equipped for the type of analysis to be conducted. Soil samples must be analyzed individually without compositing. All soil and groundwater samples to be analyzed for total petroleum hydrocarbons shall be prepared using EPA Method 5020 or 5030 and analyzed using EPA Method 8015, except EPA Method 418.1 shall be used for waste oil and may be used for diesel fuel or other heavier petroleum products. Groundwater samples, and soil samples close to the water table, shall also be analyzed using EPA Method 8020 or 8240.

If groundwater is encountered at any time during the site assessment, a groundwater monitoring well shall be established at a downgradient location. A permit for either the construction or destruction of a groundwater monitoring well is required from the Los Angeles County Department of Health Services. After proper development (four well volumes minimum), a groundwater sample shall be obtained and analyzed for all past tank constituents and results reported as parts per billion.

If you have any questions concerning this matter, please contact Mr. John Awujo at (818) 458-3507.

Very truly yours,

T. A. TIDEMANSON

Re: Temporary Repair Activities
UST Fuel Line Excavation

Dear Chief Latipow,

As you requested during telephone conversations with our consultant, David Reveley, EMCON Associates, Sanwa Bank would like to inform you of the intended temporary repair of the damaged fuel line for the west underground storage tank at the Sanwa Bank Operations Center, 1977 Saturn St., Monterey Park.

The damaged single-walled copper fuel line was discovered following use of west fuel tank on July 28, 1991. The damaged line has been uncovered, and there currently is an excavation pit at the site. The purpose of the intended temporary repair is to reduce the potential for an accident occurring at the excavation pit.

The C. E. Thomas Company has been contracted to perform the repair measures which include the capping of the damaged fuel line, and the backfilling of the excavation pit with clean stockpiled soil currently adjacent to the excavation.

Following the temporary repair, Sanwa will submit a report to the Los Angeles County Department of Public Works, (LACDPW) regarding the nature of the release incident and the mitigation measures performed thus far. Sanwa will then submit a request to the LACDPW to obtain a permit to remove the entire damaged fuel line and replace it with a double walled fuel line meeting the appropriate Uniform Fire Code standards. Sanwa will also perform any additional site assessment measures, if any, as requested by the LACDPW.

We appreciate the cooperation and patient assistance you have demonstrated on our behalf in helping us resolve this matter.

Please give me a call at (213) 727-3264 if you have any questions.

Fred Adams

Re: Security Building Rounds

Mail Sort: 0A-2 Ext: 3264

cc: Joe Rebelo

The utility building is very close to being on line. The equipment is powered up and is being tested. As such we are now at the point where I would like to request that the building and some of the remote alarms be included in the building rounds by the Security Officers.

There are three areas that should be included in the rounds.

1. Warehouse--There is an additional fuel leak detector system installed in the warehouse adjacent to the "leak sensor jr." panel. The new panel is a "trace-tek" system, and monitors the fuel line between the main building and the new generators.

   Since you are already monitoring the original "leak sensor jr." panel during your rounds, please add the "trace-tek" panel.

2. The Main Switchgear Room in the main building contains a number of remote panels. Two of these panels are not remoted to the security console. Please include this room on your regular building rounds.

   a. The remote fuel panel contains a number of red lights, all labeled, a very loud alarm and a silence button. If you hear the alarm, silence the alarm and notify the engineer on duty advising what lights are on.

   b. The air conditioning remote panel--DATA AIRE is also located in this room. If there is an alarm, silence the alarm and advise the engineer on duty.

3. The Utility Building--There are four rooms in this building, I have attached a drawing of the building with the layout of the equipment. You should monitor for:

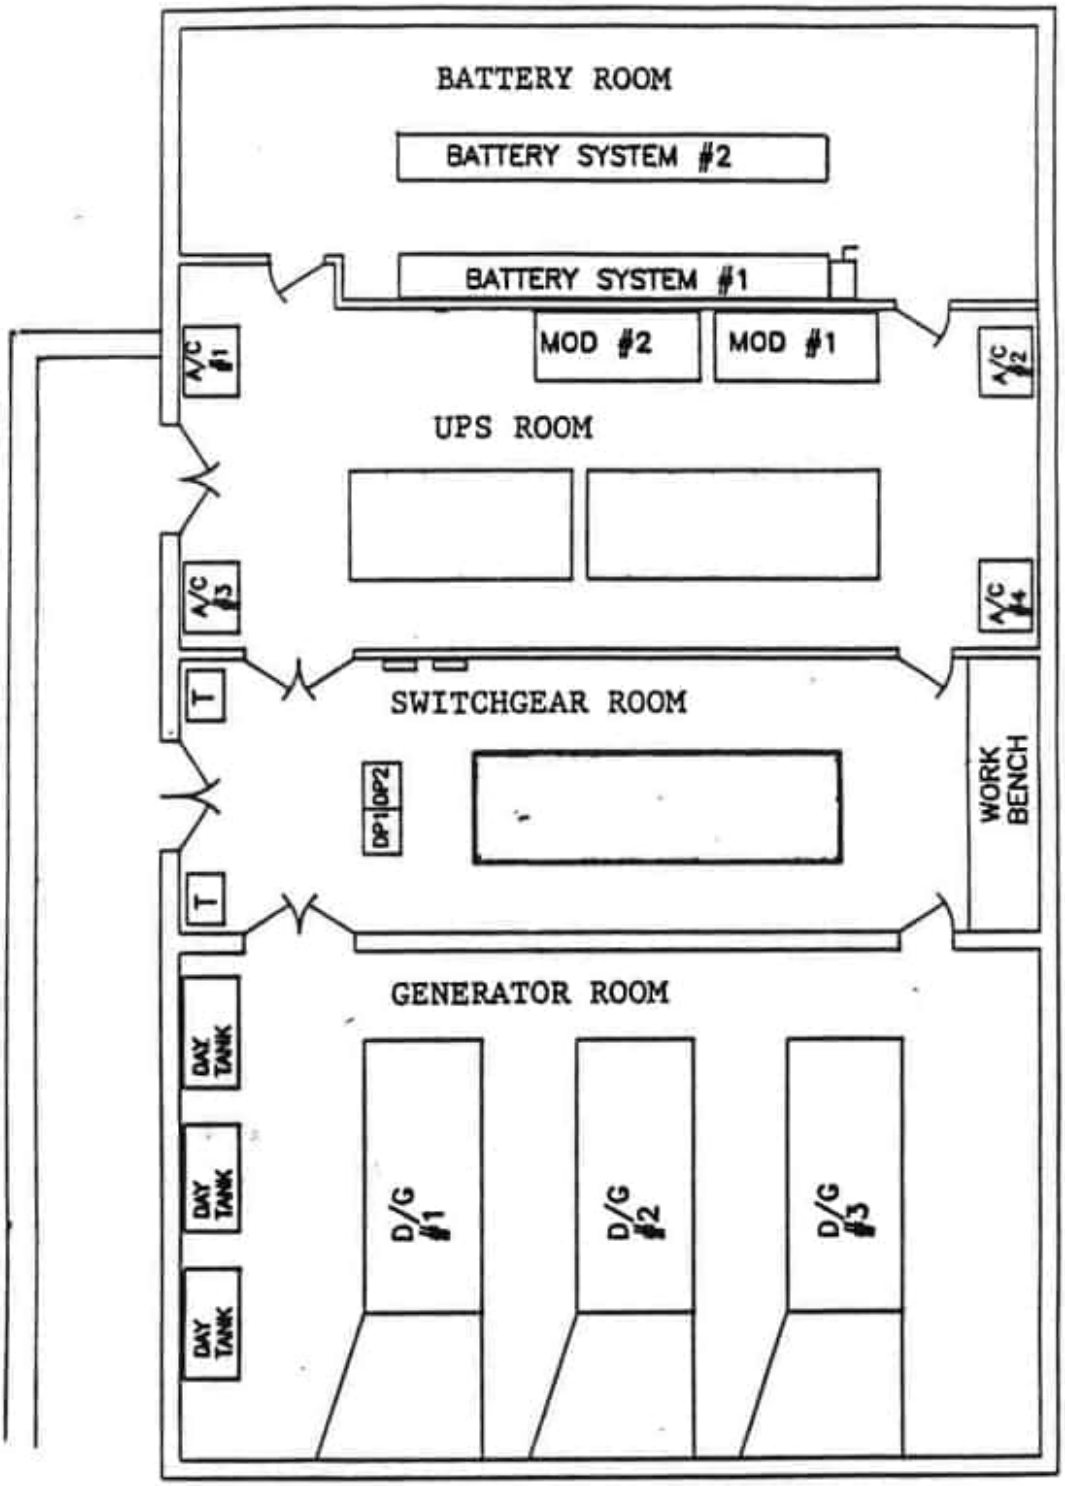
   audible alarms

   continuous fuel spills

smoke and fire

halon discharge

Air conditioning--at least one unit on the east walls of the UPS roomshould be on at all times.



Doors--all five doors to/from the UPS room should be closed at all times, unless otherwise advised by the building engineers.

Battery room--temperature should be comfortable to cool.

Please give me a call to discuss this request. We will be happy to set up a time for an instructional tour for your supervisors and lead men.

Fred Adams

AUTHORIZATION FOR CLOSURE
INDUSTRIAL WASTE CONTROL PROGRAM
CONDITIONS AND LIMITATIONS

A - GENERAL

1. This closure authorization is limited to closure of industrial wastewater pretreatment facilities NOT permitted as hazardous waste treatment units pursuant to Chapter 6.5, California Health & Safety Code, or underground storage tanks pursuant to Title 11, Division 4, Los Angeles County Code.
2. All work shall be carried out in full compliance with all applicable Federal, State and local laws, ordinances, rules and regulations.
3. The Waste Management Division (WMD) shall be notified in writing 30 days in advance of any facility closure unless this requirement is specifically waved by the Director of Public Works.
4. The applicant shall demonstrate that no pollution or nuisance will be created by the proposed closure.
5. All fees due to WMD for the operation and/or maintenance of the facility subject to closure through the date of closure shall be paid.
6. A fee pursuant to Section 20.36.270, Los Angeles County Code, or applicable city code shall accompany this application.

B - PRIOR TO STARTING WORK

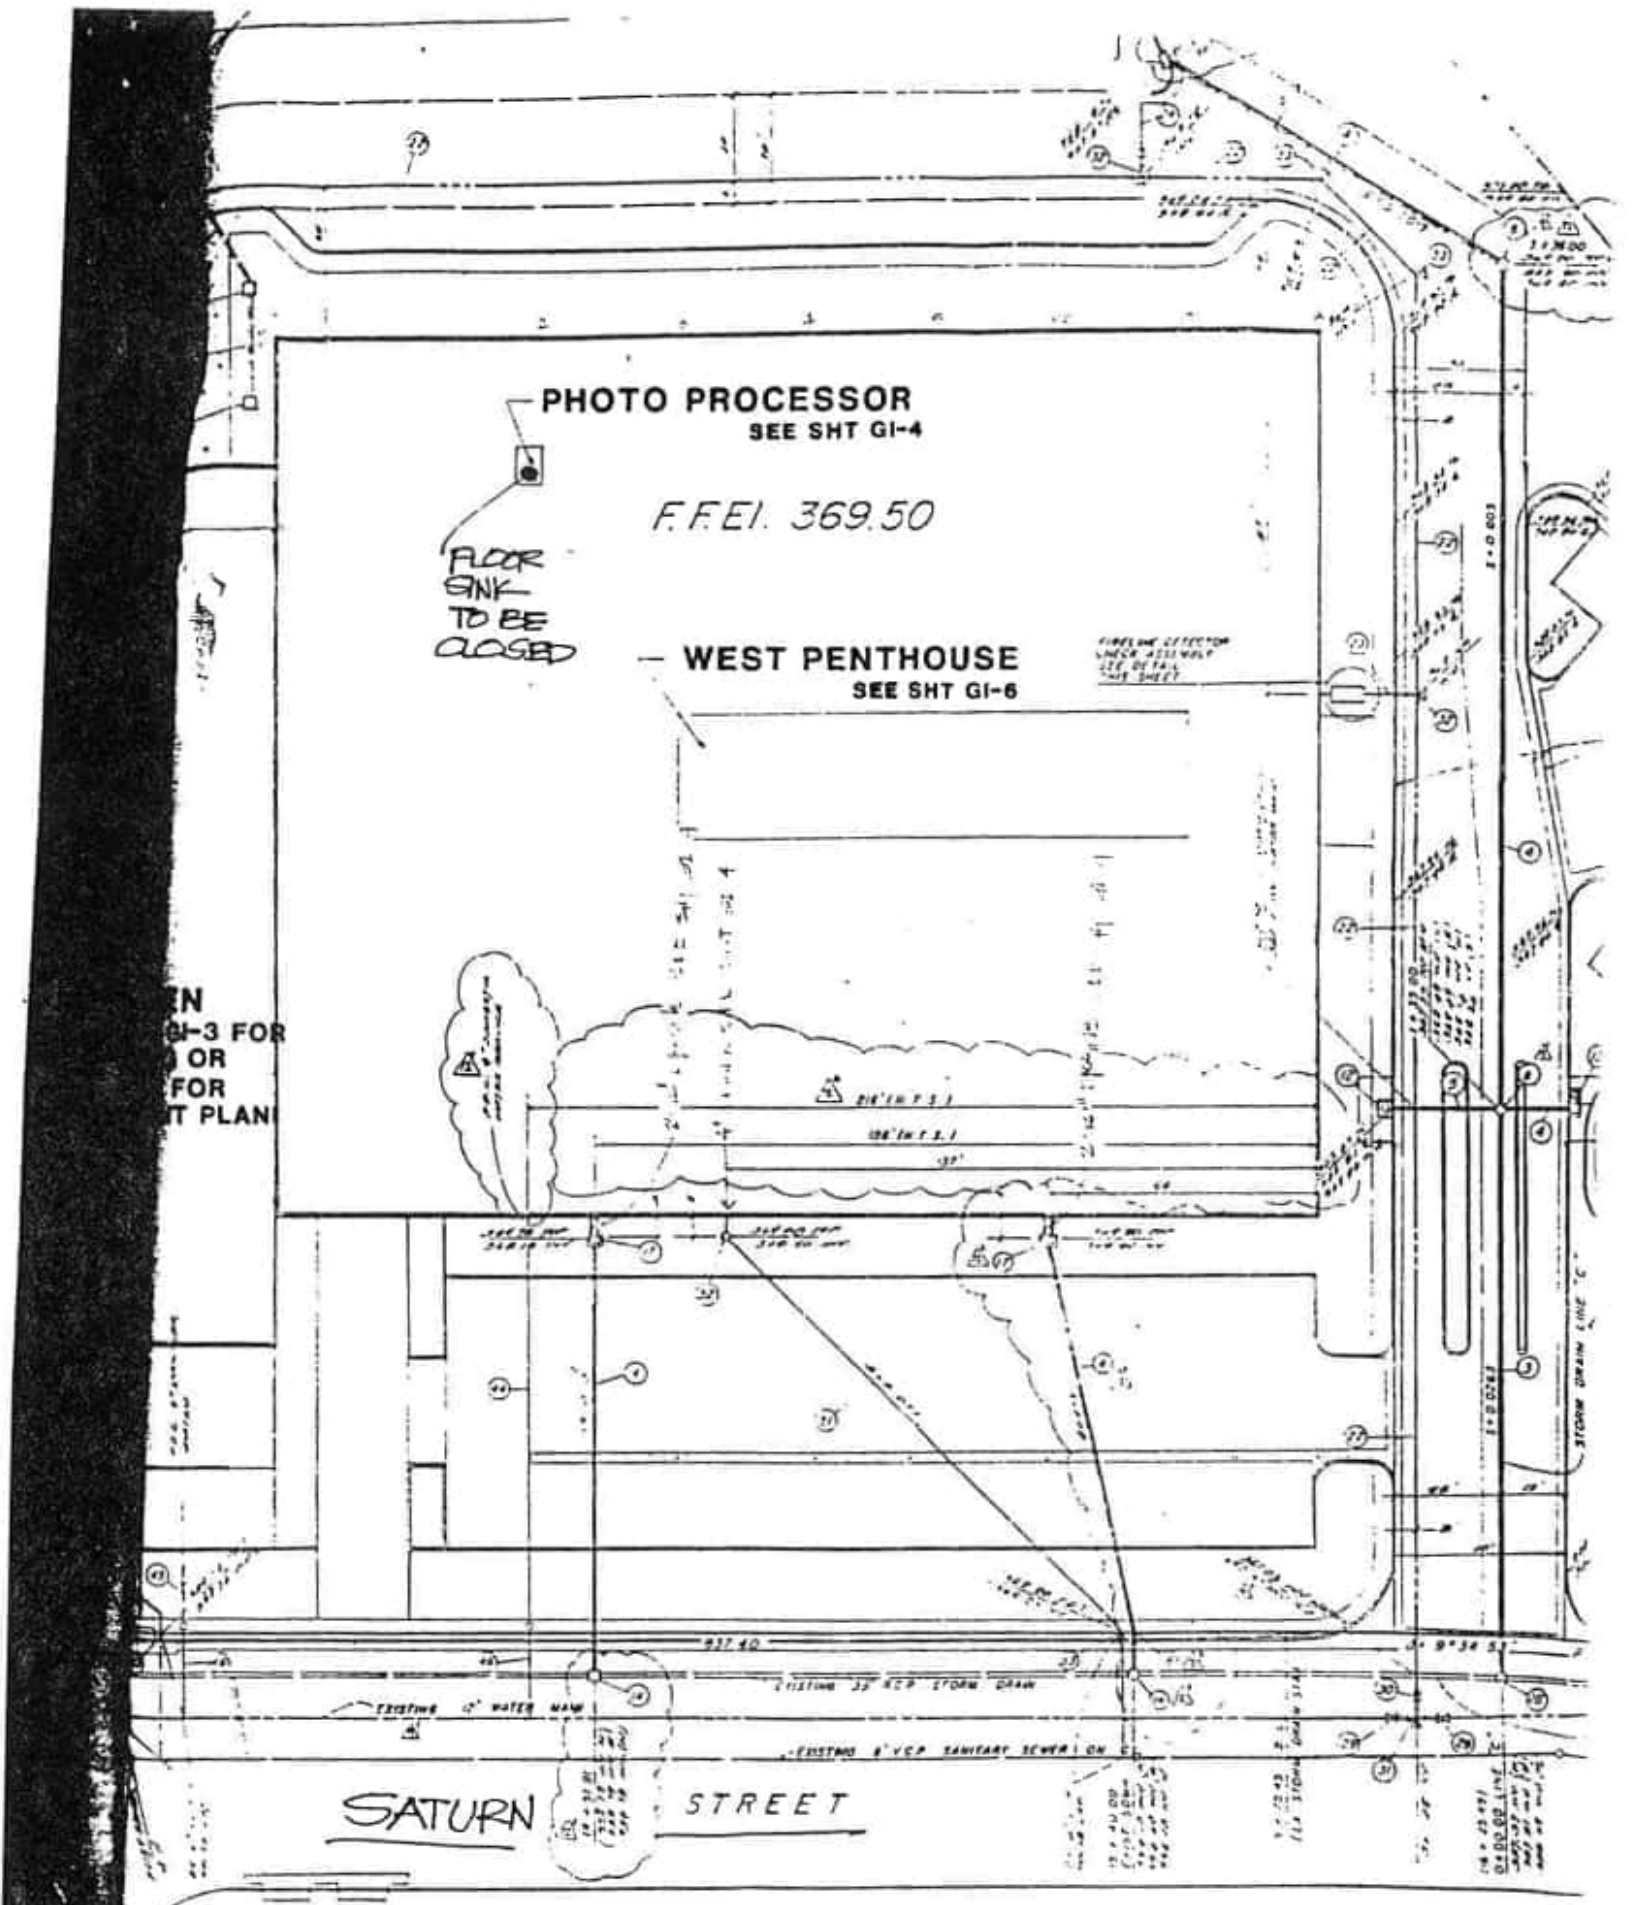
1. All wastewater generating operations tributary to the facility to be closed shall be terminated or directed to alternative approved facilities.
2. All accumulated industrial and/or hazardous wastes shall be removed from the industrial waste pretreatment facility.
3. All required plumbing and/or sewer abandonment permits shall be obtained from the Building Official prior to capping any drains, sewers or private sewer systems.
4. Inspection notification(s) shall be made as directed by this approval.

C - APPLICABLE TO ALL CLOSURES

1. Sewer laterals serving the wastewater pretreatment facility to be closed and any open sewer connections shall be removed or severed and capped immediately downstream from such facility and shall include the removal of sample box, cleanout, trap and vent associated with the facility.
2. The severed outlet line shall be capped off with a fast-setting cement or other approved equivalent material.
3. All inlets, floor sinks, drains, trenches or other fixtures tributary to the pretreatment facility shall be removed or permanently sealed with a fast-setting cement or other approved equivalent material.
4. If at any time evidence of an unauthorized discharge from the facility or tributary facilities is discovered, the applicant shall notify WMD within 24 working hours and shall take all necessary steps to secure any contaminated soils or residues.
5. No work shall be covered until all required inspections have been made.

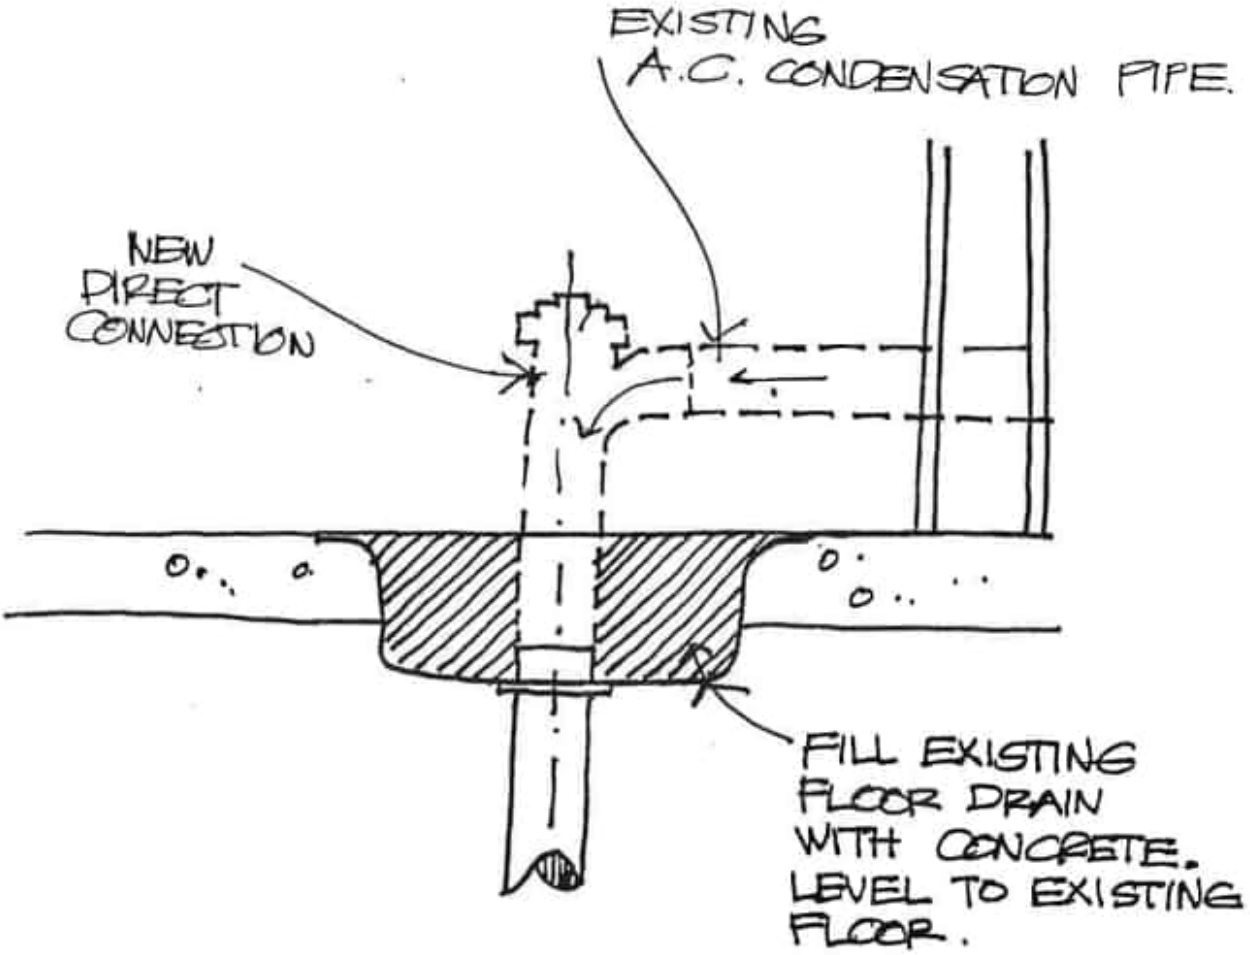
D - PERMANENT CLOSURE IN PLACE

1. Closure in place is allowed only when specified by this authorization.
2. Prior to backfill, any samples required by this approval shall be taken.
3. Upon completion of all work required above, the pretreatment facility shall be backfilled with sand, pea gravel or other approved material and compacted to within a maximum of 4 inches below grade.
4. The remaining 4 inches (minimum) shall be filled with concrete or equivalent approved material.
5. All backfill operations shall be carried out in compliance in accordance with applicable Building Code requirements.



E - PERMANENT CLOSURE BY REMOVAL

1. Upon completion of all work required by Conditions A through C above, the pretreatment facility shall be excavated and transported to a legal point of disposal.
2. Prior to backfill, any samples required by this approval shall be taken.
3. All excavation and backfill operations shall be carried out in compliance with applicable Building Code requirements.



F - REQUIRED REPORTS

1. Within 30 days of the date of closure, the applicant shall furnish WMD a closure report describing all work done, results of any required sampling, disposition of any contaminated soils or materials found and evidence of compliance with Conditions B1, B2, B3, C4, D2, E1 and E2.
2. The closure report shall include any additional requirements made a part of this approval.
3. The closure report shall be submitted to:

Department of Public Works
Waste Management Division
900 South Fremont Avenue
Alhambra, CA 91803-1331

Inglewood, Calif.
August 2, 1967

DEAR SIR:

Your proposal to abandon (037-20192) Well No. "Monterey Park" 1,
Section 35, T. 1 S., R. 12 W., S.B. B. & M., ---------- Field, Los Angeles County,
dated July 20, 1967, received July 31, 1967, has been examined in conjunction with records filed in this office.
Present conditions as shown by the records and the proposal are as follows:

THE NOTICE STATES
"THE PRESENT CONDITION OF THE WELL IS:

1. Total Depth: 7920
2. Complete casing record, including plugs:
   50" of 16" conductor pipe cemented to surface
   610' of 9-5/8" casing cemented to surface
3. Last Produced never produced

ADDITIONAL DATA FOR DRY HOLE

4. Oil or Gas showings and results of tests: None
5. Stratigraphic markers and depths: None
6. Formation at bottom: Repetto
7. Base of fresh water sands: 3550 ft."

PROPOSAL
"THE PROPOSED WORK IS
Place cement plug at 3550'-3480'
Place cement plug at 640'-520'
Place 25' cement plug at top of surface casing"

DECISION
THE PROPOSAL, COVERING WORK ALREADY COMPLETED IN ACCORDANCE WITH PRIOR AGREEMENT, IS APPROVED.

Inglewood, Calif.
July 26, 1967

Agent for BRADFORD BISHOP, OPERATOR

DEAR SIR: (037-20192)

Operations at well No. "Monterey Park" 1 Sec. 35, T. 1 S, R. 12 W, S.B. B & M.
Field, in Los Angeles County, were witnessed
on July 21, 1967. Mr. L. Axtell, Engineer, representative of the supervisor was present
from 4:30 p.m. to 5:15 p.m. There were also present D. Shepard, Drilling Foreman

Present condition of well: 16" cem. 50'; 9-5/8" cem. 610'. TD 7920', plugged w/cem. 3550'-3480' & 640'-520'.
1000'-800' - see history

The operations were performed for the purpose of witnessing the plugging operations in the process of abandonment.

Mr. reported:

MR. R. ROTHERMEL, ENGINEER, WAS PRESENT AT THE WELL FROM 5:45 A.M. TO 6:45 A.M. ON JULY 21, 1967 AND MR. SHEPARD REPORTED:

1. An 8-3/4" hole was drilled from 610' to 7920'.
2. On July 21, 1967, 50 sacks of cement was pumped into the hole through 4-1/2" drill pipe hanging at 3550'.

THE ENGINEER NOTED THAT the cement plug at the reported depth of 3480' supported 1/2 of the weight of the drill pipe.

MR. L. AXTELL, ENGINEER, WAS PRESENT AT THE WELL FROM 4:30 P.M. TO 5:15 P.M. ON JULY 21, 1967 AND MR. SHEPARD REPORTED THAT on July 21, 1967, 60 sacks of cement was pumped into the hole through 4-1/2" drill pipe hanging at 640'.
THE ENGINEER NOTED THAT the cement plug at the reported depth of 520' supported 1/4 of the weight of the drill pipe.

THE PLUGGING OPERATIONS AS WITNESSED AND REPORTED ARE APPROVED.

Form 109-D (BOPE Memo)

B. O. P. E. MEMO No. T_____

Company BRADFORD BISHOP, OPERATOR Date 7/5 19 67

Operations at well No. "MONTEREY PARK" 1 (037-20192) Sec. 35 T. 1S R. 12W SB B&M.
Field L.A. County, were witnessed

on 7/3/67. Mr. L. AXTELL, representative of the supervisor was present from 2^30 PM to 3^00 PM. There was also present V. STINNETT, DF

Present condition of well: 16" CEM 50'; 9 5/8" CEM 610', TD 2610' ± DRLG

Operations were performed for purpose of inspecting BOP equipment and installation.

Mr. STINNETT reported:

1. On JULY 1 1967, 9 7/8", 32 lb. casing was cemented in a 13 3/4" hole at 610' with 338 sacks/~~cu.ft.~~ of cement.
2. Cement returned/~~did not return~~ to the surface.
__. An additional _____ sacks/cu.ft. of cement was placed around the _____" casing from the surface.
3. The BLIND RAMS, the PIPE RAMS, and the BAG were each tested with a closed-in pressure of 1200 psi for 15 minutes, _____ ~~psi for ____ minutes, and _____ psi for ____ minutes~~, respectively.
4. A 8 3/4" hole was being drilled ahead at 2610±'.

THE ENGINEER NOTED that the well was equipped with the following BOP equipment:

1. A SHAFFER manually and hydraulically operated double control gate for closing in the well with the drill pipe/~~tubing~~ out of the hole, and for closing around the 4 1/2" drill pipe/~~tubing~~.
2. A HYDRIL blow-out preventer for closing in the well with the drill pipe/~~tubing~~ out of the hole, and for closing around the 4 1/2" drill pipe/~~tubing~~.
__. A _____ manually and hydraulically operated control gate for closing in the well with the drill pipe/tubing out of the hole.
__. A _____ manually and hydraulically operated control gate for closing around the _____" drill pipe/tubing.
__. A _____ blow-out preventer for closing around the _____" drill pipe/tubing.
3. The controls for the above equipment were located outside the derrick and on the derrick floor.
4. A 2" mud fill-up line with a 2" high-pressure stopcock into the 9 5/8" casing below the above equipment.
5. A high-pressure STOPCOCK on the kelly/~~goose-neck/stand-pipe~~.

__. Remarks _____

THE BLOW-OUT PREVENTION EQUIPMENT AND INSTALLATION ARE APPROVED.

REPORT ON PROPOSED OPERATIONS No. P.167-709

Mr. Bradford Bishop
209 Fair Oaks Ave., Suite 407
South Pasadena, California 91030
Agent for BRADFORD BISHOP, OPERATOR

121

Inglewood, Calif.
July 5, 1967

DEAR SIR: (037-20192)

Your proposal to drill Well No. "Monterey Park" 1,
Section 35, T. 1 S., R. 12 W., S.B. B. & M., ---------- Field, Los Angeles County,
dated June 27, 1967, received June 28, 1967, has been examined in conjunction with records filed in this office.
Present conditions as shown by the records and the proposal are as follows:

THE NOTICE STATES
"Legal description of mineral-right lease, consisting of 100 acres, is as follows:
Portions of Sections 34 and 35, T1S, R12W, as shown on Plat attached hereto
Do mineral and surface leases coincide? Yes X No
Location of Well: 2150 feet North along west line of Sec. 35, 435 feet at right angles to said line from the southwest corner of section 35, T1S, T12W.
Elevation of ground above sea level 343 feet datum.
All depth measurements taken from top of KB which is 12 feet above ground."

PROPOSAL
"PROPOSED CASING PROGRAM

Size of Casing	Weight	Grade and Type	Top	Bottom	Cementing Depths
9-5/8	32.30	H-40	0	600	600 to surface
	15.50	J-55			
5-1/2	17.00	J-55	0	8000	-

Intended zone of completion: Miocene Estimated total depth 8000 ft.
It is understood that if changes in this plan become necessary we are to notify you immediately."

DECISION
THE PROPOSAL IS APPROVED PROVIDED:

1. Fluid consistent with good drilling practice shall be used, and the column of fluid maintained at all times to the surface, particularly while pulling the drill pipe.
2. Adequate blowout prevention equipment shall be installed and maintained in operating condition at all times.
3. THIS DIVISION SHALL BE NOTIFIED:
   a. To inspect the installed blowout prevention equipment before drilling below 1500'.
   b. To witness a test of the effectiveness of the 5-1/2" water shut-off above any zone to be produced.

Important Information About Your

Geoenvironmental Report

Geoenvironmental studies are commissioned to gain information about environmental conditions on and beneath the surface of a site. The more comprehensive the study, the more reliable the assessment is likely to be. But remember: Any such assessment is to a greater or lesser extent based on professional opinions about conditions that cannot be seen or tested. Accordingly, no matter how many data are developed, risks created by unanticipated conditions will always remain. *Have realistic expectations.* Work with your geoenvironmental consultant to manage known and unknown risks. Part of that process should already have been accomplished, through the risk allocation provisions you and your geoenvironmental professional discussed and included in your contract's general terms and conditions. This document is intended to explain some of the concepts that may be included in your agreement, and to pass along information and suggestions to help you manage your risk.

Beware of Change; Keep Your Geoenvironmental Professional Advised

The design of a geoenvironmental study considers a variety of factors that are subject to change. Changes can undermine the applicability of a report's findings, conclusions, and recommendations. *Advise your geoenvironmental professional about any changes you become aware of.* Geoenvironmental professionals cannot accept responsibility or liability for problems that occur because a report fails to consider conditions that did not exist when the study was designed. Ask your geoenvironmental professional about the types of changes you should be particularly alert to. Some of the most common include:

- modification of the proposed development or ownership group,
- sale or other property transfer,
- replacement of or additions to the financing entity,
- amendment of existing regulations or introduction of new ones, or
- changes in the use or condition of adjacent property.

Should you become aware of any change, *do not rely on a geoenvironmental report.* Advise your geoenvironmental professional immediately; follow the professional's advice.

Recognize the Impact of Time

A geoenvironmental professional's findings, recommendations, and conclusions cannot remain valid indefinitely. The more time that passes, the more likely it is that important latent changes will occur. *Do not rely on a geoenvironmental report if too much time has elapsed since it was completed.* Ask your environmental professional to define "too much time." In the case of Phase I Environmental Site Assessments (ESAs), for example, more than 180 days after submission is generally considered "too much."

Prepare To Deal with Unanticipated Conditions

The findings, recommendations, and conclusions of a Phase I ESA report typically are based on a review of historical information, interviews, a site "walkover," and other forms of noninvasive research. When site subsurface conditions are not sampled in any way, the risk of unanticipated conditions is higher than it would otherwise be.

While borings, installation of monitoring wells, and similar invasive test methods can help reduce the risk of unanticipated conditions, *do not overvalue the effectiveness of testing.* Testing provides information about actual conditions only at the precise locations where samples are taken, and only when they are taken. Your geoenvironmental professional has applied that specific information to develop a general opinion about environmental conditions. *Actual conditions in areas not sampled may differ (sometimes sharply) from those predicted in a report.* For example, a site may contain an unregistered underground storage tank that shows no surface trace of its existence. *Even conditions in areas that were tested can change,* sometimes suddenly, due to any number of events, not the least of which include occurrences at

adjacent sites. Recognize, too, that *even some conditions in tested areas may go undiscovered*, because the tests or analytical methods used were designed to detect only those conditions assumed to exist.

Manage your risks by retaining your geoenvironmental professional to work with you as the project proceeds. Establish a contingency fund or other means to enable your geoenvironmental professional to respond rapidly, in order to limit the impact of unforeseen conditions. And to help prevent any misunderstanding, identify those empowered to authorize changes and the administrative procedures that should be followed.

Do Not Permit Any Other Party To Rely on the Report

Geoenvironmental professionals design their studies and prepare their reports to meet the specific needs of the clients who retain them, in light of the risk management methods that the client and geoenvironmental professional agree to, and the statutory, regulatory, or other requirements that apply. The study designed for a developer may differ sharply from one designed for a lender, insurer, public agency...or even another developer. *Unless the report specifically states otherwise, it was developed for you and only you.* Do not unilaterally permit any other party to rely on it. The report and the study underlying it may not be adequate for another party's needs, and you could be held liable for shortcomings your geoenvironmental professional was powerless to prevent or anticipate. Inform your geoenvironmental professional when you know or expect that someone else—a third-party—will want to use or rely on the report. *Do not permit third-party use or reliance until you first confer with the geoenvironmental professional who prepared the report.* Additional testing, analysis, or study may be required and, in any event, appropriate terms and conditions should be agreed to so both you and your geoenvironmental professional are protected from third-party risks. *Any party who relies on a geoenvironmental report without the express written permission of the professional who prepared it and the client for whom it was prepared may be solely liable for any problems that arise.*

Avoid Misinterpretation of the Report

Design professionals and other parties may want to rely on the report in developing plans and specifications. They need to be advised, in writing, that their needs may not have been considered when the study's scope was developed, and, even if their needs were considered, they might misinterpret geoenvironmental findings, conclusions, and recommendations. *Commission your geoenvironmental professional to explain pertinent elements of the report to others who are permitted to rely on it, and to review any plans, specifications or other instruments of professional service that incorporate any of the report's findings, conclusions, or recommendations.* Your geoenvironmental professional has the best understanding of the issues involved, including the fundamental assumptions that underpinned the study's scope.

Give Contractors Access to the Report

Reduce the risk of delays, claims, and disputes by giving contractors access to the full report, *providing that it is accompanied by a letter of transmittal that can protect you* by making it unquestionably clear that: 1) the study was not conducted and the report was not prepared for purposes of bid development, and 2) the findings, conclusions, and recommendations included in the report are based on a variety of opinions, inferences, and assumptions and are subject to interpretation. Use the letter to also advise contractors to consult with your geoenvironmental professional to obtain clarifications, interpretations, and guidance (a fee may be required for this service), and that—in any event—they should conduct additional studies to obtain the specific type and extent of information each prefers for preparing a bid or cost estimate. Providing access to the full report, with the appropriate caveats, helps prevent formation of adversarial attitudes and claims of concealed or differing conditions. If a contractor elects to ignore the warnings and advice in the letter of transmittal, it would do so at its own risk. Your geoenvironmental professional should be able to help you prepare an effective letter.

Do Not Separate Documentation from the Report

Geoenvironmental reports often include supplemental documentation, such as maps and copies of regulatory files, permits, registrations, citations, and correspondence with regulatory agencies. If subsurface explorations were performed, the report may contain final boring logs and copies of laboratory data. If remediation activities occurred on site, the report may include: copies of daily field reports; waste manifests; and information about the disturbance of subsurface materials, the type and thickness of any fill placed on site, and fill placement practices, among other types of documentation. *Do not separate supplemental documentation from the report. Do not, and do not permit any other party to redraw or modify any of the supplemental documentation for incorporation into other professionals' instruments of service.*

Understand the Role of Standards

Unless they are incorporated into statutes or regulations, standard practices and standard guides developed by the American Society for Testing and Materials (ASTM) and other recognized standards-developing organizations (SDOs) are little more than aspirational methods agreed to by a consensus of a committee. The committees that develop standards may not comprise those best-qualified to establish methods and, no matter what, no standard method can possibly consider the infinite client- and project-specific variables that fly in the face of the theoretical "standard conditions" to which standard practices and standard guides apply. In fact, these variables can be so pronounced that geoenvironmental professionals who comply with every directive of an ASTM or other standard procedure could run afoul of local custom and practice, thus violating the standard of care.

Accordingly, when geoenvironmental professionals indicate in their reports that they have performed a service "in general compliance" with one standard or another, it means they have applied professional judgement in creating and implementing a scope of service designed for the specific client and project involved, and which follows some of the general precepts laid out in the referenced standard. To the extent that a report indicates "general compliance" with a standard, you may wish to speak with your geoenvironmental professional to learn more about what was and was not done. *Do not assume a given standard was followed to the letter.* Research indicates that that seldom is the case.

Realize That Recommendations May Not Be Final

The technical recommendations included in a geoenvironmental report are based on assumptions about actual conditions, and so are preliminary or tentative. Final recommendations can be prepared only by observing actual conditions as they are exposed. For that reason, you should retain the geoenvironmental professional of record to observe construction and/or remediation activities on site, to permit rapid response to unanticipated conditions. *The geoenvironmental professional who prepared the report cannot assume responsibility or liability for the report's recommendations if that professional is not retained to observe relevant site operations.*

Understand That Geotechnical Issues Have Not Been Addressed

Unless geotechnical engineering was specifically included in the scope of professional service, a report is not likely to relate any findings, conclusions, or recommendations about the suitability of subsurface materials for construction purposes, especially when site remediation has been accomplished through the removal, replacement, encapsulation, or chemical treatment of on-site soils. The equipment, techniques, and testing used by geotechnical engineers differ markedly from those used by geoenvironmental professionals; their education, training, and experience are also significantly different. If you plan to build on the subject site, but have not yet had a geotechnical engineering study conducted, your geoenvironmental professional should be able to provide guidance about the next steps you should take. The same firm may provide the services you need.

Read Responsibility Provisions Closely

Geoenvironmental studies cannot be exact; they are based on professional judgement and opinion. Nonetheless, some clients, contractors, and others assume geoenvironmental reports are or certainly should be unerringly precise. Such assumptions have created unrealistic expectations that have led to wholly unwarranted claims and disputes. To help prevent such problems, geoenvironmental professionals have developed a number of report provisions and contract terms that explain who is responsible for what, and how risks are to be allocated. Some people mistake these for "exculpatory clauses," that is, provisions whose purpose is to transfer one party's rightful responsibilities and liabilities to someone else. Read the responsibility provisions included in a report and in the contract you and your geoenvironmental professional agreed to. *Responsibility provisions are not "boilerplate."* They are important.

Rely on Your Geoenvironmental Professional for Additional Assistance

Membership in ASFE exposes geoenvironmental professionals to a wide array of risk management techniques that can be of genuine benefit for everyone involved with a geoenvironmental project. Confer with your ASFE-member geoenvironmental professional for more information.

Re: URS Project No. 14966609
Observation of Limited Subsurface Investigation Activities
1977 Saturn
Monterey Park, California

Dear Mr. Patel:

URS is pleased to provide this letter summarizing our observations of a Limited Subsurface Investigation (LSI) conducted by the County of Los Angeles at the subject property and presenting the results of split soil samples collected during the completion of the LSI.

BACKGROUND

The scope of work included making observations and documenting the LSI field activities conducted by the County of Los Angeles at the site. Observed site activities were compared to standard industry practices for conducting Phase II Environmental Site Investigations (ESIs) (such as decontamination procedures, sample screening, sample collection, etc.). The County of Los Angeles collected up to eight soil samples per boring for laboratory analysis. URS split two of these soil samples per boring for laboratory analysis.

Soil samples were submitted by URS for analysis of total petroleum hydrocarbons in the diesel range (TPH-D) and volatile organic compounds (VOCs).

URS Corporation
525 Vine Street, Suite 1800
Cincinnati, Ohio 45202
Tel: 513.651.3440
Fax: 877.660.7727

DISCUSSION

URS was present during the field activities on October 4 and 5, 2014. The completed scope of work was consistent with the scope of work proposed by the County of Los Angeles with the following exceptions:

- Soil borings B-1, B-2, and B-4 were advanced to a terminal depth of 40 feet below grade. The proposed terminal depth was 50 feet below grade. The decision to terminate the borings at 40 feet below grade was made by County of Los Angeles personnel as there was no field observed evidence of impacts to the terminal depth.

- Soil samples from boring B-3 were not collected due to the presence of pea gravel in the entire boring. A decision was made by County of Los Angeles personnel to not to advance this boring through the pea gravel material as to not compromise the integrity of the overlying parking lot. Therefore, soil samples were not collected from this boring.

In general, the methods employed by the County of Los Angeles were considered consistent with those that would be typically used in the environmental industry.

Soil samples from borings B-1 and B-2 were collected by URS from 15 and 25 feet below grade and soil samples from boring B-4 were collected from 10 and 20 feet below grade. These soil intervals were selected based on the professional judgment of the URS geologist on site and were considered to be below the base of the underground storage tanks (USTs). URS submitted these soil samples to Eurofins/Calscience for analysis of VOCs and TPH-D on a 3–business day turnaround from laboratory receipt of samples. The County of Los Angeles collected eight soil samples from boring B-1, seven soil samples from boring B-2, and eight soil samples from boring B-3 and submitted the samples to American Environmental Testing Laboratory, Inc. for analysis of VOCs and TPH-D.

A copy of the laboratory report for soil samples collected by URS is included as Attachment A and the results are summarized in Table 1. VOCs and TPH-D were not reported above their respective minimum laboratory reporting limits in any of the soil

samples submitted for analysis. Sample analysis did not require sample dilutions and reporting limits were considered typical.

A copy of the laboratory report for samples collected by the County of Los Angeles is included as Attachment B. VOCs and TPH-D were not reported above their respective minimum laboratory reporting limits in any of the soil samples submitted by the County of Los Angeles for analysis. Sample analysis did not require sample dilutions and reporting limits were considered typical.

— ooOoo —

URS appreciates the opportunity to propose on this project. If there are any questions or comments regarding the proposal or if you desire additional information regarding the project approach, please call.

Very truly yours,
URS Corporation

Ben Mignery
Project Manager

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 14-10-0387 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 10/04/14. They were assigned to Work Order 14-10-0387.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Glossary of Terms and Qualifiers

Work Order: 14-10-0387 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 14-10-0390 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 10/06/14. They were assigned to Work Order 14-10-0390.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

New York NELAP air certification does not certify for all reported methods and analytes, reference the accredited items here: http://www.calscience.com/PDF/New_York.pdf

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Glossary of Terms and Qualifiers

Work Order: 14-10-0390 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Data Qualifiers and Descriptors

Data Qualifiers:

*	Recovery is not within acceptable control limits.
#	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B	Analyte was present in the Method Blank.
D	Results from a diluted analysis.
E	Result is beyond calibration limits and is estimated.
H	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL	Maximum Contaminant Level
N/A	Not Available
NS	Surrogate recovery is outside control limits due to matrix interference.
SS	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X	Results represent LCS and LCSD data.

Definition:

CL	Percent acceptable limits.
%REC	Percent recovery.
QC LL	Acceptable Control Limits.
Spike	Added concentration to the sample.
LCS	Laboratory Control Sample.
MDL	Method Detection Limit is a statistically derived minimum which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

Tel: 888-288-AETL • (818) 843-8779 • Fax: (818) 843-8779 • www.aetlab.com

Data Qualifiers and Descriptors

MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Analyte was not detected in the sample at or above MDL
PQL	Practical Quantitation Limit or ML (Minimum Level as per EPA QC's) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Result	Reported concentration in the sample
RPD	Relative Percent Difference

Data Qualifiers and Descriptors

Data Qualifiers:

*	Recovery is not within acceptable control limits.
#	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B	Analyte was present in the Method Blank.
D	Results from a diluted analysis.
E	Result is beyond calibration limits and is estimated.
H	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J	Analyte was detected. However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL	Maximum Contaminant Level
N/A	Not Available
NS	Surrogate recovery is outside control limits due to matrix interference.
SS	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X	Results represent LCS and LCSD data.

Definition:

CL	Percent acceptable limits.
%REC	Percent recovery.
QC LL	Acceptable Control Limits.
Spike	Added concentration to the sample.
LCS	Laboratory Control Sample.
MDL	Method Detection Limit is a statistically derived minimum which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

Data Qualifiers and Descriptors

MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Analyte was not detected in the sample at or above MDL
PQL	Practical Quantitation Limit or ML (Minimum Level as per EPA QC's) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Result	Reported concentration in the sample
RPD	Relative Percent Difference

SUBJECT: SOIL SAMPLING RESULTS RELATED TO UST SYSTEM REMOVALS
1977 SATURN STREET
MONTEREY PARK, CALIFORNIA 91755

Dear Sirs:

This report summarizes the results of tank system removals, and associated soil sampling activities, completed at the subject site in Monterey Park, California (see attached Site Location Map - **Figure 1**).

The soil sampling activities were completed in general accordance with guidelines of Los Angeles County Department of Public Works (LADPW) and the Los Angeles Regional Water Quality Control Board (LARWQCB).

A copy of the UST removal permit is provided in attached **Appendix A**.

The tank removal activities were conducted by George Bryant Construction of Alta Loma, California (contractor). Soil sampling was completed by ALTA EM, Inc. (environmental consultant). A representative of the LACDPW (Mr. William Edwards) was scheduled to be on-site, but called the site contractor on-site within a few minutes of the scheduled inspection time, indicating he would not be able to be on site. Mr. Edwards authorized the UST removals and soil sampling to commence without his presence. A representative of ALTA EM, Inc. also spoke with Mr. Edwards verifying these approvals, and provided him our contact info, and the license number of the responsible Professional Geologist prior to proceeding.

Site Setting / Hydrogeology

The site is located at the northern edge of the Coastal Plain of Los Angeles County, in the Merced / Montebello Hills. These hills consist of sedimentary rocks of the Pico Formation, and the site area is dominated by the structural feature known as the Montebello Anticline. The site area is not known to contain large-scale regional aquifers, as is the nearby/adjoining LA County Coastal Plain just to the south. The site is located just north and outside of the Montebello Forebay Area of the LA Coastal Plain Groundwater basin (DWR, 1961).

A review of the LACDPW water well database revealed no listed wells within one mile of the subject site (LACDPW, 2018). ALTA EM, Inc. also contacted a nearby cemetery east of the subject site (see **Figure 1**) asking about any potential well information at this location. The cemetery staff reported they have no wells (Resurrection Cemetery, 2018). A review of the Geotracker database for nearby LUST cases, with well data, revealed one facility approximately 0.5 miles south-southwest of the site with groundwater at approximately 70 feet deep in 2005. All other LUST sites with groundwater well data were greater than 0.75 miles away (Geotracker, 2018).

The site is located at the foot of a small hill, on a large graded earthen pad built for the construction of the commercial-office complex which occupies the property. Atop the hill overlooking the site are large municipal water storage tanks, a landscaping nursery (Chuys Nuersery), and a community park (La Loma Park) (see attached **Figure 2**).

While a regional aquifer is not anticipated beneath the site area, an accumulation of relatively shallow groundwater *does* exists beneath the site. The source of this groundwater is unknown (i.e. from nearby or on-site irrigation water? an accumulation of natural precipitation? an on-site water leak? combination of these sources?). Groundwater was initially encountered in the larger UST pit at approximately 5 feet, but stabilized at approximately 11.5 feet bgs overnight after it was pumped out to facility the UST removals. It is noted that groundwater appeared to be shallowest in the western-most portion of the area of investigation, even being encountered in a couple of the piping trench soil samples at 4 feet bgs.

Three monitoring wells were noted around the perimeter of the larger UST pit. All three wells appeared to have been partially destroyed (i.e. cement backfilled in their wells boxes). During excavation, the upper three to five feet of several of the wells was exposed and observed to be 4" PVC casing (presumed to also be backfilled). It is unknown if these wells were installed as groundwater monitoring wells, or possibly vadose wells when groundwater was absent or deeper.

In summary, while a regional aquifer is not anticipated beneath the site area, an accumulation of relatively shallow groundwater exists beneath the site at 4 to 11.5 feet bgs. The direction of groundwater flow is unknown, though topography of the site would strongly indicate it is likely toward the west to southwest. This is contradicted by on-site observations indicating the shallowest groundwater is in the western-most portion of the area investigated.

Tank Contents, Capacity, Construction

Details of the removed tanks were reported by the contractor as follows:

	Content	Capacity	Size	Construction
Tank #1	Diesel Fuel	10,000 gals	34' by 8'	Single-wall fiberglass w/rounded ends
Tank #2	Diesel Fuel	10,000 gals	34' by 8'	Single-wall fiberglass w/rounded ends
Tank #3	Diesel Fuel	2,500 gals	12' by 6'	Double-wall fiberglass coated steel

Larger Tanks 1 & 2 were located in a cluster, while Tank 3 was located approximately 140 feet east of the others. All three tanks contained diesel fuel, and were used to supply emergency generators. All three thanks were buried 3 to 4 feet bgs.

Attached **Figure 3** and **Photo nos. 1 and 2** show the two tank pit areas.

Soil Sampling Methods & Locations

All samples were collected on November 8, 2018.

Samples along the fuel product lines were collected at depths ranging from 3.5 to 5 feet bgs (at least 2 feet beneath removed lines), and were designated as samples no. PS1 to PS13. Attached **Photo nos. 3 through 7** show the various product line trenches which were sampled.

The Tanks 1 & 2 pit contained groundwater at approximately 11.5 feet bgs, and a large concrete pad underlying the tanks at approximately 13.5 feet bgs, precluding reasonable soil sampling. Attached **Photo no. 8** shows groundwater in the tank pit and the concrete pad depth. Given soil samples could not reasonably be collected, alternative groundwater samples were collected from this UST pit with a disposable polyethylene sampling bailer. Attached **Figure no. 3** shows the approximate locations of these two groundwater samples, designated TPGW1 and TPGW2.

The Tank 3 pit also contained an underlying concrete pad throughout the pit bottom at approximately 11.5 feet bgs, but no groundwater. This pad also precluded the reasonable collection of soil samples beneath

the concrete. Alternatively, soil samples were collected from the pit sidewalls, just above the concrete pad level, at diagonally opposing corners of the former tank. The locations of these soil samples, designated T3-1-10 and T3-2-10, are shown on attached **Figure 3**.

Soil samples were obtained with the aid of a hand auger or backhoe. Samples were retained in general accordance with EPA method no. 5035 protocol. An additional amount of each sample (for non-VOC analyses) was also collected in laboratory approved 4-oz. glass jars. **Appendix B** includes further details of the sampling procedures.

Attached **Photos 9 & 10** show both UST pits after the tanks had been removed.

Field Observations

During the soil sampling, olfactory and visual observations, as well as soil types, were recorded and are summarized in the table below:

SAMPLE NO.	SAMPLE LOCATION	SAMPLE DEPTH (feet bgs)	ODOR	COLOR	SOIL TYPE
PS1-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, damp, clayey F. SAND
PS2-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, silty F. SAND
PS3-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, F. SAND; with trace silt
PS4-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, wet, F. SAND; with trace silt
PS5-5	Pipingt rench	5	No Odor	No Discoloration	Yellowish brown, damp to moist, clayey gravelly F. SAND
PS6-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist, F. SAND
PS7-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist, gravelly F. SAND
PS8-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, most , F. SAND
PS9-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, moist to wet, silty F. SAND
PS10-3.5	Piping trench	3.5	No Odor	No Discoloration	Yellowish brown, moist to wet, silty F. SAND
PS11-4	Piping trench	4	No Odor	No Discoloration	Yellowish brown, saturated, clayey silty F. SAND
PS12-3.5	Piping trench	3.5	No Odor	No Discoloration	Yellowish brown, damp to moist, clayey silty F. SAND
PS13-4	Piping trench	4	Very slight HC odor	No Discoloration	Yellowish brown w/olive mottling, moist, sandy SILT; with trace clay
T3-1-10	Tank #3 pit	10	No Odor	No Discoloration	Yellowish orange brown, damp, clayey F. SAND
T3-2-10	Tank #3 pit	10	No Odor	No Discoloration	Yellowish brown, damp, F. SAND; with trace silt and Med Sand

During the groundwater sampling, olfactory and visual observations were recorded and are also summarized in the table below:

SAMPLE NO.	SAMPLE LOCATION	SAMPLE DEPTH (feet bgs)	ODOR & VISUAL OBSERVATIONS	COMMENT
TPGW1	Tank #1 pit - North	11.5	No odor or sheen	Groundwater sample
TPGW2	Tank #1 pit - South	11.5	No odor or sheen	Groundwater sample

Analytical Methods / Results

All soil and groundwater samples were analyzed for TPH diesel (C_{10}-C_{28}), BTEX and Fuel Oxygenates. The UST removal permit initially indicated that organic lead analyses were also required; however follow-up communications with Kattya Batres of the LACDPW confirmed the lead analyses were not required if the USTs historically only contained diesel fuel (which is the case) (see Appendix A).

The analyses were completed in general accordance with modified EPA method no. 8015 (for TPH diesel) and EPA method no. 5035/8260B (for BTEX & FUEL OXYENATES). Results are summarized as follows:

SOIL SAMPLES (all results in mg/kg)				
SAMPLE NO.	**SAMPLE DEPTH (feet bgs)**	**TPH DIESEL (C_{10}-C_{28})**	**BTEX**	**FUEL OXYGENATES (MTBE, ETBE, DIPE, TAME, TBA)**
PS1-4	4	ND	ND	ND
PS2-4	4	ND	ND	ND
PS3-4	4	ND	ND	ND
PS4-4	4	ND	ND	ND
PS5-5	5	ND	ND	ND
PS6-4	4	ND	ND	ND
PS7-4	4	ND	ND	ND
PS8-4	4	ND	ND	ND
PS9-4	4	ND	ND	ND
PS10-3.5	3.5	ND	ND	ND
PS11-4	4	ND	ND	ND
PS12-3.5	3.5	ND	ND	ND
PS13-4	4	**15.2**	ND	ND
T3-1-10	10	**10.5**	ND	ND
T3-2-10	10	ND	ND	ND
PQLs	**N/A**	**10**	**0.005-0.01**	**0.005 - 0.05**

GROUNDWATER SAMPLES (all results in ug/L)				
SAMPLE NO.	**SAMPLE DEPTH (feet bgs)**	**TPH DIESEL (C_{10}-C_{28})**	**BTEX**	**FUEL OXYGENATES (MTBE, ETBE, DIPE, TAME, TBA)**
TPGW1	11.5	ND	ND	ND
TPGW2	11.5	ND	ND	ND
PQLs	**N/A**	500	1-3	3-50

In summary, no significant TPH (C_{10}-C_{28}), BTEX or Fuel Oxygenates were detected in any of the soil or groundwater samples. Two soil samples were reported to contain minor detected TPH (C_{10}-C_{28}) at concentration of 15.2 and 10.5 mg/kg. No field evidence indicating major fuel impacts was observed at or nearby these two samples with detections. A laboratory report further detailing the results of the soil/water sample analyses is provided in attached **Appendix C**.

Other Documentation

Provide in attached **Appendix D** are copies of the tank cleaning rinsate manifest, and the tank destruction/recycling certificates.

Conclusions

Three USTs were removed from the subject site. Two UST were located in one pit, and the third was approximately 140 feet away. Soil samples PS13-4 (piping trench) and T3-1-10 (Tank 3 pit) were reported to contain 15.2 and 10.5 mgkg of TPH (C_{10}-C_{28}), but no detected BTEX or Fuel Oxygenates. Every other soil sample was reported to contain no detected TPH (C_{10}-C_{28}), BTEX or Fuel Oxygenates.

Shallow groundwater was encountered in the Tank 1 & 2 pit, as well as a concrete pad underlying the tanks. Two groundwater samples collected from this tank pit were also reported to contain no detected TPH (C_{10}-C_{28}), BTEX or Fuel Oxygenates.

Based on the field observations and laboratory data, there is no evidence to indicate a significant release of diesel fuel from the removed UST systems. No further action is recommended, and a no further action letter is requested from the responsible party. At the time of this report, the site had no Geotracker case or global ID assigned, so this report and associated data could not be uploaded.

The opportunity to be of service is greatly appreciated. If you have any questions or comments, please do nothesitate to contact the office at (909) 476-2120.

Very Truly Yours,
ALTA EM, INC.

COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION

CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the County of Los Angeles Department of Public Works, Environmental Programs Division, P.O. Box 1460, Alhambra, California 91802-1460, containing:

1. File number of facility and closure permit number.
2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets, and north arrow.
3. Description of methods for obtaining, handling, and transporting samples.
4. Time and date samples were obtained.
5. Soil sampling certification (including but not limited to soils classification, boring logs, sample procedures, sample locations, initiating chain-of-custody, and groundwater location) for Underground Storage Tank closure shall be certified by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils. The certification must clearly state that all work was performed under the supervision of the person signing.
6. Chain-of-custody documentation initiated by person obtaining sample through person at a California Department of Health Services certified laboratory.
7. Disposal destination of tanks and evidence of legal disposal.
8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction, and methods of analysis.
9. Documentation as to depth of groundwater at facility.
10. Manifests to document hazardous waste disposal of any removed soil and tank rinsate.
11. Evidence of legal disposal of soils designated as nonhazardous.
12. Any observations of site contamination.
13. Report to be signed by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils.
14. Submit to the California Environmental Reporting System (CERS) the date the UST was permanently closed for all tanks removed or closed in-place.

UST Facility Operating Permit Application:

Home » Prepare Submittal » UST: UST Facility Operating Permit Application (Draft)

Instructions/Help

You must complete this form withing 30 days of all new permits, permit changes, or facility information changes. You will also need to update/confirm your tank, monitoring plan, and other pertinent UST-related forms.

All facilities **must** provide a BOE Number--valid numbers are 8 digits long starting with the numbers 44... State and federal facilities should use 44032062. If **ALL** underground tanks at your facility **ONLY** contain NON-petroleum productions, you can provide this generic BOE Number: 44000000. Contact your local regulator if you are unsure what number to provide.

The former paper version of this form was called "UST Operating Permit Application-Facility Information" (Form A).

More information about UST Financial Responsibility Mechanisms is available at the Water Board's Underground Storage Tank Cleanup Fund Financial Responsibility web page.

CLOSURE – UNDERGROUND STORAGE TANKS

CONDITIONS A – GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer – Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

   a. Removal of tank shall require a three (3)-business day advance notification.
   b. Permanent closure of a tank in place or a temporary closure shall require a 30-written notification.

3. Consult current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74 – 81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

   a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.
   b. The personnel shall be sufficiently skilled to safely carry out such operation.
   c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.
   d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B – TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, "Abandonment or Removal of Underground Tanks, "Part A and any other applicable Parts.

2. A temporary closure shall not exceed 180 days.

CONDITION C – PERMANENT TANK (S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Part D and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer Inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tank shall be transpoited to a legal disposal point.

6. If the tank has stored materials other than motor fuel, fuel oil or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be filled and re-compacted to a relative compaction of 90%.

CONDITIONS D – PERMANENT

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A – Inspection Guide #6, Parts B or C, and any other applicable Parts.

2. Owners/operators shall demonstrate part site integrity as follows:

   a. Test borings shall be slant drilled to intercept a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test boring may be drilled vertically and the reason stated in the report in 2.b. below.
   b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.
   c. For multiple tanks, as a minimum, boring shall be placed at 20-foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test location and placement.
   d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 40 feet below grade level.
   e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.
   f. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.
   g. A report containing the results of the above analysis shall be submitted to the County Engineer.

3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation as described in Chapter V of the County's "Underground Storage of Hazardous Materials – Guidelines."

4. A report shall be submitted to the County Engineer containing the results of the site investigation.

CLOSURE APPLICATION SUPPLEMENT **PART 1 OF 3**
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

DPW USE ONLY:
SITE-FILE NO. 6994-62151
APPLICATION NO. 905099

To satisfy the permanent closure requirements for underground storage tanks storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

***** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. *****

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2-4 feet beneath	TPHD	→ 8015M
2A, 2B	tank invert	BTEX, MTBE	→ 8260B
3A, 3B		Fuel Oxygenates	→ 8260B
		# Organic Lead	→ DOHS Method
1 sample	2-4 feet below	same as	same as
	each UDC	above	above
1 sample	2-4 feet below	Same as	Same as
	piping, every 20 feet	above	above
	starting from UDCs		

° Apply EPA Method 5035 for soil sample collection, preparation and preservation.

~~# Test for organic lead if past UST contents were tested, or if it is unknown whether past UST contents were leaded.~~

Continued on Page 2

3. All soil samples obtained shall be discrete, undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date/time of sampling shall be included in the final report.

4. Conform to the analytical requirements table below for petroleum hydrocarbon sites. Apply EPA Method 5035 specified in the USEPA SW-846, version III (12/1996) for soil sample preparation and preservation in order to minimize volatile organic losses. Use the sample collection devices, or equivalent, specified in the method (e.g., the Encore™ sampler). If the Encore™ sampler is used, analyze sample within 48 hours from the collection. Analyze sample within 10 days for soil samples stored under frozen conditions.

UST CONTENTS	Analyte	Analytical Method	Required MDL	
			Soil (ug/kg)	Water (ug/L)
GASOLINE OR DIESEL	Totoal Petroleum Hydrocarbons(TPH) - Gasoline	EPA Method 8015 (M)	100-200	50-100

Continued on Page 3

5. All soil/groundwater samples shall be analyzed by a laboratory approved by the California Environmental Accreditation Laboratory Program (ELAP).

6. Analytical results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) Detection limits for each analytical procedure and determination; d) The method of analysis; e) Signature of chemist certifying results.

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

10. A final report that contains all of the above required information shall be submitted to the office above within one (1) month form the sampling date or 180 days from the date of this permit, whichever is earlier.

11. All electronic data shall be submitted to the State Water Resources Control Board Geotracker database.

Here is the reply for the lead samples. The tanks were always permitted as diesel fuel

Subject: 1977 Saturn St

Ron,

Attached you can find the pdf copy of the approved tank removal permit. In the soil sample laboratory analysis specification sheet, you can see that we require the samples to be analyzed for Organic Lead, with a note clarifying to test for it if the tanks' contents used to be leaded or if it is unknown whether they were leaded or not.
If the owner is sure these tanks never contained leaded fuel, the Organic Lead analysis can be disregarded. If there is some doubt, then it has to be included.

Best regards,
Kattya Batres

CLOSURE APPLICATION SUPPLEMENT **PART 1 OF 3**
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

DPW USE ONLY
SITE-FILE NO 6994-62151
APPLICATION NO 905099

To satisfy the permanent closure requirements for underground storage tanks storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

***** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. *****

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B	2-4 feet beneath	TPHD	→ 8015M
2A, 2B	tank invert	BTEX, MTBE	
3A, 3B		Fuel Oxygenates	→ 8260B
		* Organic Lead	→ DOHS Method
1 sample	2-4 feet below	Same as	Same as
	each UDC	above	above
1 sample	2-4 feet below	Same as	Same as
	piping, every 20 feet	above	above
	starting from UDCs		

° Apply EPA Method 5035 for soil sample collection, preparation and preservation

* Test for organic lead if past UST contents were leaded, or if it is unknown whether past UST contents were leaded.

Continued on Page 2

APPENDIX B

SOIL & GROUNDWATER SAMPLING PROCEDURES

APPENDIX B

SOIL & GROUNDWATER SAMPLING PROCEDURES

Soil Samples

- Soil samples collected from the piping trenches were obtained using a hand auger. Soil samples collected from the tank pit were obtained with a backhoe.
- A relatively undisturbed portion of each sample was also retained in general accordance with EPA method no. 5035 protocol, using an EASYDRAW® syringe. An approximate five gram sample was collected with the syringe and ejected each into four pre-tared, 40 ml glass VOA vials (two vials containing pre-measured quantities of $NaHSO_4$, one vial containing MeOH, and one vial with no preservative).
- Additional sample (for non VOC anlayses) was also collected in a laboratory approved, 4-Oz. glass jar at each location.
- All collected samples was labeled with the sample number, date and project number.
- All samples were stored in an ice chest kept at approximately 40 to 50 degrees Fahrenheit prior to transportation to a State of California, Department of Health Services certified laboratory under strict chain-of-custody procedures.
- All re-usable soil sampling equipment was washed prior to each sampling events with a solution of LIQUINOX (a phosphate free detergent), rinsed with potable tap water, and then rinsed again with de-ionized water.

Groundwater Samples

- Groundwater samples were obtained with a disposable polyethylene sampling bailer lowered into the groundwater in the bottom of the UST pit.
- The groundwater samples were each retained in a 1-liter amber glass bottle containing H_2SO_4, and three 40-ml glass VOA vials with no preservative.
- All collected samples was labeled with the sample number, date and project number.
- All samples were stored in an ice chest kept at approximately 40 to 50 degrees Fahrenheit prior to transportation to a State of California, Department of Health Services certified laboratory under strict chain-of-custody procedures.

Dear Mr. Hansen:

The **analytical results** for the soil and water samples, received by our laboratory on November 9, 2018, are attached. The samples were received chilled, intact, and accompanying chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manager

Quality Control Board
320 West 4th Street, Suite 200
Los Angeles, CA 90013-2343

Dear Mr. Rong:

HAZARDOUS SUBSTANCES UNDERGROUND STORAGE
CLOSURE/SITE ASSESSMENT REPORT
CLOSURE APPLICATION NO 905166
***977 SATURN STREET, MONTEREY PARK (3M)**

This office reviewed the soil sampling report dated December 7,2018, for the subject facility.

Pursuant to the California Health and Safety Code, Division 20, Chapter 6.7, Section 25297(b), and since the California Regional Water Quality Control Board is the lead agency for the subject facility mitigation, we are referring this matter to your agency for further action. We request that all future correspondence regarding this matter be sent to your office with a copy sent to this office.

If you have any questions, please contact me or your staff may contact Mr. John Awuja at (626) 458-3507 or JAWUJC@pw.lacounty.gov, Monday through Thursday, 7 a.m. to 5:30 p.m.

Very truly yours,

MARK PESTRELLA
Director of Public Works

T M SMITH
Senior Civil Engineer
Environmental Programs Division

APPENDIX I

ENVIRONMENTAL PROFESSIONAL QUALIFICATIONS

DERRICK S. WILLIS
PRINCIPAL III

Mr. Willis has over 30 years' experience serving both public sector and private clients in California and Canada on a wide variety of environmental projects. For the last several years, Mr. Willis' focus has been on formulating and facilitating closure and development strategies for large, complex, high profile, environmental projects for aerospace, industrial, and real estate development firms. Mr. Willis has extensive experience with due diligence/property transfer and development issues in a wide variety of industrial and regulatory settings. He is familiar with the industrial processes that generate environmental wastes, the fate and transport of chemicals in the environment, the potential adverse effects of these substances on human and ecological receptors, compliance challenges faced by business operators, the performance of remedial technologies, implementation of remedial approaches in an efficient and protective manner, and how these issues play into site acquisition, development, and divestiture.

REPRESENTATIVE EXPERIENCE

Site Investigation and Remediation

- ***Former Riverton Steel Facility, Southgate, California*** – Project manager on the investigation and remediation of a former steel production facility that is now currently adjacent to a residential development and a newly developed school. Developed remedial approach for lead impacted soil and concrete and air monitoring program (in accordance with SCAQMD Rule 1466) so that demo and concrete crushing operations were protective of adjacent receptors. CMS/RAP for remedial program, which dovetails remediation and development, is currently pending agency approval.
- ***Baker Cold Storage, Port of Long Beach Pier B Facility, California –*** Serves as project manager for investigation, remediation and redevelopment support of a 12-acre former wood treatment facility in the Port of Long Beach. The site is impacted with pentachlorophenol (PCP), metals, VOCs, and dioxins/furans. In addition, tidally influenced groundwater is impacted with PCP and petroleum hydrocarbons and methane charged from oilfield operations. Mr. Willis evaluated investigation data, managed a groundwater investigation program and developed a remedial approach for soil and groundwater. Mr. Willis successfully streamlined the regulatory process by aggregating the remedial work plans including RCRA closure of a drip pad, into one encompassing work plan (Soil and Groundwater Response Plan), which included an air monitoring program during earthmoving of the contaminants on Site, and one Remedial Design Document ([RDD] that incorporated the facility design components into building mitigation design), and securing agency approvals on components of site construction concurrent with development of the RDD. Site is currently being developed with a 250,000 square-foot cold storage facility.
- ***Black Mountain Industrial Complex Remedial Design and Implementation, Nevada*** – Served as project manager for expedited investigation and remediation program for the Tronox industrial facility within the BMI Complex. Previously the world's largest magnesium production facility during World War II, the site was later utilized for the manufacture of rocket fuel, other

products, and most recently alkali and manganese oxide-based chemicals. Historical Industrial operations resulted in subsurface impacts from heavy metals, perchlorate, pesticides, chlorinated solvents, asbestos, radionuclides, and other chemicals. Developed streamlined investigation and remedial approach, prepared remedial plans, including a comprehensive air and dust monitoring program, and rapidly mobilized and managed a team of staff and subcontractors to remove approximately 800,000 cubic yards of soil from the site to meet commercial soil cleanup goals for direct contact exposure in an expedited timeframe.

- ***Kimco Realty Corporation, multiple locations in California and Nevada, –*** Serves Principal-in-Charge and program manager for investigation and remediation of several dry-cleaner sites in California (Cupertino, Daly City, Lakewood, and LaVerne) and Reno, Nevada. Projects range from investigation of soil impact to remediation of soil and groundwater. Mr. Willis is responsible for developing remedial strategies, negotiating with regulatory agencies, and providing technical direction to staff in order to evaluate and remediate site impacts, and bring sites to regulatory closure.
- ***RREEF, Villa Marina Marketplace, Marina Del Rey, California —*** Mr. Willis managed the design and installation of a groundwater treatment system to treat groundwater impacted from metals and selenium to meet NPDES discharge requirements for a basement dewatering system for a shopping center. He currently manages the operation, maintenance and reporting associated with the ongoing dewatering system.
- ***Hawaii Wood Preserving Company Treatment Facility, Maui, Hawaii –*** Served as project manager, for decommissioning, investigation, remediation, and closure for a former wood treatment facility to allow for redevelopment. The site operated as from 1972 to 2001 to treat lumber with PCP, chromated copper arsenate (CCA), permithrin, and disodium octoborate. Chemicals were profiled, all equipment was decontaminated and decommissioned, and verification sampling was conducted as part of decommissioning. A remedial investigation and remedial alternatives analysis was developed and implemented to investigate and develop a path-forward to closure. The implemented remedial approach consisted of site capping and long-term groundwater monitoring.
- ***Lockheed Martin Former International Light Metals Facility, Torrance, California —*** Served as project manager and principal investigator for a 67-acre aerospace facility where client objective was expedited redevelopment. The project included facility demolition, preparation and implementation of a Resource Conservation and Recovery Act (RCRA) closure plan for 11 permitted RCRA units, negotiations with the Department of Toxic Substance Control (DTSC), preparation of a RCRA Facility Assessment (RFA) (210 features identified that required intrusive investigation), implementation of a RCRA Facility Investigation (RFI) for soil and groundwater, preparation of a health-based risk assessment, and implementation of soil remediation. Site closure for soil was granted only three years after project initiation, in contrast to the normal six to eight year process, and has been used as an example by head DTSC officials as an example of industry and the regulatory community working together to achieve expedited site closures for property redevelopment purposes. Mr. Willis also developed strategy for groundwater investigation and remediation and negotiated the corrective action consent agreement (CACA) with DTSC.
- ***Playa Capital Corporation, Playa Vista Development Project, Los Angeles, California —*** Mr. Willis served as program manager for the Playa Vista project, one of the largest and most visible brownfield development projects in the country. At 1,100 acres, it is the largest underway in Los Angeles County. His primary responsibility included environmental program management (including scoping, developing, scheduling, and tracking environmental activities for the

development project), risk management (including developing and negotiating with agencies for appropriate cleanup criteria), remedial strategy/management (including development and implementation of pilot tests and oversight of investigation and remediation activities), agency/RP/buyer negotiations, consultant and contractor selection/oversight, coordination with Playa's infrastructure group on the development/implementation of integrated remedial approach where appropriate, litigation support, data management, and transactional support with respect to the sale of remediated parcels.

- ***Project Manager, Confidential Client, Buena Park, California —*** Served as project manager for multi-media remediation project at a commercial development in Buena Park, California. The site was a former food processing facility that was redeveloped into commercial offices and warehouse space. Evaluated the environmental liability for a Real Estate Investment Trust (REIT) that subsequently purchased the property, and managed remediation program in conjunction with site redevelopment.
- ***Project Manager, Brownfield Redevelopment, Torrance, California —*** Served as project manager for site redevelopment project for a PacTrust. Evaluated environmental liabilities associated with a 12-acre parcel that was part of a butadiene plant (Del Amo Superfund Site) left undeveloped as a brownfield, and formulated a strategy to expedite regulatory closure and redevelopment. A comprehensive investigation was completed on the parcel, and the report submitted to the Environmental Protection Agency (EPA) for review. Successfully negotiated with EPA to conduct a non-Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) closure program. Conducted soil remediation program under EPA oversight in conjunction with site construction activities.
- ***Project Manager, Investigation and Remediation Program, Safety Kleen, Vancouver, British Columbia, Canada —*** Managed remediation of former solvent recycler transfer stations in British Columbia and Alberta, Canada. Sites involved characterization and remediation of soil and perched groundwater zones. Assessed feasibility of vapor extraction for cleanup of vadose zone contamination, and designed and installed a dewatering system for perched water in former tank cavities and surficial saturated zone for Vancouver transfer station. Achieved regulatory site closure two years faster than previous consultant's estimate.
- ***Cupples Manufacturing, Investigation and Remediation Program, La Mirada, California —*** Project manager for soil/groundwater characterization and remediation program at a truck maintenance facility in La Mirada, California. Conducted an underground storage tank and clarifier removal program in conjunction with site characterization activities. Implemented remediation of soil and groundwater impacted with petroleum hydrocarbons. Negotiated and received closure from Regional Water Quality Control Board (RWQCB).
- ***Alberta Environment, Abandoned Wood Treatment Sites, Various Locations, Alberta, Canada —*** Project manager for the Wood Preserving Sites Characterization Program for Alberta Environment. Performed site characterization of four former wood preservation sites in Alberta, Canada. The sites had been used for many years for treating wood poles and railroad ties with a pentachlorophenol/diesel mixture. Soil and/or groundwater were impacted at the sites. Soil borings and groundwater monitoring wells were installed, and laboratory analysis of soil and groundwater was performed, to help determine the lateral and vertical migration of dissolved-phase hydrocarbons in the groundwater and dense non-aqueous phase liquids (DNAPLs) through glacial tills and several non-confining layers. Detailed drilling and sampling plans were necessary to ensure correct evaluation of vertical DNAPL migration. Aquifer tests were performed and receptor

data were collected in order to formulate a quantitative assessment of both health-based and environmental risk.

- ***Texaco Refining and Marketing Inc., Investigation and Remediation Programs, Various Locations, Southern California —*** Responsible for remediation programs at several petroleum retail outlets for Texaco in the southern California area. Projects included soil and groundwater investigation programs, underground storage tank (UST) removals, remedial design (including design and implementation of vapor extraction and aquifer tests), implementation of remedial program, and operation and maintenance of remediation systems. This included designing, specifying, permitting, and installing of all equipment (including piping, downhole pumps, off-gas treatment, and water treatment).
- ***Groundwater Contamination Investigation and Analysis, Technisol, Raymond, Alberta, Canada —*** Conducted a groundwater investigation program at a solvent recycling facility located in southern Alberta, Canada. The program was implemented to determine the lateral and vertical extent of several species of chlorinated volatile organic compounds present in the confined aquifer beneath the facility. Aquifer testing was performed to estimate migration rates and to provide preliminary data for remedial action. Successfully negotiated with Alberta Environment (lead regulatory agency) for monitored natural attenuation approach.
- ***Pier A Railyard, Port of Los Angeles, Los Angeles, California —*** Managed a soil and groundwater investigation program at a Port of Los Angeles rail transfer yard. The objective of the project was to characterize previously identified polynuclear aromatic compounds, volatile organic compounds, and petroleum hydrocarbons in the soil and groundwater, and identify any regulated building materials in the site structures in order to facilitate an expedited redevelopment program. The project was finished ahead of schedule and under budget.
- ***Soil and Groundwater Remediation, Texaco, Various Locations, Southern California —*** Conducted vapor extraction tests, performed data analysis, and generated recommendations for an industrial manufacturing facility to determine the viability of using vapor extraction for remediating chlorinated solvents, primarily tetrachloroethene (PCE), present in the soil beneath the facility. Each test was designed to assess air flow rates and vacuums, vertical interference and crossflow, radii of influence, potential for water upwelling, and effectiveness of vapor extraction in both vadose and capillary zones. Extracted vapors were collected to determine volatile organic compound concentrations. Data were used to determine well spacing and slotting intervals, optimum flow rate/vacuum combinations, extraction blower sizing, and vapor treatment equipment.
- ***Texaco, Various Locations, Southern California—*** Responsible for preparation of South Coast Air Quality Management District (SCAQMD) permitting, installation, operation and maintenance of thermal and catalytic oxidizers/vapor extraction systems for the remediation of soil (containing petroleum hydrocarbons) beneath operating service stations.

Environmental Site Assessments

- ***RREEF, Multiple Sites, Southern California —*** Mr. Willis serves as client director for RREEF on multiple projects including acquisition studies (which include mold, asbestos and indoor air quality surveys), tenant audit programs, soil remediation, groundwater investigation and remediation, third party oversight, agency negotiation, and mold and asbestos abatement programs.

- ***Watson Land Company, Multiple Sites, Southern California —*** Mr. Willis has directed over 40 acquisition-related due diligence investigations for Watson Land Company (Watson). Scope of work has included Phase I ESAs, soil and groundwater investigations, risk evaluations, agency negotiation, and aiding Watson in evaluating and quantifying the potential risk associated with recognized environmental concerns.
- ***Various Clients, Various Locations, Southern California —*** Project manager for more than 200 Phase I environmental assessments (ESAs) for industrial facilities including aerospace, furniture and paper manufacturing factories; utility companies, vehicle and equipment maintenance facilities; and landfills as well former agricultural land. The objective of the ESAs was to evaluate and quantify potential liabilities associated with the acquisition and development of the properties.

Litigation Support

- ***Litigation Support, Confidential Client, City of Commerce, California –*** Conducted site review of historical records, developed and implemented soil, soil vapor, and groundwater investigation, and developed Site Conceptual Model (SCM) for former aerospace facility that was now developed as a multi-tenant warehouse. Successful in being able reconstruct historical SCM to show that environmental impacts were caused by historic aerospace operations from the 1940s to 1960s and not from the more recent tenant operations. Provided information and deposition for property management firm's counsel.
- ***Mediation Support, Confidential Client, Los Angeles, California –*** Project manager for mediation support of insurance claim for cost reimbursement for handling, transportation and disposal of petroleum contaminated soil encountered during development of a high rise on a former hospital site. Work consisted of using photogrammetry and historical records to develop a volume of contaminated soil and expert witness report using spatial data analysis, rebuttal of expert witness reports, and expert witness testimony as part of mediation where a judgement was made in favor of our client for the full reimbursement cost.

EDUCATION

B.S., Geology, University of Alberta, Alberta, 1988

PROFESSIONAL HISTORY

Northgate Environmental Management, Principal, 2006 to date
LFR Levine Fricke, Principal Geologist, 2002 – 2006
Integrated Environmental Services, Director of Operations/Senior Program Manager, 1999– 2002
ARCADIS Geraghty & Miller, Inc. Senior Geologist, 1993 – 1999
Environmental Design Corporation, Vice President, 1992
Environmental Science & Engineering, Inc., Staff Geologist, 1991
Terracon Geotechnique, Ltd., Geologist, 1989 – 1991
Contract Positions, Various Locations, Geologist, 1988

REGISTRATIONS

Certified Environmental Manager, Nevada, No. EM 2252

NICKY G. ROBINSON, PE, QSD, QSP
SENIOR I ENGINEER

Ms. Robinson is a Professional Engineer with a variety of experience serving both public sector and private clients. Her professional engineering and management experience has been focused in remediation design and construction site oversight, stormwater management, Phase I and II environmental site assessments, environmental field sampling and air monitoring, site inspections, and technical data review. Ms. Robinson's environmental field experience includes soil and groundwater sampling, soil vapor studies, stormwater sampling, indoor air quality studies, air monitoring activities, and site cleanups. She has considerable experience managing and performing environmental due diligence and property transfer projects. Ms. Robinson's project experience also includes management of Total Maximum Daily Loading (TMDL) studies in surface waters; collecting storm water samples to quantify "first-flush" impacts and composite samples for pollutant loading characterization; and obtaining NPDES permits and managing the water sample collection and analysis process to ensure permit compliance. Ms. Robinson is a licensed Civil Engineer in the state of California. She is a California licensed Qualified SWPPP Developer and Qualified SWPPP Practitioner and has received the OSHA 40 Hour HAZWOPER Training.

REPRESENTATIVE EXPERIENCE

Environmental Characterization and Remediation

- ***Southern California Edison (SCE) Power Pole Relocation into Closed and Capped Landfill, Carson, California –*** Ms. Robinson was the project manager for the environmental component of a power pole relocation project that required removing two power poles and installing two new power poles with associated anchors and wires into a closed and capped landfill under the regulatory oversight of the DTSC. Ms. Robinson was responsible for providing environmental and engineering direction to SCE to guide their overall design and construction sequencing, soil handling and monitoring procedures, and air monitoring program. On behalf of SCE, she obtained necessary permits including a Rule 1150 permit from the AQMD, developed soil handling and monitoring procedures, prepared work plans for a field investigation program to obtain environmental and geotechnical design data to direct the final power pole design and for the final power pole installation work, and developed an air monitoring activities related to operations at the landfill. Ms. Robinson provided direct field oversight of the field investigation program and the final power pole relocation work, which included air monitoring for SCAQMD Rules 1150, 402, and 403. She coordinated with various entities including the DTSC, the client, the landowner, the site occupant, the engineer of record for the landfill, and the AQMD for the various components of this project. Ms. Robinson was also responsible for preparing technical documents including work plans and completion reports and management to ensure the overall project success and quality.
- ***Former Riverton Steel Facility, Southgate, California –*** Ms. Robinson performed initial due diligence and reviewed field data for the investigation and remediation of a former steel production facility that is now currently adjacent to a residential development and a newly developed school. She assisted with scoping for remediation of leak impacted soil and concrete. Ms. Robinson

developed and oversaw the implementation of an air monitoring program during demolition and concrete crushing operations to ensure protection of adjacent receptors. The CMS/RAP for the remedial approach at the facility, which dovetails remediation and development, is currently pending agency approval. The remedial activities will include perimeter dust monitoring in addition to air monitoring in compliance with SCAQMD Rules 1166 and 1466 permits and SCAQMD Rules 401, 402, and 403. Ms. Robinson is responsible for the management and oversight of these air monitoring activities in addition to review and submittal of data and documentation to the agency.

- ***Baker Cold Storage Facility Brownfield Clean-up, Long Beach, California –*** Ms. Robinson is the engineer of record for the remedial design for a site that is impacted with pentachlorophenol (PCP), metals, VOCs, and dioxins/furans and under the regulation of the DTSC. She assisted with the development of the Soil and Groundwater Response Plan and the Remedial Design Document for the site that is developed with a 250,000 square-foot cold storage facility. During development, Ms. Robinson conducted oversight of the site activities, including soil import/export, excavation, construction, and the installation of a methane barrier, and she has performed work zone and perimeter air monitoring. She also prepared daily activity reports including the analysis of air monitoring and Rule 1166 monitoring data to submit to the DTSC. Ms. Robinson coordinated field activities including the decontamination and sampling of former drip pads, air monitoring activities, and wastewater sampling. She managed the data obtained from daily field activities and trained the field staff. Ms. Robinson prepared the Remedial Action Completion Report and the Operation and Maintenance Plan for the remedial activities.
- ***Black Mountain Industrial Complex, Henderson, Nevada –*** Ms. Robinson was a field engineer on site for the remediation of Tronox's industrial facility in Henderson, Nevada in which approximately 800,000 cubic yards of impacted soil were removed. Previously the world's largest magnesium production facility during World War II, the site was later utilized for the manufacture of rocket fuel, other products, and most recently alkali and manganese oxide-based chemicals. Historical industrial operations resulted in subsurface impacts from heavy metals, perchlorate, pesticides, chlorinated solvents, asbestos, radionuclides, and other chemicals. Her responsibilities included providing technical oversight of excavation, construction, and groundwater pumping well installation activities; collecting groundwater samples; obtaining soil and air samples; monitoring dust levels; overseeing the perimeter and work zone air monitoring programs; and conducting weekly site inspections for SWPPP compliance. Ms. Robinson coordinated with design engineers to oversee the installation of their remediation and monitoring systems and provide field support and input for design revisions.

Environmental Assessments, Investigations, and Characterization

- ***CenterCal Development, Long Beach, California –*** Ms. Robinson is the engineer of record for the remedial design of a property in Long Beach that was formerly partially occupied by a gasoline service station with documented leaking underground storage tanks (USTs) impacting the subsurface. Historic site operations also included oil wells and crude oil pipelines. Ms. Robinson assisted with the design of an excavation program to remove impacted materials to accommodate the development of a mixed-use commercial and residential facility. Her work included analyzed historic investigation results and analytical data to determine the remediation program and provide support for the engineering decisions to reach a settlement agreement with the responsible party for the contamination present at the Site. Ms. Robinson also assisted with the preparation of various

documents and reports for the site including a Remedial Action Plan, remedial costing analysis, and responses to questions from regulators and the responsible party.

- ***Kimco Lakewood Plaza, Bellflower, California –*** Ms. Robinson conducted soil and indoor air sampling to help determine a remedial design for soil impacts with VOCs from a former dry cleaning operation. She oversaw excavation activities and collected confirmation samples. Ms. Robinson managed the data and documents associated with the project and assisted with the preparation of final reports.

- ***Historic Oil Fields, Brea, California –*** Ms. Robinson conducted a Phase I ESA of historic oil fields spanning over 3,000 acres in Brea with operations still active across portions of the site. She coordinated a limited Phase II investigation across the site and utilized the results to prepare remedial cost documents, estimate of impacted material, and recommendations for areas of potential concern for redevelopment. She prepared all documentation, figures, and spreadsheets for meetings with developers interested in redeveloping the site.

- ***Park and Market Redevelopment, San Diego, California –*** Ms. Robinson managed and performed field activities, investigations, and oversight of the redevelopment of a property located in downtown San Diego that was formerly occupied by automobile repair facilities and several burn wells and pits associated with historic residential development. During excavation activities, impacted soils were encountered when former burn wells impacted with elevated concentrations of lead up to 60,000 parts per million. Ms. Robinson prepared environmental project documentation including a health and safety plan, a soil management plan, and completion report, collected samples and provided oversight of the handling and removal of lead impacted soil, and performed air monitoring during excavation and handling of lead impacted soil.

- ***Monsanto Former Detergent Manufacturing Facility, Carson, California –*** Ms. Robinson measured groundwater levels and collected groundwater samples to monitor for hydrocarbons, predominantly benzene, which migrated through the soil to the groundwater beneath the site and migrated downgradient. Some samples were collected on the adjacent oil refinery property and Ms. Robinson received the appropriate training to access the refinery.

- ***Oxygen Biosparge Pilot Scale Investigation, Carson, California –*** Ms. Robinson collected groundwater samples using low flow sampling techniques as part of an oxygen biosparge in situ treatment system. Work was performed using supplied air in Level B personal protective equipment. She also routinely works in conjunction with a mobile laboratory to simultaneously collect and analyze soil vapor samples to monitor benzene concentrations as part of the pilot scale investigation.

- ***Los Angeles World Airports, Los Angeles International Airport, Los Angeles, California –*** Ms. Robinson reviewed historical reports, documents, and data for multiple portions of the Los Angeles International Airport and prepared summary documents. She also managed the review of similar work by other consultants for the facility. Ms. Robinson utilized the results of these investigation efforts to develop a facility wide groundwater monitoring program.

- ***Former Paint Facility, City of Commerce, California –*** Ms. Robinson was responsible for coordinating the field activities associated with collecting soil vapor and LNAPL samples for a former paint facility. A soil vapor extraction system was operated on the site and sampling was performed to develop a conceptual site model to assess the effectiveness of continued remediation

at the Site. Ms. Robinson was responsible for coordinating the sample collection and analysis with the laboratory and worked to draft the analytical report.

- ***Port of Oakland Embarcadero Cove, Oakland, California –*** Ms. Robinson was a staff engineer on site to oversee the abandonment of existing groundwater monitoring wells and the installation and development of new groundwater monitoring wells. Her responsibilities also included annual groundwater sampling at the site that is known to have been impacted by VOCs, SVOCs, organochlorine pesticides, PCBs, dioxins, and furans from facilities that previously occupied the site that were known to have handled and stored solvents, refined petroleum products, wood, preservatives, pesticides, and herbicides. She also assisted the preparation of the annual report and five-year review for the site.
- ***Former Apartment Complex Close-Out, Carson, California –*** Ms. Robinson was responsible for the oversight of environmental field activities related to the demolition of an existing apartment complex for redevelopment. Field activities included asbestos and lead-based paint surveys and removal, hazardous waste packaging and disposal, geophysical surveys, and air monitoring. Ms. Robinson also prepared close out reports and documents for the site.
- ***Former Dry-Cleaning Facility, Santa Rosa, California –*** Ms. Robinson performed low flow groundwater sampling for quarterly reporting for a site containing both a dry cleaner and a residential apartment building to monitor impacts to the groundwater. The site is known to have existing soil and groundwater impacts from historic use and storage of petroleum products and other hazardous substances on surrounding sites.
- ***Wetland Restoration Project, San Francisco, California –*** Ms. Robinson reviewed contractor submittals, including dust control, decontamination, soil stabilization, and execution plans for compliance with the project specifications and regulatory requirements and prepared responses to requests for information for the restoration of 26.5 acres of tidal wetland habitat. The site is known to have soil containing naturally occurring asbestos, copper, lead, nickel, zinc, TPH, PAHs, pesticides, and PCBs and some metals impacting groundwater.
- ***Environmental Site Assessments, Various Locations, California, Nevada, and Texas –*** Ms. Robinson has managed and conducted dozens of Phase I and Phase II environmental site assessments for commercial, industrial, and residential properties. Her responsibilities included complete site history reviews, identifying recognized environmental conditions and areas of potential concern, as well as field sampling and analysis to investigate potential impacts to soil and groundwater quality. Ms. Robinson assisted with the design of investigation programs, coordinated with field staff and subcontractors, and analyzed results to determine remedial actions. She also managed budgets, schedules, and client communication. Work was performed in general conformance with the ASTM environmental assessment standard and the U.S. EPA *All Appropriate Inquiry* guidelines. She has also conducted and completed preliminary endangerment assessments and obtained necessary permits for construction (NPDES, Rule 1166, etc.) on behalf of the developer to support the redevelopment activities.

Stormwater Monitoring and Compliance

- ***Machado Lake Nutrient TMDL Sampling, Torrance, California –*** Ms. Robinson manages the stormwater monitoring, sampling, and reporting for the City of Torrance in accordance with the provisions of the Machado Lake TMDL Special Studies Work Plan and the Machado Lake

Eutrophic, Algae, Ammonia, and Odors (Nutrient) TMDL (established by the Los Angeles Regional Water Quality Control Board) to monitor nutrients, including nitrogen and phosphorous discharged from the City of Torrance to Machado Lake. She coordinates routine sampling activities and has been a field lead for activities that include rapid mobilization during wet weather and dry weather events on a monthly basis since 2012 and data collection from data loggers to calculate flow rate and discharge volume and to monitor storm events. Ms. Robinson is also responsible for maintaining a network of flow sensors in subsurface conveyances and storm drains to quantify hydrology of the storm drain system and determine mass-based discharge compliance. She maintains discharge flow and volume calculations for annual reporting and prepares the annual report document. Ms. Robinson is also responsible for communicating with the City of Torrance, maintaining the scheduling, and ensuring the project stays within budget.

- ***Walteria Lake Monitoring Program for Nutrients and Toxics, Torrance, California –*** Ms. Robinson manages a monitoring program for discharge from Walteria Lake in accordance with the Walteria Lake Monitoring Program Nutrients and Toxics Study Work Plan developed by the Los Angeles County Flood Control District. She coordinates with the City of Torrance to conduct field sampling activities during pumping events that discharge from Walteria Lake. Ms. Robinson also maintains and analyzes the analytical and flow data from the stormwater and dry weather flow in relation to the applicable nutrients and toxics TMDL waste load allocations to determine if the lake contributes or removes pollutant loading from the flow. She also maintains communication with the City of Torrance and manages the budget and reporting for the project.
- ***Stormwater Basins Enhancement Project Monitoring and Reporting, Torrance, California –*** Ms. Robinson manages a project for the City of Torrance that includes stormwater sampling and flow measurements at various locations within three stormwater basins. The work is conducted in accordance with a plan approved by the Los Angeles Regional Water Quality Control Board. Ms. Robinson manages communication with the client, field sampling events, the schedule, and the project budget.
- ***Nutrient TMDL Sampling, Peter Weber Equestrian Center, Rolling Hills Estates, California –*** Ms. Robinson manages a project involving the collection of stormwater samples and flow measurements to monitor nutrients, including nitrogen and phosphorous at an active equestrian facility in Rolling Hills Estates following facility upgrades designed to reduce surface water impacts.
- ***Machado Lake Nutrient TMDL Sampling, Rolling Hills Estates, California –*** Ms. Robinson was the field lead for the collection of stormwater samples and flow measurements in accordance with the Palos Verdes Peninsula Coordinated Monitoring Plan and the Machado Lake Eutrophic, Algae, Ammonia, and Odors (Nutrient) TMDL (established by the Los Angeles RWQCB) to monitor nutrients, including nitrogen and phosphorous discharged from Rolling Hills Estates to Machado Lake. Sampling activities included rapid mobilization during wet weather and dry weather events on a monthly basis between 2012 and 2016 to collect samples from surface waters and confined conveyance systems. She calculated monthly averages of total nitrogen and total phosphorous and compared the results to waste load allocations to determine attainment status.
- ***Anthropogenic Source Nutrient Assessment, Rolling Hills Estates, California –*** Ms. Robinson was a field lead for wet weather event stormwater sampling conducted for identification of nutrient sources to study nutrient load reduction at the Model Equestrian Center Project, Rolling Hills Estates, California.

Regulatory Compliance

- ***National Pollutant Discharge Elimination System Monitoring, Marina del Rey, California –*** Ms. Robinson coordinates field activities associated with water quality sampling and analysis, flow data collection and analysis, and system operation and maintenance for a groundwater treatment system for VOCs, selenium, and metals prior to discharge to the storm drain. Her responsibilities also include preparing quarterly and annual monitoring reports for the Regional Water Quality Control Board per requirements in the monitoring and reporting program of the NPDES permit for the project. She currently manages the testing, maintenance, and reporting associated with the ongoing dewatering system.
- ***Environmental Audits, Various Locations, California –*** Ms. Robinson has performed and managed multiple environmental audits at several commercial and industrial facilities in California. Her responsibilities included conducting interviews with current tenants, inspecting site facilities to determine environmental compliance or potential issues, and completing a final audit report of findings. She also managed budgets, schedules, and client communication.

Violation Description:

Failure to comply with one or more of the following overfill prevention equipment requirements:
Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or
Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or
Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or
Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018.

For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter.

For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter.

Inspected within 30 days after a repair to the overfill prevention equipment.

Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer.

Inspected by a certified UST service technician.

Maintain records of overfill prevention equipment inspection for 36 months.

Violations

Violation Date: 06/06/2019
Violation Source: CERS
Violation Program: HW
Violation Division: Los Angeles County Fire Department
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Notes:

Returned to compliance on 07/18/2019. OBSERVATION: The used spray booth filters located in the spray booth room was observed being accumulated in waste container and a proper waste determination has not been made. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the used spray booth filter has been properly characterized to determine if it is a hazardous waste. If determined to be hazardous submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage it in the future.

Violation Description:

Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violations

Violation Date: 04/07/2016
Violation Source: CERS
Violation Program: HWLQG
Violation Division: Los Angeles County Fire Department
Citation: 22 CCR 15 66262.41 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66262.41
Violation Notes:

OBSERVATION: The 2016 Biennial report was not prepared and submitted to DTSC. A generator who ships any hazardous waste offsite to a TSDF within the United States shall prepare and submit a Biennial Report, U.S. EPA Form 8700, to the DTSC by March 1 of each even-numbered year, and shall cover generator activities during the previous calendar year. CORRECTIVE ACTION: Immediately prepare a report for the 2016 calendar year and submit it to the DTSC. Ensure that this report is done in a timely manner.

Violation Description:

Failure of a large quantity RCRA generator to complete the Biennial report (Form 8700) by March 1st on even numbered years and maintain it onsite for three years.

Violations

Violation Date: 04/07/2016
Violation Source: CERS
Violation Program: CA
Violation Division: Los Angeles County Fire Department
Citation: 22 CCR 45 67450.13(a)(2) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.13(a)(2)

Violation Notes:

Returned to compliance on 12/06/2017. OBSERVATION: A written estimate of closure costs for the fixed treatment unit(s) has not been submitted to the CERS. A owner/operator shall prepare a written estimate of the cost of closing each unit. CORRECTIVE ACTION: Submit the written estimate of closure costs for financial assurance for each unit to the CERS. Provide financial assurance documents if closure cost is more than $10,000.

Violation Description:

Failure to adjust Closure Costs for inflation / deflation by March 1st.

Violations

Violation Date: 04/07/2016 ***Violation Source:*** CERS
Violation Program: CA ***Violation Division:*** Los Angeles County Fire Department
Citation: HSC 6.5 25200.14(b)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25200.14(b)(1)
Violation Notes:

Returned to compliance on 12/06/2017. OBSERVATION: A copy of the HW contingency plan was not maintained at the facility and/or submitted to the required agencies listed in this section. CORRECTIVE ACTION: Immediately maintain a HW contingency plan at the facility and/or submit a copy to California Environmental Reporting System (CERS).

Violation Description:

Failure to submit a Phase I Checklist.

Violations

Violation Date: 06/06/2019 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Los Angeles County Fire Department
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 06/06/2019. OBSERVATION: 1 x 250 gallon of waste filter cake located in the hazardous waste storage room was observed without a hazardous waste label. CORRECTIVE ACTION: Submit a photo to the CUPA demonstrating that the container listed above has been properly labeled. Observed operator provided a hazardous waste label to the filter cake container at time of inspection.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 04/07/2016 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Los Angeles County Fire Department
Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)
Violation Notes:

Returned to compliance on 12/06/2017. OBSERVATION: Owner/Operator failed to establish and implement a Hazardous Materials Business Plan when storing hazardous materials at or above the thresholds quantities of 55 gallons/500 lbs/200 cubic feet. Observed owner has not completed the Business Activities Page, Hazardous Materials Inventory Page, Site Map, Waste Water Treatment Page, Emergency Response/Contingency Plan and Training Plan in California Environmental Reporting System (CERS) CORRECTIVE ACTION: Establish and implement a Hazardous Materials Business Plan when storing hazardous materials at or above the thresholds quantities of 55 gallons/500 lbs/200 cubic feet. Complete and submit the following information to CERS: 1. Business Activities: Select "Yes" to question #8 as a Large Quantity Generator. 2. Hazardous Material Inventory: Report hazardous materials in Maximum Daily Amount for the following hazardous materials: Ferric Acid 175 gallons, Sulfuric Acid 150 gallons, Hydrofluoric Acid 120 [Truncated]

Violation Description:

Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 06/06/2019 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Los Angeles County Fire Department
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Notes:

Returned to compliance on 06/06/2019. OBSERVATION: 1 x 250 gallon of waste filter cake located in the hazardous waste storage room was observed open. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the container listed above has been properly closed. Observed operator provided cover to the waste filter cake container at time of inspection.

Violation Description:

Failure to meet the following container management requirements:
(a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste.
(b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Date: 04/07/2016 ***Violation Source:*** CERS
Violation Program: HWLQG ***Violation Division:*** Los Angeles County Fire Department
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 04/07/2016. OBSERVATION: Observed no hazardous waste label posted on filter cake containers and used oil containers. All hazardous waste containers shall be marked with the following information: 1) the words "Hazardous Waste"; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. Observed plant manager provided hazardous waste label to both filter cake containers and used oil containers at the end of inspection.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the

generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 06/07/2022 ***Violation Source:*** CERS
Violation Program: CA ***Violation Division:*** Los Angeles County Fire Department
Citation: 22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)
Violation Notes:

OBSERVATION: Owner/Operator failed to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer prior to placing the tank system in service, and/or the tank assessment is not complete. CORRECTIVE ACTION: Complete written tank assessment on tank system prior to placing the tank system into service, or complete now if system is already in service. Assessment must be reviewed and certified by an independent, qualified, professional engineer.

Violation Description:

Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer prior to placing the tank system in service. The written assessment shall state that, the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed to meet the regulation. The tank assessment shall be valid for five (5) years.

Violations

Violation Date: 04/07/2016 ***Violation Source:*** CERS
Violation Program: CA ***Violation Division:*** Los Angeles County Fire Department
Citation: HSC 6.5 25200.14(b)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25200.14(b)(1)
Violation Notes:

Returned to compliance on 12/06/2017. OBSERVATION: A Tiered Permitting Phase I Environmental Assessment Checklist (DTSC Form 1151) has not been submitted to the CUPA. An Owner/Operator/Generator is required to complete and file a phase I environmental assessment with the CUPA one year from the date that the facility or generator becomes authorized to operate. CORRECTIVE ACTION: Immediately submit the required Tiered Permitting Phase I Environmental Assessment Checklist to the CUPA.

Violation Description:

Failure to submit a Phase I Checklist.

Violations

Violation Date: 04/07/2016 ***Violation Source:*** CERS
Violation Program: HWLQG ***Violation Division:*** Los Angeles County Fire Department
Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Notes:

Observed no training plan and training record for reviewing on site at time of inspection. Provide training plan with procedures and job specific title and training records on site.

Violation Description:

Failure to provide employees within the first six months after the date of their employment, or assignment to the facility, or to work unsupervised, or to a new position at a facility with hazardous waste training to ensure employees are competent in the following areas: hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed, emergency response and emergency equipment, and procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment. In addition, the owner/operator shall ensure facility personnel take part in an annual review of the initial training and training records training records on current personnel shall be kept until closure of the facility. Training records on former employees shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

RAT Def: A numeric estimate of the relative severity of a hazardous substance release or potential release based on: (1) the relative potential of substances to cause hazardous situations; (2) the likelihood and rate at which the substances may affect human and environmental receptors; and (3) the severity and magnitude of potential effects. The score is computed using the hazard ranking system (HRS).

Comments:			

This is the date the site was first listed pursuant to section 25356. Second 90-day Compliance Testing period begins. DTSC received $181,012.27 from the Operating Industries Inc. Closure Trust Account. This money will be used to cover future response costs for DTSC at the OII site. The Fifth Partial Consent Degree (CD5) is negotiatied by EPA and the State with a group of potentially responsible parties (PRPs), composed of prior nonsettlers and recently noticed major parties. Third Consent Decree Final Workplan(with sampling and analysis plan) and the Revised QA/QC Plan. USEPA approves workplan outline as part of the early action activity per Eighth Partial Consent Decree. This design plan approves the capping of the landfill with an additional four feet of monocover using the existing cap as a two foot foundation layer. The cap design also includes the establishment of native vegetation for monocover performance as well as aesthetics. Second 90-day Compliance Testing period completed. DTSC receives Trial Burn Report which contains the results from the performance test for the LFGTS conducted in September 2000. Results indicate that the LFGTS achieved the 99.99% DRE. The Department enters into the third Partial Consent Decree which covers Gas Control, Landfill Cover and Surface Water Management. FS prepared by US EPA. Compliance Testing Report approved by USEPA. Final cover for the entire South Parcel is completed. The first Partial Consent Decree which addresses the Site Control and Monitoring and Leachate Management Systems is signed. Eighth Partial Consent Decree for OII entered by the United States District Court. 5 Year review prepared by US EPA. The sixth partial Consent Decree requires GSF Energy (Air Products) to pay cleanup costs. DTSC can request reimbursement of unpaid past costs and future response costs. Predesign Workplan. 30% Design - Final Cover -- The final cap will consist of a four foot thick monocover with a native vegetative cover. The existing cap will act as a foundation for the monocover. Inactive Class II Landfill. Contaminants include Pb compounds, chrome oxide, pigment sludge, refinery slop oil, emulsion solids, leaded tank bottom, wastewater from paint manufacturing, and caustic cleaning wastes. Predesign Report outline. Former TSD facility. Performance Test Plan for the LFGTS approved. A second Calstar Code was added #300284 for the Gas Migration Control activities. Oversight of these activities are the responsibility of a different group of RPs. The second Partial Consent Decree which added parties and funds to the first Partial Consent Decree is signed. Approval of the Final Design for the Landfill Gas Treatment System (LFGTS). LFGTS test completed this past week. Preliminary results indicate that the LFGTS will achieve the 99.99% Destruction and Removal Efficiency (DRE). The amended Gas Migration Control ROD at the site addresses the landfill gas (LFG) migration control and landfill cover. The major component of this amendment is the addition of landfill cover to the previously selected gas migration control remedy. The major components of the Gas Migration Control ROD include: 1) landfill cover designed to reduce surface gas emissions and odors, prevent oxygen intrusion into the refuse, prevent surface water infiltration, provide erosion control, and improve site aesthetics; perimeter LFG extraction wells with placement focused on minimizing off site LFG migration; LFG extraction wells on the top deck of the landfill with placement focused on maximizing source control of LFG; shallow and deep slope wells with placement focused on reducing surface emissions and controlling intermediate to deep subsurface migration at the perimeter; integrated above-grade LFG headers and condensate sumps; LFG monitoring wells at the site boundary; upgraded thermal destruction facility for landfill gas; and pumps in appropriate gas wells with above-grade collection sumps to dewater saturated zones. The amended gas control remedial action will be integrated with the two additional operable units, Site Control and Monitoring, and Leachate Management, now being implemented. Landfill Gas Treatment system began operations replacing the flares. The LFGTS is capable of 99.99% Destruction & Removal Efficiency (DRE). First of two consecutive 90-day Compliance Testing periods for the former landfill begins. Final Remedial Action Inspection conducted for the South Parcel. The inspection is conducted jointly between US EPA, DTSC and Army Corps of Engineers. 30% Design for Southwest Early Action Plan (SWEAP). DTSC sends letter to US EPA recommending they accept the project as complete. EPA concurs with DTSC. RI prepared by US EPA. Seismic Predesign Prefinal Workplan. The U.S. EPA and the Department of Toxic Substances Control enters into the Fourth Partial Consent Decree in an effort to expedite the cleanup of the Site and avoid prolonged and complicated litigation between the "parties". The selected Remedial Alternative includes: Perimeter liquids control, onsite treatment of collected liquids, natural attenuation of offsite groundwater which

includes monitoring and evaluation, and continued operation and maintenance of provisions in the three previous ROD's (site control and monitoring, leachate management, gas migration control and landfill cover). The leachate treatment plant (included as Leachate Manage ment Operable Unit) is built on the north parcel of the site and consists of influent storage and equalization, biological reactors, chemical precipitation, sand filtration carbon absorption, effluent storage and discharge, foul air system, storm water holding system and sludge disposal system. The plant started operation on September 13, 1994 and the first discharge into the sewer system occurred on November 9, 1994. Top deck cover for the South Parcel is 75% complete. Cover over remaining South Parcel is completed. Construction completed on Landfill Gas Treatment System (LFGTS), currently undergoing performance testing before being brought on-line and replacing the existing flare station.

Background:

Operating Industries, Inc. (OII) is an inactive Class II landfill surrounded by residential areas on the south and west borders. From 1948 to 1952, the OII site was operated as a municipal landfill by the City of Monterey Park. In January 1952, the site became a privately owned landfill under the ownership of OII. The site was permitted by the RWQCB in 1976, to receive various nonhazardous and hazardous liquid wastes, including lead compounds, chrome oxide, pigment sludge, refinery wastes, waste water from paint manufacturing, and caustic cleaning waste. It was not until 1984 that OII stopped accepting waste. The pathways of contamination are through inhalation of land fill gases and direct contact of leachate entering the ground water. Possible receptors are the residents near the facility and the potential impact of the contaminated groundwater on drinking water supplies. The Department took over the site when the owner and operator failed to continue with the site closure activities. In May 1986, the landfill was listed on the NPL and EPA became the lead agency. EPA initiated a remedial investigation to define the extent of environmental problems. A hydrogeologic investigation to study the groundwater was performed in September of 1989. In May of 1989, a Partial Consent Decree was entered in the Federal Court between EPA and over 100 PRPs. The PRPs agreed to undertake the site control and monitoring, and construct a leachate treatment system, as well as conducting several site improvements. Site work pursuant to the Consent Decree began in November 1989, when daily operation, including operation and maintenance/monitoring of the existing gas and leachate control system, and erosion and drainage control were assumed by the settling PRPs'.

Waste Code Details

Hazardous Waste Code:	D018
Waste Code Description:	BENZENE
Hazardous Waste Code:	F005
Waste Code Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	F003
Waste Code Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	D039
Waste Code Description:	TETRACHLOROETHYLENE
Hazardous Waste Code:	D001
Waste Code Description:	IGNITABLE WASTE
Hazardous Waste Code:	D040
Waste Code Description:	TRICHLORETHYLENE
Hazardous Waste Code:	F002
Waste Code Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-

1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Handler Details

Sequence No: 2
Receive Date: 20101207
Handler Name: SCE MONTEBELLO SERVICE CTR
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Waste Code Details

Hazardous Waste Code: 541
Waste Code Description: Photochemicals / photo processing waste

Hazardous Waste Code: 131
Waste Code Description: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: 272
Waste Code Description: Polymeric resin waste

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: 512

Waste Code Description: Other empty containers 30 gallons or more

Hazardous Waste Code: 211
Waste Code Description: Halogenated solvents (chloroform, methyl chloride, perchloroethylene, etc.)

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 291
Waste Code Description: Latex waste

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: 731
Waste Code Description: Liquids with polychlorinated biphenyls > 50 mg/l

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: 151
Waste Code Description: Asbestos-containing waste

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Generator Code Description: Large Quantity Generator
Source Type: Notification

Waste Code Details

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report update with Notification

Waste Code Details

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 291
Waste Code Description: Latex waste

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: 272
Waste Code Description: Polymeric resin waste

Hazardous Waste Code:	512
Waste Code Description:	Other empty containers 30 gallons or more
Hazardous Waste Code:	D008
Waste Code Description:	LEAD
Hazardous Waste Code:	731
Waste Code Description:	Liquids with polychlorinated biphenyls > 50 mg/l
Hazardous Waste Code:	213
Waste Code Description:	Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)
Hazardous Waste Code:	F001
Waste Code Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	551
Waste Code Description:	Laboratory waste chemicals
Hazardous Waste Code:	F003
Waste Code Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	D039
Waste Code Description:	TETRACHLOROETHYLENE
Hazardous Waste Code:	331
Waste Code Description:	Off-specification, aged, or surplus organics
Hazardous Waste Code:	211
Waste Code Description:	Halogenated solvents (chloroform, methyl chloride, perchloroethylene, etc.)
Hazardous Waste Code:	541
Waste Code Description:	Photochemicals / photo processing waste
Hazardous Waste Code:	261
Waste Code Description:	Polychlorinated biphenyls and material containing PCB's
Hazardous Waste Code:	151
Waste Code Description:	Asbestos-containing waste
Hazardous Waste Code:	461
Waste Code Description:	Degreasing sludge
Hazardous Waste Code:	214
Waste Code Description:	Unspecified solvent mixture
Hazardous Waste Code:	D040
Waste Code Description:	TRICHLORETHYLENE
Hazardous Waste Code:	513
Waste Code Description:	Empty containers less than 30 gallons
Hazardous Waste Code:	221
Waste Code Description:	Waste oil and mixed oil
Hazardous Waste Code:	181
Waste Code Description:	Other inorganic solid waste

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE
